### PUBLISHERS' DEPARTMENT..... FOREST AND STREAM.

The Private Practice Club : Matches

Answers to Correspondents.....

NEW YORK, THURSDAY, NOVEMBER 4, 1880.

\*\* The Forest and Stream goes to press Wednesdays. Correspondents are requested to mail their communications so that they may reach us before that day.

A BROADENED FIELD .- Although the cricket department of the Forest and Stream has from its inception been accorded a very substantial support by the devotees of that game, we are compelled, by reason of the other demands upon us, to discontinue the department. The space thereby gained will be devoted to our specialties-fishing, shooting and the kennel; and we shall give our undivided attention to these branches of American field sports. Our game columns each week are now filled with a rich abundance of matter, which indicates either that an unusually large host of sportsmen are in the field this fall, or, perhaps, that the Forest and Stream has been more successful than ever before in eliciting from its hosts of friends their experience in the pursuit of game.
By narrowing our field we have broadened it, and we shall

strive now to make the paper more than ever before a repository of all good things pertaining to the gun, rod and kennel.

OPENING OF THE QUAIL SEASON. - The season for quail in this State opened on Monday the 1st instant. This date is vertainly none too late, and in the opinion of many sportsmen We shot last week in Connecticut, and found it is too early. that several of the bevice moved were not yet full grown. We have sometimes seen in November little quail just hatched, but of course in such cases the nests had been broken up so that the second brood was exceptionally late.

We think the opinions of the oldest sportsmen, those who have the widest experience, would agree that the birds should never be shot before this time. The law in Pennsylvania is defective and so is that of Connecticut in permitting quail to be shot too early. Still it must be said that few men, we hope, trouble the half-grown bevies. The sportsmen have too much self-respect to meddle with these broods, and as the marketmen will not buy the little things, the pot

#### THE WICKERSHEIMER PRESERVING FLUID.

FEW weeks ago, in an answer to a correspondent, we referred to the "Wickersheimer process," and it has brought us a flood of letters which we have delayed answering until we could get the formula for its preparation and so not only give our readers valuable information concerning the preparation of fish and other animals for natural history purposes, but also how to make the fluid to do it with. We first became acquainted with this method at the International Fishery Exhibition in Berlin this last summer, where in the display of Prof. Jean Wickersheimer, Conservator of the University of Berlin, we saw many animals lying on the tables, without even a glass over them, which were said to have been kept for three years. Among these were serpents of fifteen to twenty feet in length; birds, fishes, seals and crustaceans. Skeletons also were shown which were kept together by the natural ligaments and were perfectly flexible, among them a snake and a crane-perfectly charming specimens-bearing even the rude handling of the ordinary exhibition visitor and exhibiting every motion which the animals were capable of in life. Vegetable tissues were also preserved, and great sea weeds hung around looking as if newly gathered.

We naturally wanted to see how the fluid was used, and by invitation of Prof. Wickersheimer we saw some fishes in jected. A fountain syringe was used, made of a tin can holding a quart, which hung on a nail about six feet high; a rubber pipe led from this, in the end of which was an injecting needle about four inches long. Laying a fish upon its back the Professor inserted the needle in its breast until it reached the heart, and let the fluid run until all the veins were filled. "But," said we, "how are you certain that it exactly strikes the heart?" "If it does not, then the fish will puff up about the heart?" the gills and you try it again," auswered the operator; "but if it is all right, then in a few minutes you will notice the pectoral fins begin to expand and stand out. If the fish is fresh the dorsal and other fins will also expand." The fish operated upon would weigh about six pounds, and as soon as the fins were expanded he threw it into a tub of the liquid, where it was allowed to remain for two or three days and was then ready to be placed on exhibition. The Professor explained that in the case of those large serpents, seals, etc., he injected them in all the large arteries which were accessible, as well as in the heart; but that for crabs, lobsters, spiders, starfishes and such small deer it was only necessary to keep them immersed for a few days. Collectors of insects will readily appreciate a method which leaves the legs flexible and not liable

The colors in the serpents were well preserved. The fish faded somewhat, and their eyes sank as much as fish in market do when kept too long; but they were well preserved, and fish are the worst things which the taxidermist has to deal with, while the collector is aghast at the bills for jars and alcohol After we left Berlin the newspapers chronicled the fact that Professor Wickersbeimer embalmed a boy and exhibited the body in the open air for several months, during which time it "looked like a sleeping child, preserving its softness and life like appearance;" while we saw the lungs of a turtle in a jar which could be inflated by a pipe through the cork to several times their size. At this time we knew that the Prussian Government had bought the formula, but did not know that it had been published by the Department of Instruction in the Staatsanzeiger, the official organ of the Department. ing this we sent for a copy, and now take pleasure in laying before our readers the following translation:

FORMULA OF THE WICKERSHEIMER FLUID.

"In 3,000 grammes of boiling water dissolve alum, 100 grammes; common salt, 25 do.; saltpetre, 12 do.; potash do.; arsenious acid, 10 do. After cooling and filtering the above solution add to every ten litres of it four litres of glycerine and one litre of methl, alcohol,"

The directions given in the paper alluded to are as follows: "The mode of application varies with the nature of the bodies requiring to be preserved. Anatomical preparations, entire bodies, etc., which are to be preserved dry, are laid in the fluid from six to twelve days, according to their size, and are then taken out and dried in the open air. The ligaments and muscles will now remain flexible and soft, so that all natural movements can be executed. Hollow organs, lungs, intestines, etc., must be filled with the fluid and then laid in it; I

afterward they are taken out and dried, first being distended with air. Smaller animals, such as crabs, beetles, lizards. frogs, etc., are not to be dried, but put up in bottles of the fluid, if the natural colors are to be kept unchanged.

"If human or other large bodies are to be preserved for a longer period before they are used for scientific purposes it is sufficient to inject them with the fluid. Two litres, f. i., will suffice for a child of two years; about five litres are required for an adult. By this treatment the muscles will appear as if fresh, when sections are made even after years. thus injected if human bodies are preserved in the open air they will gradually lose their fresh appearance and the skin will become brown. This can be avoided if the fluid is rubbed into the skin and if the access of air is prevented as far

"This latter treatment is recommended for bodies which are to be exhibited or to be preserved for some time before burial, for the features will remain unchanged and there will be no smell.

"For real embalming a method combining injection and immersion is to be applied. The bodies after injection are wrapped in cloths which are saturated with the solution and are then kept in tight cases."

### THE RHODE ISLAND FISH COMMISSION

THE ninth annual report of the Rhode Island Fish Commission, made to the General Assembly at its January Session, is just at hand. The sea-fisheries of this State are of great importance, so far overtopping the fresh water interests that the Commissioners look more toward means of preserving the former than increasing the latter and call the attention of the law-makers to the fact that their law requiring all taking of fish by traps, weirs, and similar contrivances, to be suspended from Saturday morning at sunrise to the same hour on Monday, from May to August, is not enforced. The Commissioners have done all in their power to call public attention to the law by publishing it once a week in the principal newspapers and appointing deputies who shall have supervision of certain parts of the bay shores included in the act.

In order to render their report perfectly clear it is accompanied by a map showing the traps at Seaconnet in the spring of 1879, and another exhibiting the heart-nets or pounds set in Narragansett Bay during the same summer, together with the depths of water in which they are placed. found to be more generally observed after this, only one instance of its violation being reported. The difficulties of enforcing the law were very great, as during a run of scup (the "porgy" of New York), Stenotomus argyrops, the traps are overhauled every two hours, night and day, and when the weather is rough it is imposible to tell what is going on about a trap unless a boat is anchored beside it; and when no fish are running the fishermen are very law abiding, but frankly say that in the event of a run of fish on close days they would run the risk of prosecution. The Commissioners decline to argue the question as to the spring trapping interfering with the hook and line fishing in Narragansett Bay as after all that has been written on the subject they seem no nearer a solution of it than twenty years ago. "The argument," say they, "has been a bitter one, and neither side has been at all disposed to listen to reason. The trappers have fought a bard fight with a bold front, and have never failed to appear when called upon to assert their position, backing it up year after year with the same arguments by the same parties. One wiseacre asserts that the pollution of the water from the sewage of the City of Providence has ruined the bay fisheries; an opponent takes the floor and proves exactly the contrary. \* \* \* "A glance at the map shows that the traps are so set as to take the fish as they go out and not as they come in, and this year the most southern and eastward one at West Island took more than any other, showing that the fish so taken were bound still farther East. In proof of this, it is a fact that the trappers at Buzzard's Bay have found that their business has come to an end since trap fishing has become systematized and carried on on so large a scale at Seaconnet."

In referring to the old saying that the fishes of the sea can never be exhausted they very truly say that this maxim is applicable only to those species which remain at sea, while others which are obliged to seek the vicinity of the shore to spawn should have some mercy shown them, "or our children's children (if we are so fortunate as to have any) will have no fish." They treat the pound-net question very fairly, recognizing the fact that it has been a business pur sued for twenty years or more, and its sudden stoppage would work injustice to those having their means invested in it, adding: "We are, all of us-legislators, commissioners, fishermen and arguers, pro and con.-unfortunately very ignorant of what goes on under water; it is an element that offers many difficulties to the student, and we must then submit to learn what we do of nature's work slowly if we would learn surely, and avoid jumping at conclusions," and Prof. Baird is quoted as holding the same views. A license of fifty dollars, or such sum as the Legislature deems fit, is proposed for all pound-nets or for each captain of a trapping gang who is to make return under oath to the commissioners us to the catch during the season, prices, etc., any evasion of which is to be punished by fine or imprisonment.

In their report on the inland fisheries they mention that black bass have multiplied throughout the State and are now comparatively abundant where they were unknown ten years They speak favorably of the carp and request those having suitable waters to make application for them which will be considered when they receive the promised lot from the National carp ponds at Washington.

-We understand that Mr. J. W. Bouton, 706 Broadway, New York, is receiving subscriptions for the reprint of Dame Juliana Berner's "Treatyse of Fysshynge," The publisher's announcement tells us that the extreme rarity of this work and the great interest taken in it by connoisseurs has suggested a facsimile reprint for the use of those collectors and anglers who can never hope to possess the almost priceless original. The "Treatyse of Fysshynge," by Dame Juliana Berners, was first printed by Wynkyn de Worde in the second edition of the "Book of St. Alban's," in 1496. Some ten or more editions of the work are known to have been issued between the date of its first publication and the year 1660, showing the comparative popularity of the work in the early days of printing. All these possess more or less value from their varying features and degrees of rarity, and are eagerly sought after by collectors. The present for is reproduced from a copy of the original edition in the British Museum, by means of photography, and consequently renders every peculiarity of the original in faithful detail; the rude illustrations which adorned the first edition of this "Ivtvll plaunflet" are here given in all their quaint roughness The work is printed on hand-made paper of the same texture and color as that on which the first edition appeared, and the binding is of contemporary pattern and material, so that the reader of to-day in handling this volume can realize the form and appearance of the original, which must have delighted the eyes of those who studied "treatyses perteynynge to dyuers playsaunt matters belongvinge vinto noblesse. subscription price of the favsimile reprint will be \$5. -----

THE PENNSYLVANIA FIELD TRIALS.—In stormy weather the inaugural meeting of the Pennsylvania Field Trials Association began and in dismal weather it ended. Four days had been allotted for the running off of the stakes, but on account of the scarcity of birds, the change of location and the steady downpour of rain during most of the time, only seven heats in the first stakes-the All-aged-were run off, and all the prize money was pooled and divided.

The meeting, for an inaugural one, was well attended. Pittsburgh was largely represented, but we were surprised to see, in the list of forty-three entries, but one name from Philadelphia. It seems to us that these trials were run somewhat too early to give stay-at-home people an equal chance with men who may choose to send their dogs to the West for work at the opening of the season there. Would it not be better to have succeeding meetings fixed for a date at least a month after the opening of the season in Pennsylvania? In such a case dogs, whose owners for any reason cannot send them out of the State, would have an opportunity to have a fair amount of work on local birds given them before the trials are run.

A very full account of the meeting will be found in our kennel columns this week, where also all remarks on the events of the meeting appear.

BATTERY SHOOTING.-Duck and goose shooting from batteries and from bush houses, or blinds of any description. built away from the shore, should be everywhere forbidden. There is no method of shooting that has so great a tendency to drive fowl away from any locality as one which disturb them on their feeding-grounds. No matter how much the birds are shot at on the open water or while flying across points they will still continue to frequent a locality where they are allowed to feed in peace. As soon, however, as gunners begin to disturb them while on their feeding-grounds the suspicions of the birds are aroused at once and they become very wild. They dare not alight with other ducks, for they have learned by sad experience what decoys are, and every bunch of birds on the water is shunned. Persecution of this kind cannot fail to result in driving the birds away to other grounds where they will be free from attacks of this kind.

Batteries and bush houses are nearly always placed on the feeding-grounds, and their use should therefore be forbidden. Sailing for ducks also tends to harass and drive away the

birds, and should nowhere be permitted. The law for Long Island on these points should be the same for all parts of the

FISHWAYS AND FISH LAWS.—The construction of fishways is an essential point in the protection and propagation of fish and with proper passes at Troy, Glen Falls and Cohoes there no doubt but that the Hudson and its great tributary, the Mohawk, could be made salmon streams, while it is apparent to every thoughtful man that, many front, streams have mill dams which have cut off the fish from their spawning beds. If it is necessary for the sake of the water power to dam a stream it should be made obligatory upon those who derive pecuniary benefit therefrom to erect a fishway in order that the rights of the people to an unobstructed passage of fish to and from their breeding grounds is not interfered with, and it needs not only the assistance of Fish Commissioners and the laws referred to but every friend that can be interested, to fight for the enforcement of the fishway law which is now ignored by dam owners. The black bass spawn in June in many waters, and the close season prescribed by the New York law should be extended to at least July. Dyestuffs, sawdust and coal tar should be taken care of by those who handle or make them, and it is unjust to exempt any streams from the provisions of the law regulating the emptying of deleterious refuse in our We hold that no individual or corporation should streams. have the right to deprive the people living upon or near a stream of their right in the fish in it, which is older than any law authorizing the building of dams or the erection of

STRIPED BASS.—This fish has been very scarce in the vicinity of New York throughout the season, and anglers have bewailed its supposed disappearance; but the past ten days the professional fishermen along the Massachusetts coast have been taking the large ones quite freely, and on Tuesday, the 26th inst., Mr. Blackford received the first lot of large fish, and his stand was piled with them. They were hung around, making a beautiful show. They ran from thirty to sixty pounds, averaging forty-five, and were selling at sixteen cents per pound, while the smaller ones, from two to ten pounds, brought twenty cents. As they have probably come to stay, there will be a great decline in these prices by the end of this week. Anglers may now look for good fishing in the East River and up Long Island Sound.

THE SALMON MYTH .- In all lands where the salmon is found there is a tradition on each river that in former times of plentiful fish a law was passed for that particular district forbidding employers to feed it to their appentices more than twice a week, sometimes varying it to three times during that space. This legend obtains on the Connecticut, Housatonic, Penobscot and other American rivers. We have heard it in Germany on the Rhine, the Weser and the Oder, and in England it also exists. We have just come across it in an old volume of the London Sporting Magazine for 1833, vol. 32, in which a writer tells that "Perth servants were not obliged to eat salmon more than twice a week." The singular part of this legend is that it is always told to you as a rich joke, peculiar to that locality, and that the narrator firmly believes it.

FLORIDA.—We call the special attention of Florida tourists to the reliable information contributed in this issue by our well-known correspondent Al Fresco. Those who contemplate a trip down the southwestern coast should not fail to consult the map of that region which Al Fresco so courteously places at their service. We shall take great pleasure in forwarding the success of projected Florida cruises.

Pullman's Palace Car Co.—Col. D. N. Welch having, on account of continued ill health, tendered his resignation as General Superintendent of the Company, and the same having been accepted, to take effect on the 25th inst., Mr. George F. Brown, heretofore assistant to the General Superintendent, will, until further notice, perform the duties of that office under the title of Acting General Superintendent.

A WORD TO OUR READERS .- Every reader of the Forest AND STREAM is requested to send us the names and adresses of such of his friends as are interested in field sports, but who are not among our subscribers. To all such we will send free specimen copies.

Bunched Shor—Honorer County, Va.—I notice in the last number of Forest and Stream a communication from one of your correspondents about shot bunching, which possessed a peculiar interest for me, as it showed me that experience in this was not singular. In September I t sessed a peculiar interest for me, as it smowed me that my experience in this was not singular. In September I think it was, I took my breech-loader to try its range, closeness of shooting, etc. I fired at the side of an unoccupied house eighty yards off. On examining the radius and penetration of the shot, I found to my surprise a freshly made hole of irregular shape, as if made by a tumbling rifle ball of .32 cal. A glean as of lead caught my eye, and taking my shife I extracted fourteen shot from the hole. I used Tatham No. S chilled, out of a 12-bore Porter gun, which, I am assured, is a second quality Scott gun. I understand that it is the habit of gunmakers to put some other than the firm name on those guns which on trial do not come up to their standard. This may bear out your view—that the defect is of the gun and not of the shot. In a future communication I may give your readers some account of partirdge shooting in Virginia, such as we hereabout indulge in. Though an enhusiastic sportsman, I am hardly naturalist enough to say whether our partirdge are really qualt, but one thing I know—they will continue to be known as partridges in Virginia.

J. In September I think

### The Sportsman Tourist.

SOUTHWEST FLORIDA

In your issue of Oct, 7 I notice a communication entitled "A Florida Cruise," In the columns of the Forest AND STREAM in years gone by, I directed the attention of sportsmen to the attractions of the southwest const of Florida; as I am personally acquainted with it, and as I write an annual letter, I have something to say in 1880. Your correspondent asserts that "among the islands of Chriotte Harbor there is a species of panther called Mexican lion, and we are narricularly anxious to thin, out these fellows." The bor there is a species of panther called Mexican lion, and we are particularly anxious to thin out these fellows." The words "thin out" imply that these animals are plentiful, but to "Al Fresco" and some of his sporting friends who have visited these islands, the statement of your correspondent is too "thin." If these animals ever existed on these islands it will require a forty horse-power telescope to find them in thinning out quantities in the year ts80.

Your correspondent states that "when they get away down they will quit their boat and take an ox-cart for the interior." When sportsmen get "away down" they will discover the fact that ox-carts are not obtainable. The most southern point where an ox-cart is obtainable is Fort Meyers, on the Coloosabatchie River—but this is not "away down." The only vehicle used on the coast "away down." a beat.

point where an ox-carr is obtainable is For Meyers, on the Coloosahatchie River—but hits is not "wavy down." The only vehicle used on the coast "away down." The only vehicle used on the coast "away down." If he writer refers to guides. My experience, and that of others, is that they are not always reliable. Last winter some of my friends chartered a sloop and engaged the services of the "best pilot on the coast." I allowed my friends to copy my maps of the coast south of Charlotte Harbor. On one was shown the islands, passeges, channels, entrances of and streams emptying into Estero Bay. The pilot ridiculed the idea of using maps, and would not refer to them. My friends were desirous of ascending the Corkscrew River, and as the pilot refused to be guided by charts they failed to find this stream. Pilots are familiar with the coast north of Punta Rassa, but south of this point, with the exception of Estero and Marco Passes, they know but little of the coast. I have compiled a map from actual surveys, on a scale of two inches to the mile, of the coast from Little Gasparilla Pass to Cape Romano, showing each island, pass, channel, lagoon, bay and stream, and if any gentleman calls at my residence in this city and presents a note or card for from you, such person will be allowed the privilege of copying the maps.

Let me repeat what I have already stated in your columns—that for shooting, hunting and fishing the coast south of Charlotte Harbor cannot be excelled by any portion of the United States. The winter is the dry season, and unless an exceptional season occurs, rain is seldom seen during the winter months in South Florita. The climate is all that can be desired and its healthfulness is beyond a doubt. On the

United States. The winter is the dry season, and unless an exceptional season occurs, rain is seldom seen during the winter months in South Plorida. The climate is all that can be desired, and its healthfulness is beyond a doubt. On the coast fish exist in great variety and in endless quantity. Northern tackle stores advertise: "fishing outlits for Plorida waters," and while that supply is adapted to the St. Johns River and lakes, it is unsuited, as a rule, to the southwest coast, unless the piscator conflues hinself to the capture of sheepshend, black base and sea trout. To capture cavalli, channel base, tarpon and jewfish, superior hooks and strong lines are a necessity. A full line of tackle adapted to the capture of our large fish can be purchased in this city on as reasonable terms as in the North. In this connection I may remark that we require a spinner for Florida, waters of suffichanner bass, tarpon and pewish, superor books and strong lines are a necessity. A full line of tackle adapted to the capture of our large fish can be purchased in this city on as reasonable terms as in the North. In this connection I may remark that we require a spinner for Florida waters of sufficient strength to hand fish varying from ten to firty pounds. Spoon baits, as usually made, are too flimsy, and if a twenty or thirty pound bass is hooked and landed, the bait is benit, twisted and rendered useless. What is required for the southwest coast is a spoon or spinner, with a strong brass swivel, a stout snood, and one or two strong, reliable hooks. Three years since one manufacturer endeavored to supply the want. His spoons possessed strength, but they would not revolve, and in consequence were useless. Sea front take the spinner, and although a small one is required, it should be strong, for a bass may be hooked running from twenty to thirty pounds. Cannot some manufacturer supply a much needed want—a spoon or spinner suited to the capture of cavalli and channel bass?

The southwest coast affords a fine field for the fly fisher. One of my friends captured eleven distinct species of fish in one season on one stream. Cheng gaudy and large flies with stout hooks are required. To the bait fisher the channel bass furnishes unrivalled sport; but to the expert, the noble tarpon offers an opening for fight and sport that cannot be equalled in any other portion of the world. For activity, fight, speed and gymnastic performances the tarpon exceis anything in the way of fish life; tarpon range from 50 to 150 pounds, and I would not recommend any rod fisherman to indulge in this description of fishing unless he is provided with a red which will carfodon's Pass, but all escaped. The within one hour at Gordon's Pass, but all escaped.

the past seas

rieit this river (St. John's) in the summer months, and during the past season at least 50 were hooked near Mapport, but more landed. Last winter some of my friends hooked five within one hour at Gordon's Pass, but all escaped. The difficulty was in the short lines and the application of too much muscle in the part of the fishermen. In many of the inlets and streams of the southwest coast these fish exist in great quantities, and are worthy of the notice of Cuttyhmic-res. When hooked they take a lightning run of 50 or 100 yards, followed by a series of leaps in the air of six or seven feet. If they fail to shake out or straighten the hook the performance is kept up.

At many of the inlets, at the young flood, the rod fisherman can stand on the shore and hook channel bass at almost every east. On the Coloosahatchic, allowe the islands, and at other points, large cavalil can be hooked almost as rapidly as the can bair and land them. If a change of sport is desired, at certain points and land them. If a change of sport is desired, at certain points and land them. If a change of sport is desired, at certain points can indulge in the capture of loggerhead turtles, from 200 to 600 pounds. If such sport is esterned to tame for the arient fisherman, he can amuse himself capturing sharks of almost any size desired.

When I went "away down" the coast I was compelled to Start from Cedar Keys or transport a boat to Key West and make that my point of departure. But recently a change has heen effected in the way of transportation on the second.

When I went "away down" the coast I was compelled to start from Cedar Kevs or transport a boat to Key West and make that my point of departure. But recently a change has been effected in the way of transportation on the southwest coast. Through the enterprise of Miller and Henderson, of Tampa, a number of new, commodious and full powered steamers have been placed on the coast. A steamer leaves Cedar Keys for Manatee, Tampa and Punta Rassasmi-weekly; To Chrystal River, Bayport and Clear Water Hurbor weekly, and to landings on the Suwannee as far as New Troy once each week. It is probable that a steamer will be put on the

route from Cedar Keys to the Waussa River and St. Mark The price of passage on the steamers is reasonable, and t cost of transporting boats from Codes Karsata Pasts, Pasts

route from Cedar Keys to the Waussa River and St. Mark's. The price of passage on the steamers is reasonable, and the cost of transporting boats from Cedar Keys to Punta Rassa or Key West would be from six to twelve dollars, according to size and weight. Major Galphen, the agent of the steamship line at Cedar Keys, is an ardent sportsana, and I will guarantee that he will extend the hand of fellowship to disciples of the rod and gun, and aid them in every way possible.

Dr. Macllvaine is completing a large bodel at Cedar Keys, which will be finished about Dec. I. The Doctor informed me that it would be supplied with new bedding and furniture, and managed by a Northern man who knows how to "run a botel." Comfortable hotel accommodations have long been needed at the Keys, and we feel assured that "The Seewannee" will merit and receive a full share of patronage. Sloops of from four to six tons, capable of accommodating four persons, with capitain, can be chartered for about \$100 per month. The charter party would have to supply necessary provisions. A party of say two could enjoy a pleasant cruise by transporting a boat of from sixteen to twenty feet in length by steamer from Cedar Keys to Punta Russa until wanted. Between Punta Rassa and Cape Sable sportsmen could enjoy hunting, fishing and shooting to their entire satisfaction. In my last trip I transported a boat from Cedar Keys to Key West, and from the latter city worked my way northward to the former place. The boat was sixteen feet long and six feet beam. In her I found room for five weeks' provisions, three free-gallon water kegs, bedding, gun, rille, fishing-rods, tackle, charts, compass, stove, etc. teén (cét long and six feet beam. In her I found room for five weeks' provisions, three five-gallon water kegs, bedding, gun, rifle, fishing-rods, tackle, charts, compass, stove, etc. At night I spread an awning over the boom, placed stove and water kegs on deck and secured comfortable sleeping accommodations for two. For a canoe trip the southwest coast is unequalled. The coast is shallow and harbors can be made every few miles. Unless the wind is blowing on shore the water is as calm as a mill pond. The wind is generally from the northwest to northeast during the winter, and rough water is seldom seen.

There are but two points along the coast where it is necessary to run outside—from Girdens Pass to Estiro Inlet, a dis-

There are but two points along the coast where it is necessary to run outside—from Girdens Pass to Estiro Inlet, a distance of eleven miles; and from Kettle Harbor to Caseys Pass, a distance of fourteen miles. In my last trip, in a sixteen foot boat, I made most of the run outside. As I have enjoyed so many pleasant hours on the Southwest coast I wish others to follow in my tracts. Persons can ship boats from New York by schooner to Jacksonville for a trifle; and if consigned to Peter Jones he will take charge of them until called for, and his charges will be moderate. Parties can purchase boats in this city on favorable terms. The freight on boats from this city to Cedar Keys is \$1 per hundred weight.

on boats from this city to Cedar Reys is \$1 per hundred weight.

Col. Allen has placed a steamer on the Kissimmec River, and will make seni-monthly trips from Lake Tohopekalega to the lower end of Lake Okeechobee. He has had suitable boats constructed for sportsnien. By leaving the steamer at Istopoga Creek, where it enters Kissimmec River, and by ascending the former stream to Lake Istopoga, sportsnien can reach an almost unknown and unsettled region north of Lake Okeechobee—a region where game has not been disturbed since the last Indian war. Deer, bears, panthers, turkeys and ducks exist in plenty, and have not been disturbed. The fishing is said to be superb. A friend in whom I can place dependence visited Istopoga, and from his statements the neighborhood of this lake must be a sportsman's paradisc. To reach this point the sportsman must statements the neighborhood of this lake must be a sports-man's paradisc. To reach this point the sportsman must take steamer from Jacksonville to Sandford, railroad from Sandford to Orlando, from Orlando a back line 18 miles to Lake Tohopekulega. The steamer leaves the Okeechobee on the 1st and 15th of cach month. W. H. Bliss, 31 East Bay street, Jacksonville, is the agent of the boat, from whom information can be obtained. Adventurous sportsmen can

Lake Tohopekalega. The steamer leaves the Okeechobee on the 1st and 18th of each month. W. H. Bliss, 31 East Bay street, Jacksonville, is the agent of the boat, from whom information can be obtained. Adventurous sportsmen can transport a boat from Sandford to Tohepekalega, descend the Kissimmee River to Lake Okeechobee, cross the lake and accard Fish Eating Creek to New Fort Centre. One of the party could follow the old Military road to Carleston's, distant 10 miles, and at that point secure a bullock team and wagon to transport a boat to Fort Thompson, distant twelve mites from Fort Centre. The Calloosahatchie can be descended to Fort Myers, where a supply of provisions could be worked to Cedar Keys or boat and outlit sold, and steamer taken at Panta Rassa for the return trip. From Lake Tohopekalega the entire route to Fort Myers is through an almost unsettled country stocked with game of all kinds.

Another pleasant boat trip is up the St John's to Salt Lake. Railroad to Titusville, and boat to Lower Indian, River and Lake Worth. At the lower end of I. R. and the inlet of the lake most excellent fishing can be secured. If the turists are adventurous and desire an extended trip they could amuse themselves at Lake Worth until a westerly or northwesterly wind set in, and with a fair wind and a smooth sea they could make the run to Eap Biscayne, a distance of about 70 miles. Easterly or northeasterly winds make an unpleasant sea on the Atlantic coast. But during the winter months coldsnaps are accompanied by westor 1 orthwest winds which blow for two or three days, and a run like that referred to can be successfully and pleasantly and a run fike that referred to can be successfully and pleasantly made. From Piscayne Bay no dilinculty from rough water would be encountered in making a trip to Key West, Punta Rassa or Cedar Keys. The navigation among the Keys is somewhat dillicult as a consequence of shoal water, and parties attempting it should secure the services of a plot or purchase in the North a scries of the reef, and to the east of the reef and channels between the keys, but without a pilot or charts the sportsman would dis-cover that mud flats and sand banks render the navigation somewhat difficult. In conclusion I will remark that if any or your subscribers will visit me and present a note from you I will render them any needed assistance, or furnish them with any information in my possession. \*\*Jucksanville\*, Oct. 1880.\*\*

Al Freeco.

—Most of the game served on a Paris table comes from abroad. Thus, England and Bohemia send the pheasant; Scotland, Spain and Algeria, the red or Guernesy partridge; Egypt, and especially fully, he qualit; Russia sends the heathcock, the hazel hea, the la opede, and the bustard, a mre bird in the French captal; Corsica, the edible ousel, and Italy, the titlark and the white tail. Snipe, water-rail, teal, wild duck, and wild swan gome from Holland and Italy. Pour or five bears are on an average sent up to Paris every year from the Pyrenrees or the Berness Alps. Deer usually come from England and Germany. Hares of a superior quality are furnished by Austria, while Sweden and Russia send white hares and even reindeer. ity are furnished by Austria, v white hares and even reindeer.

### Matural Distorn.

RAIL INLAND .- A correspondent writes us from Coatesville, Pa., saying that he killed a sora rail there on Saturday, October 23, and asking if it is not a stranger so far inland. These birds are by no means uncommon in the Chester Valley, and we have killed them there. It is a mistake to imagine that they are only found on the sea-board. They are very abundant almost everywhere if there is good ground for them. In Illinois, Michigan and Wisconsin they are killed in great mumbers, and we have found them in the reeds about alkaline lakes in the very heart of the Rocky Mountains.

### THE FLIGHT OF BIRDS.

HEW problems have caused more thought to zoologists than that which concerns the migration of birds. The many observations that have been made by ornithologists in many countries, though they have served to throw some light on the subject leave it still obscure, though we may hope that the day is not distant when we shall know more about these matters. The London Standard recently printed some interesting facts with regard to the flight of birds, which we give below. It says:

give below. It says:

We know that most migrants fly after sundown, though many of them select a moonlight night to cross the Mediterranean. But that their meterological instinct is not unerring is proved by the fact that thousands are every year drowned in their flights over the Atlantic and other oceans. Northern Africa and Western Asia are selected as winter quarters by most of them, and they may be often noticed on their way thirter to hang over towns at night, puzzled, in spite of their experience, by the shifting lights of the streets and houses. The swallow or the nightingale may sometimes be delayed by unexpected circumstances. Yet it is rarely that they arrive or depart many days sooner or later, one year with another. Prof. Newton considered that were sea-fowl satellites revolving round the earth their arrival could hardly be more

Prof. Newton considered that were sea-fowl satellites revolving round the earth their arrival could hardly be more surely calculated by an astronomer. Foul weather or fair, heat or cold, the pullbar repair to some of their stations punctually on a given day, as if their movements were regulated by clockwork. The swiftness of flight which characterizes most birds enables them to cover a vast space in a brief time. The common black swift can fly 276 miles an hour, a speed which, if it could be maintained for less than half a day, would carry the bird from its winter to its summer quarters. The large purple swift of America is capable of even greater feats on the wing. The chimney-swallow is slower—90 miles per hour being about the limits of its powers; but the passenger-piecon of the United States can accomplish a journey of 1,000 miles between sunrise and sunset. It is also true, as the ingenious Herr Palmen has attempted to show, that migrants during their long flights may be directed by an experience partly inherited and partly acquired by the individual bird. They often follow the coast lines of continents, and invariably take, on their passage over the Mediterranean, one of three routes. But this theory will not explain how they pilot themselves across broad oceans, and is invalidated by the fact, familiar to every ornithologist, that the old and young broads travel together; then come, after an interval, the parents; and, finally, the rear is brought up by the weakly, infirm, molting and broken-winged. This is the rule in autumn. The return journer is accomplished in the reverse order. The distance traveled, seems, moreover, to have no relation to the size of the traveler. volving round the earth their arrival could hardly be more

is the rule in autumn. The return journey is accomplished in the reverse order. The distance traveled, secus, moreover, to have no relation to the size of the traveler. The Swedish blue-throat performs its material functions among the Laps, and enjoys its winter holiday among the negroes of the Soudan, while the tiny ruby-throated humming bird proceeds annualy from Mexico to New Foundland and back again, though one would imagine that so delicate a little fairy would be more at home among the cacti and leaves of the Cheen Chilente than among the first and togs of the the Tierra Caliente than among the firs and fogs of the

Does the Flying Fish Fly?-This question having been raised by those who do not consider that the motion made by the flying fish is such as to be properly called flying, Prof. Jordan in a recent letter to the American Naturalist gives the following extract from his field notes containing his observations on the Western species known as Exocatus califor-

nicus, Cooper:

It flies for a distance sometimes of nearly a quarter of a mile, usually not rising more than three or four feet. Its motions in the water are extremely rapid, and its motive power is certainly the movement of its powerful tail in the water. On rising from the water the movements of the tail are continued for some seconds until the whole body is out of the water. While the tail is in motion the pectorals are in a state of very rapid vibration, and the ventrals are folded. When the action of the tail ceases, the pectorals and ventrals are spread, and as far as we can see, held at rest. When the fish begins to fall, the tail touches the water and the motion of the pectorals recommences, and it is enabled to resume its flight, which it finally finishes by falling in the water with a spirash. When on the wing it resembles a large dragon-fly. The motion is very swift; at first it is in a straight line, but this becomes deflected to a curve, the pectoral on the inner side of the are being bent downward. It is able to some extent to turn its course to shy off from a vessel. The motion seems to have no reference to the direction of the wind, and we observed it best from the how of a steamer off Santa Catalina Island, in early morning, when both alr and water were free from motion. free from motion.

Habits of the Beaver—Wellsborg, Oct. 28.—My attention has just been called to an article in Forest and Stream, criticising my remarks as to the beaver being first of the more important animals to vanish before the white hunters and trappers. If "E. B. B." will "take his eye and throw it along" the route from Eastern Maine to Western Oregon, and then repeat from northern Minnesota to the seashore, he might take in a half a million—more or less—of so-called beaver dams. In most localities where these exist old people may be found who at one time hunted deer, bear, wolves and pauthers. Such is the ease here in northern Pennsylvania It is the same in northern New York. So of all, or nearly all

the middle or western States. Now, how many of the oldest hunters ever saw a beaver colony in active operation, or even a beaver in his native wilds? I confess I never did, and I have hunted, fished and trapped for the last forty years and in ten different States, in all of which, saw one, deer and bear were yet extant, but not one tail of a beaver. I concede the semi-domesticated family of beaver in Iowa. More. If "E. B. B." will go to Jasper County, Miss., he may find several beaver towns in working and active condition. At least such was the case eight years ago. They existed through sufferance and because no one thought of hunting or trapping them. They became a nuisance and an eyesore to the planters by "backing the water" with branches, and flowing arable hand. They were driven away by abstracting a few sticks from the upper portions of their dams at intervals of a few days. At first they would work industrionsly to replace the lost timber, but after three or four attempts to keep their dans in order, finding their work in vain, the entire colony would suddenly disappear to come back no more. And all the same, the rule is as I have stated. The exceptions are barely sufficient to prove it. If gentlemen the middle or western States. Now, how many of the oldest keep their dams in one entire colony would suddenly disappear to come more. And all the same, the rule is as I have stated. The exceptions are barely sufficient to prove it. If gentlemen in the Valley of the Mississippi who know of beaver towns would send notes thereof to Forest and Stream it would make the most instructive reading matter.

NESSMUK.

American Museum of Natural History.—The autumn reception of the Museum of Natural History took place on Tuesday, October 26, and was an occasion of no little interest. A large number of visitors were present, among whom were many of the Trustees of the Museum and a number of scientific men from out of town. Among the recent additions to the collections were the Binney and Bland collection of shells, now arranged in the lower hall. This collection includes the types of the species described by those authors in their work, and is thus of very great value. The skeletons of three native Australians form interesting addition to the osteological collection. The Maximillan collection of birds have been looked over carefully, put in order and mounted on new stands, and the collection of North American birds has been increased by the addition of six hundred specimens.

and mounted on new stands, and the collection of North Amorican birds has been increased by the addition of six hundred specimens.

The Ethnological collection is now very large and contains many unique specimens.

The gallery stairway shows a detailed ethnological map of Africa, drawn on a large scale by Professor Bickmore. The additions to the ethnological collection from the South Scas consists of a war cance (case No. 1), New Zealand weapons and carvings (case No. 3) and stone axes from New Guinea (case No. 4). The set of ornaments and carvings from British Columbia, presented by Mr. H. R. Bishop (case M), proved to be interesting, as many items were included which appeared unfamiliar to most people present. The geological hall received seven geological maps of Eastern North America, some encrinites and other fossils from various formations. Cases A, B, C, D and E have been rearranged and labelled. In the desk cases specimens were placed which served to illustrate Dana's "Manual of Geology."

The collections are in admirable order and are under the care of careful workers, and the Museum is more attractive than ever. The Elevated Railroad has largely increased the number of visitors, and it is evident that its usefulness as a public instructor is only beginning. Its value to the schools of our city can scarcely be over-estimated.

Sharks are Viviparous.—While spending the winter with my family in St. Augustine, Florida, I saw a large shark, about eight feet long, caught by some fishermen from the dock at that place. It was cut open in my presence, and the dock at that place. It was cut open in my presence, and from the womb there was taken some five young ones (there were this number at least, but might be more, as I took no notes), just about ready to come into the world, each having an umbilical cord. I took one of the young sharks and threw it into the water, and it was off in a second, showing that it was near its birth when its mother was captured. The others were killed by the fishermen, and were fifteen inside to hand!

F. G.

A MONKEY USES TOOLS .- It has been said that man is the only animal that makes use of tools, but the statement has been controverted, observation having shown that others animals do occasionally employ tools. This is especially the case with monkeys which in confinement have been observed to use stones to crack nuts, and sticks or leather straps to draw toward them objects which lay beyond their reach.

An instance of special training bearing directly on this point is given in a recent London paper:

An instance of special training hearing directly on this point is given in a recent London paper:

Hollinwood, near Manchester, was the scene of a rather novel rat-killing match the other day, between Mr. Benson's fox terrier tog Turk, and a Mr. Lewis's monkey for 15. The conditions of the match were that each one had to kill twelve rats, and the one who finished them the quickest to be declared the winner. You may guess what excitement this would cause in the "doggy" circle. It was agreed that Turk was to finish his twelve rats first, which he did, and in good time, too, many bets being made on the dog after he had finished them. After a few minutes had clapsed it now came the monkey's turn, and a commotion it caused. Time being called, the monkey was immediately put to his twelve rats. Mr. Lewis, the owner, at the same time putting his hand in his cost pocket and handing the monkey a peculiar hammer. This was a surprise to the onlookers; but the monkey was not long in getting to work with his hammer, and, once at work, he was not long in completing the task set before him. You may talk about a dog being quick at rat-killing, but be is really not in it with the monkey and his hammer. Had the monkey been left in the ring much longer you could not have told that his victims had been rats at all—he was for leaving them in all shapes. Suffice it to say the monkey won with ease, having time to spare at the finish. Most persons present (including Mr. Benson, the owner of the dog) thought the monkey would worry the rats in the same namer as a dog does; but the conditions said to kill, and the monkey killed with a vengeance, and won the 45, besides a lot of bets for his owner. dog does; but the killed with a veng bets for his owner.

Northern New York—Moira, Oct. 24.—Several bears have been seen near the village lately. Fourteen were seen last week on a farm only a mile north of the village. One was killed in the town north of this last week. A few days ago a partridge flew into or through a window here and was killed by the force with which it struck the glass and was found dead on the floor. They are very plenty in this vicinity.

factory cotton tent, trunk, and some other fixings, to the vil-

factory cotton tent, trunk, and some other fixings, to the village. "Thirty cents," replied the man. "Thirty cents "screamed the spokesman with horror," vill give you twenty." I resently he ascended to a quarter, and there took a firm stand; it was declined, however, and the thirty cents had to be given. "I can't take you on now," said Jehn, "but will be back for you in a few minutes." Accordingly, after leaving us at the hotel, he returned that mile for his thirty-cent fare. We had ordered dinner to be ready on our arival a day or two ahead, and, as from this circumstance we had been thought to be somewhat toney, extra preparations had doubtless been made. The food was plain and substantial, and the manner in which it was served, as well as everything about the place, evidenced the greatest care and cleanliness. Presently the stage returned with the three young bloods, who were evidently bent upon having a good time at as little outlay as possible. No sooner were their effects out of the stage than the general manager asked Mr. Baker, who was stagedriver and hotel-keeper all in one, what would he let them have a beat for a week for. "Three dollars," was the reply. than the general manager asked Mr. Baker, who was singe-driver and hotel-keeper all in one, what would he let them have a best for a week for. "Three dollars," was the reply. "Can't give that much," said the manager, and "must therefore try to hire one somewhere else." As he was walking off, "Won't you take dinner?" says Mr. B. "How much will you charge?" "Twenty-five cents each." "That's too

try to fire one somewhere eise." As he was walking off, "Won't you take dinner?" says Mr. B. "How much will you charge?" "Twenty-five cents each." "That's too much," and off he went. Shortly after, himself and his companions started for an island some two or three miles off in a hybrid, partaking somewhat of the character of a punt, raft and wash-tub, which he had obtained for two dollars for a week, eash down, the owner doubtless concluding that if he never saw the craft again he would, nevertheless, be the gainer by about \$1.93.

"All aboard," was shouted along our line as each man took up his apportioned load of tackle, worms, or bottles (to put any rare fish we might capture in), or lunch, and filed down the almost descrited village to the wharf. One man composed the entire crew of the safe and lively little vessel, but the landlord's son-in-law tied his skiff to the yacht's stern, and accompanied us. He proved a useful and obliging fellow. When we had salled some five miles in a certain direction, all eyes were searching for the buoy which denotes a shoal. At last we approached it, when it was found to be nought but a bare pole painted black, standing up out of the water. As that was the place for fishing, our useless trolling lines were bauded in, hooks temptingly baited with genuine Toronto worms, and every man was anxiously waiting for a bob of his float or a tug at his line. "Who'll catch the first fish?" cried Demosthenes. "Take to your tub," was the re-joinder, to the merriment of the party, while cach one was doing his best to land the first bases on the deck.

"I're got one" yelled La Grenouille; "The first fish. What you say to that. the Poisson, fally Boy?" as we all

doing his best to land the first base on the deck.
"Tre got one!" yelled La Grenouille; "The first fish.
What you say to that, ch. Poisson, Billy Boy?" as we all
threw down our rods and made toward him. "Take care, or
you'll lose him," quietly observed Pratie. "No fear, I've got
him tight. I'll show you how to catch the first fish," and he
raised the base from the water. in an attempt to land him.
But that was a wily fish. He gave a knowing wink with his
left eye, shook his head, twisted his tail, doubled himself up,
and with a spring loosened the hook from his jaw and took a
dive. "Parblen!" eried G., with a national struct of the and with a spring loosened the hook from his jaw and took a dive, "Purblea!" cried G., with a national strug of the shoulders as he peered in bewilderment over the side of the vessel. "He's gone. That was a big fish." "About a pound bass," was slowly and solemily drawn out by the Deacon. "What you say! I'll pound you, you sanctimonious devil you, if you preach such lies as that." All returned to their rods in different parts of the yacht, while for the next quarter of an hour, "I've got him," "I'll pound you, 'resounded from every quarter, accompanied by a general horse laugh by way of chorus.

carcin the first sist, "ramble," and looking around, we saw his line taut, rod-tip bending as though it wanted to kiss the ripples, and heard the click of the reel as G. was letting the scooting one take line. As our presence had not assisted him materially to secure ris first hooked fish, we all kept our places and led him attend to bis own business. Presently he began to wind in; but a wrigde, and off went the bass again. This was repeated several times, till finally G., overcoming the struggles of the darter, lifted him triumphantly out of the water toward the deck. "Pve got him anyhow," said G., while a self-satisfying smile radiated his whole countenance. Unfortunately the bass struck the taffrail, and with a double and shake of the head, it jerked out the hook and plunged into the deep, to the consternation of G., who, gazing after his lost one, exclaimed in bitter accents: "Mon Diea! but that was one grand poisson—a big, wicked fish." "Another pounder," slowly cjaculated the Deacon. "What you say, you saint, you! Would a pound fish bend my rod like that one did?" "Oh, but you forgot the two hundred and fifty at the butt end," was the cool reply. This brought down the house. G., exasperated at the loss of his fish, and maddened by the jeers of his compagnons de copage, put for the Deacon, whom he soon captured, and a universal yell of "Pve got him!" "I slow you how to eatch the first fish!" Taking him by the collar, he shook him pretty lively, till he publicly confessed that the lost bass urwon? a postuder after all, and with this G. was appeased—so little does it take to satisfy some people.

After a while "I've got another!" came from G. To make

with this G. was appeared—so fittle does it take to sailsry some people.

After a while "Tve got another!" came from G. To make amends for former annoyances, the Deacon went to his assist-ance, and safely landed a two-pounder. So, after all his mis-

nce, and safely landed a two-pounder. So, after nit ans may, G. actually caught the first fish. Having spent more than an hour on this "celebrated" should a total catch of half a dozen bass, anchor was weighed, dd another "splendid" place about half a mile off tried tith even worse luck. "There's fine fishing to the lee ov Island." remarked Pratie. "Pve had capital sport there." and another "splendid" place about half a mile off tried with even worse luck. "There's fine fishing to the lee of Fox Island," remarked Pratie. "Pre-lad capital sport there." So away we sailed to the place indicated, but the de'il a fish was there. "Up near the lighthouse is a good point," said the son-in-law, and off we went, with our usual luck. "Let's try the shoul to the south: that ought to be a good place," observed the same party, who was really desirous that we should enjoy ourselves. It took but a quarter of an hour to reach it, and we were rewarded with two or three more lish; when, as mone of us were getting bites, we concluded we had cleaned out the place, hoisted sail, and made for Big-Cedar Point, which the same party assured us "must be a good place with this wind." Here another base or so was added to our stock, and about a score of perch from two to eight ounces taken. good place with this wind." Here another base or so was added to our stock, and about a score of perch from two to eight ounces taken. At first there seemed a promise of some fun, and the captain and whole crew rigged up tackle and joined in. Presently the son-in-law went ashore to get a stone for an anchor for the skiff, and while on the way captured a for an anenor for the skin, and winte on the way Captunet a young ground hog swimming from one point to another across a slight indentation in the land. Lifting him on board by the caudal appendage, he made us stand round by his show of pluck, not one in the crowd daring to tread on his tail. He was brought to the city on our return, and now adorns Harry

Piper's museum as the Belle Ewart grizzly. Pratie and the son-in-law went off in the skiff about a quarter of a mile west, where they caught a half-pound buss and a few perch. The wind dying away, they were called on board, and we sped for the village, trying on our way for a few minutes Little Cedar Point, with a like result.

On sailing up the bay to the railway wharf we saw numerous good-sized flsh springing at flies, and the son-in-law assured us that good fishing was to be had there sometimes. It was a fine place for mascalonge: only the other day a boy caught a soven-pounder off the Marine dock wharf with a worm. It was then just passing from twilight into darkness, and along the shores could be seen hoats with jack-lights, the occupants paying \$1 a year for the privilege of spearing. "Wonder if we could get a light and try spearing after supper," observed Demosthenes. "In a tub," chimed in Billy Boy. "I're got some fat pine," said son-in-law, "and we'll have a couple of hours' spearing, if you like." It was promised that we'd think about it.

On reaching the wharf it was found that a basket of strawberries taken out with us was compty, a hamper of sandwiches ditto, and all the bait-boxes likewise. On counting our bass it was learnt that every man had caught one, while G, had taken three, and several others two each. Altogether there were fif-

ditto, and all the bait-boxes likewise. On counting our bass it was learnt that every man had caught one, while G, had taken three, and several others two each. Altogether there were fifteen bass, from eight ounces to two pounds, to be apportioned among nine anglers!

Supper over, we all felt too well satisfied with our afternoon's sport to attempt spearing; so, pulling out a couple of decks with which some of the party had provided themselves, we sat down to business, jokes and songs enlivering the evening, while little grizzly, who was tied in a corner, would now and then make a spring for liberty, and getting in too close proximity with the legs of some one, would cause them to jump and yell with tright, to the amusement of the rest of the company. Feeling our disappointment keenly, as we had promised to express hundreds of bass, from three to five pounds each, to our friends, we resolved to return home next morning and excuse ourselves as best we could.

Though we didn't catch a great number of fish, this I will say, a happier or more jordal set I never spent an afternoon with; and I've fished for roach and perch in the royal Thames and Seepentine; for grise in Scotland; for anything I could catch in Niugara and St. Lawrence, the Ohio and Mississippi rivers, and in Lakes Ontario, Eric, St. Clair, Huron, Conchiching, Muskoka, Rosseau, St. Joseph; for mullet in the Rio Grande; for cartish in El Rio Sau Junn, and El Rio Nasis in Mexico, and for dolphin in the Gulf Stream. This last exploit is worth relating, and I therefore reserve it for a future epistle. Well, we all turned in at Baker's, Belle Ewart, before II P. M. As we were somewhat fatigued and throwing ourselves down, we soon fell into a sound sleep. Shortly after midnight we were aroused by a violent battering of sticks and kicks at the hotel doors. Raising his head and rubbing his eyes, 6. exclaimed: "What's that noise?" It being a warm night, the room doors had been left open, and the thumps and kicks had aroused every one. Recognizing G-'s accents,

an hour or two.

Morning come and breakfast over, each man went up to
the bar, and asked for his individual bill. How their faces
reddened when the landford told them \$1 a head and \$2 for reducined when the mandord rold them \$1 a need and \$2 for the use of the yacht and services of the captain and crew the day before. Talk of extortion at country horels! This beat all I had ever experienced. Taking us to and from the sta-tion, supplying three fair meals, clean bed—and only a dollar! How can such people live? I may never see them again, but they deserve encouragement. To those who wish to spend a week or two in some salubrious spot in the hot summer they deserve encoungement. To mose who wast in spent a week or two in some salubrious spot in the hot summer days, and to enjoy a little flshing now and then—for really splendid flshing is frequently to be had in the vicinity—and cannot afford fancy figures, I would say let them try Bakers,

at Belle Ewart.

The musquito feeders were sound asleep when we mounted the stage. "I know those cheap jacks that kicked up such a fuse in the night are Down-Easters—from Massachusetts or thereabouts. Mean cusses! I've met the like of them down South before," observed Pratie, as the "stage was start-

South before," observed trane, as the state of the property of

r Northern waters. Toronto Gun Club, 1880.

"Red Drum" Fishing at Care Max.—This fish, Scienaps occllatus, Linn, Gill., variously known as spot-bass in New York markets and parts of the Carolina coast, while in other parts of the latter it becomes "channel bass," the "red fish" of the Gulf and New Orleans, is now plenty at Cape May. The menhaden, or bony-fish, is used as bait on a large

### FISHING AT BELLE EWART.

FISHING AT BELLE EWART.

NOW, let me try your geographical knowledge, just a little. Do you know where Belle Ewart is? Of course you don't, so I might have sparred myself the trouble of putting the question, and you the humiliation of showing you don't know every hole and corner in the universe and everywhere else. No. It isn't one of those backwoods places that's never heard of beyond the nearest oll-gate. A few years ago its building lots sold by auction; saw-mills were in operation: lumber was shipped (by rail) to Buffalo, Albany, New York, etc.; it had a daily steamboat, a marine dock, and was the terminus of a railroad. In those days it was o place, and you should have seen it in its prosperity. There were life, and sport, and money there then; and good fellows who knew how to carn and spend the last and enjoy the other two. Deer were found in its vicinity; at the marsh, a few miles off, ducks were plentiful in their season; woodcock were not unknown, and it was just the place for partridge. But now it is a very quiet place, just the spot for those who wish to enter upon deep studies without the fear of being disturbed by railroad or steamboat whistles, the buzz and jarring of the saw-mills, the shouts and songs of the lumbermen, or any other real noise. Now, I see you're in a flurry and wish to hear where Belle lu jolie is situated, and what has wrought such a sad change in her history. Ecouter cost. Listen. Just cast your eye northward along the N. R. R. from Toronto till Lefroy catches it or your eye catches Lefroy, a station 52 miles from the place of beginning, as surveyors say. Well, Belle Ewart lies about one mile to the north of that, on the shore of one of those beautiful bays for which Lake Sinucce is so famous. That's where it is. Now let me tell you what killed it. The Northern Railroad north of that, on the shore of one of those beautiful bays for which Lake Sinnce is so famous. That's where it is. Now let me tell you what killed it. The Northern Railroad originally had its Lake Sincoe terminus here; the steamer net the morning train and conveyed the passengers to Barrie, Orillia and other points. In course of time it was decided to continue the road around the western extremity of the lake to Barrie and Orillia, and subsequently across the Narrows between Lake Simoen and Couchicking (Indian, I suppose, for "Wipe your chin") to Gravenlurst, Lake Muskoka. So Belle Evart wasn't 'wanted' any more by the railroad; the rails were removed from the track, and the embryo town was left to its own resources, at a time when it couldn't 'go it alone." In short, the railroad brought the place into existwas left to its own resources, at a line when it couldn't "go it alone." In short, the railroad brought the place into existence—gave it life; and the railroad has killed it—virtually destroyed its own offspring. Consequently the inhabitants don't much inhabit it now, and those that are left—well, don't bless the railroad. (Parenthesis.) The undersigned has hopes that the spot may yet return to its natural state again, and that at no very distant future it may be his "happy hunting grounds."

You and your readers may ask, What has all this to do with fishing? Pray, don't be impatient; there's always a good dead to be seen after, when a party of seven citizens (beg pardon, subjects) are about to start on a week's fishing, miles from home and all they love. And is it not a fact that all authors have a preface or prelude to their works, while a good many interludes are generally dovettiled in to add interest to the tales?

Not to keep you and your patrons (I hope they are all pay-

good many interludes are generally dovetailed in to add interest to the tales?

Not to keep you and your patrons (I hope they are all paying ones—interlude No. 1) longer in suspense, to my fishing.

After preliminary arrangements, Messrs, P. and W. H., Mr. Mac L. and your correspondent took the Northern one Thesday moraing, in the beginning of this present month of July, 1880, for Lefroy, thence to Belle Ewart by stage. As Mr. E. was to join us at Aurora, and Messrs, M. and K. at Newmarket, we took six rods, the necessary hooks and lines, minnows and handing nets, and enough worms to suffice for a month's fishing. Our three friends put in an appearance according to promise, and then seven as "jolly good fellows" were we as ever went a-fishing. According to universal custom on such occasions, every man had to get a new name, derived from some trait of character or appearance or deficiency. P. was dubbed by our French companyon. E. Poisson, because of a remarkable feat he had accomplished a few days before, by tumbling out of a boat into the natural dwelling place of fishes. W., because of his genial turn, just got Billy Boy. of a remarkable feat he had accomplished a few day's before, by tumbling out of a hoat into the natural dwelling place of fishes. W., because of his genial turn, just got Billy Boy. M., from his cognomen, took Pratie. K., who was from New York, on account of his eloquence and philosophical observations, received Demosthenes: and as he had confessed that he had traveled at all hours from the Battery to 159th street without ever having hooked a fish, was advised to try his buck in a tub. E., in consequence of his nationality, got La Grenouille, while because of his diminutiveness, the adjective petite was interpolated between the article and noun, and thus he became La petite Grenouille, the little frog, whose avoirdupois is bound to turn the beam at considerably over 200. Mac Le got simply Mac. Your correspondent R., from he pristine gravity of his demeanor and the solemnity of his countenance, was permitted to retain his time-honored title of Deaxon.

In the midst of par jubilee the car-door was opened and "Lefrog" shouted by a brakesman. Ourselves and impediments were soon off the train on the platform, and the stage inquired for; this was an open spring wagon, by no means uncomfortable, but more than one-half too small for the passengers offering.

Just as we were about to start three young men, probably clerks or students, approached and asked the driver what he would charge to take them and their equipage, consisting of a

hook and heavy tackle, generally, for it is a powerful fish, often weighing fifty pounds and very gamy. They are taken from a boat, and when a stout bass rod with large reel, capable of holding fifty to seventy-five yards of heavy line, is used they afford good sport and only succumb when completely vanquished.

#### FISHING IN FOX RIVER.

FISHING IN FOX RIVER.

Tox RIVER sources in Lake Geneva, a beautiful sheet of water in the southeast corner of Wisconsin. It was named by the Indians "Kish-wa-ke-la," signifying "crystal water," on account of its uncommon transparency. Its outlet is Fox River, which flows due south into the State of Illinois, then a little westward until it greets the waters of Des Plaines at Ottawa, where they together form the Illinois River. It is about twelve rods from shore to shore, and very uniform in width, like most rivers in prairie countries, where very few, if any, hills and rock-ledges are encountered sufficiently formidable to interrupt their even flow. Fox River has a swift current and furnishes a splendid water-power, which is ntilized by the many and various manufactories at Elgin, St. Charles, Geneva, Batavia, Aurora and other thriving cities and villages situated upon its banks. It also has attractions for sportsmen, armed with rod and gun. It is quite a rendezvons for wild ducks; many laws been shot this month along this river. A neighbor of mine went out a few mornins since for a little hunt before breakfast. He brought home seven ducks, which he espied from behind a thicketed shore disporting together in the river. With one barrel he killed three outright and winged two, which his dog soon retrieved: and before returning home he added the renaining two to their unfortunate mates. This was certainly a specimen of good markmanship, and sport enough before breakfast to give a man a good relish for his coffee and to make him good-natured all day.

Also, the fishing is first-rate. Black bass predominate, though many wall-cyed pike are eaught, the meat of which is, by many, considered superior and preferred to hass: it is very white, juicy and sweet. A party of four of us went up in August to South Elgin and caught, in one afternoon, fifty pounds of black bass and pike, the heavier ones weighing four pounds each. I have been up twice since with a friend, and returned home with a handsome string each time. I find

### A PLEA FOR THE "SUNFISH"-[Eupomotis, 1

CLEVELAND, O., Oct. 21.

CLEVELAND, O., Oct. 21.

You speak of the "sunfish" or "pondfish" as a worthless animal. How can you say this of a fish that gave so much sport to me in my boy days, and is ever the pride of the youthful fisher? He is harmless, never eating the spawn or young of any other water animal, and as a pan-fish he is not excelled; a beauty in his spring colors, and fectum beyond all measure. In June he fans out his round nest, a foot in diameter, in the fine sand, deposits his eggs and milt and guards them closely until the young are able to care for themselves. Please remember that little boys and girls like to go a-lishing. I am in favor of the sunfish and bullhead (see Dr. Gartileck's book, page 106). In the sunmer months the sunfish will take the dry as readily and with as much vigor as the trout. Fishing with the seine is much practiced during the winter under the ice in the estuaries and marshes on the south shore of Lake Erie, when the fishes of the locality bed in the sunken water-weeds in numbers almost incredible. Thave seen taken at one hand of the next seventy-five barrels, consisting mostly of sunfish, straw bass, big-mouthed bass and a few pickerel. The flat fish are sent to market, skinned and dressed, and Oring readily ten to twelve cents per pound. Excessive fishing has finally exhausted this harvest. Would you believe me when I relate that I have seen five cords piled up frozen in one mass? But it is so, and the entire lot was taken in the space of three acres of water. No wonder they are all gone, and hardly a "kiver" or straw bass of a decent size remains to tell the tale.

CATFISH TAKE THE FLY.—A correspondent writes us as fol-"In your last issue I notice that a catfish was taken with a fly in the Pardonales River, Texas, and that you speak of the event as the first recorded instance of this kind. I send you herewith an extract from a letter to the Syracuse, N. Y., Journal, of April 5, 1880, written last winter by the well-known sportsman Mr. James Geddes, of that city, who took a ten-pound catfish on an eight ounce Skidmore rod. The fact that these fishes take a fly at all is new to us, and we are glad to place the valuable testimony of so excellent a fly fisher as Mr. Geddes upon record. Here is the extract

At Palatka we found that the hotel on Drayton Island, near the fishing ground we were bound for, had been burned, so we went by steamer to Mt. Royal, where we found Messes. Kirby and Wright, of Auburn, N. Y., living among their orange groves. We chartered a large sail boat of Mr. Varnum to take us over the twelve miles between Mt. Royal and the famed Sait Creek. This creek is made from a luge spring

about five miles from Lake George, which lake is simply a widening of the river St. John. After a delightful sail of two hours we cast anchor at the mouth of the creek and went over the har in a small boat. When once in the creek you are in water as pure and clear as crystal. Up the creek to the grand pool at the spring the sportsman is in his paradise. The Captain fointed his eight ounce fly rod, while I did likewise, and business commenced. Hardly a moment passed when I heard from the other end of the boat, "Ain't he a whopper?" and I cast my eye over my shoulder to see the Captain wrestling with a monstrous bass. At that moment I was fast to his mate, and the fight went on; first out of the water four feet, then the whirr of the reel and he would run fifty feet before another leap. At last they were brought to net, and a pair of Oswego bass lay at our feet that would crowd six pounds each. The sport continued till the skipper who accompanied us stood up to his knees in fish, and suggested that it was about time for lunch, a suggestion always in order. We dined from a well filled lunch basket at the side of the great boiling spring, among tropical scenery and gested that it was about time no more, the side of the great boiling spring, among tropical scenery and regetation. The lunch over we again took our places in the boat, when the Captain fastened to another "whopper," and seemed to have the game all in his own hands, as I had seen him land three large base and I had not had a rise. But I had my revenge. Soon up came to my fly—which, by theby, is an R. W., named after our renowned and accomplished sportsman, Reuben Wood—a fish of huge dimensions. I strike, and in a moment fully fifty feet of my line is run out. To the surface he came, but not to jump, and what did I see. Only a glance. It looked very much like an enormous cathely but I could not believe a catish could ever be induced to sportsman, Reuben Wood—a fish of huge dimensions. I strike, and in a moment fully fifty feet of my line is run out. To the surface be came, but not to jump, and what did I see. Only a glance. It looked very much like an enormous eathsh, but I could not believe a catish could ever be induced to come up twenty feet for a fly; but the R. W. has been known to do unheard-of things. The Captain said, "You have got the boss bass this time," I replied, "Catish." He said, "Nonsense; such a thing was never heard of." I still insisted on "cat." The skipper said, "huge bass," and I "cat." The Captain wagered a bottle of the best wine "it was not a cat." I accepted on the understanding that the fish must be brought to not to declie the wager; and, Mr. Editor. I had a twenty minutes' fight with that cat, and any one who says that a catish on an eight-ounce rod is not "some pumpkins" is saily mistaken. The pliant Skidmore won the day, and Mr. Catish, of about ten pounds, was safely landed. The Captain looked and said, "You always were hooking all kinds of monstrosities, and now you have gone and hooked a catish. I give up the bet."

Two hours more at the bass, and our boat looked like a fish market, and the Captain remarked "iss we were not fishing for market, we had better quit," which we accordingly did, and at 10 r. M. were again at our hotel, having enjoyed a splendid day's sport, like many I have enjoyed in the same pool in years gone by.

ool in years gone by.

This creek can never be depleted, as the immense river St. John sends up its millions of base into this pure, clear spring, which, not liking the warmth of the river, remain there. The spring is enormous, making a creek two hundred feet wide and ten deep.

On this subject our Cleveland, O., correspondent, Dr. E. Sterling, writes :

You speak of the catfish taking the fly. I had one take a red spoot that was dangling two feet above the water; and "cat" has an adipose dorsal fin. Taking these facts altogether do you not think it might have contained some saimon blood?

We can't say; we only know that, dazed with wonder as we are, we would not be surprised if it could be shown that the gentle catfish, who usually gropes the bottom and roars, when he does roar, as gently as a sucking dove, was even now a-evolutin' into a fierce fly-devourin', lofty tumblin' salmon, a-goin' about a-seeking what inoffensive insect he

SMELT FISHING .- This is the way this duinty little fish is taken near Boston, as told by the Sunday Budget:

MELT FISHING.—This is the way this dainty little fish is taken near Boston, as told by the Sunday Budget:

Almost any of these frosty mornings groups of fishermen may be seen along the city wharves, with rod and line and the strawberry box for bait, endeavoring to catch these shiny little denizens of the harbor. The season is now at its height and will continue until the first fall of snow, when the smelts disappear for a period. About the first of January they are again abundant and may be caught through the ice until the first of March. The best time to catch them now is during the flood tide, on days when the sky is overcast and the air cool. They may be caught at almost any of the wharves, although there are a few places where the fish congregate in considerable numbers, especially where the incoming tide makes a small whirlpool or edity around the piles of the wharf. The unfrequented wharves of East Boston and Chelsea, the stone walls at the mouth of the Mystic River, and the Boston & Albany railroad bridge, between East Boston and Chelsea, are favorite resorts for fishermen, large numbers of smelts having been caught at the latter place. There is a law in this Stute against seining the fish, and consequently they bring a good price, twenty cents a pound being asked at the markets, and there is always a demand for them. Alight pole, delicate tackle and fresh shrimps are needed, and if the sportsman is skillful—for there is quite a science in securing them—a good haul may be obtained.

Spawn Fishing in the Rangelley Large-Rodon Menter of the securing them—a good haul may be obtained.

them—a good haul may be obtained.

SPANN FISHING IN THE RANGILEY LAKES—Boston, Mass.,
Oct. 29.—Editor Forest and Stram: In your issue of the
28th instant is a paragraph relating to the taking of large
trout in the Rangeley Lakes, in which it is stated that many
large fish were taken this fall by the use of spawn as bait.
Although the paragraph referred to does not state it, it is a
fact that the eleven pound brook trout it speaks of as having been taken at the Upper Dam was captured by the use
of spawn, after every other method had been exhausted.
This noble fish, which attracted much attention when on exhibition in Bradford & Anthony's window in this city, and
which was afterward purchased by the Smithsonian Instintion, was one of several large trout which had for some days
been seen on the spawning beds, and which many expert
fishermen endeavored to capture by means of various and
seductive files and worm bait without success. Finally,
some persons who cared little for the future of the fishing,
and were only anxious for the camescent glory of making a
big score, resorted to the use of spawn, and the big fish in
question was one of the victims.

And other parties who had permits to fish out of season,
granted then by the Fish Commissioners, adopted the same
practice with such success that in five days they took over

fifty breeding trout, weighing in the aggregate over two hundred pounds. Every fish was taken from off the spawning beds, and no man can say how many young trout which would have aided in the restocking of that great fishing resort

beds, and no man cau say over the control of the great fishing resort were destroyed by these captures. If, as is claimed, there is no law against the use of spawn as bait, it certainly seems as if the law to that extent should be changed. Further, it is pertinent to inquire what right the Commissioners have to grant such permits, the exercise of which produces such fatal results. If there is no legal way of prevention, it only remains to append to an enlightened public sentiment, of which your journal is the best exponent, and to ventilate this subject thoroughly, to the end that so-called gentlemen fishermen, who hide themselves behind a claim of legal right, may be shamed into a compliance with the requirements of fair dealing, and so made to abstain from spawn fishing, tham which no more destructive method of killing breeding trout has ever been devised.

The influence of your paper is invoked in favor of FAIR PLAY.

The Northern Barracuta.—This small fish is more plentiful on our coast than is suspected. Its small size and agility almost always enable it to elude the net. They are plenty in Peconic Bay this season, and last week Mr. John Tallmadge, a fisherman of Sag Harbor, N. Y., saw a big school go through his net as he was raising it, but only one happened to be caught. He showed it to us, and we identified it as Sphyrona borealts, DeKay. The fish is usually eight to ten includes long, and about three-quarters of an inche in diameter. Its teeth are formidable for so small a fish, resembling a niles somewhat. regar to ten index song, and about three-quarters of an inen-in diameter. Its teeft are formidable for so small a fish, re-sembling a pike's somewhat; the lower jaw is the longost; two dorsal lins, with a wide space between them; head about one-third of the length. The fishermen generally do not know that she have the reasons given.

OLD CANNED SALMON.—A Maine paper is responsible for saying: "At the office of the Portland (Me). Packing Company is a can that was packed with salmon in 1814. The vessel in which the can was shipped was wrecked, and a short time ago this can was taken from the wreck. It was opened the other day, and the contents were found in perfect condition." ondition.

The Mackerel Catch—Verport, R, I.—The fishing has now settled down to mackerel, very few boats going after fish. The mackerel that are caught now are mostly No. 2, and very fat, with quite a lot of No. 1 among them. The boats go with two men, and average from 50 to 200 fish to a boat. They are caught anywhere from Gould Island out to the light ship. the light-ship.

### High Culture.

AFTER BIG TROUT EGGS FOR IOWA.

BEING here in company with my father, Mr. B. F. Shaw,
for the purpose of securing salmon trout eggs for our
State (lowa), a few lines from this section of the country
may be of interest to you.

Marais (pronounced Mo-Ray) is situated 105 miles Grand Marais (pronounced Mo-Ray) is situated 105 miles from Duluth, on the north shore of Lake Superior, in Coak County. This county is about 70 miles long by some 20 to 50 wide, with a white population of 15 men and one woman. The balance of the population are mostly Indians, of the Otchipwe (Ghip-pe-wa) tribe, together with a few half-breeds, mostly Indian and French, in all about 200. We arrived here a week ago yesterday. On Friday last we had secured about 200,000 eggs, but on Friday night a storm destroyed about all of them.

half of them.

The storm is said by those who have lived here for the past 12 years to have been the worst ever known. Many of the fishermen lost their nets, boats, fish, fish-houses, and in many instances their dwellings. The storm has left us such continued bad weather that the fishermen have been unable to lift their nets, and until it changes for the better shall be unable to secure any more of the 2,000,000 eggs that we want. The country is covered with snow; on the trail up and down the lake shore it is reported to be 14 inches on the level. The temperature here for the nest three days has been below.

The temperature here for the past three days has been below freezing, and the inland ponds are frozen over. A good many cariboo are killed here during the winter season.

Grand Marais, Minn., Oct. 19.

ED. R. Shaw.

Growth of Care.—Office of the Fish Commission, Austin, Teras, Oct. 4, 1880.—Professor Spencer F. Baird, Washington, D. C.—Deer Sir. I saw a day or two ago one of the carp sent me hast winter (these fish were the young of 1879 and about three or four inches long when received): it measured twenty inches. I am inclined to think they spawned this last summer, for the reason that the pond is now filled with rmall fry, unknown before in the pond: Should it prove to be correct I will inform you. Respectfully,

J. H. Dinkins, Fish Commissioner.

Growth of Carp.—Mr. Geo. W. Hopkins, of Mount Simi, Long Island, N. Y., received some carp last spring from the national carp ponds at Washington, through Mr. E. G. Blackford, Commissioner of Fisheries for New York, which were then about three inches in length, but by the first of October would measure from twelve to fourteen inches.

The Illinois Fish Commission .-- Another addition to our list of Fish Commissioners comes from Illinois. We stated that the term of Mr. Briggs had expired and that no appointment had been usade in his place. We wrote him on the subject, but it appears that he was absent. The following has just been received:

KANKAKEE, Ill., Oct. 25.

Editor Forest and Stream: I find your letter of the 5th inst. awaiting my return home. My appointment as Commissioner of Pisheries was for the period of one year, dating from the 2d day of July, 1879, with the right to hold over until my successor shall be appointed. I have not been notified of the appointment of a successor.

J. SMITH BRIGGS.

Carp for Distribution in New York, --Mr. E. G. Blackford, of the New York Fish Commission, has received from Prof. Baird a lot of 1,000 young carp for distribution. The fish are about three inches long and can be had by applying

to Mr. B. at Fulton Market, New York, either personally or

by letter.

If the early worm catches the carp, those who would like to obtain a few of them may try the effect of an early letter, which will probably answer the purpose as well as any other bait for this particular school of fish.

-Ladies, do you want to be strong, healthy and beautiful? Then use Hop Bitters,

### A FAG FOR QUAIL.

CLEVELAND, O., Oct. 23, 1880.

Editor Forest and Stream:

Some years since the following verses—as near as I can recall them—appeared in the Roo AND Gr.s. It is a concise description of a "Fag for Quail," and very appropriate at this time—the opening of the quail season. I hope you will think best to republish them:

The ancient farm-house—ucons... Early breakfast—dogs lightly fed; """ """ "" "" leash," " to hee!" "" With trusty "gas-pipe" . "leash," "to True sportsman's ardor blessed to feel.

" Hie on!" The cornfield stubble serge The brush's fence at coppice's verge;

Oh, glorious sight! The heart-strings burn

In true accord with the lashing "stern."

Ha! Topsy "stands," the pointers "back," With quivering form the haddled pack; "To-ho," good dogs, a noble "find,"
Step close the trembling bitch behind.

The beyy flushed, our star is kind-The perty nusned, our star is kind—
Two tufts of feathers down the wind;
The replaced shells—"Hold up! Dead bird!"— Fetch! fetch! With willing step, retrieved at word.

A noble brace, with smoothed plume Within the game-coat's spacious room:
Well done, brave dogs; well done, good gun;
So mote it be till the setting sun.

Is man good brother, ever blessed With satisfaction, mind at rest Freedom from care, from business fogs, So much as when, with gun and dogs, O'er field and marsh and wooded place? He feels his game-bag grow apace. With action right, his killing clean His misses few and far between : Dogs wide of range—none better broke-His snap-shots good, without a poke.

### LONG ISLAND SPORTSMEN'S ASSOCIATION

LONG ISLAND SPORTSMEN'S ASSOCIATION.

THE regular monthly meeting of the Long Island Sportsmen's Association was held at the Royal Areanum Rooms in Music Hall, Brooklyn, Friday evening, Oct. 29. A full delegation from each club was present, with the exception of the Long Island Forester Club.

Abel Crook, Esq., read a letter which he had received from Mr. George A. Chappell, the President of the Long Island Association, in which he had been requested by the writer to proceed agoinst certain violators of the game laws.

Relative to this, Mr. Crook reported: "On October 19 my attention was called by your Vice-President Aten to an alleged violation of the game laws.

Relative to this, Mr. Crook reported: "On October 19 my attention was called by your Vice-President Aten to an alleged violation of the game laws.

Relative to this, Mr. Crook reported: "On October 19, my attention was called by your Vice-President Aten to an alleged violation of the game laws.

Respectively on the standard of the control of the contr

was powerless to proceed, and report the matter for your information. Your President, Mr. Chappell, volunteered to assume the prosecution if sworn proof were furnished."

This created considerable excitement, and several members said that Mr. Gordon had told them the same story, and Dr. Aten was willing to make an affidavit to that effect, but as it could not be used as evidence it was not taken. Dr. Wynn, the president of the Long Island Shooting Club, moved that the words "Long Island Shooting Club" be stricken out of the report, as Mr. Brower did not kill the quail, and if he was prosecuted the club would stand by him with both men and money. Upon this Mr. Eddy said that while he was a member of the Long Island Club there was one man who would not shield any member that violated the game laws. After a hot discussion it was finally decided to accept the report with a vote of thanks to Messrs. Crook, Aten and Chappell, and it was voted that the shooting he investigated by a committee

to be appointed by the Chair. The following gentlemen were appointed on the committee: Messrs. Havemeyer, Crook and Aten. Next was the report of the Committee on Grounds. Mr. Robinson, chairman of the committee, reported that they had decided on the racing park at Brighton Beach, Coney Island, owned by Mr. Engeman.

It was decided that the secretary should confer with Mr. Sage, of Buffalo, and request four more traps to be used at the next State shoot.

In regard to the game law analysis published in the Forest And Stream, suggestions had been received from Mr. F. S. Wager, of Rome, as follows: "Every person building or maintaining a dam upon any of the fluvial waters of this State, which dam is higher than two feet, shall likewise build and maintain, during the months of March, April, May, September, October and November for the purpose of the passage of fish, a sluiceway in the mid-channel at least one foot in depth at the edge of the dam and of proper width, and placed, at an angle of not more than thirty degrees, and extending entirely to the moving water below the dam, which sluiceway shall be protected on each side by an apron at least one foot in height to confine the water there."—Laws of New York, 1889, vol. ii., p. 2316, 716.

"The game law of 1880 is deemed to have repealed laws of 1889, hence we are without a very valuable game law, which I think the compilers of the statutes had no intention of renewing.

"At Piseco Lake, Ham, Co., N. Y. (head of Hudson River).

1809, hence we are without a very valuable game law, which I think the compilers of the statutes had no intention of renewing.

"At Piseco Lake, Ham. Co., N. Y. (head of Hudson River), on the outlet of said lake there is a dam. In the fall the trout leave the lake, pass over this dam into the stream to spawn, but are unable to return up this dam into the lake in the spring. In a few years this lake will be destitute of trout unless it be for above act, which will compel the owner of that dam to maintain a sluiceway."

Mr. W. Thiese, of the New York Jagd Zeitung, wrote:

"I wish to call the attention of the committee preparing the new game laws to 37 of the present law, giving the supervisors of the different counties the power to enact their own game laws, and prescribe punishments and penalties for all violation of the same. If such a provision will be adopted in the new law two points ought to be added.

"Ist. A limit of such punishments and penalties should be stated, which should not exceed in the different cases those of the State laws.

of the State laws.

'2d. Some means should be provided to make these special county game laws more generally known.

'At I re ent it is sufficient if any county enacting such a law publishes it in the papers where the session laws are published. Such papers, in many instances, have a very limited circulation, and the majority of hunters from all other parts of the State will never be aware of those laws. I should think that all papers, especially those devoted to the interest of sport, should publish such laws also. The clerks of the different counties should be directed by law to send a copy of such enactment to any paper that applies for it.'

These letters were referred to the Committee on Fish and Game.

of sitch enactment of any personal transfer of the Committee on Fish and Game.

It was decided that the Chair should appoint a committee of five to select prizes for the next tournament. The stock certificates were now issued, and each club, with the exception of the L. I. Forester, sold to the Washington Gun Club eight shares of stock, as the Washington Club bad not been able to procure any. It was then decided that the rest of the money due on the stock should be paid as follows: On or before the 15th of November, 10 per cent.; on or before the 1st of February, 20 per cent.; on or before the 1st of February, 25 per cent.; and on or before the 1st of March, 25 per cent.; and on or before the 1st of March, 25 per cent.; and on or before the 1st of March, 25 per cent.; and on or before the 1st of March, 25 per cent.; and on or before the 1st of March, 25 per cent.; and so will be supported to the point of the support of the 1st of 1st

and he was tendered the thanks of the Association for his suggestions. After this came the new sportsman's song, sung by the Washington Gun Glub Glee Club. It was well sung, and was received with appreciation and accepted as the song of the Long Island Association to be sung at an appropriate time at the State Convention. The necting then adjourned. The Long Island Association have taken a determined stand on the question of breaking the game laws, and are determined to put a stop to it no matter what it costs. We may now expect to see an advance in sentiment and practice on Long Island.

may now expect on Long Island.

### PHILADELPHIA LETTER.

PHILADELPHIA LETTER.

In order to procure the opinion of our leading sportsmen of this city regarding October quall shooting I have asked a number the question as I casually met them on the street: "How have you found quall this season?" and in every instance but one received the reply: "Have not been out, never go until November," or words to this effect. It may be relied upon that all thinking men are opposed to the law as it now stands. We have been having some cool weather lately, occasioned, no doubt, by the snow-storms that have occurred in the northwest, and the blow down the bay has driven quantities of ducks up the river. I have learned likewise that "Slaughter Neck" and "Prime Hook" marshes in the Milton and Milford, Del., sections are alive with widgeon and sprig tails. What sport could be had there if a good bind could be made on the borders of one of the ponds with which those marshes abound, and a good supply of decoys to attract the attention of the ducks as they come in from the bay to feed. It strikes me a capital plan to follow would be for a party to go down by yacht with their skiffs, make their home on board and take advantage of the early morning and evening shooting wherever they discovered the ducks frequented. Being directly in the neighborhood of a capital quall and likewise snipe country, dogs could be taken aboard on the trip, and varied sport could be had. Your correspondent has long desired to make this expedition by water, and has promised hinself the pleasure in the near future. During the past week I have taken a flying visit to Bath and Washington, and while at the former city the fox-hunting season was opened by the Elk Ridge Fox Hunting Club, on Saturday, the 23d. The weather during the day was splendid for riding, and the early morning, though a little cool and windy, sent the blood dancing through the veins of the horsemen as they rode through the streets on their way to the meet. About seven gentlemen members left, Mount Vernon Place at an early hour and rode down Charles

fox. The chase was a long and exciting one, and greatly enjoyed by all, and what was better than all Reynard was caught. Many fine jumps were made, and the ride across country was delightful. The season was successfully opened. The hunts will follow in quick succession as the club's members, besides a number of ladies, are anxious for this delightful spot.

members, besides a number of ladies, are auxious for this delightful sport.

I hope to give you now and then an account of some of the
meets of the Rose Tree Hunt, which is composed of some of our
nost prominent Philadelphia and Delaware County citizens.
You may remember the club's hounds have been cry successful prize winners at late bench shows. The pack is a noble one,
but not at all in accordance with the ideas of our English
consins as to what hounds should be. Where we admire the
long and pendant car they require them to be rounded. In
speed their dogs are superior; in scenting powers, never. Our
animals, from the fact that a great part of the chase is made
in cover and through woodland and hicket, are not required
to be so flect and greyhound-like on foot. While their dogs,
owligt to the open country in which their hunts are made,
often run down the fox in half an hour, here a chase frequently lasts a good portion of the day.

While in Bath we heard good accounts of the kennel club
of that city, and that the association derived much pleasure

own ig to the open country in which their hunts are made, often run down the fox in half an hour, here a chase frequently lasts a good portion of the day.

While in Bath we heard good accounts of the kennel club of that city, and that the association derived much pleasure from this mino of lovers of fine bred field dogs; but we fear the gentlemen comprising it cannot be prevailed upon to undertake the giving of another Bench Show very soon, both their exhibitions having proven financial failures. It is so with the Philadelphia Rennel Club, notwithstanding the display made by them was the finest we ever saw of high bred selters and pointers—the very mention of a Bench Show seems to disgust them; in fact, we may say there exists no Philadelphia Kennel Club. What think you, dear Editor; we know of an owner of some of the finest setter and pointers—they could not tell a woodcock from a snipe, or a ruffed grouse from a pinnated one, let alone being able to shoot over his dogs, once field trial winners and go adminals. Is it not a shume? How unfortunate it is that gentlemen who are not calculated in any manner for field sports, notwithstanding wealth and time are at their disposal, will become inoculated with the dog fever, and attempt to gain that which they never can accomplish. Money will not purchase this talent, or 'knack' as we may call it. In a great measure a sportsman is born such, he inherits the taste, and the love of outdoor life fosters such a desire for companionship with nature's children that he becomes a student of their peculiar ways. Truly a love for the field is the gift of God; it cannot be purchased, and when it is attempted it can readily be discovered. I meution also case of a hady of a city not far distant from yours who has offered a large price for a blue blood as a house dog. She wants a full pedigreed animal—nothing else will suit her, one of the thing the contain any she is accorded to the first of the race, a dog for the chase, and a gun only for the sportsman.

Last week several flocks

CHOKE-BORING GUNS

CHOKE-BORING GUNS.

HAVING derived much pleasure from the perusal of the articles and correspondence in Forest and Stream on the properties and performance of shot-guns, it has occurred to me that it might interest some of your numerous readers if I should narrate my experience in the boring and shooting of the same—extending over a full half-century. In the summer of the year 1830 I made the acquaintance of Mr. William Greener, who had a short time previously commenced the business of a gun-maker in a shop on Collingwood street, Newcastle-on-Tyne, England, and had many conversations with him on subjects connected with his trade. About this time the country began to be inundated with factory-made guns, of the "Brumnagem" class, which were got up with sham twist, varnish, etc., so as to counterfeit gunmakers' work and deceive the ignorant and unwary, and which were rapidly transferring the trade in the lower-priced grades of guns from the gunmakers to the hardware men, In order to countract, at least, in part, this tendency. Mr. Greener conceived the idea of publishing a pamphlet, exposing the true character of these specious but inferior, and, to the owners in many cases, dangerous what inferior, and, in order to qualify himself more thoroughly for such exposure, he visited Birmingsham and made linuself acquainted, by personn observation, with the whole process of manufacture—from the raw material to the finished weapon. On his return he brought with him samples of the several sorts of iron and steel used in the making of barrels, from "twopenny skép" up to "wire-twist" and "Damascus."

Through the kindness of my esteemed friend, the late Sir Robert Shafte Hawks, J got for Mr. Greener the use of the

steel used in the making of barrels, from "twopenny skep" up to "wire-twist" and "Damascus."

Through the kindness of my esteemed friend, the late Sir Robert Shafto Hawks, I got for Mr. Greener the use of the testing machine at the extensive iron works of Messrs. Hawks & Co., and, from the data obtained by its use, I calculated for him the resisting power of each sort in larrels of a given thickness, and the strain to which they would be subjected with a given ealibre and weight of charge. With these results, and the information he had obtained at Birmingham, Mr. Greener found himself in possession of a mass of matter suitable for a work of a higher class and greater extent than he had at first contemplated, and in due time "Greener on the Gun" made its appearance. Unfortunately, however, the authlor, being ignorant of the requirements of the book trade, did not bring his work before the public through the acknowledged channels, and, instead of improving his circumstances, its publication resulted in his being compelled to make an assignment, when the copyright passed into other hands. The new proprietors took the necessary measures as to advertising, reviewing, etc., and the book

became known and appreciated as an acknowledged authorbecame known and appreciated us an acknowledged authority on the subjects of which it treats. Shortly afterward Mr. Greener received an advantageous offer from a Birmingham house, of a partnership, to superintend the manufacture of a superior description of sporting guns, which he accepted; and, on his leaving Nowcastle, my correspondence with him νĺ

and, on his leaving Nowcastle, my correspondence with him ceased.

The recollection, however, of the discussions I had held with him incited me to endeavor by experiment and calculation to discover some method by which closeness and strength might be combined in such proportion as to enable a fair marksman to bring down his bird with some degree of certainty at distances from fifty yards to seventy yards. I therefore procured a few old gun-barrels, and after spending most of my leisure time for nearly two years in boring and trying, and considerable time in making calculations and diagrams, I succeeded in establishing a formula, from which I deduced the following rule of proportion: First, make the bore a true cylinder; then divide the length into seven equal parts; open the bore at the breech end one part, with one slip of cartridge paper, and again insert the bit one-half part with a second slip; leave four parts cylinder, and open downward from the muzzle two-sevenths, using three slips, so as to make a tapering relief for the charge on leaving the gun. I have bored many barrels upon this principle, and invariably with good results. For example, the following is the record of a trial made leat week of three single gruss bored to this formula twenty-four years ago, and well used during that period. The conditions were those prescribed in Forses And Stream, amonly—40 yards distance, 30-inch target, 14 ounce Canadian soft shot. No. 7 and 23 drs. Hamilton Co.'s diamond grain black powder:

No. of Gun. \* Length. Calibre. Weight. Average, 14 diagrams and 15 described in the part of the conditions were the sum of the sum of the property of the conditions were the sum of the principle, and conditions were those prescribed in Forses and Stream, and the property of the sum of the principle. The outliness of the sum of the principle and the principle and the principle and the principle and the principle and the principle and the principle and the principle and the principle and the principle and the principle and the p

Length. 32in. 35in. 28in. Calibre, No. of Gun. 71b, Soz. 71b, 41b, 14oz. .14

All strong enough to bring down a duck at sixty yards. In my opinion this mode of boring is all that is requisite for ordinary shooting at such game as qualt, partridge, super, wondcock, squirrels, etc., ns a very close-shooting gan is apt to mangle her game at short distances; but for bard shooting at long distances at duck, geese, swams or sea-fowl, the choke-bore is undoubtedly very superior. After reading the accounts of gun trials which have lately appeared in Forest AND STREAM, I became auxious to learn in what 'choke-bore' consisted, and having an opportunity of examining a fine English breech-loading gun belonging to Lieut. Col. Hulme, of this city, I found that, like most good things, it was exceedingly simple and easy of execution. Having in my possession a fine single gan of .11 calibre, 74b. weight, 33in. long, the average of which had been reduced by long, hard work to 97. I tried the experiment of "choking," with the following result, conditions as before, but with 23 drs. powder: First shot, 187; second shot, 186; third shot, 202; fourth shot, 189; average, 191. Nos, 1,2 and 4 were fired under the disadvantage of a strong west wind blowing in gusts across the line of fire. No. 3 was fired in a calm interval.

interval.

Since the above trial I have choked gun No. 2 of the former record, with the effect of raising the average from 133 to 180. Verily choke-boring makes a wonderful improvement in the killing power, and when it becomes generally known and appreciated, every owner and user of a shot-gun will have at least one of his barrels "choked." My powder charges may seem light; but I have found," My powder charges may seem light; but I have found; s may seem light, but I have found that a pa gun requires full one-sixth less powder than a ll one,

JAMES T. BELL

### RUFFED GROUSE SHOOTING.

DUFFED GROUSE and woodcock are here in Western been my go of luck to have been principal or accessory to the killing of eighty-four of the latter. Grouse, however, stand first in my estimation for many reasons. A dog of the proper spirit, highly broken on ruffed grouse, will soon make himself at home on any other game bird; but the reverse of this statement will not hold good—at least such has been my experience.

experience.
I believe that the ruffed grouse of Western Pennsylvania

experience.

The believe that the ruffed grouse of Western Pennsylvania are more difficult to hunt successfully than are the same species elsewhere. Words almost fail to describe the nature of our grouse country. It is grandly wild, and these birds appear to partake of the nature of the country here are spots where snow may be seen until summer, and where I have waded with a noiseless step ankle deep in the velvety moss among the giant pines.

The man who can bag six out of twenty shots through thick and thin, counting every bird within range—that is, no selection of shots—is an artist such as I have rarely seen, although I know a very reputable gentleman who claims to have killed his fourteen successive shots. There is no more interesting sight to me than the variegated, frost-bitten foliage covering the hills as far as the eye can carry, and no greater enjoyment than to swift the bracing air of these enchanting October mornings, and no more glorious music than the whirr and whistle of the rising grouse or cock, especially when out for a day with the dog and gun.

Two or three years ago, while visiting at my old home in New Jersey, a gentleman in speaking of ruffed grouse remarked in my hearing that in the State of Maine these birds would handy give way to the pedestrian, and upon being fushed would almost invariably "tree." Now, I have resided about fourteen years in Western Pennsylvania, and have spent not a little time with the birds of which I write, and excepting during the warm, pleasont weather—say up to Oct, 15—they very seldom "tree" when flushed. On the contrary, after the tirst few frosts a bullet (the only comparison I have in mind at present) is hardly more prompt and direct in its flight.

While the brood are yet young, however, and before seat-

parison! I have in mind at present) is hardly more prompt and direct in its flight.

While the broad are yet young, however, and before seattering, they not infrequently take to the trees, but after the date above mentioned, for every one that will flush into a tree there will be forty that will place a good sixty yards behind them with such astonishing celerity as to rivet the hunter, if he be a novice, with a species of "buck fever."

From this date I would prescribe from 3½ drams to 4½ drams of best powder, and from 1 to 1½ ozs. (according to the calibre) of No.'s 6 or 7 shot, correctly delivered, as being the only legitimate mode of making their closer acquaintance; and even then, many a time and off have I strained my vision in watching one carry away the whole charge, in momentary exwatching one carry away the whole charge, in momentary ex-pectation of section blim fall, but with wings rigid in a death-set float away on the wind by the force of his importus. The breaking of a wing is the only way that I consider certain of dropping him at the shot, and then it wing-broken only, even

with your skillful old setter or pointer, the chances are not largely in your favor, as he is an adept in running and skulk-

FOREST AND STREAM.

larger in your nava, as no seek the property of the first proficient on woodcock, snips and ducks, but for the entire scason, during my initiation into ruffed grouse shooting, my aggregate was but a single bird. Their startling whire as they rose seemed to unnerve me, and before my gun half reached the shoulder my finger would involuntarily find the trigger in spite of all previous resolutions, and I rarely could tell whether I had held within an inch or a yard of the bird Everythine considered, the ruffed grouse, in my opinion, could fell whether I had held within an inch or a yard of the bird. Everything sonsidered, the ruffed grosse, in my opinion, is the noblest of our game birds. He is a handsome fellow, especially as seen in his fall plumage, with ruff and tail spread, strutting after the manner of a cook turkey. A strong natural taste for the sport, with skill and muscle of the highest order in man and dog, is required to hunt him successfully in this section. He is a fine, large fellow, his flesh is clear and white and his gastronomical qualities are excelled by but few birds; and finally, the man and dog who have graduated on ruffed grouse, to quote, are "top sawyers," and may easily take a "place" in any company. My experience shows me that the defamers of Danass unbabliss are usually those persons who have been pitted against the crafty fellows and been found wanting.

"place" in any company. My experience shows me that the defamers of Thomson unfoldus are usually those persons who have been pitted against: the crafty fellows and been found wanting.

Quail suit this sort of person, for his dog may point them under his feet, and the shooting is usually in an open field, excepting perhaps an occasional bunch of brush. Indeed I have heard men tell of having killed their dozen or more straight who failed to average one-sixth of their shots on grouse.

Por a diametrically opposite picture you may have the heavy scrub oak and other dense brush of a hillstide of nearly or quite a 45° slope, or the bottom land along a creck lined equally as thick with alder and other brush, where, in either case, a 25-yards unobstructed view is something unusual; your steady, cautious old dog within, easy range, is carnestly working over the ground as though stepping on eggs, and slowly unraveling the trail. Fancy him now on belly dragging binned or a rotten log, and coming to a halt, for his experienced nose warms him that he may not go further with safety. Now he moves carefully on again, and the uneasy bird flushes with a startled boom, perhaps from an old stump or log, and anywhere from ten yards distant to away beyond range, and disappears like a flash in the very densest of the cover. The throwing up of the gun, the glance over the rib, and pressing of the trigger are simultaneous, yet deliberate; and with the report comes a shower of twigs and leaves as the charge follows closely in his wake, leaving the result in momentary doubt. Or, quite likely, he places a tree in your line of sight so quickly hat it receives the entire charge; or, if it be but a sapling, your blood may tingle with gratification at the cutting down of both tree mit bird together.

Such is the hunting of the grouse, and as the dog brings to hand the result of your successful shot, you feel that you have carned your bird, and you apprectate him accordingly.

There are, of course, many other phases of mifed grouse shooting ar

McKean Co., Oct. 1880.

### GAME REGIONS IN MAINE.

GAME REGIONS IN MAINE.

To those who desire sport with rod and gun, and have but limited means at command, I would recommend Beddington, Washington County, twenty-five niles from the sea-board. The northern settlement consists of four families, farmers on a small scale, who work in the woods winters, and most of them hunters withat. There is no public house kept as such, yet any family would entertain a small party at low rates. For trout, Mopang lake and stream, five niles beyond. Small and medium-sized fish abound, with good casting in mid-stream and banks. The upper and largest lake, reached by a good trait, contains large trout, but it is said they do not bite. It is not known if they have ever been tempted with the fly. There are no boats. During September and October partirige are abundant, and easily obtained. Take the highway, or any of the many tote roads that diverge from the settlement, and a bip bag can be made without striring out of the trail. Later along, after snowfall, the deer shooting cannot be surpassed in any section east of Michigan. A few minutes' walk from the house brings the hunter to a perfect network of deer paths. L. C. Bridgham, an expert still hunter, will entertain small parties with substantial well-cooked food, pleasant room and luxurious bed at the ridiculously low price of \$3 per week, and if his services are required to pilot around to shoot or fish, his weages would be \$4.25 per day, "finding" himself. If his team is called into requisition, a correspondingly low taril. Of course, this will not apply to deer hunting, as at that season he makes his harvest for family support. To reach there, take cars for Portland, thence steamer to Milbridge—fare, \$6. Daily stage to Cherryfield, they miles, fifty cents, where livery is kept by McConldrick, who will take you the twenty miles to Bridgham's at fair rate. Or if the party consists of but one of two, Bridgham would meet by appointment with his own team. Mall facilities from Cherryfield weekly, Wednesday up and return same day. If

Mose River is seventy-five miles north from Skowhegan, Maine. A good stage from Skow to Moose River, and any one can go anywhere on Moose River in a canoe. This would be a good place for "Lower Bunk" and party. The Journal, of Lewiston, gives this report of a party who have been there: "Two weeks ago last Thursday Messrs. L. D. Mariner and W. H. Johnson, of this city, started on a hunting expedition to Moose River. They arrived home to-day, bringing their spoils with them. They had splendid luck, and their account of their adventures is enough to enthuse any lover of sport. They shot three beavers, three minks, one sable, one fox and an army of muskrats, and brought home the skins. They also brought down about seventy

partridges. Among their trophics is a section of popular tree ten inches in diameter, cut off by beavers. They camped partiages. Among their freplies is a section of point ten inches in diameter, cut off by beavers. They e where the beavers had worn a track up a mountain, as hard as a cattle track. The gentlemen depended on their guns for their supply of food, and roughed i the most approved hunters fashion, spending their ev-in watching the beavers build their dams by moonlight

### THE MAINE GAME LAWS.

Editor Forest and Stream

BANGOR, Me., Nov. I.

Bangor, Me., Nov. I.

We call the attention of all proposing to visit the woods of
Maine for sporting purposes, that no trout are allowed to be
killed from the 1st day of October to the 1st day of May Iolowing. But officens of the State are permitted to kill and
take to their own houses for their own use, but not to sell or
market, from the 1st day of February to the 1st day of May.

Trout, Togue, and Land-Leckel Statuno.

Annual close time from October 1 to May 1 following, excepting on the 85. Croix River and its tributaries, and all the waters in
Kennebee County, in which close time is from September 15 to
May 1 following, penalty thirty dollars. "Provided, however,
that during the moutlas of February, March and April, in each
year, it shall be lawful for citizens of this State to fish for, and take
land-locked salmon trout and togue, and convey the same to their
lomes, but not otherwise."

Xo person shall sell expose for sale, or have in possession
with intest as sell, afternoon or retigene between October 1 and
May 1 following, under penalty of fifty dollars for each offene,
and only person or persons having in pressession, except alive,
any of these fish between October 1 and May 1 following, or
who shall transport them from place to place with this State,
who shall transport them from place to place within this State,
shall be deemed to have killed, caught or transported the same
contrary to hav, and be liable to the penalties aforesaid. Chapter
123, 1879.

Moose, deer and caribou are forbidden to be killed or taken

Moose, deer and caribou are forbidden to be killed or taken

Moose, deer and caribou are forbidden to be killed or taken in any manner from the 1st day of January to the 1st day of October following. We append the law, as also in relation to our ruffed grouse, or partridge as commonly called:

Mosse,

of October following. We append the law, as also in relation to our rufled grouse, or partridge as commonly called:

Noose,

Sec. 3. No person shall, after the first day of October in the year of our Lord eighteen hundred and eighty, hunt, kill or destroy, with dogs, any moose within this State, under a penalty of one hundred dollars for overy moose so killed or destroyed; and no person shall, after the first day of October, in each year, in any manner hunt, kill or destroy any moose under the sane penalty of any more many than the penalty as above provided.

Sec. 4. No person shall bunt, kill or destroy, with dogs, any deer or earlbon within this State, under a penalty of forty dollars for overy such deer for carbon so killed or destroyed, and no person shall, between the first day of January and the first day of October, in any manner hunt, kill or destroy any deer or earlbon within this State, under a penalty of forty dollars for overy such deer or carbon so killed or destroyed; and no person shall, between the first day of January and the first day of October, in any manner hunt, kill or destroy any deer or earlbon, under the same penalty as above provided. Any person may lawfully kill any dog found hunting moose, deer or caribon.

Sec. 5. If any person has in his possession.

Penalties for Possession.

Sec. 6. No person shall carry or transport from place to place in this State the carcass or hide, or any part thereof, of any such animal, during the period of time in which the killing of such animal is problided, under a penalty of forty dollars. Chap, 50, 1874.

No person shall kill, sell, or have in personession except alive, any ruffed grouse, commonly called partridge, or wootcoek, between the first day of December and the first day of September following, under a penalty of foul kes and in the salls of the salls and the or have a such as a such as a such as a such as a such as a such as a such as a such as a such as a such as a such as a such as a such as a such as a such as a such as a such as a such

cach bird so killed, or had in possession, or exposes.

12. Chap. 126, 1879.

We wish it to be distinctly and clearly undersood that we shall rigidly enforce to the utmost extent of our power and resources these laws against all parties, whether guides or principals, who shall be guilty of their infraction.

E. M. Stillerle.

Commissioner of Fisheries and Game.

### WILD RICE.

WILD RICE.

I AM prompted to say a word for the benefit of my brother sportsmen on the cultivation of wild rice. Thave lived where it grew for the last thirty-four years and I know someshing about it. There seems to be a desire among sportsmen to introduce this most attractive water-fowl food where it is not natural to grow. Articles in Forense and Steeke seem to me will lead those who are getting seed to plant to failure. Some time ago the Forense and Steeke as spear reach the top and head out at that depth. We have here two distinct varieties. One will head out at three feed deep—a spindling head with little seed. This variety always grows along the margin of rivers and on small small bars or small deposits in two to three feet of water. The other variety, or large species, grows from four to as high as the feet. The largest growth in shallow water from one foot to one inch (general average during summer), and a part the summer no water stands around it, except rain falls and rise of streams therefrom. I have seen stalks six to eight feet this fall in marshes that are mowed every year. I will guarantee that this variety will not reach the surface water and head out planted in six feet depth. There are thousands of spears seen along our views here that die and deeay in four and five feet before the main stock reaches the surface.

F. and S. gives a very correct account except the depth to plant and the time of sprouting. The last two years I have taken pains to die up the mud in our marsh as soon as the cwaffer pain to the mud. This was March 20 to 25. By the first of May it covers the bottom an inch out of the mud. Then bluebills, red-head and other ducks feed on it, so the water is winrowed with fine fillets of it. The growth is slow till it reaches the surface; then one or two leaves lie and float on the surface, as though no head was to appear, for a long time, and, as if by magic, rise up "10 explain," then grow very rapidly till in blossom. There is something about it I propose to still further investiga

about five seasons. This season there is scarcely a spear where the last five years there were hundreds of acres, and this year

the last five years there were numerous of the state open water.

Will some one tell if seed thoroughly dried will grow? It is very soft when it self sows. Let those who plant it remember the strongest plants I ever saw were grown in less than a LUTHON.

St. Joseph, Mich., Oct. 18.

### IN THE CANADA WOODS.

AST Friday F. Miner, M. D., of Honolulu, S. I., and myself, with two guides, took possession of this most pleasant camp with the consent of the owner, Mr. L. Pope Robinson, Que. It is a well-built log-house, with stove and moderate amount of furniture in it, and pleasantly situated in a small clearing on the rising ground west and within a short distance of the "Megautte Bog," which lies along the western base of Meganic Mountain. The camp fronts and gives us a fine view of the various peaks and basin in the mountain and surrounding wilderness. We have already bagged quite a number of ruffed grouse and ducks' and have seen numerous signs of deer and moose, together with most of the fur bearing animals that frequent this Part of the globe.

I have since I came here met one of the readers of Forest And Stream, Mr. L. P. Kenney, of New Hampshire, who is trapping in this vicinity. He reports good success so far, and will remain here until the bog freezes up.

Duck shooting on the St. Lawrence and on Missisquoi Bay,

Duck shooting on the St. Lawrence and on Missisquoi Bay, on Lake Champhain, has been good, and is likely to continue so for some weeks yet. My friend, Mr. Henry Cascau, of Vermont, is having fine sport among the black bass at Bass Lake, Franklin, Vt. He has captured some six-pounders, and they were the small-mouthed variety.

Some two weeks ago Mr. A. F. Dunlop, of Montreal, and myself were duck shooting at the Back River, near St. Rose, when two Montreal amateurs tried to "corner" our wooden decoys, mistaking them for live ducks. One of the cockneys walked boldly down the shore with gun held at an angle of forty-five decrease, while the other went remand the decrease.

walked boldly down the shore with gun held at an angle of forty-five degrees, while the other went around the decoys in the boat, so as to drive them up to bis companion. When he had rowed within about thirty feet of them he began to splash the water with one oar and cry out "Shoo-alt' shoo-alt' shoo-alt'. We then showed ourselves outside the blind, which caused the fellow with the gun to take to his heels; but the cockney in the boat was so paralyzed with anazement that the only reply be could make to our "chaff" was "Aw-oh-aw," as he drifted down the current out of hearing. He, however, recovered his wits and rowed back up stream, picked up his friend, and rowed for the village, where we again saw them that evening talking very loud about rowing natters and Hanlan's probabilities of success in his match with Trickett.

#### TEXAS NOTES.

FROM the time water fowl leave, until their return in the

TROM the time water fowl leave, until their return in the fault, we have no shooting of consequence except at the fow chickens that breed on the low prairies bordering the gulf and later at migrad 3 plover. Quall are now getting plenty on the mainland where there is suitable cover.

During the few cool days last week the market hunters brought in quite a lot of ducks, mostly teal, but in a few weeks more vast flocks can be seen in almost any direction. Jacksmipe have been plenty for several weeks, and later may be found in every wet, marshy place in abundance. They remain until April and afford fine sport.

Your remarks last week about dog sellers and buyers were anusing. I have had allittle experience in that direction. The two most prominent cases were in buying a setter bitch "in whelp" that had not been served at all, at least, the owner of the dog averred that he knew nothing of it. At another time

when the dea accreted that he knew nothing of it. At another time I purchased a pointer bitch "broken by \_\_\_\_, a profession-al." After satisfying myself that she had no breaking, wrote said professional, who denied having broken her. The sportsmen here are much in need of a light draft boat

The sportsmen here are much in need of a light draft boat with side wheels, propelled by steam, to reach the best points in our shallow bays, and to return speedily and with certainty. You referred to such a boat not long since as being built for such a purpose, and if you will tell us more about it you will confer a special favor on the sportsmen of this city. One carrying say fifteen men, and drawing not more than two feet loaded is most suitable for our use. About what would such a craft cost, and what would the expenses of running her per day probably be?

The annual meeting and tournament of the Texas State Sportsmen's Association will take place here in May next and we hope to make it on attractive one.

Caronamy

we hope to make it an attractive one. CARONKAWAY

SABBATH MARAUDERS AGAIN .- Sunday shooters get their deserts in Westchester County. Four persons were arrested last week on the complaint of Geo. Laick, the wide-awake game constable, for shooting on the Sunday previous. They were taken before Justice Bird, who fined them \$5 cach and costs. They were all from Jersey City, and this was not their first offense. Officer Laick has received praise from the local press for his faithful discharge of the duties of his office.

Relative to the above, we have received the following par ticulars from Mr. Saick, which we publish with pleasure both because the action was highly creditable to the game constable and because the result is a salutary warning to others

ble and because the result is a salutary warning to others:

For the last year or two past a party of four and sometimes five have made it a practice to come up here from Jersey City with their dogs and guns, on Saturday nights, to go out shooting on Sunday. They used to go about three miles back of Tarrytown to a friend and stay there over night, As I thought they would come this fall as usual I kept a sharp lookout for them every (Saturday night, and on Saturday, October 16, they came up and warb back in the country in their friend's wagon who was in waiting for them. Early on Sunday morning I took a horse and wagon and statted for the country. I knew they would hunt, and had a good opportunity to see four of them in the field with their dogs and guns, and when they came to the Tarrytown depot, on Monday morning, they were duly arrested and taken before Justice Bird, who fined them five dollars each and costs. After tice Bird, who fined them five dollars each and costs. After they paid the fine the Justice told them that the next time they should learn the law first, and one of them said, "We know the law, but we thought we were all right as long as we

were in a country place." But although, in my opinion, the fine was not large enough, I think they have learned to their sorrow that they must not come to Turrytown to violate the game laws, and I don't shink they will come again. This is the first time that any one has been arrested and paid a fine for violating the game laws in this part of the country since I lived here, which is fourteen years.

George Later, Game Constable.

Canada.—"E. S. M.," of Winchendon, Mass., gives to the Coorier, of that town, the following facts regarding Buck-ingham, a sporting resort in Northwestern Quebec:
"To get to Buckingham the quickest and best route is via Montreal and the O. M. & O. R. R., leaving Boston at 8 o'clock a. W., and arriving at Buchingham the next day at 12:80 noon. At Buckingham, go to the Montreal House kept by J. W. Lynch, who will give you all necessary information and assistance, will take you to the lakes, provide camps, boats, provisions, cooks and guides at very reasonable terms. The ride from Lynch's out to camp is through various secuery and over a very comfortable road of about twenty-four miles, then by boat about a mile, then by portage nearly a mile and a half to boat again, then a mile and a half to camp. From the camp there are five or six lakes, in all a mile and a half to load again, then a mile and a half to camp. From the camp here are five or six lakes, in all about ten miles long, where you can find the red spotted trout, the gray trout, and the black trout, and occasionally one will find them all together, and weighing from half a pound up—up—to where even a fisherman dare not give the weight. Mr. Lynch told me that one was caught at Big lake last fall weighing twenty-one and a half pounds. These, however, were the second or the last fall weighing twenty-one and a half pounds. These, however, are the exceptions, not often seen or caught, but the
kind that are always lost when hooked; but trout of from
one to four or five pounds are plenty, and any one can have
plenty of sport and without going far from camp. The camp
is well kept by Terrence McCabe, and Angus Pierson, his
camp helper, is a good and faithful guide. Trout Lake No.
1, is about five minute's walk back of the camp on another
little stream, and Lakes No. 2 and 8 are above No. 1 on the
same stream. Ducks and partridges are plenty in their
season. A few deer are in the woods about the lakes, but
moose and caribon has been driven from twenty to fifty niles
farther north. The lakes above mentioned are not all the moose and carbon has been driven from twenty to fifty niles farther north. The lakes above mentioned are not all the ones that are accessible to the tourists; within a mile or two of the above are Gull Lake, Hawk; Lake, Lady Lake, and some forty others within a radius of ten miles, and all full of trout. The scenery is be, untiful and grand. Altogether it well pays the sportsman for the trip."

OHO NOTES—Toledo, O., Nov. 24.—I inclose slip from paper: "Yesterday's Cleveland Leader says: Captain Louis Smithight returned yesterday from a three days' shoot at the Ottawa Point Club House, of which he is the founder. He brought back with him 146 ducks of the most nugnificent

at the Ottawa Point Club House, of which he is the founder. He brought back with him 146 ducks of the most magnificent specimens that ever cut the air. Seventy-one of these ducks were shot in four hours during the heavy storm of Friday. The 146 are now distributed among friends, and are on their way to that grateful sepulchre which the true epicurean is always ready to offer to delicious wild fowl."

The duck shooting is very good on all the different club marshes near here. The clubs are having some trouble with trespassers who seem to think all marsh land belongs to Uncle Sam, and that they can just shoot all they wish; but there have been several arrests made lately, and are to come to trial, which will, undoubtedly, settle the trouble. Every day or two I have complaints that people are shooting quail or ducks out of season. There is no one who seems to take any particular interest in stopping this unjust breaking of the law. Our Ohio Legislature should look out and make provision for the protection of game, or in a few years we will have none. Cannot something be done? The great trouble seems to be that members of Congress, etc., are asked if they will enforce the game laws and protect clubs, and if they say yes there is capital made out of it, and they lose votes by it. So it goes with the game.

Washington Territory Notes.—[Extract from Circular 55, received by Prof. Spencer F. Baird, from A. J. Smith, P. M., Quileut, Quileut Co., Washington Territory]:—If the Indians could depend on a steady market to buy their fish, furs and hides, they might become a useful people. The plain Indians are often hungry as a wolf, and often assavage. The coast Indians have plenty to eat and are quite docile. The cost Indians have plenty to eat and are quite docile. The cost Indians have plenty to eat and are quite docile. The cost indians have plenty to eat and are quite docile. The cost Indians have plenty to eat and are fine seal, seal, seal otter. The land with elk, beaver, bear, panther, wildcar, fisher, otter rubbits, wild geese and ducks. Our forest is forty by sixty miles interspersed with small prairies of from one to ten plains of 160 acres. Numerous streams, with waterfalls from five to sixty feet. The timber is fir, spruce, codar and hemlock from one to ten feet in diameter, and from 50 to 300 feet high. Gold is found in our streams, but as yet it has not yet been taken out in paying ameter, and from 50 to 800 feet high. Gold is found in our streams, but as yet it has not yet been taken out in paying quantities. Coal has been found in several places. This almost unknown region abounds in untold wealth of agriculture, minerals, timber and fish. Our population is 43. There is room and wealth for several thousands. We need U. S. Postal Service put on our route to develop the country, and a raffroad which is sure to come. Our coldest weather was in December—20 degrees above zero. Our deepest snow was in January last—20 inches deep, lay one week, the hardest winter for 20 years. Our mountain streams do not freeze over in the winter; fish can be caught all winter. Mt. Olympia is covered with snow the vear round. is covered with snow the year round

GAME ABOUT ROCHESTER-Rochester, N. Y., We have had, and are still enjoying a very favorable season for field sports. In some of my former letters I told your readers what superior woodcock shooting may be had in this vicinity at times. This has been one of the favorable seasons and the number of those favorite birds that have been shot in the counties adjoining this city within the last month almost exceeds belief.

exceeds belief.

There is one market shooter living in the town of Greece, next north of the city, and he has shot enough woodcook this month to make happy forever half a down men who shoot for sport. Early in October he shot thirty-two cocks in one day, and in a day and a half lost week he bagged forty-two woodcock... The unusual number of the birds is accounted day, and in a day and a half last week he bagged forty-two woodcock... The unusual number of the birds is-accounted for by the fact that the great storm in the west and north probably drove the migratory birds from their haunts in the regions visited by the cold, and they flocked in to the pleasanter places of New York. Just before the last flight there was a foot of snow over the State from Batavia, thirty miles west of here, to Buffalo and through Canada. The woods where the cocks are found so abundant are close to the lake, and when the birds cross lake Ontario they are probably tired and stop in the first shelter. There have been more golden

plover with us this season than for many years past. I heard this afternoon that on Friday afternoon last a Rochester man shot thirty-five Wilson snipe on the Montezuma marshes, and that he could have shot a hundred next day if the weather had not turned unfavorable.

Three of us went to Conesus Lake, Livingston County, last week, and as the result of one day's duck shooting brought to bag thirty-one ducks. The day was not favorable, and other circumstances intervened to prevent our doing as well as might have been. One of our party, G. D. B., made a pretty double shot at a pair of redheads, knocking down one with each barrel. They were so big that at first they were taken for canvas backs, but their yellow iris betrayed them. We tried diving decoys, and it was anussing to they were taken for canvas backs, but their yellow ins oc-trayed them. We tried diving decoys, and it was amusing to see how we could toll ducks with the diver. On one occa-sion, just for trial, we led a blue bill directly past our flock of common stools by working the diver, which seemed to excite the curiosity of the living bird to an extraordinary

LANK ORRECHORRE.—In an item headed "Lake Okeechobec," the correspondent says that it is no unusual thing to see 50 or 75 deer in a day's ride. This seems to me drawing it rather long. I have been in that part of Florida (from Rock Spring Creek to the Miami River) on foot, with a hunter born and bred in the State, who was said to know every square foot of land in Florida, and don't believe lever-saw more than 25 deer in one day, and then 13 out of the 25 were at a spring for water. There is plenty of game in Florida, so I see no reason for stretching things so. In speaking of the cruelty of shooting from the deek of a steamboat I would certainly take your view of 18, providing the parties hit anything when they fired. On one trip up the St. John's, from Jacksonville to Melouville, there were four gentlemen on board who fired at least ten shots apiece at an alligator lying perfectly still on the top of the water, and never even made him wink. So it is with most of them, as the good hunters prefer sport that gives them some exercise. I was in Florida from January 1876 to the middle of April the same year, and again from September 1876 to June 1877, so that I have some idea of how much game can be found.

G. W. B.

game can be found. G. W. B.

VISITING SPORTSMEN AND DUCKS—Windom, Minn., Oct., 23.—Editor Forest and Stream: I have just read what "Fairmont Sportsman" says in reply to my criticism upon "Wausce's" recent letter in the Foxest and Stream about the dog poisoning here. I certainly intended no injustice to "Wansee". But his letter contained the sentlinents and expressions of the foreign sportsmen to such an extent that our sportsmen all took it for granted that he was one of others who had made hinself obnoxions to them. At all events he not only did an injustice to our sportsmen but to the community in general, and I see no reason to modify anything in my former letter. If "Wansee" was attempting anything in good faith it was from exparte testimony, evincing a dispositutely nothing. My attempt to "connect Wansee's personal character with the merits of the case" was wholly upon the assumption that he was one of pol-hunters who had been making the unsportsmanilke war upon our chickens.

In reply to your editorial comment as to "whether or not

making the unsportsmanike war upon our chickens. In reply to your editorial comment as to "whether or not we can take our valuable dogs with safety to Windom, Minn., I will say yes with the utmost safety, and their owners will be warmly welcomed also if the outrages upon the country are not repeated.

The duck and groups sensor is now at its best. I have

neverknown the aquatic game so plenty. Saturday I saw fully a thousand white geese rise from a single cornfield, and with a thousand white geese rise from a single cornfield, and wit my companion, lying on my back in the adjacent wheat stubble shot several as they passed over, and for hours they were fly ing over the field like great swarms of ducks. Geese of ever variety are plenty, and the ducks are without number. The storm of the 16th drove the covies mostly south though few yet remain. They have been extremely and nunsuall plenty this fall.

Window Pot-Hunter.

WEIGHT OF RUFFED CROSSE.—Elmira, N. Y., Oct. 25.—
Seeing the note on "The Weight of Ruffed Grouse," by J.
H. M.," in your issue of the 21st inst. and the invitation from
you to others to give their experience, I send you the result of
my observations. I have before me my game account for 1870
and to this time in 1880, in which I have the weights of twenty-three ruffed grouse, the heaviest one showing twenty-five
and three-quarter ounces, an old cockbird shot in November,
'79. I also find the account of thirteen shot in two days in
the middle of December, '79, the weights of which range
from nineteen and a half to twenty-five ounces. Then I have
the weights of six shot just before Christmas, '79. The tree
male birds weighed from twenty-three and a half to twentyfour ounces, and the females from nineteen to nineteen and a
half ounces. From the above it will be seen that as far as my
experience goes our birds will weigh from nineteen to twentyexperience goes our birds will weigh from nineteen to twent experience goes our birds will weigh from nineteen to twenty-five and three-quarter ounces. I also draw the conclusion that the female birds in this section of the State will weigh from nineteen to twenty-one ounces, and the males from twenty-two to twenty-six ounces; although I have not secured any that would turn the scales at twenty-six ounces. I weigh my birds in the same kind of scales used by the post-office department. We have here what we call "old gray backs," the back and tail being gray instead of brown. We do not get more than one in ten of this color, and I am at a loss to account for the difference in coloring, and should be pleased to hear from others of longer and larger experience in regard to the from others of longer and larger experience in regard to from others of longer and larger experience in regard to the matter. Can you account for the heavier weights of the birds mentioned by "J. H. M?" Do they grow larger in that section of the State, or has my limited experience failed to bring any of the "old ones" to bag? As you suggest, let the sports men give us the first of their experience, as it is of much in terest to us all I think.

E. B. G..

-The New Haven Register gives a good re-CONNECTICIT.—The New Haven Register gives a good report of woodcock shooting by sportsmen of that city: "Vesterday was a good day for sportsmen. The birds were moving in large numbers, the air heine cold and the morning-frosty. New Haven sportsmen were on hand to take advantage of the conditions. They went up the Canal road to favorite preserves, to Woodbridge and elsewhere. The result shows that the anticipated diminution of woodcock has, fortunately, not come to pass. More birds will be shot this month than during the remainder of the season. William Peck and Brownell Robertson bagged twenty-from woodcock; the Potter boys twenty birds; Henry and David Cowell ten woodcock and six partridges, and several others seven, eight woodcock and six partridges, and several others seven, eight or nine birds each, mostly woodcock. Mr. Peck has a able dog which yesterday did something rarely witne It had just recovered a dead bird from the cover who pointed at another with the dead bird still in its mouth.

the word he put up the bird which was shot by Mr. Robert-

Detroit Notes—Nos. 1.—The sportsmen continue to come and go, and there is little to record beyond the oft repeated story of an unprecedented abundance of game. This with special reference to the duck hunters, Dave Isaacs of Nisgara Falls and Captain Maioy, and mine the host, McCoy of the American Toronto, have just returned from the North Channel Club (St. Clair Flats) and are now the guests of Mr. James Donaldson of this city. They report big success. Wm. Butts and Dr. Sumner of Rochester, N. Y., have just gone up to the Star Island House for a few day's shooting. Henry Brown of Cleveland and Wm. C. Colburn of Detroit, President of the Lake St. Clair Fishing and Shooting Club, left to-day for Point Monellie on a like expedition, and L. B. Jewell of Hartford, Ct., returned an hour ago with 230 duck (mostly mallard), the result of four days's sport. Three young gentlemen of this city went up to the Ship Canal at the Flats last week, and in less than a day bagged 199 duck from the piers. This week, Jake Wimer of Ningara Falls, New York, accompanied by friend Poole of the Ningara Falls Gasette, and S. T. Murray, go down to Point Monellie as guests of E. H. Gillman.

DEADLI GEAR OLD, HUNTER —The Sun of Wonday less!

DEATH OF AN OLD HUNTER.—The Sun of Monday last announces the death of an old hunter of Pennsylvania, Jonas Schaffer by name, at the age of 70. His death was due to injuries received from a vicious bull by which he was attacked two weeks ago. Our contemporary, in alluding to the death of Mr. Schaffer, says:

of Mr. Schaffer, says:

"Mr. Schaffer is the fourth one of the old time hunters of northern Pennsylvania who have met tragic deaths after years spent among the dangers of hunting and trapping bears and other wild animals. Sile Reeves was killed by a falling tree in Potter County last winter. A short time before that Sid Cody was caught in one of his bear traps in the Porest County woods, and held there until he died and was caten by wild heasts. An old hunter, named Pettingill, was killed by a runaway horse in Monroe county a year or so since. All of these men had narrowly escaped death scores of times in hand-to-hand fights with wounded animals. There are only a few of the old-time hunters left in this region. Jacob Benson, Marcus Killam, one or two of the Kimbles, Fin. Treple and Ed. Quick are among them.

Onto Qual. Law—Woodstock, O., Oct. 26.—Editor Forest and Stream.—I notice in last week's F. and S. a publication which may mislead well-disposed quail hunters. That correspondent affirms the Quail Law is off Nov. 1st, 1880.

All the law I can find on the subject is this: Whoever, in any place, catches, kills; injures, or pursues with such intent any quail (or Virginia partridge), or any prairie chicken, before the (15) fifteenth day of November, 1880, or disturbs or destroys the eggs of any such birds, shall be fined not more than \$30 or less than \$3, or be imprisoned not more than thirty days or both. Act Feb. 21, 1879.

Please correct or furnish us a later law.

T. M. O.

Ruode Island—Newport, R. I., Oct. 27.—The shooting in this vicinity has been good all the season, some shooters getting as many as 23 and 50 plover for the week they were in passing our marsh on their way south. Teal, broadbill and other small water-fowl have been very plenty. John H. Choce had a pair of young black ducks come into his comfield this fall: he caught them and now has them on his farm. They notice a stranger, and you will see them start off at once with one eye on you, and will be sure to keep the proper distance; both fine birds. He is in hopes to breed from them another season.

Occasional. another season.

Game Resours.—1. Answer to F. W. D.'s inquiry for good shooting within 100 miles of New York: At Millford, Del. Write to John Wooters, who will pilot over the country. A license of \$5 is required for Del.

2. Or at Milton, Del. Same license required. There are snipe both at Millford and Milton.

3. W. K. should go to Tallahassee, Fla., and get a pilot to take him about. All kinds of game from this centre. Good boarding.

boarding.

4. Mr. R. M. L. would find Valpariso, Ind., a good centre. Get acquainted with W. Stanton and Fred Gould, of Gould's Hotel. They would show him everywhere, as would Holabird, who resides there. Snipe, ducks, geese, quail and a few

chickens.

4. The Lake View House (Geo. Woods, proprietor) would be a good place for R. M. L. I found this out by reading a letter of a correspondent from Syracuse. You will find duck, plover, snipe, squirrel (gray), rabbit (white), woodcock and partridge. Good guides for \$3 per day. Hotel charge \$1 per day, good food and plenty of it. From New York take Grand Central R. R. to Rome, N. Y., then the Rome, Watertown & Ogdensburg R. R. to Pierrepont Manor, then stage to the hotel on Mexico Bay, Lake Ontario. Through ticket on railroad \$6.95, stage fare, 75 cents. I have just returned from this place and can recommend it. After November 1 you can shoot plenty of rabbit and have good fishing for pickerel. Boats free.

Harrisburg, Pa., Oct. 28.—The Susquehanna River is very low. There are some ducks, but English suipe are very plenty on the flats along the river.

Pennsylvania—Roltston, Oct. 25, 1880.—Game is plenty here but some straggling hunters are slaughtering it before it is fit to kill. The weather is warm and it spoils. J. W. E.

Deer in Pennsylvania—*Coleville*,  $P\alpha$ , Oct. 30.—Owing to the mild winter we had a year ago, deer are getting quite plenty, and occasionally a bear crosses below this place on their old runway. Back ten to twelve miles from Smithport one can find deer, bears, wolves, and in season good trout fishing. So far this season two deer have been shot.

When Should Quall Be Shot—Phila., Oct. 31.—Editor Forest and Stream: Noticing in your issue of F. and S., of October 28, a modest protest from "Homo" against the present Quail Law in this State, I would respectfully add mine, as experience on the 15th of the present month would justify. In nine coveys of birds started that day I found but one covey full grown, and think the first of November early enough in this or any State. W. F. Tappan.

Philadelphia, Oct. 29. - Where are the detectives of the New

Jersey Game Protective Society. Walking along South street to-day I saw many Jersey farmers and hucksters from all parts of Gloucester Co., N. J., with quail and rabbits killed in above county exposed for sale. Your exposure of Dittmar has opened the eyes of many sportsmen in this locality, and they all give you credit for the frauk manner of dealing with the dangerous compound. Ducks plenty on Delaware, and as many as 74 were killed in a day by one party last week near Maiden Island.

J. R.

PENNSYLVANIA.—The character of the game about Clear-field, Pa., may be inferred from the reports of a recent hunt by the gunners of that town, in which the total amount of game killed was as follows: 152 pine squirrels, 24 gray squirrels, 35 black squirrels, 24 pheasants, 1 owl, 1 duck, 2 pig-cons, 3 crows and 1 rabbit. Game of all kinds is scarce. Deer are quite plenty in Forest County. When the river train was passing Trunkeyville recently, according to the On Citty Derrick, a fine one was seen between the railroad and the river bank. When the train came along he made a dash for the river and ran out to a little island, from which point he watched the train sait continued on its way. watched the train as it continued on its way.

watched the train as it continued on its way.

A Canyas-back—Oscego, Oct. 26.—I have sent to you in this mail the head of a duck. I shot the duck a few days ago at our Ontario game preserve at Sandy Creek, Oswego County, N. Y. It has been pronounced a canvas-back, and members of our association are anxious to know just what you pronounce it. The whole body of this duck resembles a broad bill, such as I have secured often at this place; not a light or white feather on him. In the flock that I secured this duck from I brought to bag also six others—two male redhead and four blue-bills, seven in all.

We have a fine preserve, and I never saw ducks more plenty at this season than I was fortunate to get among a few days ago.

J. G. S.

The bird is a female canvas back duck.

Wooncock—Peekskill, N. Y., Oet. 30.—Fall woodcock have been "drawing" from the North in fair numbers for the past few days and some fair bags have been made in this sec-

Snow-bound—Indianapolis, Oct. 30.—I and my party were deprived of our usual fall sport by that terrible snow storm to which "Dell" alludes. Our car was snow-bound for seventy-two hours, and the storm drove all the geese and ducks from that county.

H. G. C.

SIGHLY ISLAND FISHING CLUB.—This organization of thirty members has its club house on a beautiful little island in the Susquehanna River, above Port Deposit. President, Frank S. Shroder; secretary, Col. S. H. Prince; treasurer, A. C.

How is This?-While waiting at Rome for train for New York a gentleman entered into conversation with us and, among other things, spoke of the large quantity of duck killed on Oneida Lake with small cannon, using a charge of 1 lb. of powder to 1½ lb, of shot. Is not this against the law?

Georgia Bear Grounds .- For Southern bear hunting this winter go to Brunswick, Ga. The Altamahaswamp abounds in bears. Although not hunted as regularly as deer, many are nevertheless killed every year. Any of the darkies who hang around the steamboat landing will conduct the stranger to the best grounds.

QUAIL OUT OF SEASON—New York, Oct. 30.—I would like to call the attention of the sportsmen of Freeport, L. I., to the fact that quail have been shot about there in considerable the fact that quall have neen snot amous that in the same in mumbers by the farmers, their excuse being that they did not intend to let N. V. sportsmen get ahead of them. Also around Fort Hamilton, Sundays, the country is alive with gunners.

W. Holdertos.

New Jersey—Little Egg Harbor, Oct. 20.—1 "hear" of the usual numbers of ducks, springtails, broadbills, black ducks, etc., in our bay. The men are not killing a great many as yet, but doubtless will commence doing so in a few days. We have plenty of qualit this season and, with some energetic person to enforce game laws, would have unusually good shooting.

A CHANGE Shor—Hornellsville, N. Y., Oct. 24.—While W. H. Pierce was crossing Hemlock Lake he saw what he supposed was a muskrat. Having his gun he fired, and was surprised to find he had shot a pickerel two feet long with a salmon trout eleven inches long stuck in his throat. Both fish were alive when picked up. Charles Margeson and three others left Oct. 18 for a six weeks' hunting excursion in Northern Michigan.

Hit and Miss.—A correspondent in this week's paper says that the man who can bag six ruffled grouse out of every twenty shots is, in his estimation, "an artist." Some bona fide reports of the relative number of killing shots to the whole number of shots fired would be of interest. It is hardly probable that any sufficient exhibit of statistics could ever be collected to show the average number of shots fired to secure each bird killed. Such a true showing might at least encourage the birds; and we are very sure that it would please the manufacturers of ammunition.

Connectiour.—The good effects of the summer law on woodcock have never been better shown than this season in Connecticut. Cock have been unusually plenty in that State for a week past, and have afforded fair shooting.

Your correspondent, with two friends, went out last week, and on Friday and Saturday the three guns bagged 28 cock, 11 partridges and 8 quail. It commenced to rain heavily on Saturday at 11.4. M., and this spoiled the shooting for the rest of the day. Shall try to send you further reports from the State.

ONTARIO—St. Davids, Oct. 25.—I have not seen game so scarce in years here as it is thisseason, although summer cock were in fair numbers, but where, oh! where are the partridge I used to run across through the August cock shooting? Rabbits are, however, plentiful, but, alas! beagles I have none. St. Davids, where I now write from, is the miles from Niagara Falls and two miles from Queenston Heights. I give you this geographical information so that you may not wear out your spectacles looking for the place on the map, on which it appears in extremely small print. W. W. B.

Bosrox, Oct. 30.—Game is coming in here lively. Bromfield street rejoices. Three Cape Cod deer have taken up their residence temporarily at the Bromfield House, the last a 250 lbs. buck, with antler prongs like needles. A short time ago I had the felicity of a moose steak at the above place. Mine host doesn't know me, but that doesn't matter, for I don't know him either. The big trout mentioned by J. G. Rich in your last was on exhibition at Bradford & Anthony's for a few hours, and it had a back like a whale. I believe it was purchased—for scientific purposes, of course (ahem!)—by Professor Baird.

AFTER ECHOES.—Editor Forest and Stream: Though late in doing so, permit me to express to you my very sincere thanks for your full and able articles on the Dittmar powder. The gratitude of all sportsmen is due to you for your painstaking care in your experiments with the powder, and for pointing out the great danger attending its use. It must have been evident to most men with even a limited knowledge of chemistry, even though they were "not chemists," that the powder was a nitro-cellulose compound, and hence from what was well known of gun cotton, uncertain in its action, and always liable to be disastrous in its results. I never dared to use it, and constantly wondered at others doing so. Again I say most heartily, thanks for the service yon have done us all.

C. B.

—The Lancaster County Game Protective Association, of Pennsylvania, have already paid out over \$70 this season in bounties for hawk and owl heads. They give 50 cents for the former and 25 cents for the emblems of wisdom.

The market men say that the game market is very dull this week on account of the election. A few English snipe have been received from the east end of Long Island, but no other game is coming in.

— "Al. Fresco" informs us that the Windsor Hotel, of Jacksonville, Fla., has been leased by F. H. Orvis, of the Equinox House, Manchester, Vt. The building is being renovated and extensive improvements made. Mr. H. is so well-known in both the North and South that comment is un-

—On the preserves of Lord Derby a powerful gang of poachers, amply provided with brickbats and armed with bludgeons, recently beat off fourteen keepers and police, leaving half of them so seriously injured on the ground as to require the assistance of their comrades, while the poachers went off with their plugder.

—The Springfield, Mass., New England Homestead has a story of an innocent of that city who purchased in New York recently a fine coach dog. By some accident, however, the dog was allowed to run out on a rainy day, and came home minus his spots. The metropolitan dog dealer afterward explained that an umbrella should have accompanied the dog, as the paint was not fast.

—One day in a railway carriage two hunters began to quar-rel. The quarrel in time took such proportions that nothing was left for the belligerents but to fight a duel. It was decided that the weapons should be rifles. On arriving upon the ground the adversaries were placed and the word given to fire. At that instant a lare, attempting to pass, fell struck with two balls! Thus two men escaped death by a single began Author unknown. -Author unknown.

### SHOOTING MATCHES.

### TORONTO GUN CLUB.

THE Toronto Gun Glub's annual shoot took place at the Wood-bine Track on Monday Oct 11 The Track of the Woodbirds, 21 yards rise, 100 yards boundary, 2 traps 10 yards apart the puller being behind the shooters. There were 26 entries some good shooting, although the birds were very lively. I was a gold medal for highest score at match. The following is the score of the first-class shooters :

T. Thompse																				ñ	1 6
W. Villiers																					0-9
H. Millar																				1	1-10
J. Barrett.																		1	1	1	1- 9
T. Taylor																		1	1	1	1- 6
Jos. Taylor																				1	1-8
S. Stanelan																				1	1- S
B. Pearsall																					1- 7
H. Watson.																					0 9
J. Maughar																			1	1	1 8
J. James		٠	٠.		 							ı	1	1	1	1	1	1	0	0	1- 8
W. Bugg																				0	0-6
J. Webster.																1	1	1	1	1	0-8
F. Draper												ŀ	1	1	Ţ	0	1	1	-{1	1	1- 8

The ties to be shot off at 26 yards rise, 3 birds each. In case of a second tie, miss and go out. Mr. H. Millar killed his 3 birds, winning first prize, gold medal and silver water pitcher; Mr. C. C. Small missed his 3d bird, and won second prize, card receiver. Ties of nine, in shooting off—Mr. J. Barrett killed his 3 birds, winning third prize, butter cooler; H. Watson won fourth, fancy considered the second prize, and the second prize of t

large cruet; S. Staneland, seventh, pickle cruet; Joseph Taylor, eighth, pickle cruet
Ties of seven—It being too dark, they decided to toss for ninth and tenth prizes. F. Draper won the ninth prize, fancy toilet set;
J. Manghan, tenth, fancy glass water pitcher.
The following is the score of the second class:

R. Wilson	 1 1 1	0 0 1	1 0	1 1-
W. J. Taylor	 1 1 1	0 1 1	0 1	1 1-8
Dr. Smith				
A. McGregor	 1 1 0	1 1 1	1 1 1	1 0-
A. T. Deacon	 1 1 0	0 1 1	1 0	0 1-
W. Kennedy	 1 1 1	1 1 1	1 1	0 1-4
J. Douglas	 . 1 1 1	1 7 . :	1 1 1	1 9-

J. Douglass.

Ties of nine, in shooting off—W. Kennedy killed his 8 birds, winning first prize, large lose pitcher; Dr. Smith and J. Douglas, in shooting off for-second and third prizes, kept on killing fiber birds, and after each had killed his 6th bird, darkness coming on, they could not finish, so they decided to tose for second and third prizes. Dr. Smith won second, card receiver; J. Douglass won third, butter cooler. I might here say the Ductor, being sixty-five years old, is shooting well.

Ties of eight—On account of darkness, it was decided to tose for fourth and fifth prizes. A. McGregor won fourth prize, single pickle cruet; W. J. Taylor, won lifth, hive dollars' worth of eights. Mr. R. Wilson killed 7 birds, and secured the sixth prize, a large ham.

The following is the score of the third class

depression.

Mr. R. A. Defries having made the lowest score at the shoot, se-ured three prizes which were donated for the lowest score in the match, being a very line energy bird and cage, a bottle of wine and

a ham.

The prizes were presented to the successful winners by the President of the club on Saturday evening, the 16th inst, at a special meeting of the club called for that business. After the presentation there was a very pleasant evening spent.

J. B. G.

Omo, Cincinnali, Oct. 26.—The following are the scores of two matches recently shot at Lockland, Ohio, under the auspices of the Lockland Shooting Club. The prizes put up were a \$75 Colt gun and a Hollis gun valued at \$45. The former was won by Wm. coinf, and the latter by J. C. Whetstone, both members of the Cin innati Gun Club. The birds were A1, and a strong wind blowing made the shooting very difficult. The matches were shot at 26 yards rise, out of Hawe's traps. Score of first match:

WESTMINSTER KENNEL CLUB,-The regular monthly shoot of the Westminster Kennel Club for the silver cup took place on Saturday last, Oct. 30, at Erb's, Newark, N. J. In spite of the bad weather nine contestants appeared at the traps, and the shooting in view of the fact that it rained hard all the time, was very good.

The following is a summary:

Regular mouthly contest of the Westminster Kennel Club for

silver cup, shot for at twenty birds each from five ground traps, handicapped rise, eighty yards boundary, Hurlingham rules.

Wallingford Explairs .- We have received from the Wallingford, Conn, Gun Club, in reply to an article recently published re-flecting upon that club's action, the following statement of facts:

ford, Conn., Gun Club, in reply to an article recently published reflecting upon that club's action, the following statement of facts:

Last spring the Wallingford Club received an invitation to shood a friendly match at glass balls with the New Haven Club. The invitation was necepted and the match shot, resulting in New Havens defeat. Before this, however, the New Haven Club had been informed that the Wallingford Club bould only-shoot on Wednesdays or formed that the Wallingford Club bould only-shoot on Wednesdays of the Article State of the Wallingford Club grounds on Wednesday of a certain week, and maned 10 a. M as the time to begin said match. Wednesday inorning, however, was cloudy, and the New Haven Club halled to put in an appearance at the hour named (presumably) on that account, but sent a telegram about 11 a. M., saying they would be in Wallingford at 11:30. Now, one of the Wallingford Club's best shots lives four miles from the centre, and it was impossible to get word to time in time for the shooting, so substituted a hereaber who word to time in time for the shooting, so substituted a hereaber who word to time in time for the shooting, so substituted a hereaber who in the shooting, so substituted a hereaber who have hereafted the bave emerioned days, and said oth), after waiting upin on which continues the hove-mentioned days, and said oth), after waiting upin a while, sent word to Wallingford that they would shoot the deciding that hall be a shooting the inability of the Wallingford club to shoot on that day. Word was sent them that Wallingford could not shoot on that day. Word was sent them that Wallingford club to shoot on that day. Word was sent them that Wallingford could not shoot on that day tun on notice was taken of it, and programmes were sent about announcing the time shooting, so and will not club to they were always and the shoot of the deciding that hall the wallingford could not shoot on that day. Word was sent them that Wallingford could not shoot on that day but no notice was take

National American Kennel Club's Second Annual Field Trials, Vincennes, Ind., Nov., 15th. Chas. De Ronge, Secretary, 51 Broad street, New York. Eastern Field Trials (Jub's Second Annual Trials, Robins Island Reconte Bay, L. I., Nov. 29. Jacob Pentz, Secretary, New York.

### THE PENNSYLVANIA FIELD TRIALS.

I'N last week's issue we gave the official entry list of the trials, the braces which had been drawn to run in the All-aged Stakes, and the details of the first day's running at All-aged Stakes, and the details of the first day's running at Quarryville, Lancaster County, Pa., where Brown's Dash and Thunder each won a heat, and the heat between Countess and Button remained unfinished. We now append the remainder of the running until the end of the fourth day of the muffinished trials, when the stakes were divided on account of the rough, rainy weather and the scarcily of great

birds: Weddesday, October 27.

All-agat States at \$18 each. First prize, \$100; second prize, \$50, and third prize, \$25.

Mr. H. C. Steahman's red setter dog Pat II., by York Countess, whelped July 29, 1878.

Mr. S. S. Brown's roan setter dog Dash by -----, whelped

Mr. S. S. Brown's roan setter dog Dash l y — — — , whelped 1876.
Mr. L. R. Stayton's b'k w and tan setter dog Belton 111., by Belton-Floss, whelped June 5, 1878.
Mr. L. R. Shrister, Jr.'s, b'k w and tan setter bitch by Cornelia, by Leicester-Dart, whelped March 23, 1877.
Mr. J. J. Snellenburg's blue belton setter dog Thunder, by Pride of the Border-Fairy III., whelped May 7, 1877.
Mr. Isaac Yearsley, Jr.'s, b'k and w setter bitch Roscy, by Leicester-Sanborn's Nellie, whelped two years.
Mr. F. A. Diffenderffer's b'k and w setter bitch Leah, by Roybel-Livye III., whelped October, 1879.
Mr. J. J. Snellenburg's b'k and w setter bitch May Laverack, by Thunder Spot, whelped June 19, 1879.
Mr. F. W. Seller's b'k w and tan setter dog King Dash, by Belton-Floss, whelped June 5, 1878.
Mr. Isaac Yearsley, Jr.'s, b'k and w setter bitch Countess, Leicester-Vecaloutas, whelped Jun 5, 1878.
Mr. Isaac Yearsley, Jr.'s, b'k and w setter bitch Countess, Leicester-Vecaloutas, whelped Jun 5, 1878.

Mr. J. J. Snedenburg s in and w pointer dog Button, by Dod-Bin, whichyed 1873.
Mr. W. L. McCounells's lem and w setter bitch Lady Laverack, by Thunder-Peeress, whelped June 29, 1879.
Mr. Isaac Yearsley, Jr. ś., b'k and w setter bitch Little Lady, by Dash III. Rosey, whelped July 7, 1879.
Mr. Wm. Seager's b'k w and han setter dog Doctor, by McDona's Ranger-Pera, whelped 1878.
Mr. H. G. Sheahman's red setter bitch Biddic, by York-Countess, whelped July 29, 1878.

The running was as follows:

Ine rulling was storiows: Steahman's Pat II. against Brown's Dash. Stayton's Belton III. against Shuster's Cornelia. Snellenburg's Thunder aganst Yearsley's Roxey. Diffenderffer's Leah against Horlienburg's May Laverack. Seiler's Dash against Horlirick's King Dash. Yearsley's Countess against Snellenburg's Button. McConnell's Lady Laverack against Yearsley's Little Lady. Seager's Doctor against Steahman's Biddie.

On account of the searcity of birds at Quarryville a change locality had been deemed expedient, and at 7:30 a, m, an

early start was made from the Stevens House at Lancaster, the sportsmen's headquarters for the new grounds in the burough of Mankheim, ten miles north of the city of Lancaster. Owing to some misunderstanding, the dogs which had been left the previous evening at Quarryville were sent on without their handlers. This caused considerable delay, and it was fully two o'clock before the judges selected the grounds, and the special train, which had been sent back for the handlers, brought them to the meet. On their arrival not time was lost in ordering down the brace, Countess and Button, to decide their unfinished heat. As on the day previous, the former was handled by T. E. Smith and the latter by his owner. The beat began in a narrow strip of meadow, which was drawn blank. If Countess had won the administion of the hield the evening before, she certainly received an ovation as sin resumed her work. She is by far the most charmingly hatural little setter bitch we have ever seen in the field. Although but small in size, her springy gait makes her have the appearance of being a much larger dog. She is as rapid a goer as is possible to conceive, and her style, ranging and quartering superb. All she needs is a firm hand and plenty of work in a good game section, and she will be found at the fore in company with the best of them. After a fruitless search of over an hour on the least likely looking quality country we ever saw, seven birds were moved from the corner of a grass field and marked into a patch of open early start was made from the Stevens House at Lancaster. less search of over an hour on the least likely looking qual-country we ever saw, seven birds were moved from the corner of a grass field and marked into a patch of open woods. Upon being ordered across the fence, Button point-ed, drew on and located his birds, and pointed stanuchly, the birds lying in the dry leaves. Countess was jealously working to one side of the pointer at the time. The gun was ordered to flush, and the heat was given to Button. DiffenderHer's Leah and Snellenburg's May Laverack were next called, but as the former was excusably absent, Sciler's Dash, a fine looking dog, and Hendrick's King Dash came next. A retrograde movement was made to the starting point, where a large bevy had been reported to have been moved

Diffenderfer's Leah and Snellenburg's May Laverack were
next called, but as the former was excusably absent, Seifer's
Dash, a fine looking dog, and Hendrick's King Dash came
next. A retrograde movement was made to the starting point,
where a large bevy had been reported to have been moved
and marked into a thick woods. The brace was ordered
down upon reaching the spot and given a preliminary run in
un adjoining field before being sent to the woods. King
Dash, handled by H. M. Short, showed himself to be the
much faster dog, while Seller's Dash, handled by Wm. Seiler,
son of the owner, scened out of sorts and needled a deal of
pushing. The weather had now become threatening and
dark, the wind blowing steadily from the west northwest.
On entering the woods, King Dash showed to be under perfect command, reflecting great credit on his breaker and
handler. He ranged excellently, head well up, and quartered
his ground with well-ludged precition his breaker and
handler. He ranged excellently, head well up, and quartered

handler. He ranged excellently, head
handler. H bane of American sporting events, and more particularly in this case, for since field trials were first run inany country, never before did judges have such a thankless or more arduous task mapped out for them. The scarcity of birds, the little progress that had been made, and the waning hours stared them in the face even after they had been working like Trojans to run the trials off. But there is a vast difference between errors of the heart and head, and we cannot let this matter pass in justice to both judges and the owners of the dogs without expressing it from our light a most premature decision. After a careful consideration of the subject we believe it to have been entirely an error of judgment, and we wish that the matter could lie buried here. Unfortunately the matter did not end here, as it most certainly would had the judges later on adhered to their decision as they should have done. We shall therefore express our views on their subsequent action as freely as possible at this place, and not refer to the matter again. Upon returning to the Steven's House at Lancaster a meeting was held, and the upshot was that the judges announced that they had reconsidered their decision made on the ground, and had decided to order down the brace the fellowing morning and give the dogs another try. Admitting

for argument's sake an erroneous award in this case we comfor argument's sake an erroneous award in this case we consider the precedent of changing a decision a very bad one. In this case it was particularly unfortunate, for it was the first decision of the meeting that had been openly announced In this case it was particularly unfortunate, for it was the first decision of the meeting that had been openly announced to the whole field. We consider re-judging should be discouraged by all those who do not wish to see our trials and shows turned into been gardens simply because Mr. Smith or Mr. Robinson thinks he has been aggrieved. Up to this time there never was a set of judges in America who land shown themselves more competent to judge or had greater confidence from every one present. Next morning the brace and handlers were on the ground, but as we state further on the rain prevented the running of the trials, on Thursday Mr. Sielercamae on to Manheim from Harrisburg, and in the afternoon was obliged to return home, and his son decided to go with him and take the dog. Just before entering the cars Mr. Seiler was informed that the judges had again reversed their decision, and that his dog had been awarded the heat, and Mr. Hendricks was told that King Dash would be permitted to run for second and the money. These are the simple facts of the case as they occurred, and as the committee of the association determined not to make public the score of points which we consider should have been done, we refrain from criticising it as it was not handed to us officially. In conclusion we will say, that though it is a matter of great regret that anything should have occurred to mar the pleasure of the meeting, yet it is no surprise to us that errors should occur as long as our Field Trial rules remained conclud in the language in which they are presented. We cannot do better, therefore, than quote from our editorial remarks in Folessy AND Syrgam of September 2. Had our words of warning been heeded this occurrence would never have happened:

warning been heeded this occurrence would never have nappened:

No laws for competitions of this kind can be too fully or plainly expressed. They should be explicit and admit of but one construction. The street was a construction of the construct

might find himself sorely tried.

To resume. Mr. McConnell's Lady Laverack and Mr. Israel Carlot of the Mr. McConnell's Lady Laverack and Mr. To resume. Mr. McConnell's Lady Laverack and Mr. Israel Carlot of the Mr. Lady were called, and as the former did not respond, Doctor, belonging to G. B. McLane, Pittsburg, Pat, handled by Wm. Seager and Biddie by T. W. Ferrington, were slipped. Across the glade Doctor went like a flash, showing himself a merry going dog of good speed. He soon brought up standing on a cat, and Biddie ran in from across the meadow refusing to back. Both dogs were under good command, but Doctor had it his own way from the start, showing a good notion how to quarter his ground. In a little spongy gully in a cornified Doctor straightened himself out, and firer drawing a few steps on, pointed in excellent style. The birds were flushed by the gun, and two were killed by one discharge. Owing to the fault of his handler, who should have steadied him, Doctor broke shot and retrieved one bird, and the other fairly at command. Doctor, further on in a springy glade, made a false point, but went on. He then ran down wind in a rag grassfield, flushed one bird, and in quartering back came to a point on the bevy as it jumped. In the same field Doctor roaded and pointed where birds had been running, Biddie moved up and shared the point, refusing to back. Doctor then flushed. Biddie then nosed a bird up which she should have pointed, and the heat went to Doctor. It had now grown quite dark, and a move was made to the railway station, and 8:30 r. x. saw the party back at the Sievens House at Laucaster.

Although rain was falling on the back is the sale task.

### THURSDAY, OCTOBER 28.

THURSDAY, OCTOBER 28.

Although rain was falling quite heavily, an early start was made at 7:50 Å. M. for Manheim. As the weather did not clear, the party returned to Lancaster by the L.E. M, train, and the afternoon was devoted to visiting Mr. C. Z. Miley's large kennel of dogs and a call upon Mr. Vondersmith, whom we found away from home. On our way back to the hotel we were met by Mr. F. A. Diffenderffer, who invited us to look at his kennel. There we-found his two first-class bitches, Leah, Roybell-Livy II., and Armida, Leicester-Pocohontas, and two very likely puppies by Roscoe out of Armida.

FROMAN, October 29.

and two very likely puppies by Roscoe out of Armida.

FRIDAY, OCTOBER 29.

In spite of a dripping morning, with the whole country shrouded in a fog, the 7:50 a. M. train was taken for Manheim station. The start was achieveless a one as it is possible to conceive, the judges and the majority of spectators had donned their rubber coats, and the dogs had a listless look except when shaking the water from their coats. The ground heing reached, the same where the running ended on Wedneslay evening, it was found that Diffenderfler's Leah and McConnell's Lady Laverack had been withdrawn, and that Shuster's Cornella had falled to put in an appearance. This brought Stayton's Belton III., and Yearsley's Little Lady together, May Laverack having the bye. Belton was handled by H. M. Short, and Little Lady by her owner. The dogs were slipped at ten o'clock in the rag-weed field above the glade. Both dogs were off like a shot, the little bitch being a stylish and rapid goer, and Belton settling at once to his work. At the lower end of the field Belton pointed a good sized bery, which flushed as the gun came up, not lying well on the cold and wet limestone chippings. The bevy dropped apparently in the bottom. On the other side of the bottom, in some woods, Belton, who was under good command, pointed in some long grass and stood very staunchly in an awkward position. Lady was called up to back, and Belton settled down on his point. Lady refused to back, and passed between Belton and the bird, and circled round him. The grown's Dash, winner of first heat in the stakes, and Mr. Broelwher's May Laverade.

promptly to shot, but retrieved the bird in style and was awarded the hent.

Mr. Brown's Dash, winner of first heat in the stakes, and Mr. Snellenburg's May Lawerack, who had a bye, were then run together, both dogs being mavoidably handled by H. M. Sbort. The dogs were given a spin in the bottom, and then ordered back into the woods, which was drawn blank. May

showed up at once as a very speedy bitch, but Dash seemed stale. He began by flushing a bird in the bottom, but dropped well to wing. The dogs we've sent into some thick alders along a little stream, where the bird had been marked, and where it was impossible to see the dogs at work. The bird was flushed presumably by Dash. It was marked down in a corn lot, but both dogs failed to make it out. The bird was then trodden upon by a spectator, and May pointed where it had been moved. Dash pointed the bird in the alders under a mass of drift stuff, and when the gun came up, jumped in and caught it. The glade was followed up into a ravine, and many fields of grass and rag-weed were drawn blank. The party then adjourned to a barn and partook of an excellent luncheon, which had been sent on by mine host, Mr. A. Hiestand, of the Stevens House. On resuming, Dash made an uncertain point in the first field of the morning, and May went in and flushed. It was a bad day to work any dog. There was but little air stirring, and that from the east; everything recked with dampness. After the dogs had been down over three hours, the judges, who had been working untiringly for a result, asked the representative of the owner of Dash and Mr. Shellenburg if they would be content with a decision as the score stood at that time. It was agreed to, and May was awarded the heat. It may be said that Short bandled both dogs with great fairness, and the owners cannot be otherwise than satisfied with the decision, and the by his owner, and McLane's Doctor, handled by Wn. Seager. Thunder showed the same good ranging and quartering qualities as on the first day. He is an excellent dog, and we be.

The next brace run was Snellenburg's Thunder, hondled by his owner, and McLane's Doctor, handled by Wm. Seager. Thunder showed the same good ranging and quartering qualities as on the first day. He is an excellent dog, and we helieve the first pure Lavernek ever run in an American field trial. After a vast range of ground had been' drawn blank, a meeting was called on the ground of members of the association and contestants. Mr. Stayton, secretary of the P. S. F. T. Associor, offered a resolution, as follows: "That on account of the scarcity of birds, the unpromising weather and the closing hours of the last day of the trials, it being impossible to run them off, the first prize of \$100 in the All-aged Stakes should be equally divided among those dogs by virtue of their positions, who were entitled to compete for first prize; and that the second and third prizes in the All-aged Stakes be pooled and equally divided among those dogs remaining in the stakes." The motion was seconded by Mr. Diffenderffer, and then put to a vote, which was carried unanimously, the following gentlemen voting in the affirmative: Messrs. Snellenburg, Stayton, Yearsley, Seager, Hendricks, Diffenderffer, Farrington and McConnell.

Division of First Prize, 820 each—Thunder, Button, May Laverack, Doctor and Belton.

Division of Second and Third Prizes, \$10.71 each—Pat II..

Biddie, Brown's Dash, Countess, Roxey, Little Lady and King Dash.

Withdrawals—Lady Laverack, Leah and Seiler's Dash.

ng Dasn. Withdrawals—Lady Laverack, Leah and Seiler's Dash.

Mightawals—Lady Laverack, Leah and Seiler's Dash. Absent—Cornelia and Minerva. Upon returning to Lancaster a meeting was held, and it was decided by the committee to pool the prizes in each of the Puppy and Nursery Stakes, and the divisions were made as follows: Puppy Stakes, 29 each—Bess, Little Lady, Mack, Diek Laverack, Daisy Laverack, May Laverack, Count, Lady Laverack, Daisy Laverack, My Laverack, Count, Lady Laverack, Roxey Boy and Abbey W. Absent—Dart, Bob and Ned. Nursery Stakes, \$22.50—Dolly Edwin, Smart, Pet Laverack and Lu Laverack. It was also decided to tender to the gentlemen of the association the return of their entrance fee of \$10, and to offer the return of the donation prizes to Messrs. James E. Caldwell & Co., of Philadelphia, and Mr. T. G. Conway, of New York.

The party then met at supper for the hast time, and the evening trains going both East and West carried the judges, contestants and visitors to their respective homes.

We desire to return thanks to the local press of Laucaster

We desire to return thanks to the local press of Lancaster for many courtesies extended to us during our stay in that

#### PENNSYLVANIA STATE FIELD TRIALS ASSOCIA TION.

PENNSYLVANIA STATE FIELD TRIALS ASSOCIATION.

THE annual meeting of this organization was held on Tuesday, October 26, at 8:30 p. m., the evening of the first day of the trials, at the Stevens House, Lancaster, Pa., J. Palmer O'Neil, President, in the chair. The minutes of the previous meeting were read and adopted, the Secretary's report read and that of the Treasurer, which showed a balance on hand of \$412.45 obtained from membership dues, entrance fees and donations. The President then rose and stated that as the Forder and Stream and written the organization to know the reason why the National American Kennel Club's Field Trials rules had been somewhat altered by the Pennsylvania Association, he deemed an explanation at that time but proper. He had taken the liberty of changing the running rules, because the National Trials were run in the West on large prairies, where pace and ranging were of more importance than on the inclosed farm lauds of Pennsylvania. He had, therefore, taken five from pace and one from ranging, and added two points each to staunchness, quartering and obedience and disposition. Slight changes had also been made in the negative points for demerits which were found to be expedient.

The meeting then proceeded to the election of officers with the following result: President, J. Palmer O'Neil, Pittsburgh, Pa.; Treasurer, Frank A. Diffenderfer, Lancaster, Pa. (re-elected): Secretary, I. R. Stayton, 67 Fourth avenue, Pittsburgh, Pa.; Teasurer, Frank A. Diffenderfer, Lancaster, Pa., (re-elected): Secretary, I. R. Stayton, 67 Fourth avenue, Pittsburgh, Pa.; S. D. Thompson, Pittsburgh, Pa.; S. D. Thompson, Pittsburgh, Pa.; S. D. Thompson, Pittsburgh, Pa.; S. D. Thompson, Pittsburgh, Pa.; S. D. Thompson, Pittsburgh, Pa.; S. D. Thompson, Pittsburgh, Pa.; S. S. D. Thompson, Pittsburgh, Pa.; S. S. D. Thompson, Pittsburgh, Pa.; S. S. D. Thompson, Pittsburgh, Pa.; S. S. Thompson, Pittsburgh, Pa.; S. S. Thompson, Pittsburgh, Pa.; S. S. D. Thompson, Pittsburgh, Pa.; S. S. D. Thompson, Pittsburgh, Pa.;

Ouarryville, who was a brother member with himself of the Lancaster County Game Protective Association, that the grounds should be strictly preserved for the trials, but that he had learned from five sources of information that the party had broken faith with him, and that the birds had been shot

at since the opening of the season. Alderman A. K. Spurrier, President of the County Association, corroborated this statement, and said that he felt aggrieved; that the near referred to had not only allowed his friends to shoot over the grounds but had done so himself, that Mr. Diffenderifer had drawn the grounds before the open season, and had found birds in large numbers on the beat, and that he was promised they should be left unmolested. A change of base was then decided upon and the burrough of Manheim, ten miles north of Lancaster, was selected as the locality in which to continue the trials

the trials. While the meeting was in progress the Pennsylvania Association received a telegram from W. A. Dunishee, President of the McKeesport Game Protective Association, offering their preserve of thirty-five lundred acres for next year's trials. The President was authorized to appoint a committee

trials. The President was authorized to appenin a commince to select the location for next year's trials.

A vote of thanks was tendered to Mesers, James E. Cald well & Co., of Philadelphia, for their donation of a prize in the shape of a solid silver cup, and to Mr. T. G. Conway, of New York, for the donation of a handsome gold and silver

mounted revolver.

After a lively discussion on the practicability of allowing non-residents of the State to contest in the future, on which nothing was done, the meeting adjourned.

### COCKER SPANIELS.

CHICAGO, Oct. 25.

Editor Forest and Stream:

COCKER SPANIELS.

CRICAGO, Oct. 25.

Editor Forest and Streem:

In your last issue appeared an article under the heading of "Modern Cocker Spanies," from Mr. A. C. Waddell, of Topka, Kansa. This article was brought out, no doubt, by the very landable request of G. J. D. McDougall to breeders of this strain of spaniels to give their views of the type of the modern cocker, that some definite standard might be azreed on by which to judge the breed at bench shows in this country. "Stonehenges" standard, to some whose breed did not correspond with it, not being satisfactory, "Idstone," in list work on the dog, says: "The forms and colors of cockers are all matters of fancy and fashion, but I may caution those who desire to have them that they must not expect a very great amount of work from them unless they are of adequate size." "Stonehenge" says: "The title 'cocker' includes every variety of field spaniel except the Sussex and Clumber." Now to whom are we to refer as to what the modern cocker is or should be? Shall it be to Mr. Waddell or to such well-known authority as: "Stonehenge?" For one, knowing how Mr. Waddell's dogs are bred, Ishould prefer the former.

I beg to correct one statement he makes: "To call such dogs as Whitmau's cockers is a farce: they are merely bandsome English spaniels. I am opposed to cockers running over twenty-five pounds, and when Mr. Whitman exhibited his at St. Louis—liver and whites that would run near to, if not quite, forty pounds—I said English field spaniels, or, as some call them, English water spaniels."

Now, the first cockers I exhibited at St. Louis, liver and white, were the dog Dick and bitted Dixic—both I considered quite handsome and good. They both won first prize in their respective ethe dog Dick and bitted Dixic—both I considered quite handsome and good. They both won first prize in their respective ethe dog Dick and bitted Dixic—both I considered quite handsome and good. They both won first prize in their respective ethes dogs are readed and the hand and it entered

Notes from Foreign Exchanges.—The Royal Society for the Prevention of Cruelty to Animals, of London, England, October 14, had one James Smith, a log dealer, arrested for biting off the tails of five King Charles spaniels. Mr. Cattral, a member of the College of Veterinary Surgeons, testified to having examined the dogs, and found that inflammation had set in. He looked upon the biting off of the tails as an operation both painful and unnecessary, as part of the spinal marrow would be taken away, and that at the expense of a terrific nervous shock. He further stated that he had never heard that it cured distemper, and that the act was one of cruelty. The defense set up a plea of general custom, and that the operation was performed on thousands of fox terriers. Alderman Sir Thomas Gabriel, in giving his decision, said that though the charge was one of cruelty, no one could suppose that it was wilful, or that a man would injure his own property, and fined the defendant the nominal fine of one shilling and costs. The editor of the Field renurks as follows: "The statement in evidence that 'part of the spinal marrow is tasken away' is contrary to fact. The spinal marrow is tasken away' is contrary to fact. The spinal Notes from Foreign Exchanges.—The Royal Society for one shilling and costs. The cuttor of the relation of the spinal marrow is taken away' is contrary to fact. The spinal marrow is taken away' is contrary to fact. The spinal marrow does not extend even to the root of the tail, and it is only the bodies of the vertebræ (without any cavity for the nerves, or neural canal) that enter into the formation of that organ. Still there is no necessity whatever for biting off the end of the tail, seeing that it can be removed in a much more painless way by the knife."

Mr. Macdona has lost his pointer bitch, Dido, who was doubly valuable to her owner, as she was the only daughter

Mr. Macdona has lost his pointer often, Dulo, who was doubly valuable to her owner, as she was the only daughter of Garth's Drake in his possession. She, however, leaves behind her three pups, Drummer Boy, Desdemona and Dulcimer, by Lord Sefton's Drake, by Sam, out of Lord Sefton's Morn.

The Goathland farmers have been amusing themselves of the racing hounds under the following conditions - A trail

is carried across country and the hounds laid on, the first arriving at the further end receiving the prize.

Dr. Jarvis' New Importation.—The steamer Bolivia, which reached this port on October 25, had on board a magnificent red Irish setter bitch from the kennels of Mr. James I. Giltrap, of Dublin, Ireland, for Dr. Wn. Jarvis, of Claremont, N. H. The bitch arrived in fine condition and was forwarded at once to Dr. Jarvis by Mr. E. B. Goldsmith, the well-known forwarding agent, who writes us that she is one of the finest-looking animals he ever saw.

of the finest-tooking animus me CCC series.

ESSEX COUNTY HUNT.—The following are the meets for the balance of the month (with the exception of Thanksgiving Day, for which a special notice will be issued) Saturday, Nov. 6th, at 3:30 r. м., Mr. Collamore's, Northield Road, Ormage; Wednesday, Nov. 10, at 3:30 r. м., Ridgewood Station; Saturday, Nov. 13, at 3:00 r. м., Ilamilton House, Paterson; Wednesday, Nov. 17, at 3:30 r. м., School-House, Montclair; Saturday, Nov. 20, at 3:00 r. м., Franklin.

Biz.—There was one dog entered in the Association Stakes, at the Pennsylvania Field Trials, which we should have liked to see run, and that was Mr. J. L. McIntosh's very handsome red setter dog, Biz. The owner kindly gave us an opportunity of seeing the dog range and quarter, and we must say that he performed his work to perfection. Biz was broken by Mr. Chubb, of Cleveland, Ohio, and is out of Flora by Dash, first prize winner's each at New York Dog Show, 1878.

### KENNEL NOTES.

KENNEL NOTES.

Names Claimed—Madia.—Mr. N. Elmore claims the name of Madia for English hare beagle, whelped June 11, 1880, out of Lucy (Inno-Cold Beas) by Victor (Rattler-Bine Bell). Flate.—Mr. N. Elmore claims the name of Einte for a white, black and tan English hare beagle dog, out of J. N. Dodges 'Brue by Rattler. Sales—Belle.—Mr. C. Z. Miley, of Laucaster, Fa., has sool blue Bellon setter bich Belle (Tride of the Border-Rivey) Mr. H. B. Harrisch, thisehoung, sillen Prince-Nettonitz) in Mrely to State of the Mr. B. J. Glane Prince-Nettonitz) in whelp to Count Border to Mr. E. Jacobs, Schma, Ma. Ruth.—Mr. C. Z. Miley has sold blewellin setter bitch Ruth, in whelp to Count Boval, to Dr. E. C. Franklin, and Arbor, Mich. Shot.—Mr. C. Z. Miley has sold orangeand white pointer-Shot to Mr. H. Howell, Lancaster, Pa. and a black, white and tan setter dog puppy to Mr. Frank Diffenderffer, Lancaster, Pa. Ton.—Mr. C. Z. Miley has sold red Irish setter Yon to Mr. O. A. Altey, Marietia, Ohro, Frank.—Mr. George Van Steenburgh, of Red Hook, N. Y. Jacob, Bellow J. L. Jacob, J. L. Jacob, J. L. Jacob, J.

Princeton, Kansas.
WIRI, 189—Grace,—Mr. E. F. Merceilott's (New York City) chamrion bitch Grace whelped on Oct. 26, eighteen pupples, thirteen dogs and five bitches, by Mr. P. H. Morris champion Czar. A most unusual litter, all dead but five. Floss.—Mr. C. Z. Miley's imported red Irish setter bitch Floss whelped, on Oct. 22, eight pupples, all dogs, by Yon. Belle.—Mr. C. Z. Miley's Llewellin setter bitch Belle whelped, on Oct. 23, nine pupples, five dogs and four bitches, by Count Royal. Belle.—Mr. Burr Holls' black and tan Burdette ocker bitch Belle (formerly Waddell's Bello), Hubbell's Blanche out of Hubbell's Bean, wholped, Oct. 38 x pupples—Gur dogs and two bitches—by Holls Wildart, Waddell's Belse-Wiltmann S.

### The Bifle.

### RANGE AND GALLERY.

MAMMOTH RIPLE GALLERY-Boston, Oct. 29 .- The fourth and last week in the Inaugural Rifle Match has outranked all others in last week in the Inaugural Inte Match has outranked all others in fine shooting, and the competition has been lively and interesting.

Mr. J. Merrill, of the Massachusetts Ride Association, was nearly successful in getting the extra prize of ten dollars for a clean score of eight consecutive bullseyes. He made a fine thirty-nine, missing the two-inch bull by a hair only. With a two o'clock nipper he ended the score with six bullseyes, and started a new core with five bulls, making eleven consecutive bullseyes. It was the largest number of consecutive bullseyes this month. Richardson heads the list with 191, closely followed by Mr. Merrill with 190. Mr. Frank Hollis is third on the list with 189. Next in order is Mr. U. A. Pollard with 187. Mr. Geo. F. Ellsworth is fifth order is Mr. 9. A. Foliard with 161. 311. due F. Eilsworth is fitting with 183, and sixth is Mr. L. W. Farrar with 182. Next Monday, November 1, will commence a new match, called the Excelsior Rufe Match, to continue through the menth of November. Conditions of the match are: Any 22 calibre rifle, three pounds pull; position, off-hand; rounds, 8; possible 40; five scores to win, or nossible 200. The match to close on the evening of Nov. 30. The prize winners in the Inaugural Rifle Match for October will be announced in next week's Forest and Stream, as owing to the latenose of the hour, Saturday evening, Oct. 30, when the match closed, it was impossible to do so in this issue. The following are the leading secres; 50 yards, rounds 8, possible 40; five scores to

win, or possible 200:

BOSTON, Mass., Oct. 31.-The pavilion at Walnut Hill was welltilled to-day by the marksmen in the final shooting in four matches which have been running since July 24. The several matched have been well attended, and large results have been obtained. better wind-up day could not have been selected; the sun was obscured all day; a splendid gray light prevailed during the entire shooting, and the wind was steady from the east-southeast, with hardly force enough to disturb the signal flags. We give a few We give a few scores of to-day's work, and the final prize winners in each match

The following dispatch was received from Capt of the New Orleans Team, which explains itself: "New Orleans, October 24.—Total score, 580. Clear, but norther owing.

blowing The New Orleans team was composed of the picked men of four companies of the militia of that city as follows: The Washington Artillery, Lonisiana Field, Continental Guard and Crescent City Regiment, while the Denyer team might bruly be called a sorub

team, most of the members being strangers to each other previous

CREEDMOOR.—The N. R. A. programme for November matches

at Greedmoor includes two day's shooting, as follows:
Saturday, 6.—"Marksman's Badge" Match—All day; 200 and
500 yards; five shots at each; State rifles. Open to members of the association and members of the N. G. S. N. Y. in uniform. Two entries allowed: 50 cents each entry. This will be the last chance for members of the National Guard to win the Marksman's Decorfor members of the National Guard to win the Marksman's Decoration of 1880. Match will be shot rain or shine. After the match, competitors making 25 points or over, can obtain a certificate to that effect by applying at the N. R. A. office, No. 23 Park Row, N. Y. City. The "Alford" Match will also be shot a 3 P. M.

Wednesday, 17—At 9 A. M., "Remington Gold" Match. Conditions as previously announced. At 11:30 A. M., "Ballard Rifle" Match. Same conditions as heretofore. At 2:45 P. M. the twentieth "Alford" Match. Special trains for Creedmoor on these days from Hunter's Point and Flatbush Depot, Brooklyn, at 8 and 9:55 A. M. and 1:30 P. M.

### PROFESSIONAL VS. AMATEUR.

A RE we right as riflemen to permit a law to go on our by-laws which shall make restriction as to the right of one rifleman which shall make restriction as to the right of one rifleman over the other? We hold you cannot do this and deal fairly with every member of the N. R. A. As "Gun and Gallery" says, "The gun firms and rifle galleries have been the making of two-thirds of the off-shots that visit the ranges," We are of the opinion that a the on-short due visit he ranges. We are of the opinion that a few rich men, who have lately come into possession of the Direc-tor's ears, are pushing this to win for themselves their own selfish desires which, in our opinion, are detrimental to the welfare of the N. R. A. We candidly believe that this law will work out an evil consequence. Have not our gun firms given prizes, and mevery way tried to make our ranges a success? We fail to see wherein they have in any way performed an act which should merit such rebuke as this law will bring upon them. Rifle shooting, in our opinion, has grown so large that the great executive committee should be riflemen who do not reside in New York, and who can bring with them the opinions of riflemen in every part of the United States. If it does not do this, it fails to perform the duty for which it was organized—that of spreading the art of rifle shooting all over this country. This association, we are afraid, has within the last two years fallen into the hands of certain rifle shots who are more alert to cut out the so-called "professional" than they were in 1876 or 1878. We also believe that this resolution is of a personal character. Well, if it is, the law-makers of the N. R. A, are fixing on very poor principles to work out their own ends,
How are they to change prizes that are now marked "All-comers Prize?" Professional rifle shooting is a very small matter, and one which could have lived, and will live, and never for one mement have or will interfere with the best interests of the N. R. A

Now, we would like to have it explained to us why the Massachusetts Rifle Association could not make up a representative team of American riflemen, and compete with England or Ireland, and have as much a national character as any team formed by the N.
R. A.? Yet this new resolution says: "And amateurs only shall be allowed to serve, or to compete for places, upon any American Inter-State or International rifle teams to be organized by this association." We believe the N. R. A. has taken a great responsibility on their shoulders and it may result in some hard work in getting it off. We believe it would have been wiser to have left this matter You cannot make the distinction between the one and the other clear enough to warrant the soundness of such a resolution. We hope through your valuable paper will come protests from every rifleman with as much or more vigor than the thanks have poured in upon you for your grand exposure of the Dittmar pow-

Near York, Oct. 30,

SHOOTING WITH GLASSES .- I would suggest to "Phila.," whose letter in your last issue stated that he is near-sighted, and shoots high when using glasses, that he take aim with his rifle in a fixed position, first with and then without glasses, and he can then dis-cover if there is any real displacement of the mark by the glasses, or whether it is the result of not being accustomed to the use of then. I am extremely near-sighted, and use two pairs of glasses when gunning, but have not been troubled by the displacement of the mark such as "Phila." describes.

East Brimfield, Mass.

I notice in your issue of Oct. 21 a paragraph entitled "Shooting with Glasses 'from a near-sighted correspondent. Like this correspondent I am near-sighted; am very fond of shooting, and, if what he says applies to open sights only, I have had a similar trouble, especially in target practice. With a long ritle and open sights I never could draw a "fine bead" on the centre without blurring and mirage, and I almost always shot high. burring and imrage, and I almost always anothigh. My remedy consisted in getting a short ride, with a thin polished frost sight made of silver or some white metal. As I can see this sight clearly there is no blurring. Then I raised my rear sight so that just as the front sight cuts into the lower edge of the bullesye the bullet strikes the centre. With the sights in that position I have no mirage. But as my rifle has combined sights I seldom use the open sights in the target shooting, and not always in hunting, as when the light is sufficient I find the globe more reliable. Of course short rifles and globe sights may not suit all who have defective vision. All that I claim is that such a rifle and such sights are just the thing for me; and I believe that most near-sighted persons, whose trouble is similar to mune, will find the same remedy

Of course the cause or causes of such troubles must be in the kind or position of sights in the eyes or in the glasses. As your correspondent neglects to mention the kind of sights he nees, whether the glasses aid his vision much or little, the appearance of distant objects viewed through them, etc., it is not possible to locate the cause of his trouble with any exactness; and, in writing as I have, I may have shot wide of the mark.

A. G. B.

Emberton, Mo.

If your correspondent ("Phila.") will get a pair of spectacles witing his evesight, and place them upside down on his nose, perraps this will remedy the defect he speaks of. This is the best

Madison, Indiana.

THE CHOICE OF HUNTING RIFLES. -Editor Forest and Stream :-In your issue of 24th inst. I notice a communication from Bexar, of Texas, with reference to "Choosing a Hunting Ride," who, after examining all the markets, has come to the conclusion that atter examining all the markets, has come to the concusion that the Vinchester rifle is out of the race, having distanced all its competitors, and says it is "plain language," and "that it is true, as all plain language should be." All right, Bexar; out with it, and no frank, as I will try to be before I am through. I have learned omething by experience, and it is due all parties interested to now that there is at least one other magazine rifle upon the maret besides the Winchester that is safe and reliable. It is the Keniedy magazine rifle, brought out last year by the Whitney Arn Company, of New Haven, Conn. It shoots the Winchester .44-cal. eartridge, 1873 model, and carries fifteen shots in the magazine. This weapon, for fine finish, thorough workmanship, simplicity of construction, strength in those parts where most needed, case of operation, certainty of action in the most rapid firing, combining great strength and accuracy in shooting, brings it square out to the front, "second to none," and acknowledges no superior in al and acknowledges no superior in all oints of excellence, so much desired by every one who handles a ifte, either for game or other purposes. I have used both Wiuhester and Kennedy magazine ritles, and must say, candidly, hat 1 never used a rifle that has given the pleasure and general atiafaction that the Kennedy rifle has done. I am not condemn-og the Winchester, not a bit of it, knowing it to be a good weapon. 3tt when they claim that it is about a gun-shot in advance of all thers, I say it is not true! Plain talk, "that is what it should be." The Winchester has been upon the market a long time, and, in the ace, quite alone in the magazine line, but not without its faults and imperfections, as is well known. Is it possible that when it was first brought out that all improvements in that line ceased? Does the fact that it has been a long time upon the market, well known and introduced, make it a superior weapon over all others that may come after? Are not the chances in favor of the new and improved every time in this age of improvement? It has been the good luck of the Winchester to be the first successful magazine rifle introduced, and now enjoys the prestige of a name which alone is a big thing in this country. The article that has been drummed, advertised and kept before the people the greatest length of time is the one usually considered the best, whether it is or not. You ask some men what repeating ritle they like best, and they will say:
"Oh, the Winchester is best." Why? Because they have heard and read more about it than any other: that settles it with them. But, remember, while the Winchester has a reputation, there are other repeating rifles that, for accuracy and durability, cannot be surpassed. I am glad "Bexar" has introduced this matter, for if is important to every one who is looking after a good rifle to know that the weapon he puts to his face (perhaps thousands of times) is safe and not liable to burst at the breech. Offic. Gooperstown, Penn.

---THE WIMBLEDON SCANDAL.

HERE is in the following communication from one of the best posted and most enthusiastic volunteer shooters on the other side much that the Directors of our own National Ritle Association might ponder over with profit. The case of the bribery in connec-tion with the Olympic Prize at the recent prize meeting at Winabledon is still frosh in the minds of our readers. Sergoant Marshman, the chief offender, was tried by court martial, and, to the surprise of volunteers in every part of the kingdom, he was acquitted. What sort of comment has been provoked is best told in the communication below, dated-

the communication below, dated—

RARYESEND, Eng., Sept. 25, 1880.

With the coming of age of the Volunteer Force one of the most remarkable episodes in its history has just been brought to a conclusion. The trial by count martial of Sergeant Marshama, of the Koyal Marine Light Infantry, on a charge of having fraudulently conspired to give false returns from the butts in order to enable a person at the firing point to win a particular prize, has come to an ead in his acquittal. It is obvious that between the various expressions of opinion there is a very large gap, and one which it is proposed to fill up with a brief outline of the various questions involved in this disagreeable business.

National Bills Association. Although not one word can be said against the members of the Connell individually, their proceedings bave, as is customary with many official bodies, afried into the usad groove of allowing what is generally called the Excentive to manage their affairs pretty much as they liked. Now, with regard to the Excentive of the National Bilde Association at the Wimblodon meeting, there is room for considerable diversity of opinion.

We will divide the Excentive into two bodies—one of which has charge of the purely milltary discipline, and the other, which has the tanangement and administration of the Regimental camps, the remains a processing the state of general contentment existing between the governors and the sortend.

Reamont to be occurredly remembered by the National Bilde As-

reverned.

It cannot be too carefully remembered by the National Rife Association that the Military features of the Camp are secondary to the development of the shooting qualities of the individual members of the volunteer force. The Camp, in effect, has grown out of the enforced concentration at a given point of so many bundreds or thousands of men for a more or less prolonged period. It was obvious that this body of men could not be allowed to camp at their own aweet will all over the Common, and to wander in and out as they liked. It was obvious, therefore, that the Camp became as adjunct to the principal object of the meeting—viz., the shoot-life in the shooting at the shoo

an adjunct to the principal object of the meeting—viz., the shootath of the high of the shooting at the butts that the most stringent precautions ought to be observed, and here it is where the greatest accumen and intelligence ought to be displayed by all who attend the meeting, in roder to insive the necessary conditions of fairness and euccas being carried out to the satisfaction of every one. The immense number of prizes, some of which are of the most valuable blaracter, which are every year given by the National Ride Association, are immeasurably over those of any similar institution or meeting in the world. At the prize meetings which take place in the Colonies and at Creedmour the prizes given will not for a mother than the colonies and at Creedmour the prizes given will not for a mother of the colonies and at Creedmour the prizes given will not for a mother of the colonies o

The facts are that the Association has hitherto steadfastly resisted every attempt made in the direction of satisfying the legitimate curiosity and inquiries of those for whose benefit it is supposed to exist. It has absolutely refused, under any circumstances, to targets, which, although mechanically superior from many points of view to the old targets, has rendered checking the making by the telescope an impossibility. It has most positively declined to introduce any system by which a conversation can be readily maintained between the officer at the firing point and the markers at the butts, and only quite recently has thought it worth while to have an officer to superintend the marking at the targets. The officers who have been depinted by the Association to superintend the squadding and arrangement of competitors at the firing point, appear to have overlooked the first principles of conducting target in the control of the signal of the competitions of the first principles of conducting target in the first principles of conducting target in the control of the signal of the property of the regular targets. The officers when have been depinted by the Association to superintend the squadding and arrangement of competitors at the firing point, appear to have overlooked the first principles of conducting the monkerty practices for the strup it is expressly indid down—and, in fact, specially directed—that when a party is drawn up for target practice the firing shall not take place in the order in which the competitors' names are entered on the register. It is also specified that when the target practice of a company of the regulars takes place, that a representative of another company of the same regiment—a segreant or non-commissioned officer, if possible—should be in the markers and the practice, in the condition of the competitions that, owing to the targets in use in the regular army being the conditions that, owing to the targets in use in the regular army being contions that, owing to the targets in use in t The facts are that the Association has hitherto steadfastly resisted

ive score. We do not know whether Major Thompson is what is called a shooting man, but we presume by his reply that he is not. Under these circumstances we are giving him the bonefit of the doubt.

Among the curves for frand suggested were many, but shifting the markown in the manthets is a very small precaution to take. It is the continuous shifting at the firing point that can alone prevent such frands as are alleged to have taken place at this and the provalence of the continuous shifting at the firing point that can alone prevent such frands as are alleged to have taken place at this and the provalence of the continuous shifting the same place at the same place that the whole of the arrangements in the bands of the Executive. The Council could not realize, and would not believe, that anything could go wrong under the management of such intelligent—albeit somewhat coulding—military officers. The council, as a rule, declined to pay any attention to the many complaints that were made to them on this and cognate subjects. It has, in fact, succeeded, justify or unjustly, in conveying to the minds of many of the competitors on Winnieden Common that even if anything were wrong, because the provided the provided of the control of the council, that Mr. Runtz would not have been able to fire at the straget at which the alleged fraudulent marking has been made, and consequently, supposing such fraudulent arrangement to have been in existence, it would never have been discovered. It would appear that everything that could be done was done (of course innocently) to prevent the detection of a fraud, supposing one was being carried out. As we could be consequently and the conclusion of the council of the National Rife Association who have been the conclusion of the National Rife Association where the country of the National Rife Association where the country appears to have been discovered hay a reverse of the Council generally, or their Executive of their Executive of the National Rife Association to obtain. We say surfu

is factory, and this most 'remarkable case, which has been so grudgingly entered into by them, and which has been carried ont in such a perfunctory and half-hearted manner, has brought matters to a crisis.

The National Riide Association is confessedly, by the verdict of the trial, placed in a very awkward position. In the first place, who is to receive the Olympic prize? Mr. Runtz positively states he is not entitled to it. Yet the court martial again that he is, by acquitting Siergeant Marsiman of fraud, and pronouncing that Mr. Innutz do makes as bulleyess and four contres out of ten elots, with a busider rile, at 80 yards, on a windy day. In the second place, report of the intended fraud fraud, and pronouncing that Mr. Innutz dol makes its bulleyess and four contres out of ten elots, with a busider rile, at 80 yards, on a windy day. In the second place, report of the intended fraud reaching it, steps were not taken to provide such a target at the butt as would enable the fraud, if perpetualed, to be exposed immediately afterward by counting the hist them marked on it, and comparing them with the state of the target previous to the firing? In the third place, was not every effort made to provent the demonstration of the fraud, by resquadding in such a way as to attempt to move Mr. Runtz and Mr. Humphry away from "14" target? In the fourth place, why were not the vital point—viz., the fact that 46 points was the score agreed upon 1670r the thring took place? The Association cannot oscape from the intended in the maintenance of the farm of the fact that a fact in the smallest English village that would not be more wary than the Executive of the N. K. A. The Necretary to the Association cannot very well plead ignorance not credulity. Some statement from him on the part of the Association would be heartily welcome which would win back to the Association the coinfidence hitherto reposed in them.

The National Rille Association and better place in life—mechanic, artisans, and men occupying more or less humble posi

STEELE CUP.—The match annually shot at Hartford, Conn., for the "T. Steele & Son's Silver Cup" has been postponed, and is now appointed for next Saturday, Nov. 6. The teams will consist of four men each from various towns in the State.

FIFTY YEARS WITH THE GUN AND ROD. D. W. Cross, Cleveland, O. Short & Forman, Printers. 1880.

This little book of 138 pages deals largely with the history and chemistry of gunpowder, touches lightly upon guns and boats in its descriptive portion, but devotes much space to some gun trials

made in Illinois, of doubtful value, insemuch as it was suspected at the time that they were made in the interest of certain manufacturers. Thirty pages are devoted to the velocity, distance, effect or force, etc., of shot, giving the calculations of the late Leonard Case, which may be of value, but, being in algebraic formula, will prove "doep water" to many, and will provede a smile from the old sportsman when it is proposed that he figure out the proper place to "hold" by the rules, and consider the velocity of projection, velocity of flight, time of falling from the greatest height, and multiply these by the square of his dog's uose, subtracting the number of crackers in his cont-tail pocket and the square of the Napierian logarithm. In all this we do not really see much of practical field work, as one is led to expect from the alleged fifty years mentioned in the title: but over on the 77th page the author begins to have a dawning perception of this fact, and proposes to drop theories and turn to practice. This he does by giving short sketches of goose and duck shooting, with the charges for different sized guns, all of which is comprised in lifteen pages, whou he leads off again into the capacity of rish tanks, force of wind, mensuration, weights and measures, leverage, power of pulleys, etc. Then comes a chapter on trapping in which one is told how to catch foxes, mink and marten, with a picture (the only one in the book) of a "dead-fall," an article which sportsmen have little uso for

Now comes the dishing. As we have found so little of interest in the shooting portion, the hope arises that as the author is not very interesting there he may be an angler, who drops into shooting occasionally: but on reading through the fishing, of which there are seventeen pages, we only find a few stereotyped directions how to fish for trout, and an alleged comical adventure of Mr. Snooks, who went on his first trip for them. If any one dies laughing over Mr. Snooks' adventure we will gladly settle the undertaker's bill. After the very funny Mr. Snooks, we find a chapter entitled, "Big and Small-Mouth Bass—How a Bass Takes a Fly;" but still our brain carries the information contained without bulging our

summer lat, or even requiring a shoc-horn to get it on.
When our author gets into the three-page description of "How
to Paddle and Pole a Boat," he seems to have struck the first
original vein since he staked out his chain, and he works it for all it is worth; so to those who wish to perfect themselves in this It is winth; so u nose who wish to perfect themselves in this branch of athletic sport we recommend the book. The directions how to make trout flies in these days, when anglers can buy thom so cheaply, are entirely useless to the rising generation, to whom this knowledge is not as necessary as it was to the fly-fishers. of the past generation.

ng this book as a whole, it is so largely a re-hash of what has been written, and not entertainingly re-hashed at that, that we are wearied with the labor of writing up its excellencies.

SINGLE-HANDED CRUISERS.

If we can judge by the number of letters received and the warmth of their encouragements, a popular choid was struck when we bronched the recovery of the control of their encouragements, a popular choid was struck when we bronched the control of the c can judge by the number of letters received and the warmth

like a country production, like a haphazard effort, like an accident, or like a mass of incongruities, she should not be a more rule-of-thamb production, but in every line the artist eye should discover. And with such a craft, a little ship muto herself, it needs only a wideawake man at the helm to sail her where he may list; and with the binest wood beneath him he can hugh at the heavier purse and big tonnoage of his neighbor, and like him can "yacht it" with putie as much lervor, deeply absorbed in the many little details of of his wee pet, whose every characteristic, freeks of waywardness, rull and ributhions he learns to love, humor or correct. How those various essentials may be successfully combined we propose in the little of the control of the learns to love, humor or correct. How those various essentials may be successfully combined we propose in the little of little of the little of the little of the little of little

### MEASUREMENT FOR TONNAGE.

Editor Forest and Stream:

We evidently differ somewhat in our views on the measurement question, and it is therefore not surprising that while I concurring great many of your remarks on the subject, there are others which appear to me open to criticism. I shall not now, however, enter upon a discussion of the question at large, but merely refer to one or two points. You seem to admit that a "three dimensions rule would not in all probability work as length at the expose of the other will demonstrate and the subject of the su

but let us suppose that you put the depth D—c VLB (c being a constant). Instead of the tonange T=LxibxD, you would have T=LxibxD, you would have T=LxibxD, you would have T=LxibxD, you would have T=LxibxD, you would have T=LxibxD, you would have T=LxibxD, you would have T=LxibxD, you would have T=LxibxD, you would have T=LxibxD, you would have T=LxibxD, you would have T=LxibxD, you would have T=LxibxD, you would have T=LxibxD, you would have T=LxibxD, you would have T=LxibxD, you would have T=LxibxD, you would have T=LxibxD, you have T=Lxib

The modification we recommended in the measurement of depth The modification we recommended in the measurement of depin was intended not to cover any fault in the theory of the "three dimension rule," but to foster the production of a wholesome type of vessel in respect to freeboard. For light weather racing a sacrifice of the latter might be made to gain an advantage in respect to tomage, and it was with a view to removing the inducement to such sucrifice, and the consequent production of racing machines of low freeboard that we proposed the modification. Racing machines by shirking open water and hard weather matches, can run up an enviable string of prizes won in smooth water, and by example would induce all racing men to forgo other qualities in their craft and seek to excel only in the requisites of a smooth-water mug-hunter. Having control of the disposition of prizes themselves

they would naturally confine their racing courses to sheltered waters. they would maturany comme their racing course to such seathers a masses whe already suffer quite enough from such tendencies in America without giving the emooth-water turn any further incentive in the way of a rule partial to their proclivities. Hence our desire to see way of a rule partial to their proclivities. Hence our desire to see such limitation placed upon the "three dimension rule" as will, in practice, promote the construction of wholesome vachts which shall not be penalized when racing in fair weather for their posse sion of qualities which every sailor desires to see them display under other circumstances, Turn any way you like and it will be found next to impossible to frame a rule correct in theory without some next to impossible to frame a rule correct in theory without some modification in pratice for the sake of ready application, and the encouragement of yachts of fair "all round" qualities. So far as we can see, a rule founded upon the principles suggested in these columns will more nearly fulfill the wish Mr. Collin Archer expresses in the last paragraph of his letter than any other. It would presses in the last paragraph of his letter than any other. I twould be based upon logic in the first place, and then qualified in such a manner as to lead to the production of an able, safe, roomy craft. Under any circumstances such a rule would not give special countenance to the wash-howl light-draft monstrosities which are the tenance to the wash-howl light-draft monstreames which are the outgrowth of measurement by "simple length," no ryet the expensive modern English entter, the outgrowth of the squeezing tendencies of the old Thames rules. These remarks have been confined to the practical side of the question as a re-opening of the theory of measurement would lead us too far from the con for the coming winter. We conclude by pointing to the recent Regina-Fanita match as an illustration of the fallacy of the length standard which, under different conditions of wind and weather, might have been misleading in its effect.

#### WHAT THE LAKES SAY.

WHAT THE LAKES SAY.

Editor Forest and Stream:

We have no claim to the name of old yachtsmen perhaps, still the yachting colums receive our first attention when the Forest ASD STREAM is opened Naturday evenings after supper. We are partial to beat saling here during the warm summer evenings, and love a dashing September breeze, when it will make our craft spin through the water at a lively rate. We can always excuse the enthusiasm of the yachtsman who owns and salis his own yacht; hence, when some one gives his experience of the pleasures of a sympathy on the lakes with a jumping, botbing boat, yelpt a specific particular of the yachtsman who was an assist his own yacht; he read that you have been a summer of another's experience, induced by a careful inquiry into the system adopted by an Eastern builder of light-drafts.

A gentleman absorbed in business wanted some means of recreation. As a friend owned some interest in a small yacht, he often went saling. He had a chance to lay a 30ft, yacht at a bargain. She was an open boat, of fine model and a good sailer. In a little while his tastes outgreen his small boat, and he wanted a cabin yacht. Reading my copy of Forest and Stream he became interested in the Eastern light-draft model. Some Eastern friends knew of one for sale. He went to See Yore, as the boat, as also much for him. He meferred a keel boat, in spite of his inclinations being attracted to light-drafts at first by reading the letters in Forest and Stream. A short time after his return a friend wrote him about a yacht on Lake Erie being for sale. She was indorsed by yachtsmon as a fine boat in every way. He took the night train, saw her, went out on the lake with her, and train deep keel han. From that time on we have never heard anything of light-draft boats, or heing able to run over bars and shouls or frying up at the docks. He rejoices that he can carry a tuder, and during the hot nights they could sleep quietly on board, and in setter, away of from when, and sing, and is as much on earthesizes

Into to my minut is one of the surest indications of the valinsity to be attached to the fine lines and deep model of a ke boat. It has always seemed to me that there was such an amou of work in beating an against the wind in a boat drawing only few inches of water that I prefer a keel boat of deeper draft work to windward with.

### WHAT THE NONPAREIL IS.

Roslyn, L. I., N. Y., Oct. 23.

ROSLYN, L. I., N. Y., Oct. 23.

Allow me to say that when an individual attempts an attack through the columns of a respectable newspaper he should be sure of his facts it he would avoid being langhed at. "A Yachtboam" is virtually a skipjack, "et. Now I have nothing to easy for or against skipjacks, overeighted, particularly, But permit me to tell the party when thinks he is "A Yachtsman" in that the skipjack is overeighted, particularly, But permit me to tell the party when thinks he is "A Yachtsman" in that the skipjack is ordinarly a very wide boat, with a blarp deadrise bottom her entire length, usually carries a large out of saids, and is practically not/sing but a jib-and-mainsail racing boat.

The patent Nonpareli, on the other hand, is a narrow boat, has a perfectly flat bottom half its length, and carries a small rig. My new "stylo of boat," that after all is only one of several models from which I am prepared to build, is simply the sharpic, with pounding habits taken out of her; and sharpics have been fastorably known these forty years and more. They have their special uses, as the Foreser and Stramm puts it, and will speak for themselves.

KNICKERBOCKER CANOE CLIB.—Under this title a new canoe club has recently been organized. A constitution and by-laws have been put in force, and the following officers cleeted: Commodore, R. J. Wilkin; Viee-C&3N Arthur Berntano; Treasurer, A. Lowenthal; Secretary, Simon Brontano; Measurer, R. E. Deane. It is proposed to acquire headquarters within the city limits. We are glad to see such active signs of the spread of canoning.

ADD ONE MORE.—The sloop Imperia, formerly of New York, has een hauled out at Lawley's Yard, South Boston, and will receive n iron keel.

WANTED TO CHARTER.—Parties having a schooner—keel pro-erred—of about eight hundred tons, to charter for midsummer ext year, may send particulars to this office.

CANDENIA.—A correspondent well acquainted in canoeing circles

CANORNO,—A correspondent wer acquammen in canoring reacts writes as that there seems to be quite a jump in the popularity of the sport, and that he is kept busy answering inquiries. Glen's Fall's has organized a club, and so have Whitchall? Clovedand, O.; Duanesburg, N. Y.; St. Johnsbury, Vt., and several other localities have organization under advisement.

have organization under auvisement.

The Occas Prant.—From the London Field we take the following in reference to this big craft: 'The magnificent American-built yacht Occan Pearl, shout 250 tone yacht measurement and 147 tone measurement, is now for sale. She was built this year in Massachusetts regardless of cock, and classed for oleven years A1. Has large sabon, dining saloon and smoking room; eight staterooms (one of which is a family one), all elegantly fitted up in hard wood, and ventilated throughout with Norton's patent ship ventilator. This splendid cruising yacht has just mado a nine run across the Atlantic, and is most admirably adapted for the mediterranean."

Chusaden.—This schooner has been hauled out at Mumm's new yard, foot of Fifty-fifth street, South Brooklyn, and is being

lengthened aft, so as to modify a knuckle found in her section lines when a draft was taken off from the actual heat.

#### CRUISE IN A CANOE.

Mr. F. H. Siegfried has recently completed an interesting week's ruise in a curpe, and from the Detroit Free Press we extract the

Mr. F. H. Garger.

Terrise in a canop' and from the Detroit Frice Press we cannop' and from the Detroit Frice Press we following:

Ever since reading McGregor's exploits in the canoe Rob Roy, a small boat capable of being carried in an emergency—arranged to be slept in and easily propelled—in which extensive journeys had been made throughout Europe and the East, I have been possessed with the idea of making a trip in a "cruising canoe."

continuous arrongment raurope and the East, I have been possessed with the idea of making a trip in a "erunising cance."

Canoning has become quite the thing in England and is becoming popular in this country, so much set that that the principal cities now boost their "curine clubs." I bought a Racine veneer cance, weight sixty pounds, with its equipment—viz., a double bladed paddle, jointed; a mast, also jointed; a sail, combined life-preserver, cushion and mattress, all complete, for \$65. \* \* \*

It contained apparatus for steering with the feet, and water and air-tight compartments in which to stow the outfit. The beauty of the paddle as a means of locemotion is that the navigator faces the way he is going, and paddling is far less of an exertion than rowing. Twenty miles a day can be accomplished without fatigue. Joe was "willin," so we planned a week's cruise. We decided to make a trip from Lake Hurou to Detvoit. Down the St. Clair, down one of the numerous channels through "the Bita' to the Canada shore of the lake and around the shore to Detroit, near the entrance of the Detroit River, at the extreme foot of Lake St. Clair. \* \*

Clair. \* \* \*
We prepared ourselves with the following outfit, which I give for the benefit of any one contemplating such a cruise:

\*\*CLOTHING\*\*

Slippers (to wear in the cause).

Stout shoes.

Suppers (to wear in the cance).
Stout shoes.
Two pair socks.
Two pair spants (one pair on, of course).
One heavy coat.
Two flamed undershirts.
One blue overshirt.
Two pair drawers.
One rubber blanket.
Two pair dwoden blankets.
One air pillow.
We also took an alcohol sbove, compass, liquor, twine and cord, sketching materials, opera glass, charts, etc., etc. Liebig's extract of beef. Condensed milk. Coffee and sugar. Lemons.

Coffee and sugar.
Lemons.
Canned sonps; tomatores.
Sardines, sulhon, etc., etc.
Cooking utensils.
I deviced a small tent to be spread over the cance at night, supported by the mast and boom, and capable of being robled into small compass. The whole outit, including tent, weighing less than uniety pounds, was stowed away in landly packages in the water-tight compartments of the cance. We took a steamer from Detroit to Lake Huron.
It was at mine o'clock one beautiful morning that we launched our cances off the dock at Port Huron, with a shower of comments from a large rowed which never failed, as at every other place, civilized or otherwise, thereafter that we departed from.

Dows THE MURE ST, CLAIR.

The breeze freshened, and everything indicated that we would make the month of the river by night. We met great numbers of

The breeze freshened, and everything indicated that we would make the mouth of the river by night. We not great numbers of vessels, and the passengers on one big Lake Supricer propeller crowded to the rail and railed at us as we shot past. At one point we ran in close to the shore on the other side; a man, driving a horse and buggy came into view on the highway, which ran for quite a distance near the shore. We challenged bin; he whipped us his horse, and we had a merry race for nearly a mile, when the read womat out of view.

Mathie City was reached at one o'clock, where we had dinner, and old hody with terrs in her eyes, sought our acquaintance, and rowned in the St. Clair living.

At three o'clock we made the head of Walpole Island, on the Dominion side. Here we handed the consult the charts and decide on our future course. We encountered an old Indian, but found become that we should take the side of the shore of the short of the short of the short of the short of the poly of her interest of the short of the short of the poly of her interest of the short of the sh

post-office.
I asked the young man for whisky.
"Can't let you have it," said he.
"Why?"

"Why?"
"You must have a physician's prescription," he replied.
"Well, I can give you one," said I boldly.
"Are you a doctor?"
"I am!" And I here thought of G. W.'s little hatchet.
"Here's a bank!," producing one; "fill it out properly for what you want."
I cogitated for a moment or two, and here is what I produced:

> Sp't's frumenti : VIII oz. tions : Use as directed when required,

The young man gave a hewildered look at my snuburnt nose and went to put it up. We went out to make after purchases, and on our return found the entire store occupied by a beyo of young ladies. The young man behind the counter, with a worried look on his classic features, was busy distributing the unit, and every blossed pair of eyes in every one of those blossed heads was fixed upon us two bashful young men when we came in. We had to wait for the young man. Our situation was truly embarrassing. Had we been dressed in the last in the caught with red Turkish friezes on our heads, with blue shirts and knee-breeches on, and with long stockings on, by a secre or more of pretty girls, was too, friezes on our heads, with blue shirts and knees-breedus on, and with long stockings on, by a score or more of pretty girls, was too, too much. How they did stare at us! Joe hid one of his shins behind a rake-bandle, and I refreated to the friendly shelter of a sansage-stuffer. Finally the young man came up smiling, and said, so loudly that every one of the damesic heard him:

"Oil! you have come for that whisky!" and handed us a big black bottle that would hold nearly a gallon.

It is not been a supported by the said of the sai

### Archery.

#### PRIVATE PRACTICE CLUB.

SEPTEMBER SCORES.

THE shooting of the members of this club during September shows but from remarkable a first company to the company of the comp A shows but few remarkable features, although a general tendency toward the shorter ranges is perceptible as the hours of practice shorten with the days. During the winter months there will be a few members, no doubt, who will have the hardihood to shoot the "York round" despite the snow and Litter winds, but most of the members will doubtless be content with sixty-yards most of the members will doubtless be content with sixty-yards shooting in halls, and leave the long ranges for next May. We trust that enough may eling to the outdoor practice to give us a comparison next spring between those who have practiced only at short-range, and those who lave lad even limited practice at the longer ranges of the York round. Among the notable performances of the month of September, the score of 46 bits, 261 points, made by Mr. Maurice Thompson on the 30th, stands pre-eminent. Unstable that this is the greatest feat the Shayard range of the content. questionably this is the greatest feat at the 80-yards range yet ac-complished in America, and few instances are recorded in English archery annals where it has been exceeded.

The most beautiful record throughout the month was made by

Mr. Frank H. Walworth, of Saratoga Springs. This archer, who is of only one season's experience, has at once pressed to the front of only one scaon acceptance, mas at once present of the from rank of American archers, and bids fair to bear away the champion medal for the coming year. His 60-yards shooting is now better than that of any living magnate of England's archery, and it is doubtful if his equal can be found in America. Shooting 29 scores

doubtful if his equal can be found in America. Shooting 29 scores of 24 arrows each, he only fell below 100 points in a single instance, and ten times secred 24 hits. His average was above 120 points. This is admirable work. At 50 yards he got a splendid average, and only at 160 yards is he yet weak. His score of 416 at the single York is a record of which he should be proud. Steady and beautiful shooting by Prof. T. R. Willard encourages the hope that we may see the 'lone archer" as a competitor in the front rank at the next National. No progress could be more sure and satisfactory than this member has shown, his double York round of 157—703, scored on the 21st and 22d, being only a trifle above his average for the month. All honor to the ''lone archer'' who proposes to defy the will weather of the parify whiter in purwho proposes to defy the wild weather of the prairie winter in pursuit of his solitary practice!

A new and welcome face appears this month, new to the Private Practice Club, though not new to archery. It is a pleasant duty to record the name of Mr. Brackett among the members of the club, and the score recorded at the single York opposite his name of 76-352 is one of the notable things of the month.

352 is one of the notable things of the month.

Mr. Hyatt, though an old acquaintance, comes newly among us, and every member will rejoice to greet him. He enters the arena with twenty York rounds as tokens of his prowess, and not a single additional score at the short ranges. Well done! Welcome!

Our good friend, De Graff, shows marked improvement this month. Sorry, however, to see that he has left the Charch! Some of our familiar names are absent. What has become of Peddinghans? Of old we leaned upon him for our good scores. Surely he has not foreaken us! And Hussey, and L. D. Edwin, and Lesse Deval where are they?

and Jesse Deval, where are they?

	E. B. Smith20 96	14 66	16 74	20 50	703

This was the only match which was shot by these clubs, although the Toxopholites subsequently shot two scores in pursuance of an understanding with the North Side Club, but the latter club were prevented from shooting by the weather, or the absence of some of the members of their teams. I send the scores simply as a record of the shooting of the Toxopholites. First score, shot August 14, 1880, was as follows:

F. Sidway23117	22126	21 99	23123	89465

### PUBLISHER'S DEPARTMENT.

-Hop Bitters has restored to sobriety and health, perfect wrecks

—The Holabird Shooting and Fishing Suits. Upthegrove & McLellan, sole manufacturers, Valparaiso, Ind. Send for circular. -Mange-ine cures, or no pay. Trial box mailed for stamp.

Hepworth, Druggist, 296 Madison street, Brooklyn. A Harpy Responsion.—I can truly say that I owe my present existence and happy restoration to the hopes and joys of life, to the use of Warner's Safe Ridney and Liver Cure, and I say to every one suffering from any manner of kidney or liver trouble, "Use this remody and recover," W. E. SANFORD.

Holly, N. Y., Feb. 25, 1850.

If you want to buy a W. & C. Scott & Sons' breech-loader cheap, call at C. L. Ritzman's, 943 Broadway, near Twenty-third street. Sixteen and twenty bores of these celebrated makers from \$75.00 and upward, also hamnerdess 10, 12, 16 and 20 bores on hand. A 10 and 12 bore, second-hand, Scott now on hand. Call soon, as they go as fast as they come. An English gun with all improvements, including extension rib, patent forend, etc., from \$10.00 upward (warranted in every way). Don't forget address, C. L. Ritzman, 943 Broadway.

### Answers to Correspondents.

### to" No Notice taken of Anonymous Communications.

A. J. S., Ripley, Ohio.—Please give the name of the inclosed bird. Ans. It is a sora rail (Porzana carolina). H. C. F., New York .- You can examine the gun by calling at

any of the large gun stores advertised in our columns.

E. A. P., Sackett's Harbor, N. Y.—You will find either one of the two guns reliable, and for the price as good as you can find.

E. T. P., Carson, Nev .- You will find what you wish by referring to the advertisement elsewhere of Edwin S. Harris, 177 Broadway,

COCKER.—Please inform me through your columns of the Lest book on breaking cocker spaniels? Ans. "Hutchinson on Dog Breaking." We can furnish it.

G. L.-To go to Robin's Island, where the Eastern Field Trials are to be held, take the L. I. R. R. from Hunter's Point to Cutchogue, thence stage to New Suffolk.

L. P., New York .-- You will find plenty of quail all through the lower tier of counties in Pennsylvania, but the farmers are much opposed to having sportsmen shoot over their land.

Manhattan.—Your setter puppy has the mange. Try one of the mange cures advertised in this paper, and in addition give two drops of Fowler's solution of arsenic in food three times a day.

H. G. F., Peconic, N. X.—Your fish is the "horse-fish" (Vomer setipinnis), the "blunt-nosed shiner" of De Kay. It is an inhabitant of tropical seas, but is frequent upon our coast from Maine to ......417 2017 Florida, according to Gill.

J. D., Dayton, O.—The best book on training hunting dogs is "Hutchinson on Dog Breaking." Voro Shaw's "Illustrated Book of the Dog" is one that should be in the hands of every deg man. We can furnish numbers already published.

J. W. E., Pottstown, Pa.-My dog is very constipated. What shall I do for him? Ans. Want of exercise and absence of proper food are the principal causes. Give sulphur—one teaspoonful—with food once a day for a week, and give two doses of castor oil three days apart twice.

J. P. W., South Orange, N. J.—The fore-feet of my setter bitch, six months old, seem to be out of joint, or rather out of shape, She seems to be bow-legged. What is the matter and what can I do for her? Ans. The dog has been improperly confined. All young dogs should have their freedom. Chaining young dogs up will get them out of shape, and kennelling puppies in barrels will crook their legs. There is nothing to be done.

H. R. P., Gambier, Ohio.—I have a puppy ten months old, half Gordon and half Black Russian. In June last he got the St. Anthony's dance. Shall I use a battery? Ans. The puppy has chores, or St. Vitus' dance. We have heard of St. Anthony's fire, but not of his dance. The battery would probably do more harm than good. Give nux vomica one-eighth of one grain and two grains of quinine made in pill three times a day. Gentle exercise in open air and careful diet may in time bring about the desired result,

T. E. L., New York City.-My dog, a large mastiff, has canker within his ear. The crevices are discolored by a black discharge, and the dog frequently shakes and scratches his ear. You were and the tog frequently shakes and scratteres me ear. I out were kind enough to give a most valuable remedy for the mange; may I ask you to add to the obligation by prescribing for this trouble? Ans. Remove all dirt and hardened wax by careful washing or syringing of the ears with lukewarm water. If the waxis hardened it can be removed by pouring in a few drops of olive oil. The following preparation should then be applied: Goulard's extract of lead, one ounce; glycerine and carbolic acid, one-quarter ounce; finest olive oil, four and a half ounces. Mix the two first named, and add the oil gently, rubbing them in a mortar. The bottle must be shaken before the liniment is used.

C. S., Coleville, Pa.-We were talking about game birds in our dore the other night in regard to quail (Bob White), partridges and pheasants. F. claims quail and partridges are the same and S. claims they are three distinct birds. Which is right? The discussion arose from reading the game laws of Pa., where it read par-tridge or quail. He said it was two names for one bird. Ans. Partridge and quail are local names applied in different sections to different birds. The partridge of Virginia is the quail of New York and Connecticut, while the partridge of New England is the "pheasant" of Pennsylvania and the South. In many parts of Pennsylvania the terms quail and partridge are indiscriminately applied to the Bob White (Ortyx virginianus). In New England, however, the Bob White (Ortyx rirginianus). In New England, I quail is Bob White and the partridge the ruffed grouse.

A CONSTANT READER.-My Gordon setter is in good condition and seemingly healthy. He has a watery discharge at the eyes, which is particularly noticeable in the morning. He is three years old. My pointer, same age, is similarly afflicted, as is also my young pointer, fourteen months old. The latter dog was very sick with distemper, which ended in the formation of a kind of tr which discharged a quantity of matter and then healed. Thi three months ago; since then I have found it difficult to fatten him. What shall I do for my dogs? Ans. The two first dogs re-ferred to, if fat, caused from over-feeding, you can improve by giving limited amount of food and regular exercise. once a day with Goulard extract, one drachm, and one ounce of water mixed together. Small doses of sulphur will also be found beneficial. To fatten your young pointer, add meat with the meal and feed three times a day.

H. S., Troy, N. Y.—1. I have a black and tan dog, ten months ld. About two weeks ago the inside of his mouth, and outside under his lower jaw, became very much inflamed and sore, causing him to rub and irritate it. I treated him by rubbing his month with borax water, which entirely healed it, but after a day or so I noticed he was very sore about his throat, and then I found that outside there was a sore about the size of a silver dollar. The hair has fallen out, and he is constantly rubbing it, and he can hardly swallow his food. His nose is quite dry, and there is a slight discharge from the eyes. 2. I also have a setter puppy, four

ouths old, strong and healthy, but when she is excited she can not retain her urine. Ans. 1. The probability is that there has been inflammation of some one or more of the glands situated under the jaw, in which case a flax-seed poultice, or some simple ointment, such as two ounces of lard mixed with a teaspoonful of tar, will afford relief. 2. As the little bitch grows older she will become free from the trouble you speak of. The less you intimfdate her the better.

F. B. S., Elizabeth, N. J.—Will you please tell me what to do for ound aged four years who has been troubled since December last with a running from one eye. I think he burt it when bunting in the brush. There is a small spot about the size of the head a pin on the dark part of the eyeball, from which a yellowish of a pin of the care part of the eyeoal, from which a yellowish white matter is discharged. When the eye is washed he can for a short time see with it, but it soon fills up again. At the time of the injury the eye did not swell, but was very much inflamed. At the present time, however, the inflammation seems to have disappeared in the contract of the present time. peared, but the eye is covered at all time with the thick yellowish Ans. You have allowed ten months to elapse before attending to your dog. There are too many sportsmen like yourself, who, at the ending of the season, neglect their dogs until the bewho, at the ending of the season, negrect their dogs until the be-ginning of the next. Such an injury as probably exists is of too delicate a nature to be prescribed for without seeing the dog. We would suggest that you show him to a competent surgeon. John Daucier, Central Hotel, Orange, N. J.; so one whom we can recom-mend. The trouble you speak of may be one of two kinds. For example, if inflammation of the cornea exists very careful and unirritating treatment is demanded. If on the other hand it is a small growth upon the cornea, a caustic, accurately applied, or calomel dusted upon it would be likely to remove it. In any case the eye should be kept clean with tepid water.

-One of the firm of John H. Pray, Sons & Co., wholesale and retail carpet dealers, Boston, Mass., is, or claims to be, a sportsman, and he will at all times take great pleasure in doing a favor for a fellow sportsman in want of any kind or grade of carpeting, rugs, etc., etc. Correspond with the house, or call and see him, and see if he means what he says .-- Adv.

Botels and Routes for Sportsmen.

# TO SPORTSMEN:

## The Pennsylvania R. R. Co.,

Respectfully invite attention to the

#### SUPERIOR FACILITIES

afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent care which run over 10 ke smooth accollent racks enable STOCK TO BE TRANSPORTED without failure or loury.

THE LINES OF

Pennsylvania Railroad Company also reach the best localities for

#### GUNNING AND FISHING

in Pennsylvania and New Jerrey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, IEROVA, BEDFORD, CRESSON, RAISTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting. Algo, \*9

Special Announcement

THE MANUFACTURERS OF THE "FOX" GUN, FEELING THAT DEALERS, as a general thing, have not done justice to the merits of this WONDERFUL GUN, are determined to have them placed before sportsmen more generally, that their great merits may become better known and appreciated. It is needless to speak of THE ELEGANT WORKMANSHIP AND WONDERFUL SHOOTING POWERS of these guns. It is a fact well established that they are UNSURPASSED BY ANY IN THE WORLD.

IN THE WORLD.

We propose for a limited period to offer a line of these guns at the following EXTREMELY LOW PRICES, after which the original prices will be restored, our object being to introduce the guns into sections of the country where dealers have failed to present them; in the firm belief that where they become known they will be the established favorite, and we shall reap the benefit in future of this great sacrifice.

Such Inducements Have Never Before Been Offered. Sportsmen wishing to purchase one of these beautiful guns must respond at once, as the number offered at these prices is limited. FORMER PRICE.

### FOREST AND STREAM.

NEW YORK, THURSDAY, NOVEMBER 11, 1880.

297

\*\* The Forest and Stream goes to press Wednesdays. Correspondents are requested to mail their communications rethat they may reach us before that day.

THE NATIONAL AMERICAN FIRED TRIALS .- The trials to be run near Vincennes, Indiana, next week promise to be in all respects very successful. From what we learn of the arrangements it appears that everything which careful forcsight could accomplish has been done to render the meeting attractive to sportsmen, and to make it what it should be, a field where the best dogs of America can contend without fear or favor.

Great credit is due to Dr. E. Kellum and Mr. Sloo for the vigorous work that they have done to promote the success of the meeting. We look forward with great interest to the result of the trials, and feel sure that this meeting will exceed in interest any hitherto held in this country.

BLUEFISH GOING SOUTH .- The bluefish Pomatomus sultatrix, have left the Northern and Eastern coast as far as New Jersey, and are now on their winter tour. They have settled the bills (of the young bill-fish) and with a young one under each fin (inside) they have departed from the shores of Long Island, like the last summer boarder, not to be seen again until next spring when the skipper of a menhaden steamer, standing in the prow of his piscivorous craft, erect as a sore thumb and with a north-east smile of satisfaction which expands until both ends of it can be seen behind, calls to the cook of his oleagenous ship: "Get out your squid, Sam, we'll have bluefish for dinner."

-We have received from the author an "Introduction to the Study of Mortuary Customs among the North American Indians," by Dr. H. C. Yarrow, an extended notice of which will be given next week.

#### A DEATH TRAP IN SHINNECOCK BAY.

THERE are now untold millions of fish, mostly young ones, which are shut in by the closing of Shinnecock Inlet, and which will die soon if not let out. The bay is situated upon the south side and near the eastern end of Long Island, opening southward into the Atlantic Ocean, and is the feeding and spawning ground of millions of fish. Its fishery interests are very large; probably two hundred men support their families from the bay fisheries, taking the different fish in their seasons, as bluefish, weakfish, sea bass, etc., in spring and summer, and crabs, cels and flat fish in winter. The bay is deeper than the Great South Bay, averaging about twelve feet, but its inlet is often filled up and stopped by the autumn storms, one of which closed it up about two months ago. Intelligent fishermen place the amount of young bluefish (snapping mackerel), weakfish, menhaden, porgies and sea bass of this season's hatch, now confined in the bay at many millions, while of the older fish there is also a great number, one of our informants saying that he recently saw ten acres of solid fish in one mass in

Learning these facts we recently visited the bay and found them confirmed by the professional fishermen of Quogue, Atlanticville, Good Ground and Southampton. In conversation with Mr. Wm. N. Lane, the well known host of the sportsman's resort at Good Ground, so famous for its duck and bay-bird shooting, he said that he would open the inlet at his own expense if allowed, but that there was a fine of \$25 and imprisonment for so doing. Astonished at learning that a man might be subjected to a criminal prosecution for doing so good and public spirited an act as Mr. Lane proposed to do, we made further inquiry and learned that at the last session of the Legislature of New York the Supervisors of the town were empowered to appoint two commissioners, who had nower to locate an inlet to be dug at the expense of the town, and that it was unlawful for any one to make an inlet at any other place.

Two men have been appointed; one of them is a man who has no interest in the bay and who does not care if it is never opened, and the other has a hotel somewhere in the castern part of the bay, where an inlet is not practicable, and he does not care to locate it elsewhere, and in the meantime the fish

The death of the fish is not the worst evil. Many of them do not decay until warm weather, according to the fishermen, and then the waters are foul, a "slick" is formed on top from the oil, and this, flowing out at every tide, repels the spawning fish from entering next season to deposit their ova-This is a case which calls for immediate action, and if Shinnecock Bay is not opened during this month we hope that some way may be found to punish derelict commissioners to as great an extent as the law would inflict upon Mr. Lane or others who should offer to do this necessary work. The Leg-islature should be called upon to repeal such portion of the act as inflicts a penalty upon men who offer to remedy the effect of storms in closing this inlet. It seems to us not only unjust but outrageous. The strip of sandy beach which separates the Atlantic from the bay is from sixteen to seventy five rods in width, narrowest near Good Ground, in the west ern part, where Mr. Lane'says he can open an inlet in twentyfour hours, and the fishermen at Atlanticville and Quogue, still west of that, say that one made there is more likely to stand than if made in the Eastern and wider part.

We call the attention of our public spirited Fish Commis sioners to this grievance. They are stocking the waters with young fish and here are millions of fry, one-quarter grown, suffering to be let out to find their migrating fellows or to go to deeper waters and more congenial temperature, which will surely die in another month. We are aware that the Fish Commission are powerless in this matter, but call their attention that they may see that they should be empowered to act, and act promptly, in a case of this kind. To dig such an in at the first property of the state of the st we call on somebody to do something to save, not only the fish now living, but the spawning ground of a most valuable fishery from a pollution which will render it obnoxious to the fish next season.

## TRAPPED BIRDS ON LONG ISLAND.

E commend to the consideration of the sportsmen of this city and Brooklyn the communication published elsewhere respecting the illegal traffic in trapped birds, extensively carried on by the employees of the Long Island Railhear

The writer of that letter tells us that on the occasion of his return from a recent shooting trip to Greenport, L. I., there being seven other gunners on the same train, the baggage master had in his possession more birds, which he had bought of the trappers at the stations along the line, than the eight sportsmen could show as the result of their day's shooting. He further avers that this was nothing unusual, but that the same thing has been going on day after day, and will probably continue so long as the supply of birds holds out.

The law on this point is explicit. Section XI. of the game statute reads :

statute reads:

No person shall, at any time or place within this State, take of kill any ruffed grouse, commonly called partridge, or any pinnated grouse, commonly called prairie chieken, or any spruce grouse, commonly called Canada partridge, or any quall, with any net, trap, or sante, or set any such net, trap or snare for the purpose of taking or killing any of such birds; nor shall any person willfully sell, expose for sale, or have in possession any of the said birds after the same have been so faken or killed. Any person volating any of the provisions of this section shall be deemed guilty of a misdemenor, and in addition thereto shall be hable to a penalty of \$10 for any person to take or destroy any such nets, traps, or snares wherever found.

When grottsmen are accorded the univillege of shooting over

When sportsmen are accorded the privilege of shooting over certain premises on the one condition that they do "not disturb the boys' snares down in the field," and when these sportsmen-eight of them-after a day's tramp with gun and dog over the snare covered fields, come home bringing in a beggarly bag of birds, while the baggage master on their train, who has confined his "sporting" to his baggage car sends his boy through the train to peddle to these sportsmen a couple of dozen brace of trapped birds the inference is plain that there is something exceedingly putrid in Denmark.

There ought not to be any hesitation or misapprehension about their duty by the organizations whose business it is to attend to this matter. If the trade in snared birds is carried on with the boldness alleged by our informant certainly no extraordinary detective skill is required to put the guilt just where it belongs, and the simplest way to go about the suppression of the traffic would be the arrest and prosecution of every baggage master, brakesman, news agent and stoker on the Long Island Railroad in whose possession the birds might be found.

This appears to us to be the simplest and most promising mode of procedure. When once the trade of the railroad employees is stopped, the trapper will find a poor market for his birds and little encouragement to pursue his practices. The efforts of the game associations ought to receive the cordial support of the Long Island Railroad managers, who owe it to their sportsmen patrons to stop the contemptible work of their employees. The ordinary rules of business ought to teach them that the patronage of the passengers who go over their road to and from the shooting districts is much more to them than the revenue accruing to their brakesmen and baggage masters from their services as go-betweens for trappers and dealers. A general order from headquarters respecting this subject would be appreciated by the public. We are confident that if a committee of the Long Island Sportsmen's Association should confer with the railroad managers they would find the latter ready to further their endeavors to prevent the extermination of the game birds of Long Island.

HATCHING FLOATING EGGS. - We publish in another place a figure and description of a new hatching apparatus invented by Col. M. McDonald, Assistant to the U. sion and Fish Commissioner of Virginia. It is not patented, and is generously given to the fish culturists to use, if it so An examination of it will show that it is on pleases them. An examination of it will show that it is on the principle of the conical hatchers, but reversed, the eggs of the cod having as strong a tendency to rise as those of the shad have to sink; and though there are several forms of apparatus which hatch cod eggs tolerably well, there was need of a better one, and certainly this new device of Col. McDonald's looked fair and worked well with beeswax imitations of eggs, which are about the specific gravity of codfish eggs. It may be that this is destined to work the same revolution in hatch

.....

ing floating eggs that the cones have in shad hatching, smerseding other apparatus by reason of compactness and the facility with which they can be worked. We will watch for reports of its use this winter at. Gloucester and other places where the cod will be hatched.

#### YARNS

ARK clouds arose, about the time we did, to repulse the wooing kisses of the morning sun, and growing every moment more and more threatening, finally struck a mountain top and sprung a leak. Saint Swithin! how it rained! Golden showers for the corn, emerald for the grass, ruby for the clover. The wind howled dismally and forced his way into the parlor. He does not knock at your door as a gentle man would, and enter in a modest, unobtrusive manner, but he kicks the door open and stalks in like the rough rider that he is, overturning everything as though he were the boss and sole proprietor of the ranch.

A thoroughly bad day fills its proper place in the angler's calender. It is put there partly to make the better ones more attractive by comparison. A whole season of superlatively perfect days would bring in its train a sort of contempt or perhaps unthankfulness; but sandwiching unlucky and unpleasant ones between adds infinitely to the charms of the perfect angling day, when the wind is just right, the ripple just high enough and the fish a-biting.

"This is one of my days," says Tyro, after breakfast has been disposed of, "and I expect, as you are all to be housed for a few hours, to hear Munchausen outdone. Anglers can outdo the most famous story tellers of any other profession.' "How do you account for it, and why do you associate

with men who have so little regard for probity?

"It seems as though the rarified atmosphere up here has an expansive effect, and is conducive to exaggeration of fishing and hunting exploits. It not only braces up a man physically, but his conversation gets braced up, and sometimes so high and well sustained that a judge and jury would be deceived into accepting as truth his most inflated flight of I associate with them, trying by so doing to correet their bad habits."

You are an ass, Tyro; but whether you inherited or achieved or had assininity thrust upon you I am not prepared to say, but that you are an ass I do affirm."

"Well, now, Jack, all hard names aside, I have yet to meet the man who, as an angling historian, is strictly truthful. My experience is this: I care not how honest a man is in his business relations and his ordinary everyday transactions, that same man will not tell things exactly as they are when he recounts his adventures by field or flood. To illustrate my position: I went fishing one day with a clergy-We went to one of the fishing stations on States Island. We caught seven weakfish-

"I don't believe you caught seven weakfish."

"Hear me out and then contradict me; but allow, for the sake of argument, that we did catch seven weakfish. we came ashore we met a party who had been out nearly a week. They wanted some New York papers we had, and for which they gave us half a dozen more weakfish. clergyman showed those fish as part of his catch. He did not, I will say to his credit, claim to have caught them. If his friends inferred that he did he was not going to disabuse their minds by telling things as they were and damaging his reputation as an angler. You are all the same. utter these little fibs with the most unblushing mendacity. You guard your reputations as skillful anglers more zealously than any other quality you may possess, and knowing this I take very little stock in fish stories. I never knew a to guess anywhere near the weight of his fish. He always exceeds the mark. There are pleuty of men whose words I would unhesitatingly accept in regard to anything but fishing, and on that subject I would not believe them under oath. Munchausen tells few fish varns because he knew that the guild of anglers were thoroughly competent to keep up their end, and would probably be able to grandly discount his most extravagant stories; and I admire and honor his judgment. He would prove in comparison the embodiment of strict veracity. You anglers lie artistically and grow to believe your own piscatorial falsehoods. It is blow, blow, brag, until the familiar quotation, "That's a fish story," has become a synonym for every improbable and impossible yarn you can spin. No angler hears a brother angler's experience but he either pronounces it fishy, or proceeds to draw s thing still more wonderful from his own well-filled storehouse of fiction.

"There is a well-defined vein of spiteful jealousy running through your speech. You, Tyro, never had any luck fishing. That is known of all men. Your opportunities have been golden but you never could take advantage of them. You are totally lacking in almost every qualification that the angler requires. You have no patience. You are excitable. You are mechanically clumsy and stupid. Put a rod in your hands and you are a pathetic picture of ignorance and awk-You cannot learn to tie a decent knot. I have spent hours with you vainly endeavoring to teach you how to fasten your hooks, and yet you know to-day as little about it as a child. I gave you up years ago.

"Personal abuse is one thing and facts another. There was Barney Whistler, one of the most truthful men that over lived. A friend asked him to substantiate a statement regarding some fishing excursion. 'Excuse me,' said Barney; you will have to swear to your own lies, for I have all I can as represented, nor even a \$50 gun.

do to manage and remember my own.' You young fellows, however, are not half as bad as the old veterans. They are the most unconscionable old braggarts in existence. however, from any intentional tendency to falsehood, but from an unrestrained habit of harmless exggeration that took possession of their souls, and through the lapse of ages has so thoroughly fortified its position that it is impossible to dislodge it. Theirs are genuine fish stories, to which they cling with barnacle tenacity. It does not take them long to make a bull-frog attain the proportions of an elephant. they have caught are like Falstaff's men in buckram-exaggerated to an almost unlimited number. But these rusty old chroniclers can safely be consigned to the category of 'have beens,' who have no proof of their passed-away prowess save in their own unsubstantiated assertions. depreciate everything of the present, and say, 'When I was on the Restigouche, or the Beaverkill, in '45, then there was fishing,' The still small voice of conscience never smites but little fault will you find with them for that. vill all be in the same boat after a few seasons more. The wrinkles will gather, slowly perhaps, but surely; the eyes fail, the limbs grow weak, the blood run sluggishly through the veins, the voice will tremble, imperceptibly at first, but the quaver will come; yet the tongue will never weary, while memory yearningly reverts to the long-ago angling days, to you the brightest tints in Time's everchanging kaleidescope. Then your talk will be wise and reminiscent and ofttimes thin, I'll stick to that, although I say, good old friends of the rod and reel everywhere, I forgive you all, and may the evenings of your lives be a sunset without a cloud."

#### CENTRAL PARK.

THE condition of Central Park is a disgrace to the city, and a disgrace which is month by month growing more fluoreaut

It is asking too much that commissioners, who receive their appointment through no greater special fitness for office than the color of their political creed, should appreciate and respect the designs of the landscape artists who planned the Park and it is therefore a matter of no surprise that those designs are ignored and frustrated. But there are other, and to the general public more patent, signs on every hand of the incompetence of the present management of New York's pleasure ground. From Fifth avenue to Eighth avenue, and from Fifty-ninth street to One Hundred and Tenth street, the visitor is confronted by glaring evidences of shiftlessness and neg-

The walks are untidy, the concrete broken and the wire fences straggling and disjointed. The mall is muddy, and through its centre runs a narrow walk of rotten planks. Here, unless the visitor exercises considerable agility in getting out of the way, he is jostled and bruised by the rampant goat teams which, with their noisy, impudent and rowdyish attendants, monopolize that part of the Park.

The stone bridges are marred by the hundreds of idiots' names scrawled over them, and many of the wooden bridges are rotten and patchy.

The arbors and rustic works are rotting and falling to pieces, without even the pretence of being patched.

The banks of the lake are seamed with the roadways of the huge rats, which vermin, with the English sparrows, are the most numerous and conspicuous members of the animal kingdom to be seen in Central Park.

Add to all this that the Park policemen upon assuming their uniform become at once thereby deaf, dumb and blind, and that the walks and rambles are infested by "gangs" of boys and roughs who salute the ears of the lady passers-by with oaths and obscenity, and we have a ready explanation of the fact that decent people are year by year shunning the Park and relegating it to the undisputed and destructive possession of the great unwashed.

If the Obelisk ever reaches its proposed site, it will be a most fitting circumstance that this monument of the ruins of the East should be erected amid the ruins of a great public park of the Western world.

Alleged Gun Frauds.—J. A. Ross, of the firm of G. W. Turner & Ross, 17 Dock Square, Boston, Mass., was arrested last week by a special agent of the Post Office, for alleged violation of the postal law, which forbids the mailing of circulars concerning a scheme to deceive and defraud the public by obtaining money by false pretenses. This firm has distributed throughout the rural districts, and by means of such papers as will publish their advertisement, voluminous circulars setting forth extraordinary bargains in firearms. One particular form of inducement held out is the offer to send for a certain amount a gun, rifle or revolver worth several times the price asked for it, the purchaser in reality receiving a weapon which he could buy in a reputable gun store for less than he had paid Messrs. Turner and Ross.

We have inspected one of the breech-loading shot guns which was sent to a purchaser who wrote for one of the guns styled "The Empress, Extra, No. 5," represented to be the highest grade of a first quality Bonehill or Tolley. The price asked and paid was \$50. The gun was, to the best of our judgment, the lowest grade of a Bonehill that is made with all the improvements, and it bears the name "Henry Tolley," evidently a play upon the name of the well known firm of J. & W. Tolley. This gun could be duplicated in any reputable gun store for \$35 or \$40. It is in no sense a \$200 gun.

We understand that it is for an operation of substantially this nature that Messrs. G. W. Turner and J. A. Ross are now held in \$500 ball each to appear for examination Nov. 16.

# The Sportsman Tourist.

A PRAIRIE FIRE ON THE SEVIER.

By Cosmopolitan.

A FTER a long and tiresome day's march we went into camp on the west bank of the Sevier, near old Descretelty, at 4 r. m., weary, dusty, hungry, thirsty and irritable; and the appearance of our camping place did not add much to our contentment, for there was no shade, and the water, which was brackish and seam, teemed with millions of animals were obliged to wade through soft and tenacious mud for nearly forty feet. An attenut, was made to build a sort of canseway of rushes wade through soft and tenacious mud for nearly forty feet. An attempt was made to build a sort of causeway of rushes, but failed, for the more bundles we placed in position the more were needed, until the supply failed, and we were as badly off as ever, and so gave up the attempt. The sun came down as hot as Tophet, but ere long we had up our tents, and beneath the canvas roofs comparative confort was

tents, and beneath the canvas roofs comparative confort was attained.

Our chief and myself occupied a wall tent, which, compared to the little dog-hous s of the men, was a palace. With my pipe of Durham, and Iolling on my mattress, the ill-humor I had been suffering from for several hours gradually evaporated. But not so with Mott, who tossed and turned in his blankets, used some bad language, anathematizing the country, the expedition, the Army, and the water in particular, for after several attempts to drink it he had given it up in despair.

"My dear boy," said I, "why make such a fuss? Why your sorrows in the flowing bowl?"
A grunt was the only response. Again I repeated my query. Still no reply.

"Well," said I, "if you are too hazy to do your duty as a man had an officer, I shall myself make a punch and drink it all alone."

"Look here, Pills, what is the use of tautalizing a fellow

it all klone."

"Look here, Pills, what is the use of tautajing a fellow that way? You know very well that all our liquor is gone. Orth begged the last bottle when he started; and where the Old Scratch can you find milk in this blank blank prairie, unless you expect to get it from the old bell mare?"

I answered by running my hand inside my rag pillow and bringing out a quart bottle of brandy, the last of twenty-four brothers, which had been reserved for use in case rattlers should attack the camp. My companion beamed, and when he saw me extract from my haversack a can of Borden's condensed nilk, eagle brand, he leaped to his feet and favored me with an ursine hug. an ursing hug.
"Hooley! Hooley!" shouted he to the cook, "put on a

"Hooley! Hooley:" shouted he to the cook, "put on a kettle of that water and bring it to a boil."

This was to kill the animalcule. While the water was being prepared sugar was procured and an old nutmeg found, and we anxiously awaited a chauce to compound the

found, and we anxiously awaited a chance to compound the much needed medicament.

By this time the sun was gradually sinking, and as the shadows lengthened, insects began to come out and disport themselves around us, much to our discomfort. Musquitoes by the millions, billions of longs and multitudinous moths frollicked and gamboled. For awhile I amused myself catching some as specimens, but us they became more numerous I was forced to beat a retreat to the open air. Mott bore the torments manfully, having in anticipation "a balm in Gilead." But he eventually succumbed, and yelled: "For goodness sake, Pills, build a fire and smudge into the tent."

As I proceeded to tear up the long Indian grass with which

Officad." But he eventuany succurries, and goodness sake, Pills, build a fire and smudge into the tent!"
As I proceeded to tear up the long Indian grass with which our camping ground was covered, to serve as fuel and leave a clear space for the fire so that it might not spread, Hooley advanced to the tent and said, "Here, Leftinant, is the wather. It has biled, but I cooled it in the river, and ye can use it now," "Go ahead with your fire and Pil bring the mode," said Mott. punch," said Mott.

I looked carefully around to see that there was no danger

Those determing around to see that there was no danger of the tall grass igniting, wet my finger and held it up to see if any wind could be felt; all appeared safe, and I struck a match and soon had a blazing and smoking fire, and with my hat I fanned the smoke into the tent. Suddenly I felt a that I named the smoke into the tent. Suddenly I felt a breath of wind from the east which in a second was followed by a dust swirl. I rushed to stamp out the fire, but in less time than it takes to write the account, some embers were blown into the surreunding grass and a terrific flame sprang up which was frightful to contemplate. I stripped off my coat to beat it, and called, "Mott, quick' help me to put this fire out; the grass has caught." But he, intent only on his pharaceutical ways later the first transfer of the first out. fire out; the grass has caught." But he, intent only on his pharmaceutical manipulation, or thinking I was joking, refused to stir. My yells brought the men in camp to my side, and, with blankers and overcoats, we fought the fire and tried to keep it down and away from the tents, but in vain. Mort, finding it no joke, rushed out and hammered away like the keep it down and away ..... finding it no joke, rushed out and hammered away has the rest. In a few moments our tent took fire and we attempted Just us the last rope was loosened, Mott rest. In a few moments our tent took fire and we attempted to pull it down. Just as the last rope was loosened, Mott yelled, or rather screamed. "Our punch, our punch," and sprang into the tent, determined to rescue it, and, while doing so, down it came on top of him, after in a dozen places; but with a perseverance worthy of a better cause he held fast to the parmiskin and emerged from the ruins with it in his hands. He quickly placed it, as he supposed, in a secure place, and joined the fire-fighting crowd. The flames still expered resistlessly on, and in less that ten minutes had swept over the entire camp, with the exception of the place where the wagons were parked, and went rushing out toward the west with ever-increasing fury, until only a long, low line of fire was visible in the dim distance. ward the west with ever-increasing fury, until low line of fire was visible in the dim distance.

We rested from our fruitless labors and ruefully looked We rested from our fruitless labors and rucfully looked around us to ascertain the damage. Every tent was hurned up, the arapajos of the pack train badly scorched, and there was a general wailing over scorched and damaged outer gar-ments. My valise and gun-case were badly burned; several ments. My valise and gun-case were badly burnet; several of our blankets barely held together, and a number of bottles containing specimens had burst. In short, we were in a bad its. The men, old mountaineers and travellers, did not dare express their feelings too openly in the presence of their commanding officer, but the poor "tender foot" pilgrim (for such I was) came in for a fair share of expletives for stupidity and greenness. I knew I deserved all that could be said,

If him greenness. I know I describe an inaboute of sam, and held my peace.

My friend walked up to me and coolly said: "See here, old fellow, did you see anything of my blouse?" "No; where was it?" "I at the tent," "I expect it is burned up,

November 11, 1880.]

then." "I hope not, for in the pocket I had over \$400 of greenbucks—Government funds." "Great Heavens! Are you joking?" "Not at all, let's hunt for it." He called some of the men, and lighting fourteen candles searched for the missing garment. It was found at length a mere mass of scorched rags, but no money in the pockets, for somehody had doubtless picked it up to beat out the fire, and the notes had fallen out. Another search, and singular to relate, about \$100 was found, but so charred that great care had to be taken to prevent them falling to pieces. I may add that a till bad to be introduced in Congress to account for the loss of this money.

"Well, at all events," said our chief, "our milk punch is all right." We walked to the place where the can was, and as stopped to raise it to his lips, but dropped it quickly, for the fire had passed over it, and the tin and contents were too warm for comfort. He let it cool, and then mished it with logubrious sighs. We crept into our blankets supperless, and in mourtful silence Mott ejaculated as he composed himself to rest, "Oh, Pills, what blanked asses we have made of our-edves." I agreed with him, and so expressed himself to ris a few minutes a derizhing rain commenced which lasted apparently for hours, and long before it ceased we were wet hrough, and as uncomfortable as need be.

Suddenly we heard an approaching tramp coming rapidly toward the camp, and in a few moments a band of wild horses swept over us, snorts, neighs and leaps, and our horses stamped followed. It was no use trying to follow at that hour of the night and in the pitchy darkness, so we again composed ourselves for sleep which would not come, and sunries saw us still awake, rucful and disconsolate. This mode trate cost us fifteen good horses, although all but five were away any little shame or mortification that the principal actor may have felt, and the story has been told as a warning to those who are fond of drinking milk punch, and may perhaps be ignorant of the danger

#### A STORY FROM MONROE.

CITUATED on the broad, shallow river basin, near Lake Eric, Monroe, Michigan, presents an attractive side to the sportsmen the year around. In the early autumn the woodcock in the thick stubble and peat lands that border the river command his attention; later, be can pursue the ruffed grouse, quall and turkeys in the uplands; and when the cold north winds have turned the marsh grass in the bayous at the mouth of the river to a golden yellow, he can enjoy the best sport of all among the myriads of canvas-backs, red-leads, mallards and other wild-fowl that select this place as their feeding-ground. Nor will his sport end here; for when the trees are again green, and the water-lilies and the flowers of the stately lottus are again in bloom, he can quietly drop his flies in the ripple below some half-sunken log, and a three-pound bass will test the plancy of his rod and the skill of his good right arm.

Perhaps as remarkable an illustration as has been afforded of late years of the abundance and variety of game at Monroe occurred in the fall of 1875 in the following incident, which can be substantiated by the old gunners and boatmen of the marshes:

which can be substantiated by the old gunners and boatmen of the marshes:

A gentlemen from Syracuse, N. Y., who has passed a portion of every autumn at Monroe for several years, arrived late one Friday evening, and was grieved to learn from the sportsmen already arrived that the ducks were so scarce on the marshes that the sport would hardly repay the unpacking of his guns. Determined to stay and investigate for himself, however, our friend unpacked his trappings, and the next afternoon, while awaiting the arrival of his dilatory punter, he concluded to take a light punt and his Greener, and make a prospecting tour in the North Marsh. Paddling about for some time in his accustomed haunts, the sportsman came to the conclusion that his fellow gunners had rightly informed him, for at the end of nearly five hours of weary punting he had only half a dozen ducks to his credit. Wishing to stretch his legs a little after maintaining a cramped position so long some thme in its accissoment nature, the sportsman came to the conclusion that his fellow gumers had rightly informed bim, for at the end of nearly five hours of weary punting he had only half a dozen ducks to his credit. Wishing to stretch his legs a little after maintaining a cramped position so long in the boat, our friend landed at the Carry, and walked aim-lessly down the sand bar. At Sandy Creck Cut he sprung a flock of widgeons, out of which he dropped four, and seeing a couple of green-winged teal approaching at a distance he harricdly inserted two fresh cartridges, dropped behind a bunch of rushes, and as the teal passed with bullet-like rapidity down wind, he gave them both barrels, and was delighted to see them drop in the parsh. He had no sooner secured this pair, than half a dozen widgeons, anxious to finish their suppers, came circling around a clump of marsh grass, a long gunshot away, and one was so unfortunate as to be cut down by the hunter's right, and while he was returning toward his boat with his load another, a solitary old drake, was added to the pile. Depositing his trophies in the boat, the hunter concluded that, as twilight was fast approaching, he had better be seeking home, and with paddle in hand he was preparing to shore off, when down with the west wind came a single "honk!" Being on the marsh side of the bar, the hunter was near no cover, but trusting to lick he dropped that on the sand, and without turning, cast his eager eyes to windward and saw a flock of about a dozen that had he was preparing to shore off, when down with the west wind came a single "honk!" Being on the marsh side of the bar, the hunter was near no cover, but trusting to lick he dropped that on the sand, and without turning, cast his eager eyes to windward and saw a flock of about a dozen and the other out some distance in the lake. Retrieving the first one, the hunter concluded to leave the other to be picked up afterward, as the gale rendered it unsafe to embark on the lake with the little punt. "Glory eno

gun might be in some cases. The male bird was a fine specimen, weighing fully fourteen pounds, and the ben about nine. Their glossy plumage and soft, velvety fur on the neck and legs told our friend that he had not made the mistake of shooting a neighbor's favorite gobbler, and gathering in his goose as he retreated to the boat, he deposited his load and made his way in the darkness to "Uncle Joe's," where he was awarded the honor of bringing in the best bag of the season, considering the time occupied in securing it. As Uncle Joe said: "You was foolish for comin' in so soon, for while your luck was on you might a' shined a buck or a catamount. I shouldn't expect nothin' less with such luck as you had."

The abandoned goose (a large one) was picked up next morning on the shore, where it had drifted during the night, making the bag just fourteen ducks, two geese and two turkeys, all except six of the ducks—shot within a half hour.

#### CŒUR D'ALENE LAKE.

W ENGINEER'S CAMP, NEAR SPOKAN, Washington Ter., Sept. 30, 1880. }

L'ARLY last month I received instructions from the Eng. Pen d'Orielle Div. N. P. R. R., to proceed without delay to Cour d'Alene Lake and its southern tributary; the St. Joe River, to look after certain interests in that direction. St. Joe River, to look after certain interests in final direction. So, one bright morning Heft Asst. Eng. Scovill's camp, with blankets and fly-rod strapped behind the saddle, and the following aftermoon arrived at Ceur d'Alene Post, one of the most beautiful and romantic spots to be found within the boundaries of Uncle Sam's dominion. Taking no lecel blankets and fly-rod strapped behind the saddle, and the following afternoon arrived at Cear d'Alcne Post, one of the most beautiful and romantic spots to be found within the boundaries of Uncle San's dominion. Taking no head of entreaties to remain there and fish a day or two, and proof against the inducement held out by a friend of "eighty-three trout yesterday afternoon of two pounds," I engaged a boat and guide, and proceeded to lay in provisions for two weeks. We were off bright and early in the morning, the guide taking his rifle, and my own outfit being reinforced by one of Colf's new breech-loaders. Rowing leisurely, for the day was hot, and the trout more than anxious to take the fly as I cast from side to side occasionally, at four o'clock we made camp on the beach below a focky point, about eighteen miles from the Post. Those three and four pound trout were delicious, but, alas for human calculation! we found that five of them among two men-and men with mountain appetites, too—were just two and one-half too many. But they were not wasted, for before the dishes were washed and stowed away a lank and hungry Indian paddled alongside with three freshly killed deer in his cance. Addressing him in "Chinool," we asked him to come ashore and have some "mucka-nuck." His face wreathed itself into one of the most hideous grins I ever beheld, as he exclaimed "Na-witka" (yes), and within less than five minutes he had 'holted' himself outside of the remainder of those fish, plus four pounds of raw bacon, a pound and a half of sugar, three pints of coffee, a can of Boston baked beans and a big loaf of bread. But there is an end to all things, even an Indian's appetite, and as he swabbed up the last bit of grease in the frying-pan with one hand, I grasped the other, and indian's appetite, and as he swabbed up the last bit of grease in the frying-pan with one hand, I grasped the other, and in fearful accepted the invitation, and after giving us a big chunk ovenison, and the information that we could kill "hi-yu" (dee

the Curient is a sight as to be scaled, perceptione. The banks are lined for the most part with huge cottonwood and willows, while here and there tower huge belts of gigantic fir, cedar and pine.

The valley itself is one huge meadow, from one to three miles in width, hemmed in on either side by the majestic mountains of the Cœur d'Alene range. Years ago the Catholics founded a mission there, and as an evidence of the zeal, and energy of the priests in charge, about ten miles up the river, surrounded by fruit trees, stand the old mission houses and barns, while acre upon acre of timothy grass waves in the wind and gladdens the heart—and appetite—of deer without number. Every winter the Indians resort there to participate in their annual "deive," and an old "Siwash" showed me one point where last January they killed one hundred and citably deer in two days. Their modus operand is as follows: First, selecting a narrow neck of meadow land, caused by a bend in the river, they divide into parties of twelve or fifteen, each under control of a captain; then, proceeding to the hills a few miles from the river, they separate, keeping within halling distance of each other and form a semicircle of several miles in length. Now the drive begins in earnest, and with shouts and cries such as Indians only know how to utter, the frightened deer are driven before them, the outer edges of the semicircle gradually closing in upon the timid creatures until the river is reached, when crack! crack! go the rifles, and the mountains catch the sound, and send the celoes from peak to peak, until the last deer is killed. There is plenty of danger attached to the drive, as witness the case of friend C, who participated in a drive on Hayden Lake last winter, and was only too glad to seek refuge in a huge hellow log, to escape the too many stray bullets that were whizzing about his cars.

his cars.

I found the best fishing near the rapids, about thirty-five inlies from the mouth, and on the evening before I left, landed at six consecutive casts eleven trout, whose combined weight was twenty-eight pounds. The largest trout I killed weighed six and one-quarter pounds, and I saw many larger ones. They differ greatly in appearance from those taken in the Spokan River—at least, the larger ones do. Their bodies are long and slender, tapering from head to tail; above the lateral line is a row of bright; early sort; eye extremely large and bright; under jaw tinged with crimson, two double rows of teeth, and teeth unon hyoid bone, tail almost if not cuits. of teeth, and teeth upon hyoid bone; tail almost, it not quite, as square as that of Joulinalis. I have fished the waters of Maine, New Hampshire and Puget Sound, and have killed plenty of hard fighting trout and salmon, but in all my experience I have never seamy fish, trout or salmon which possible to the proper seamy the proper seamy the properties of the properties sess such a fund of pluck and endurance as do those St. Joe

In a few weeks the meadows will resound to the cries of In a tew weeks the meagons will resolute to the class countless wild fowl, and I venture to predict that in a few years Ceur d'Alene Lake and its tributaries will become the Mecca toward which the best sportsmen in the United States

years Geur d'Alene Lake and its tributaries will become the Meeca toward which the best sportsmen in the United States will yearly turn their eager steps.

This mouth my duties led me to a little lake six miles long, about thirty-five miles north-east of Spokan Falls. A lovely sheet of water, nestled among thepines in the foot-bills of the Cour d'Alene range. There one afternoon two of us killed ninety trout, from one to three pounds weight, and while returning to the "He". Camp at dusk, the wolves kindly drove a two hundred pound buck down upon us, and we, nothing loth, gathered him in, with a shot from a .45 cal. rille, and we feasted upon his juicy ribs in the bright moonlight, to the tune of "A freg he would a wooing go," played upon a cracked fiddle with two strings.

The sporting world probably does not realize what will be miversally known in a very few years, that the Northern Pacific Railroad will prove the "open sesame" to the fuses game and fish region in America, where sporting will be a pleasure, and not the toil that I have often found it in Maine and New Hampskire while fighting guats and mosquitoes with one hand and trying to land a poor little half-pound trout with the other. We have very little occasion for the use of tar and oil. Prairic chicken shooting is at its best now, the whole country is alive with them, and aftree hours' tramp in the vicinity of Eag. Scovill's canp is sure to result in a full bag. The numerous lakes throughout this section of Washington are beginning to be covered with swans, geese, and ducks, and the honest granger will have a welcome addition to his regular diet of potatoes and bacon.

H. B.

# Matural History.

OUR WATERFOWL.

1TH the approach of winter the season for wild fowl shooting draws near. Already the guns have commenced to sound both in the interior and along the coast. In the marshes of Canada and the Western States the mallards, teal and pintail are falling thick and fast, and on the Chesapeake the boom of the heavy guns has, since November 1, sounded the death knell of many a canvas-back and black-head. People are beginning to paint up their goose and brant decoys, to bait their blinds, and to load their shells with BB's; and, with the first real cold snap we shall receive reports of the bags made at the various shooting resorts, inland and along the coast, on the geese and brant.

We so constantly receive inquiries from our readers in relation to waterfowl of different species, which they have killed, but are unable to identify, that it seems worth while to give some facts in regard to these birds in order that each one may be enabled to tell for himself the names of such as may fall into his hands. It would be for the interest of each sportsman in the country to purchase a copy of Dr. Coues' admirable "Key to North American Birds." By the aid of this work, the reader, after a little practice, would be able to settle for bimself all questions with regard to the identity of any of our game birds, and could learn the differences and relationships between the different groups.

The term waterfowl, which is frequently loosely applied to our shore birds or bay snipe, might better be restricted, it seems to us, so as to include only the swans, geese and ducks. These constitute three sub-families of the Anatida, a group of great size and economic importance, and of very wide distribution. Dr. Coues gives one hundred and seventy-five as the number of species included in it. He says of these, "They differ a good deal in minor details, and represent a number of peculiar genera aside from the ordinary types, though none are so aberrant as to endanger the integrity of the group,"

North American waters are certainly well peopled with birds of this group, of which not far from fifty are cuumerated in our works on ornithology. Of these there are two swans, ten geese and four varieties, twelve species of Anatina. or river ducks, twenty-one and several varieties of Ful'guline, or sea ducks, and three of Mergina, or tish ducks.

As a rule those species of the Analida which inhabit fresh waters are more delicate in flavor than those which frequent the sea exclusively. The flavor of any animal's flesh depends in such a great measure upon its food that it is evident that a bird which feeds to a considerable extent on vegetable food will be more toothsome than one which confines itself to a diet of fish or molluses, and so we find that the typical sea duck, such as the genera tEdemia, Harelda, Somateria and others, and the fishing ducks, Mergus, rank very low as table birds. On the other hand, swans, geese, the Anatina, and many of those ducks which, though included by systematists among the Fuligulium, pass the greater portion or all of their time upon inland waters, are among the most highly esteemed of our food birds.

The Anatida, from their aquatic habits, are warmly clad with a thick covering of feathers, which form an efficient protection against cold and wet, and for these feathers they are destroyed in great numbers. During the excessively severe winter of 1874-5 Long Island Sound was frozen over, and the black ducks, which were wintering on it, were unable to obtain food in any quantity, and thus became extremely thin. At this time they were accustomed to resort in great numbers to certain warm spring holes in New Haven County, Connecticut, to pass the night and feed, and here they were were quite unfit for food, and no one having the instincts of a sportsman would have disturbed them at such a time. No one, we think, would feel disposed to criticise the action of any one who chooses to save the feathers of a bird that he kills in a legitimate way. But to kill game when it cannot be eaten simply for its hide or its feathers is neither more nor less than pot hunting of the worst type, and is entirely unjustifiable from any point of view. Happily, such opportunities do not often present themselves, for, in the East at least, birds are seldom found in sufficient numbers to make such butcher's work profitable.

Those members of the duck tribe found within our borders are readily distinguishable one from another, and there is no reason why all our readers should not be familiar with them all. There are, it is true, a few cases in which the young of one species bear a somewhat close resemblance to the young of another, but in most cases they are so different that even the least observant gunner can distinguish the different spc-Years ago we frequently used to have the question asked us, How does a red-head differ from a canvas-back? and after answering it for years, we are now led to believe that all our readers are able to tell the two species apart.

We shall publish next week some remarks on our swans and geese, and shall follow these up with others on the ducks, trusting that the information thus given may be of real practical value to sportsmen.

[TO BE CONTINUED.]

Gulls in Central Park. - Visitors to Central Park during the fall before freezing weather comes will do well to observe the gulls which are to be seen in great numbers about the reservoir, either resting on the water or flying over it. At a distance they appear to be snow-white, and whether winging their way with graceful flight from one end of the reservoir to the other or floating lightly on the water's surface, they are beautiful objects.

We have as yet observed but two species among them, Larus argentatus and L. delawarensis, though others no doubt are sometimes to be seen. E 101

DEATH OF THE WOODCOCK DICK. — Editor Forest, and Stream. From the time I readyour article entitled "A Captive Woodcock" I decided that I would if possible procure one, and also that I would see Mr. Morris bird as soon as possible. When I did see him I was very much pleased, and decided to purchase him, which I did, and kept him at first in a box about 40 inches by 20 inches by 18 inches, with small wooden bars in front, but the back, top and ends solid. I placed moss I inches deep over the bottom, except in a broad pan 9 inches by 5 inches by 8 linches deep, where I made a soft wet place for him to bore in. He did very well, and was healthy, and I decided to have a new cage built for him. It was 4 feet long, 2 feet wide, and 28 inches high in all. I had made a pan 4 inches deep, filling the entire bottom. This I filled with moss and put a small hendock tree in the cage. He did not seem to like the change as well as I had hoped he would, and acted wild whenever any one approached his cage, but when I approached it carefully he was quiet. I always fed him morning and aftermoon with a handful of earth worms.

one afternoon when I came home I went up stairs to see him and found the maid sweeping the room. This of course had frightened him very badly, and all the feathers were knocked off his poor head and the joints of his wings, and there was blood on the wires. This made me feel pretty badly, but I put him in his old cage and proceeded to tack some green cambric on the top and sides of the large cage to darken ft, as I thought it must be the light which made him wild, as he was much more quict in his old place and gentle. One morning two days after his accident he did not look well, and stood with all his feathers ruffled up, and eat only a few worms. I placed him in his new cage and gave him plenty of worms, and in the afternoon he looked better, but the next morning he was dead. I never felt so badly about anything before.

before.

Think the trouble must have been partly the banging be gave himself, and partly his food, as he was pretty poor at the time of his death. I think the worms given him crawled away among the roots of the moss and thus a great many es-

caped him.

A woodcock should be fed each day his full weight in A woodcock should be ted each as me sair wears worms, say six ounces, three in the morning and three in afternoon. He should have a place to bathe in, and on hide in, such as some ferns.

No. 10 East 37th street. and one to

BATS STILL FLYING .- A correspondent who writes us from

Youkers, N. Y., under date Nov. 5, says: "While I was riding home one evening last week I saw what I took to be a bat. I called the attention of my friend who was in the wagon with me to it. I said it was a bat, but he didn't believe that bats showed themselves late in the fall. Could it possibly have been a bat? It was quite warm that coming?"

It was no doubt what you took it to be. We saw on the afternoon of Saturday, Nov. 6, two bats busily engaged in estebing insects.

skink Bire.—Editor Forest and Stream: I read with much interest the articles in your paper upon the effects of the bite of the skunk upon the plains of the great West. It seems to be a case clearly made out that a very common, if not invariable, sequence of skunk bite there was hydrophobia. I have heard of no such result cast of the Missispip, nor have I been able to learn of any after considerable inquiry among my friends in various parts of the country. The following case of a dog in Chester County, Pa., has recently come to my notice. I have not been able to collect so many facts in the case as are desirable, but those that I could gather make the case an interesting one. I submit them to you and to your readers without comment, hoping that others may follow them up by careful personal observation when opportunity offers. The dog attacked a skunk and killed him. In the sculled the dog was bitten. Between one and two weeks afterward he was taken sick, refused all food, his jaws were set about an inch apart, he lapped water but could not swallow it. Suliva constantly flowed from his mouth. After some days he died.

This is a peculiarly interesting note, as the symptoms ob-

This is a peculiarly interesting note, as the symptoms observed in the dog seem to point towards true rabies. There

has been up to this time, we believe, no record of a dog's becoming rabid from skunk bite. We shall hope to receive further particulars of this most interesting case

Habits of the Beaver,—Recent items concerning the extinction of the beaver which have appeared in your paper would almost convey to the casual reader the impression of their non-existence east of the Mississippi River. True, like the red man, they have fast disuppeared before the advance of civilization, but from our extended trapping excursions carried on for the past eight years we know of their existence in four of the Southern States east of that river, and think they can yet be found within a limited territory in some of the more Northern States. If would be almost impossible to get a true HABITS OF THE BEAVER .- Recent items concerning the ex can yet be found within a limited territory in some of the more Northern States. It would be almost impossible to get a true and loyal trapper to write to Forest and Stream or any other good paper the exact whereabouts of a colony of beavers. Such wholesale information is but, rarely given, and we would be very sorry to throw broadcast such valuable information to amateurs of the trap, who would frighten away more than they would catch. The beaver seldom takes up his abels so recay white settlement we to correctly incorporate. more than they would catch. The beaver seldom takes up his abode so near a white settlement as to seriously inconveni-ence the farmer by the damming of the creeks or the destruc-tion of his crop of corn. Although we have seen instances of their destructiveness which caused a great desire among of their destructiveness which caused a great desire among the farmers to get rid of them as a continual nuisance. The beaver is the most industrious of all the fur animals. In fact most of the other fur-producing quadrupeds are prowling thieves that under cover of darkness roam through the swamp and forest in quest of food, and some, as the mink, skunk and oposeum, will not hestiate to raid on the mink of or a neet of eggs. The very old saying, "Work like beavers," has been well founded, as they are a most innocent and industrious race, living entirely upon vegetable food procured by great industry. They will work the whole night to repair a break in their dam, felling small trees and dragging them in place, and afterward drawing up a great quantity of repair a break in their dam, felling small trees and dragging them in place, and afterward drawing up a great quantity of mud and leaves, which are firmly settled into place by the vigorous use of their broad, flat tail. In our trapping campaigns we always felt our conscience a little touched when we had to kill these very innocent animals. Unlike all other wild fur animals of the trap, they are perfectly harmless. Their oven-shaped houses are very comfortably constructed. We have stood upon their top without causing the least depression, and, after cutting through the twelve or fourteen inches solid roof, have went inside, which above water was amply large to admit of an erect sitting posture, the floor being thickly covered with heavy layers of soft inner bark. Dugdale, Penn., Nov. 9.

J. Lee SMEDLEY.

More Praise for the Starrows—Kingston, Ont., Oct. 23, 1880.—In your last issue I noticed a good word for the sparrow from "Plint;" would you kindly allow me to add another. We have around our institution here thousands of sparrows, and since the controversy in the columns of Forest and Streem some time ago I have had a special interest in watching them, and have become fully convinced of their insectivorous labits.

Several weeks ago a couple of friends and myself were enjoying a quiet smoke in the garden when our attention was attracted by the peculiar darting flight of a large number of sparrows. Upon a closer scrutiny we found that they were busy catching a winged insect of large size. They would dart up into the air and secure it in exactly the same manner as does the kingbird, woodpecker, etc., alighting on a tree or the fence, and pound it on the branch two or three times, then swallow it. We watched them for nearly an hour, and in all that time they were very busy.

I noticed subsequently that they seemed to enjoy this kind of food, particularly just on the eve of a shower of rain. They were not driven to seek this kind of food from lack of other. On the contrary, the men (convicts) feed them daily

They were not driven to seek this kind of food from lack of other. On the contrary, the men (conviets) feed them daily on bread which they strew all over the place, and they have access to all kinds of grain and fruits. I have also noticed them busy among the flower beds and plants, hopping about in quest of the insects who infect them. As "Plini" says, the cocks do have buttles royal among themselves. (Others than cock sparrows raise "ructions" for a preference with the gentle sex.) Swallows, martins, robins and grass birds are numerous here, but the sparrows live anticably with them. The much petted and vaunted robin is the greatest robber and fruit destroyer among them all.

Allow me to tender you my thanks also for your exposure of that villianous compound, Dittmar powder.

Will, it Live Theorem the Winter?—Harrodsburg, Ky., October, 1880.—A humming-bird was captured in a room by Miss Ada Huff, whither it was attracted by a flower. It has been thoroughly domesticated, and is fond of being caressed. Takes food from band, and returns from its wanderings to the room in which it was caught. When shown us by lamplight it was perched upon a flower. Its accustomed perch at night is the top of a canary cage.

Syakes in Kenticky—Mill Springs, Ky., Nov. 1.— Snakes are numerous and varied in vicinity of our nev mountain home you'll readily credit when assured that fiv of different kinds were killed one forenoon last summer with ist summer with of different kinds were killed one forenoon last summer within half a mile of the house, one, a viper, within a few paces. The subject of hissing in Forest and Steemal led me to interview several of the old natives, and the universal assurance was that only the viper and a species of black snake—the racer, I think—have been known to hiss.

A friend not long ago "set out" a line and hook baited with a lively chub—ninnow, on which, next morning, he was chagrined to find a huge water snake instead of a toothsome bases as the lively motion of the swinging limb led him to anticipate. Wasn't it a rare catch?

Kentuckian.

A Heavy Mallard.—Baltimore, Oct. 25.—In the fall of 1877 I shot a mallard on the Arkansas River which appeared so unusually large to me that I had him weighed at the village store. He tipped the beam at 4 lbs. 2 oz., and was considered by those who saw him as the largest in their experience, and truly he was immense.

FREDERICK.

Weights of Quali-Mill Springs, Ky., Noc.—A few seasons since Capi. G. H. McKinney, of J. M. & I. R. R., and the writer were quail shooting in Rock Castle County, where wing shooting was comparatively unknown, when the extraordinary weight of a hen quail prompted me to weigh it on our return home, thirty-six hours after it had been drawn. Its head was pulled off in detaching it from the string, and without head and entrails it weighed \$\frac{1}{2}\$ oz. on a pair of druggists' balances. It was fifty per cent. heavier ---

than the next largest from a string of faty. Much the larges I ever bagged in twenty years' shooting.

WEIGHT OF RUFFED GROUSE .- Ashfield, Mass. Weight of Rifferd Grosse.—Ashfeld, Mass., Nos. 5.— I killed yesterday the largest rullled grouse that I ever weighed. It turned the scale at 1 lb. 18 oz. He was one o, a bag of eight made that day. The seven others avernged les-than 1 lb. 4 oz. each and were about average birds. I have been shooting constantly since September 1, and rurely bag a grouse that weighs over 1 lb. 8 oz. Rifferd Grosse.

RECENT ARBIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN, —Three black spider-monkeys, Ateles ater; four brown capucins Cebus fatuellus; five rhesus monkeys, Macacus erythraeus; twelv common macaques, Macacus cynomolgus; two bonnet monkeys.

Macacus radialus; one yellow-crowned night-heron, Nyclarda.

violacea; two weeper capacias, Cebus capaciaus; one prairie wolf, Canis latrans; one entellus monkey, Semnopithicus entellus one Chuva spider monkey, Ateles marginatus; one herring gul Larus argentalus; one merlin, Falco asalon; and two yellow baboons, Cynocephalus babmin, all purchased. One great-horned owl, Bubo virginianus; three raccoons, Procyon lolor; one hos nosed snake, Helerodon platyrhinos; four marsh harviers, Circu cyaneus hudsonius; one red-wingod blackbird. Agela eus phæns ceus; two alligators, Alligator mississippiensis; one black Baseanion constrictor; two sparrow-hawks. Falco sparrerius: our rellow-shafted woodpocker, Colapies aurains; two red salams ders, Spelerges ruber; two pine snakes, Pituophis melanoleucu one water snake, Tropidonolus sipedon; one common bittern, Ro-taurus minor; one Northern loon, Colymbus torquatus; one dipper duck, Podilymbus podiceps; one common crow, Corvus americanus: one rattleanake, Crotalus horridus, all presented; and

canus; one rattlesders, Cyvatas and Carles, one mazame deer, Cervus campestris; born in the Garden.

Arrivals at the Zoological Garden, Circinnati, to Nov. 1.—
Two Baltimore orioles (Icterus baltimore), three orchard orioles (Icterus spurius), one yellow warbler (Dendroica estica), one black-billed euchoo (Coologus erythrophthalmus), two indiged this (Gyanospita eyenea), one black and white crooper (Intolita cardo), one chewink (Papilio erythrophthalmus), two lead-beaters cockatoos (Cacadaa leadweater), two stander-billed ooksatoos (Icterus senioristris), all purchased; three ground squirrels (Tundas striatus), one cool (Patira americana), six mountain qual (Corvortes) striatus), six valed qual (Lophorigo cat) pais, all desented; one hog deer (Cercus promises) be exchange hermit thrushes (Turdas patasi), received he exchange

High Qulture.

ACCLIMATIZATION OF BLACK BASS IN ENGLAND.

ACCLIMATIZATION OF BLACK BASS IN ENGLAND

M. R. SILK, fish culturist to the Marquis of Exeter, Barleigh House, Stamford, writes me the following gratifying intelligence.

FIRANK BUCKLAND.

"All of the black bass that I brought from the United States of America were taken from the Delaware River. I had them caught and placed in boxes, floating in the stream ready to be taken away when wanted. On the day preceding the sailing of the steamer for England I had them placed in the tanks I had prepared for them by the river side. We got them to the train without any loss, and on arriving at New York had them placed on the main deek of the steamer; it was then 11 r. M., we having left the Delaware River at 3 p. M. Up to this time I had no loss; my greatest trouble was the high temperature it stood at—78 deg, all night. I kept the water as cold as possible with ice, which I had placed on the ship before going for the fish. I stayed by the tanks all night pumping air every few minutes, and keeping people from mediling with them. When daylight came I cannited the tanks and found five dead fish, which I removed at once. It was now 5 a. M., and the ship was to sail at 6 a. M. I got some men to assist me in changing the water in the tanks. Some men to assist me in changing the water in the tanks all fresh water. We sailed at 6 a. M. sharp. When we got out to sea a few miles, I nade arrangements with two of the steerage passengers to assist me on the voyage. It was then 9 a. M. I gave them both instructions what to do, and saw that they understood their work. I had then been twenty hours with the fish; and wanted a rest. After this I arranged with my men to keep watch two hours each, and to rolleve each other at meal times. I always took four hours' watch in he night, from 12 until 4 a. M. I then roused one of the men and gave over the fish in good order. If there were any dead I always took them out at once. I lay down on the hatchway in a rug, with orders to call me if anything went wrong. I made it a point never to go to m

we got into cooler weather, and the fish commenced to do better. The temperature of the atmosphere dropped to 57 dec. We used very little ice unless to make fresh water with. We kept on like this until we reached Liverpool, after ten days passage. I now got fresh water and changed all the tanks. The fish did not object in the least, but were quite lively. It did not hurt them changing the water from American to British. I got them conveyed to the railway station and placed on a truck. We arrived at Stamford in due course, and on counting the fish I found we had 153. I left the Delaware with 250, so that I had lost 33 fish in twelve days. In 1879 I went again, and started from America with 1,200 black bass, and on arriving home I had 812, having dome better than I did on the previous occasion. All the black hass were for the Marquis of Exeter, he having horne all the expense of the experiment. Most of the fish were placed loa lake belonging to his lordship called Whitewater, near Stamford. Not any of them have been caught yet, but two of them were found dead in a pipe, where they had got jammed. The pipe supplied a filterer, and they had got jammed. The pipe supplied a filterer, and they had got jam down the supplied of the supplied of the supplied of the supplied of the supplied of the down that a point was dead to the supplied to supplied to the supplied to the suppl

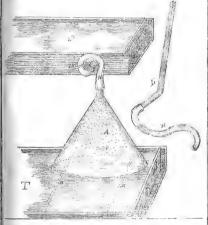

We take the above from Land and Water of a recent date. Some one has said, and it appears to be the general impres-

sion, that all importations of our fresh water black bass into England have been the big mouth, Micropterus pallidus, but if these came from the Delaware River it is likely that they are the M. salmoides, although both species may exist in that river, yet we do not remember to have seen a "big mouth" from there. They were called Grystes nigricans in Land and Water, Grystes being an obsolete name for the genus while nigricans is now known as pallidus, the "big mouth.

# APPARATUS FOR HATCHING FLOATING EGGS, SUCH AS THE COD AND MACKEREL.

A GLASS funnel, A, having a diameter of twelve or fourupon wooden, BB, strips four inches high in the shallow
wooden trough, T. The width of this trough is equal to
wice the diameter of the funnel, and the depth is six inches.
It may be made of any convenient length to allow for a row
of funnels. The upper end of the funnel is connected by the
rubber hose, II, with a wooden spile in the wooden tank, C,
and the flow of water through the tube is regulated by the
pinch cock, D. The level of the water in the tank, C, is
maintained constant by an automatic cock communicating
with a reservoir which is kept filled by pumping (this is not
shown in the figure). The funnel being in position, and
connections made, water is turned on and allowed to run
until the trough, T, is full.

The funnel is now filled with confined air, which cannot
scape, and which may be withdrawn either by suction

through the bent tube. L. or more readily attaching to the lose connection It, a rubber hand-pump, by means of which the air is rapidly exhausted. As the air is withdrawn the water rises in the funnel, and finally fills it and the tube connecting it with the tank. The funnel once filled with water it will remain so, and we have now only to regulate the flow so as to suit the buoyancy of the eggs to be treated. To introduce eggs, they are placed in a shallow van, which is completely filled, and a flat cover placed on. The pan is then sunk in the trough in front of the funnel and pushed under it and the top removed. When the eggs, by their buoyancy, will immediately rise up to the throat of the funnel, and there, meeting the descending current, which must be so regulated that none of the eggs shall pass between the lower margin of the funnel.

To remove the eggs for the purpose of working them over the water is checked off so that the eggs may crowd up into the upper part of the funnel. The tube, L, is filled with water by dipping the glass end in the tank and sucking through the other. When the tube is filled with water the rubber end is placed in the receiving pan, and the glass end earried up to the throat of the funnel. Also and the eggs will be rapidly transferred through the tube. L, to the pan, where they may be examined, worked over and returned to the funnel as before.

In the case of the codish, and probably of the mackerel, they may be ex-funnel as before.

In the case of the codfish, and probably of the mackerel,

In the case of the codfish, and probably of the mackerel, the dead eggs are sensibly heavier than the living. They may therefore be easily sorted out by so regulating the flow of the water as to throw them out of the funnel. The fish, as they hatch, will swim off with the current and be collected in the tank to the nselves.

This apparatus will. I think, be found effective in hatching any eggs of sensible buoyancy. My experiments have here-tofore been with artificial eggs, and with them the working sall that could be desired. There is no reason to suppose that the working will be less satisfactory with the natural. The apparatus is of the simplest construction, very cheap, absolutely non-corrovive in sall water, and I respectfully commend it to the attention of our fishculturists, who have full liberty to use it.

Maine Franing Notes.—We learn from the Belfast Journal that on account of the failure of the Freuch fisheries, Estport sardines have advanced to \$2.50 per case, with the prespects of a still further advance. At Boothbay, the cod, hake and mackerel fishing has been unusually remunerative, both to fishermen and litters.....Mr. Wyman, of Bath, has men at Lee's Island getting ready for the smelt fishery.....The selectmen of Nobleboro and Newcastle are repairing the fish locks.....They use hake sounds for currency at St. Stephen, N. B. One of them will buy a real Havana cigar or a plug of tobacco. At Grand Manan lately there was an ametion sale of 10,000 lbs. of sounds, and they brought 97 cents per lb ....Up to Oct. 25 there had been packed in Portland, 65,000 barrels of mackerel, against 52,000 barrels for the whole year of 1879. There are no mackerel of any importance upon that market. The year has been a successful one in the catch as well as the disposal of the fish.

EGGS OF SPANISH MACKEREL, PORGEE, AN-CHOVY AND OYSTER

URING the past week your correspondent dropped in at the Philadelphia Academy of Natural Sciences, and had the pleasure of again meeting Mr. John A. Ryder, of this institution, who has been prosecuting his observations with the United States Fish Commission at Havre de Grace during the past summer on the food of the adult and young shad. The latter information was in great part gained at the Navy Yard hatching, at Washington, D. C., respecting the growth of the roe shad. Mr. Ryder's coming report of his observations and study will be of a very interesting character, and is looked forward to with great eagerness by students of this branch of natural sciences. While at Mobjack Bay, western shore, Chesapeake, Mr. R. commenced his work on the development of the Spanish mackerel, and he tells me he has discovered the eggs of this delicious food fish floot immediately after being ejected, and hatch in twenty-four hours. He succeeded in hatching them indoors in a pan of water in this time, changing the water but twice. during the past summer on the food of the adult and young

The eggs of the common porgee\* likewise float and hatch in the same space of time. The spawn of the filo or fool fish he found were of a green color, and but 1-50th of an inch in diameter. In relating to your correspondent some of his interesting discoveries, he stated that the American anchovy'st eggs, when emitted, have four minute threads attached to them, all growing from one point, which at first are tightly wrapped around the egg, but which unwind and catch on blades of grass, seawed, etc., etc., thus tethering it, as it were, until the fish is hatched. The egg of the American anchovy, he tells me, is somewhat buoyant.

Col. MacDonald, of the Virginia Fish Commission, is getting up a machine for the hatching of the floating eggs of the cod, Spanish mackerel and porgee, which we understand is of very ingenious structure.

cod, spanish mackerer and porgee, which we understand is of very ingenious structure.

Mr. Ryder gave me some very interesting points from his study of the oyster while with the Maryland Fish Commission in July. In eighty-two days after being spawned young oysters were collected that had grown nearly two inches, and some that measured \(\frac{1}{2}\) of an inch in diameter, showing that the American variety develops much more rapidly than that of Furone. that of Europe.

that of Europe.

Maj. Ferguson, of the Maryland Fish Commission, has selected a pond in a favorable locality, and intends to modify and arrange it after the French plan, for the continuing his observations and prosecuting his experiments regarding the breeding of the American oyster, and there is no doubt that what has been gained this summer will lead to perfection in what has long been looked to as a coming and valuable. what has long been looked to as a coming and valuable branch of industry. Mr. Ryder also discovered that the eggs of the soft shell clam develop like those of the fresh water mussel, and succeeded in impregnating the ova, after discovering by microscope and removing the male spermato-zoa and female spawn in proper season. Homo.

----THE FISHERIES AND FISH CULTURE OF HOL LAND

BY favor of Mr. C. J. Bottemanne. Supt. of Fisheries of the Netherlands, we have received the report of the Netherland sea fisheries for 1879 (Verslag van den Staat der Nederlandsehe Zeevisscherijen over 1879), and the report on the condition of the fisheries in the Scheldcand its tributaries the condition of the fisheries in the Schelde and its tributaries for the same year (Verslag omtrent den toestand der visscherijen in de Schelde en Zeeuwsche stroomen in 1879), from which we gather the following facts: Since 1875 the herring fisheries have increased from 30°2 tons to 2,635 tons. The catch of edible fishes in the North Sea is not so great as in former years. Mussels are extensively "tished" for and catca, there was received at Billingsgate market during the past year 1,656 tons from North Holland, 639 tons from South Holland, and 739 tons from England; while from the British Islands and Holland there was received 2,578 tons of periwinkles. winkles

blands and Holland there was received 2,578 tons of peri-winkles.

Of 59,300 eggs of the California schmon received from Prof. Baird, U. S. Fish Commissioner, 46,000 young were planted. The salmon fishery has been good for the year named. The first-mentioned report gives interesting tables of the earth of cod and other edible fishes by the Dutch, French, German and English fishermen, as well as the num-bers of each kind of fish sent to the principal markets of the different countries. The report on the Schelde gives us an account of the boat fishing for halibut, the "whiging" profa-ably whiting, (Gadas Merlangus), the spirit, or sardine, the "harder" (Magil') herring and anchovy fisheries. The latter fishery has been very bad for the past year, and the oyster fishery, which in Holland is a large industry, bas not been good.

AMKANSAS HAS A FISH COMMISSION. We very much regret that in our annual list of FISh Commissioners it so happened that this State was left out. We gave our reason for doing it, which was that no reply to our letters had been received. As it is our intention to compile such a list annually, wholly for the benefit of the Commissioners themselves, that they may exchange reports and correspondence, we hope that as Folker AND STREAM is the recognized medium of communication our next one will need no corrections. The fact is that changes are being made in the list all the time, and so in naking it up for publication we take nothing for granted, but proceed as if such a list was being made for the first time. tim

All who are interested in the progress of fish culture will rejoice to know that Arkansas has a commission, and that there is a prospect of their being able to do their State some benefit if the Legislature can be made to see the great im-portance of an addition to the supply of fish food for the

The following letter is explanatory:

OSAGE MILLS, Ark., Oct. 29. Editor Forest and Stream:

T regret that you did not receive my response to yours of ppt. 30 in time to insert the names of the Fish Commissioners our State in your list; they are:

Gen. N. B. Pearce. Capt. John E. Reardon. ...Osage Mills. George Hornebrook.....Little Rock

\*If we are not mistaken the name "pergee" is applied on Chesapeake Bay, to the \*Parephippus faber, a fish called "moon fish" in New York and "angel fish" on the Southern cost.
† The anchovy, \*Engradia vicatus, is the so-called "spearing" or New York and the "silver side" of Peconic Bay.

The two latter were recently appointed to fill vacancies by Gov. W. R. Miller, and we hope to be able to get an appropriation from the Legislature, which meets in January, to enable us to do something. We will be glad to have the Commissioners of the different States send us their reports, and for this reason 'especially request that you insert the names of the Fish Commission of Arkansas in Foerst and

Export of Trout Onafron Tashania.—We are indebted to the secretary of the Salmon Commissioners for the following return of trout ova sent away during the last few days:—On the 19th inst, per Tarama, 2,000 to Blenheim, New Zealand; on the 21st inst, per Tasman, 2,000 to Sydney; and on Aug. 23, per Southern (ross, 12,000 to Geelong, 2,000 to Sir Samuel Wilson, St. Kilda, and 5,000 to Adelaide. The total quantity thus supplied by the Salmon Ponds establishment is 23,000. The demand for ova is increasing. In 1877 the quantity exported was 10,500; in 1878, 10,500; in 1879, 18,000, and this year, 23,000. Any colony requiring ova should apply to the secretary about the months of Aprilor May.— Tasmanian Matl, Ang. 28, 1880. EXPORT OF TROUT OVA FROM TASMANIA .- We sre indebted to

A Terrapix Law Suggested.—In commenting upon the working of the law regulating the size of lobsters to be sent to market, the New York 8nn thinks that something similar should be enacted to preserve the glatinous terrapin from extinction. It says: "Since the excellent lobster law went into force restricting the capture of decapods less than 10½ inches in length, the supply has been steady. The price has risen in New York, because the demand is ever on the increase in consequence of the increased centralization of population here. And it might be well to follow out the same plan with regard to terrapin, and restrict the capture to specimens fully six inches in length. Plenty of much smaller ones come into market, some less than four inches in length. These are not stewed, but are utilized for terrapin soup. A terrapin law would do no harm. The diamond-backed fellows from the Chesapeake fetch \$48 a dozen; those from further South are now fetching only \$40 per dozen."

The Use of Maggors as Fish Food. A tew years ago we heard a great deal of the use of maggots as food for trout fry, and most all our fish culturists regarded its use as an original and most all our fish culturists regarded its use as an original discovery made by themselves, as it indeed was in one sense, but in looking over some old volumes of the Sporting Mograziae, published in London, we find in Vol. 32, for the year 1833, pp. 42-375, it is recommended to suspend the leg of a horse or other animal over the pond and let the maggots drop. There is no doubt that much good for dir fry can be got in this way from meat which is too "ripe" to be utilized in any other manner, if the pond is situated so that the odor is not offensive to those living near. The maggot is most excellent food for fish, fully as good as any other insect larva, and is perfectly clean in itself, as many other seavengers are, and even if fed to adult trout we doubt if any bad flavor would result. We were impelled to pen this paragraph to show that their use was nothing new.

The Oregon Salmon Fisherres.— From the annual report of the Oregon Board of Trade we learn that the salmon catch of the past spring and summer has exceeded anticipations, yielding 530,000 cases. In 1875 a catch of 232,500 cases was considered enormous: 1877 yielded 400,000 cases, and 1879 as many as 439,000 cases. This rapid increase shows the vast extent and thuncial value of the Oregon salmon fisheries. Of the half million and more cases packed this year, 211,522 cases were sent to San Francisco, and 239,241 cases were shipped direct to Great Britain.

shipped direct to Great Briain.

ILLEGAL PISHING STOPERD.—The Utien, N. Y., Herald says: Last week Agent Dodge went to Oneida Lake. With trustworthy guides he made a detour of the lake and succeeded in seizing thirty-four trap nets. They are treacherous traps and give the isis in ochane of escape. The captures were made in and about severals points on the lake. More are buried in the water, and they will be attended to as speedily as possible. In addition to securing the nets Agent Dodge obtained the names of people who have been violating the special acts relative to fishing and bunting in and around Oneida Lake, and they will have to answer for their work unless they make a short stop. Among the nets captured was one said to be owned by a game constable, who was elected to aid in carrying out the fish and game laws of the State. Everybody will rejoice that something is being done to protect the fish in Oneida Lake. With their usual greed, the local fishermen in those waters haut in little and big fish and leave the small ones on the shore to rot. They forget that this is virtually killing the goose that lays the golden eggs for them. If the State should stop planting fish for their benefit they might begin to realize how foolish they had been in disregarding the laws intended to benefit the public generally. ally

adly.

The Catebol Chechand, O. The extreme northern range of the eathsh is you may be about certain, Lake Eric. Here it is a gamy fish, in hard and perfect condition of flesh, not exceeding, as a rule, the weight of twenty-five pounds, although sometimes a "Daniel Lambert" is taken weighing thirty to forty-five pounds. I never-saw but one of the latter size, and it was taken in the usual way some years ago, by the hook baited with fiver.

The eathsh here in our waters, in season, is as fine a fish when properly cooked, "in every style," as any fish caught in fresh waters. The hotel, or any other table, can palm it off for lake tront, white fish, or even black bias, as I have seen done many times. The farther South you go the larger the fish grows, the softer its flesh is, and the more it tastes of the muddy water it inhabits. A catfish in the month of May, taken from Lake Eric, parboiled, stuffed and baked, will satisfy the taste of any one who desires a good fish.

E. STERLING, M. D.

We are glad to see some one take up the endgel for this fish. We are not familiar with the large ones the Doctor mentions as table fish, but the small "bullheads" (N. Y.), "catties" (Phila.), or "horn-ponts" of the Eastern States are, when of a quarter to a half-pound weight, of a high order of excellence when fried for breakfast, brook trout to the contrary notwithstanding.

Forest and Stream General Passey our Recomb—Chicago, Nov. 2. I would note the following persons on route to hunting grounds, over the Chicago and Northwestern Railroad: Mr. Callin and son, Mr. Lancaster and Mr. Robinson, from Illinois, going to Section No. 17, Mich. W. H. S.

#### FISHING ON THE MATAPEDIA.

DECEIVING a pressing invitation from two of my old triends, Dr. Arthur Armstrong and Will Sutherland, well known "troutists," if I may coin the word, from Duloup, to join their party for a week's fishing, I was not long in replying in the affirmative, as I was sure of some good sport the Doctor being throughly acquainted with the river, and the next day saw me at Duloup, assisting in the preparations for our occurrence.

loop, to Join their party for a week's issue, of some good sport the Doctor being thoroughly acquainted with the river, and the next day saw me at Duloup, assisting in the preparations for our excursion.

Our party consisted of the Doctor, Bill Sutherland, Colin Hetherington and self. Everything being in readiness we fook the J. C. R. train to Mill Stream studion, where we arrived at 5 o'clock A. M. in a terrible shower of rain; but as we expected wet work we did not complain of the early commencement, and humediately got the canoe ready and embarked our camp and other utensits and proceeded up the river to McKinnon's brook and pitched our tent. It was still raining with a vengeance, and, as the bush was so uninvitingly wet, we camped on an islane where was plenty of drift wood; but it was a hard job to get that tent up the island, being composed of small stones, and driving the pegs in them was a wet task.

However we got things to rights, and as I was appointed "Cuisinies" I managed by the help of a little coal oil and wet cedar to get a good fire started, by which time Colly II. managed to land about three pounds of trout, which were soon sinnering with a slice of pork, and we sat to breakfast and did it ample justice. I think ten in camp is far better flavored than boarding' house quality in town. I may be mistaken, but it took a gallon of ten to supply our party at meal time, and they have been in the ten trade some time. Breakfast over and things straightened up, and rods got ready, we started up the river.

Good fishing may be done in a canoe if you can only manage to anchor it, but we took to wading, and wading where the current runs at the rate of fifteen miles an hour is no easy or safe task as the Doctor found out. He only weighs 225 pounds, and when be came down plump on the end of his back, he said, as he upended himself, "Pm too round to make an anchor." We are now one mile from camp, and only one dozen fish between the Doctor and I. We retrace our track, not by water, but along the beach, and on

of our anticipated good time, but if they lost their temper over it they did not lose their appetites, and the day's catch was again consigned to the frying Pan.

Dector said, casting his eye to the east: "Boys, we must move our tent; there will be no island here to morrow?" And move it we did to the main bank of the river, and a beautiful spot we chose, just alongside of the railroad track, and an elevation that commanded a view of the river for a mile up and down. While the rest of the party were moving camp I made a raft, and, with the aid some green withes and clothes-line, managed a rather cumbrous-looking vessel, but sufficiently buoy-nut to bear one confortably, and which was staffer than our bark cance. By this time it was getting flusk, and the Doctor was roaring at me to get supper ready. They had made a good fire, and I soon had their appetites appeased. It was still raining furiously, but the tent was waterproof, and lightling our pipes, we stretched out on our Bankets, while Coll got his bagpipes ready and we soon had the "Campbells are Coming," "Mrs. McLeod's Reel," and a host more of Secula's favorite tunes echoing among the hills. We then fixed the fire for the night, and rolled ourselves up in our blankets and forget our disappointment.

Breakfast over we mude another trial. The Doctor was ahead of me on the raft, as when I went down for it he had was joined by Colly and Bill. The latter had sprained his knee and was almost unable to walk, and we could not use the cance as it had a hole in it, so we hauled it up to dry tilt could be gummed. We were sorry for Bill as he could do very little walking, but when he saw us hooking a few two or three pounders he started to join us. Theysay, "Tris an ill wind," etc.; so with Bill. He had not come twenty yards when he sliped, and down he went, and hardly down till up again and started for shore as if a shark was after him. When he reached the shore he felt his knee, and looked out at us. We ceased fishing to laugh. He slowly bent the knee and then strai

Bill, and hardly were the words uttered than we saw the Doctor lay his rod down and then lay himself alongside of it, and he, raft and all, were in the rapids over the falls and alongside of us in about as short a space of time as I take to

appears his anchor line cut and he never noticed he

alongside of us in about as short a space of time as I take to write it.

It appears his anchor line cut and he never noticed he was drifting till too late to try and pole ashore. "Wasn't that neatly done?" said he, and we thought it was, but would not like to try it. The Doctor lost his line, hooks and all his fish by his little cruise, but hung on to his rod.

The fishing not being very good we determined to strike camp, and seeing Tom King, the master for that section, roing down on his "pumper" we made him wait and take our baggage down to Mill Stream and Colly and Bill went along with him leaving the Doctor and I with the cance to go by river to join them. Doctor and I started, "but," says the Doctor, "we are not going straight through yet. I'll show you some good spots. We will try the pools at the Assauct-quaghu Bridge," and there we steered for, hauled the cance up and tried the pools. First fish for the Doctor and a beauty of five pounds: next for me, not so large; and for two hours we were kept busy. The sky then brightened and fishing ceased, the doctor went ashore and stood on the bridge. We were fishing about one hundred yards from the foot of the bridge in still water, and I suddenly heard a shout, when I ran up the bank and shouted back to know if anything was wrong. "Come here and see trout as long as a railroad track," said he, and up I went, and it was a sight to make one wild. Just under the bridge the water is as clear as crystal and about six fathoms deep, all rock bottom; and, lying in shoals, one could see the trout without a perceptible motion, and larger ones than we had yet caught. We tried every lly, we had, but could not get a rise. I then got on a sinker and cut up a trout for bait and tried them with that. No better success, although I could not get a rise. Then got on a sinker and cut up a trout for bait and tried them with that. No better success, although I could see the bait alongside of their nose and rub it against their bodies. They would only give a wrigingle to their tails

#### "FYSSHYNGE WYTH AN ANGLE."

[Fac-simile of Illustration in First Edition, 1496 ]

him as the place where I was standing was very bluff and barely room to move, that he got shouting that he'd go round and help me, when his feet went from him and in he went, and I was very 'near having to fish out more than I bargained for; but he floundered around, and at hast got ashore just as I landed my six pound four ounce fish, the largest of all our catch. Doctor was delighted at my success, as he did not expect I could land him without a net; but it took me some time to drown him, he fought so very hard.

We tried for over an hour at and around the same spot, but not a risefrom one. We then concluded to strike for camp, and about six o'cleck we arrived, just in time to try Bill's cooking, which was excellent; had our after-supper smoke and wrapped ourselves in blankets.

Next day we went back to Assametquaghu bridge with the whole party and 5 r. s. sw us back to camp with a total of thirty-three dozen and odd, exclusive of what we consumed, to bring home with us and when weighed averaged three pound six ounce. There is fine fishing on this river, but it is uncertain. As our party had decided to try Lake Malfait on our way back we struck camp next morning and took the train, but on looking over our stock of provisions we concluded to go straight through to Duloup, where we arrived at 4:30 r. M. well satisfied with our try, although commenced under very unfavorable circumstances.

The Doctor was quite right about our first camping ground, the Island, as when passing in the train where an island was three days before only water was to be seen. We had several rises from salmon grilse but that was all, it was just as well, however, as they were out of season.

Red Color our sequite right about our first camping served as the season.

wever, as they we Quebec, Sept. 1880.

—Through the courtesy of Mr. J. W. Bouton we publish the above cut, illustrating a quaint book of which we spoke in last week's issue.

#### MR. SCOVEL GOES A FISHING.

MR. SCOVEL GOES A FISHING.

The was a gorgeous September afternoon, and I sat reading the Times under the lofty and leafy pines which grace my friend Stover's esplanade on the upper Delaware.

I had justread "Bodine's" brillatin and sparkling account of how that speckled trout had got away from him, and how "Bodine's" "lured the gentle tassel back." My mind reverted to my first day's fishing out in Indiana in Doughterbe Creek, when I was sixteen years old, and O! what a joy it was to my untutored and somewhat savage mind to see the lecauliful little sun-fish scattered on the bank, as I haufed them up as fast as they would bite, and as fast as I could jeft them in! If Cicero had any more exquisite delight with "listoning senates at his heels" than I had with my sun-fish, at least history has been silent on that subject.

The "Bodine" trout still lingered in my mind, and I said to my friend Jordan H. Stover, who has the soul of goodness in him, that if I had appropriate tackle I would tackle on it the sun-fish. He told me he knew a hole down by the mil where they most did congregate, and that I might take a base or two.

where they most du congregace, and that a magnetance a most of two.

The "booming" campaign had no more joys for me for a few hours, and Jordan was soon assiduously engaged in rigging me a horse-hair line from the tail of one of his Arabiar steeds, which hitherto had only ovaged to Frenchtow or led exploring parties when hitched to a hay wagon to some romantic spot like the "Singing Rocks" in the Happy Valley, Well, in one hour Jordan showed me as pretty a fishing rig as it I had bauelt it at Krider's.

ging me a horse-nair line from the fail of one of his Arabiar steeds, which hitherto had only voyaged to Frenchtow or led exploring parties when hitched to a hay wagon to some romantic spot like the "Singing Rocks" in the Happy Valley, Well, in one hour Jordan showed me as pretty a fishing rig so if I had bought it at Krider's.

The place under the pines deserves a word. Here I have rested for three summers with my household gods about me (board \$7 per week). To get here you must go to Frenchtown, N. J., 23 miles above Trenton, and a line to J.r lan H. Stover, at Erwinna (two miles below Frenchtown, N. J., in Bucks County, Pa., will bring our friend Jordan with a pair of Arab colts, well bred and well trained, to meet you any train north or south.

And I have derived so much pleasure from the Forest axis Stream that I feel like giving others the benefit of whatever sweet delights can be had to fill the sportsnam's soul with joy without utterly emptying hispockets, unlesshis proched be like that of Fortunatus or the devils which is said to have neither top nor bottom!

September and October are said to be the best mouths in which to catch bass, albeit my friead Major T. W. Walker, of the U. S. Army, astonished me with a four-pound bass he had caught with a silk line in the middle of Angust. My luck don't rut that way. I am some on ducks, brant and wilk greese, but when it comes to big bass and sheepshead, I am not there. For sixten years I angled wisely and too well for the sullen sheepshead, at Bond's and in Grassy Bay and all over Absectom Inle's and caught one sle pishead; time, July; year, 16 in had him embalmed, and ever after consoled myest with flounder and weak fish, and against my prosessional fish-catcher or quanteur.

But we seem to wander from our mutton.

As I sat looking proudly at my horse-hair? line, I thought of my lamented friend Dr. Wm. M. King, now at peace with all the world. It was scarcely a year ago when the versatile Doctor but had with his side world—art is a single with a "girly with a

there must be a place where thy soul can find the repose denied it here.

I started off toward the spot pointed out by Stover by the old mill. "Where the mill-wheel rolled right steadily. As I trudged along I recalled good old Izank Waiton's words. "No life so happy and pleasant as the life of a well governed angler, for when the lawyer is swallowed up with business, and the statesman is preventing or contriving plots then we sit on the cowslip banks, hear the birds sing, and possess ourselves in as much quietness as these silent silve streams which we now see glide so quietly by us. Indeed, my good scholar, we may say of angling as Dr. Boteler said of strawberries:

of strawberries:

"'Doubtless God could have made a better herry than the strawberry, but doubtless He never did, and so, if I might judge, God did never make a more calm, quiet or innocent recreation than angling."

Once at the old mill I sat me down fifteen feet above the deep hole into which the dammed up waters of the Delaware

It was 4 P. M., and a grateful shade diffused itself around

It was 4 p. M., and a grateful shade diffused itself around A new "Blincker" I had gathered in to find "crickets on the hearth" for bait had to be silenced with threats of effectual applications of the butt end of my pole—"Quiet reigned in Warsaw."

No sooner had the crickets touched the oozing waters than something gave a well-defined tug. Cautiously I tightered my hair-line till I could see the glistening sides of a "sunny" larger than my hand, and if not a "game" fish he fought me ten minutes before I dared draw him up to my "perch."

was awkward; so I climbed down below the mill

This was awkward; so I climbed down below the mill' wheel, shortened my line, and with every cricket I ''hagged' a noble sun-fish till I numbered twenty-five.

Alas! my bait was all gone! My beer bottle, full of crickets an hour before, was empty—dry as a powder-horn!

I was at my wit's end. No crickets, and the tait ground was nearly a mile away. The boy from the swamp was equal to the emergency. He knew where a wasp's nest grow.

A silver piece made his cyces stand out like saucærs, and in three minintes he had the adolescent waspsready for stringing on my hook. That was a new experience. Cautiously I stack a couple of infant wasps on my little hook, and left the horsehair lutter. What is that? Something cavorting through the water like a devil-fish, but I hang bravely on to my pole, vaindy codeavoring to give my line additional reach. Suddenly up darted a "monster"—a two-pound bass. Softly! Softly! He sulks a little I draw him quietly, breathlessly, lovingly doward me. Another flop. My legs dangle over the deep hole. I have nothing to hold on to. A sudden jump of the nimble bass clear out of the water. My horse-hair line gives way eight feet from the hook. I tumble into the water in my cagerness. Minding not the wet secretsker suit, I scramble out on the gravelly banks of the Delaware, and only know that my five-pound bass majestically datts down the shallow falls into which the pool empties into the deeper Delaware below, with a long line in hismouth. J. M. S.

W BIG BLACK BASS - Monmouth, Illinois, Nov. Bre Black Bass—Monmouth, Illinois, Nov. 1.—I send you to-day by express a black bass caught yesterday. Please accept with my complianents. As I have seen several communications in your paper from correspondents bragging over minnoors that weigh from five to six pounds, I thought I would send you a full-grown fish. This fish when taken out of the water weighed seven pounds and five ounces (7 lbs. 5 oz.). I caught yesterday, in six hours, forty-six (46) bass that weighed one hundred and eighty pounds (180 lbs.). When any of your friends that are good fellows wish to eatch big bass, and lots of them, call on me and I will show them were they can do so free of charge.

Yours, etc., Thusks, It proved to be a

----

The fish came in good order. Thanks. It proved to be a big mouth," Microplerus pullidus,

An Exersten Hook—Jill Springs, Ky., Vor. 1880.—
Recent mention of the sacculation of a hook in a fish recalls a circumstance which I sent to the FOREST AND SURRAN four or five years ago. Old "Hopwood," then one of Stanford's experts or "professors," with a Frankfort reel landed a six of seven pound pike near Livingston, on Rock Castle River, in the fall, and was superintending the dressing of his fish when a prominence about the middle of a site artracted his atwhen a prominence assume the tention, and proved to have been caused by a well preserved hook and fragment of a line attached. On investigation he learned that his neighbor "Dilsey," who is quite sensitive to the charge of "slathering"—Dilse does slather fearfully sometimes—had claimed to have had his line broken at the same pool by a whale the previous spring, and when "Hop" exhibited them in Dilsey's presence he immediately recognized them, and located their loss without prompting.

NOVEMBER SHOOTING GROUNDS

# QUAL IN MARYLAND, VIRGINIA AND NORTH CAROLINA

IN previous letters to the Forest and Stream I have called the attention of sportsmen to the advantages of the National Capital as a place of rendezvous for those de-siring good shooting. Of late years a trip to the West has siring good shooting. Of late years a trip to the West been deemed the correct thing by gentlemen fond of the suit of wild fowl or game birds. That there is a gre abundance of game in the Western States than in the 1 cannot be denied. I think, however, that sportsmen of East, who have made the Western trip, will concede their success in the lake regions and upon the positive pends in great measure mon the chargeter of the con-

cannot be denied. I think, however, that sportsmen of the East, who have made the Western trip, will concede that their success in the lake regions and upon the prairies depends in great measure upon the character of the men into whose hands they fall when the hunting grounds are reached. One must know where game can be found in the West as well as in the East if good sport is to be enjoyed.

The question of expense is a vital element in the calculations of a vast majority of sportsmen. The gentleman who lakes his vacation in the fresty days of Ortober and November, upon the stubblefields or woodlands, must be able to reckton the cost of his amusemont quite as accurately as he who lounges upon the heach at Newport or in the hotels at Saratoga during the sweltering mid-summer time.

There are field sports which can only be enjoyed by the rich—sports which are as far beyond the reach of the ordinary mortal who loves a dog and gun as the elevated attractions of the Newport Folo Club are beyond the humble aspirations of the youth who rides a stift lack at a county tournament. The successful bumpkin who crowns his sweetheart Queen of Beauty at the country fair may enjoy himself vasily more, however, than he who drives the ball beyond his opponent's goal in the presence of the congregated belles of New York and Boston. The poverty-stricken sportsman, who killes a dozen ducks from an inexpensive blind at some good point on the Potomac, in like manner may enjoy his shooting vasily more than he who pays a Havre de Grace

professional \$40 per day to equip him with decays sind professional \$40 per day to equip him with decoys, sink boxes and assistants for the destruction of immunerable canyas backs. Western shooting is an expensive luxury for Eastern sportsmen. If there was no game in the East there would be an excellent reason for going a thousand miles westward to find it. There is, however, magnificent sport to be obtained near home. There never was a time when game birds were well protected in Maryland, Virginia and North Carolina as at present. The quaid, or participe as the bird is generally denominated in the South, is increasing in numbers. "Bob White" utrives best in the prosperous agricultural commu-nities. He appears to follow civilization. Omil shooting and chicken shooting cannot, in my estima-

nities. He appears to follow civilization.

Quali shooting and chicken shooting cannot, in my estimation, be compared. If a man is shooting for results in bulk
he will undoubtedly enjoy prairie shooting best. A chicken
weighs more than a quait. On the 15th of August a chicken
will rise as heavily as a crow, and is about as easy to kill as
an ortolan. The hunter stands upon a vast expanse of level

ground. There is scarcely a hummock to relieve the sameness of the prospect. After 8 o'clock in the morning the sun beats down with paralyzing effect. His shooting is virtually at an end until the shades of venning begin to fall. How different is quall shooting? There is first the accessory of a beautiful landscape. Hills, trees, water, and an infinite variety of autural colors. The air is sharp and inviconting. The hanter must older the property of the property of the control of the property of the control of the property is found and flushed he must shoot rapidly and well to kill be birds. There is nothing slow about the quall. He is active and cumning under all circumstances. There are pleasant surprises almost always in store for the quall hunter. Following a cover into thick bottom he often stambles upon brace of woodcock. Not thin, puny July woodcock either, but large, strong, fat birds, oftentines heavier than the fatter of the property

Washington, D. C., Oct. 1880.

PASS SHOOTING" IN MINNESOTA

REACHED Sauk Centre on the morning of Friday ALACATIAN SAUK Centre on the morning of Friday, Logiober S, at 1:18, where, at the depot, I found my friend, Mr. B., awaiting me, and within ten minutes we were placed at his door. The next morning preparations were begun early; our guns were brought out of their cases; flaunch rugs and oil were in demand. Such bustling activity brought forth derisive and sarcastic remarks from the ladies who were on the last and satisfied and the land show were engaged in the more asthetic subject of millinery and dresses. Bless their dear hearts! I wonder if the ladies don't secrely take as much pleasure in seeing the sterner sex becoming loys again—if not in age and stature, at least in spirits and enthusiasm—as we do when preparing for a shooting trip. I

logs again—it not in age and stature, at least in spirits and enthusiasm—as we do when preparing for a shooting trip. I believe they do.

In the afternoon we were scudding along at a good gait over the rolling prairie in a comfortable two-scat wagon, drawn by a team of large horses—good travelers—the property of a neighbor who accompanied us.

Our personnel and outfit comprised the following, to wit: Four adults, two dogs (one a pointer and the other a water spaniel, formerly the property of Col. Gildersleeve of this city), four breech-loaders, ammunition enought to last, buffalo robes, and hast, but not least, plenty of lunch.

We had not gone more than two or three miles when Mr B, asked to stop a few minutes, as he fancied we could have a shot at some ducks. I looked all about me and could see nothing. The ducks were not in the air, but I was informed there might be some over the fence in that hole, hidden from view by a few trees not many rods from a comfortable looking farm-house. Climbing over the fence, and cantioned to careful, I crawled as slowly and noisclessly as it was possible for one weighing 192 pounds through the tall, rank grass growing in thick profusion about the edges of the slouth, risking wet knees and muddy hands.

Laborious though the work was I felt the labor was worth all the pains, for, carefully raising our heads, we were rewarded by seeing a bunch of mallards fully ten rods off, feeding quietly on the wild rice that grows in almost every hole about the prairie; and, while our eyes were made glad by the sight, I could not help admiring the intelligent actions of the pointer. Nero, which, without a word from us, had leaped from the wagon the moment we did, and crawled as carefully through the grass as though he intuitively knew what was necessary. Starting the flock up, we each secured one apiece, and Nero retrieved them; but, so eager had he been, his excited nature could not restrain him from "chawing" one up rather badly.

We joined the wagon farther down the road, feeling we

wint was necessary. Starting the hock up, we can secured one apiece, and Nero retrieved them; but, so eager had he been, his excited nature could not restrain him from "chawing" one up rather badly.

We joined the wagon farther down the road, feeling we had made a good commencement.

We spent the night at a farm-house, and roused up early the next morning the other two of our party, who went out on the farm to dig holes for a shoot at the geese, as we had word from the farmer that there were plenty about his farm, and who laughed at the hole digaing, and "guessed he'd never get a goose if he had to dig a hole for them: it was too hard work." But the others persisted, and were rewarded by getting a pair of "honkers."

Portune smiled not upon us, the other members of the quartette, though we carefully hid ourselves along the fence where the grass grew high, not 25 yards from the plowed field where the previous afternoon we had aroused a big bunch of goese. Our sheet-iron decoys, though placed in a most alluring way, failed to act as a charm.

In regard to the wild goose shooting on the prairie, I consider the best way to procure a big bag is to have live decays, and there is no telling what fine sport one could have. The weather had been and was still very warm; no rain had fallon for six or eight weeks, and all birds were very cautions. We left the farm-house after breakfast for the Westport Tass, mentioned by "Dell" in his last letter to you, and there we had soone sport.

Along a ridge that originally was the work of beavers years ago we distributed ourselves, screening our forms carefully from the gaze of the watchful ducks as they flew over in passing from one lake to the other. Some good shots were made.

Pass-shooting is exciting sport, particularly when the birds are stirring about. A low whistle from one of the party is the signal for attention, or the exclamation, "Mark! north: mark! south," puts you on the quit sier, and I consider no more exhilarating sport can be had than this kind of shooting.

more exhilarating sport can be had than this kind of shooting. The two dogs were kept busy, and demands for Drive and Nero were constant, and after two hours' shooting we gathered up our ducks, quite satisfied with the morning's sport. Leisurely and heartily eating our lunch, we were refreshed sufficiently to seek fields and pastures new, and, driving toward home across the 'breaking,' a term applied to a tract plowed for the first time, came to one farm, where 50 rods off we saw a very large bunch of gesse, and farther on a great regiment of sand-hill cranes, which with necks creet and motionless tooked like soldiers on dress parade. They took the alarm, however, and soon sped out of sight. Concluding that we might get some shots at their return, we made our preparations to receive them.

Concluding that we hight get some snot at their return, we hade our preparations to receive them.

Our dinner had strengthened us for hole-digging, and we soon had our pits dug, but the cannel cornel beef and dust had combined to make me so thirsty that I walked a mile for

a drink of water.

Our laborious work was only rewarded by getting three

drink of water.

Our laborious work was only rewarded by getting three sandhill cranes, and as we had some twelve or fourteen miles to drive before reaching home we filled up the heles, and drove back to rown looking like coal-heavers. The dust of the farm recently plowed had blown into our eyes, cars and moses, and we were sorry looking white men, judging from the ejaculations of our respective wires.

I subsequently had my first taste of crane, and I confess that the same of the

beans was a shaving-mug), taixed in a bread howl some flour and milk with a sprinkling of salt, and possibly raising powder, generously larding his bread pans, baked two loaves of bread, so that for breakfast we had warm bread, but potatoes and hot coffee, and the contents of our lunch busket.

When asked his clurges for taking care of us through the might, including the fodder furnished the old gray horse that took us so faithfully about the country through some of the

might, including the fodder furnished the old gray horse that took us so faithfully about the country through some of the roughest roads I ever experienced, he refused to charge anything, but on our insisting on a price, said twenty-five cents. We gave him fifty cents, and he was abundantly thankful: How is that for backwoods or prairie simplicity?

I think I must have captured the old man's heart, the night before by giving him a Havana, the end of which he bit off, but turned it around and tried for five minutes to light the wrong end without avail, until 1set him aright.

My third trip from the town was two days after, when we visited Westport again. Arriving at about half-past four P. M. we shot an hour and a half with fair success, returning to nose the night at a convenient farm-house a mile or two

pass the night at a convenient farm-house a mile or

away.

We rose early for the morning flight. I seemed to meet
with poor success this time. "I couldn't get onto them,"
somehow, though my record was first rate the previous even-

Thus, during the three trips I made, we secured about 130

Thus, during the three trips I made, we secured about 130 birds, including geese, crane, mallard, teal, broadbills, English and yellow leg snipe.

Minnesota is the sportsman's paradise, of that there is no doubt in my mind. The shooting is of a different character from that obtained in the East. Decay shooting is comparatively unknown.

troin may obtained in the East. Decry smoothing is comparatively unknown.

An instance which will illustrate the plentitude of game in this section I would like to mention. Right in town is situated Sauk Lake, at one end of which is erected a dam that uated Sauk Lake, at one end of which is effected a dam that supplies water power to an adjacent flour mill. Stationed on the bridge which spans the dam, one can have good flight shooting. On the 18th inst. Mr. P., of Sauk Centre, whose house is but 100 yards or so from the bridge, while passing over it in a sleigh—for we had a severe snow-storm three days before—shot four mallards at one shot, and one yellow leg snipe with the remaining barrel. They were feeding in a little creek which serves as a conduit for the overflow of the dam, and my friend Mr. P., in an hour's shooting the same afternoon, by walking down this creek, procured nine snipe. I take this occasion to refer in fitting terms to the hospitality, generosity and good feeling existing among the pocole in

I take this occasion to refer in fitting terms to the hospitality, generosity and good feeling existing among the people in this place. The right hand of fellowship is extended to all gentlemanly sportsmen, and I shall long cherish the many kindnesses received at the hands of those who became my friends during my short sojourn in Sauk Centre. Van.

#### UNNECESSARY CRUELTY TO WILDROWL

UNNECESSARY CRUELTY TO WILDFOWL.

THE writer of this article is, has been, and shall continue to be a sportsman so long as he is able to indulge in the pursuit. He has no doubt, therefore, that in numberless instances, always without intention, he has been guilty of the very acts of barbarity and cauchty he condemns in others. A certain amount of cruchty is insepurable from every form of sport. It is not his purpose, therefore, to pose as a philanthropic hypocrite. "Only like the insulation due dissimulation, the professional and annature sportsmane may be avoided by a moderate degree of care and thoughtfulness. It is to be presumed that the object he shooting at a bird skill li. He is the most skillful sportsman and best shot who succeeds the more frequently in attaining that end. Professor Mayer, of the Stevens Institute of Technology, of Hoboken, in a paper read before a body of scientists which recently met in Boston, gives the results of a very delicate and ingenious series of experiments, by a process of his own, as to the velocity of shot from a fowling-piece under varying conditions. A careful examination of this paper shows conclusively the fallaey of attempting to do effective shooting outside of a certain limited range. Now, a bird when hit beyond this limit, while he may be mortally injured, is yet capable of flying a long distance; consequently he dies a slow and puinful death. Those who have been wounded in action, or have witnessed the sufferings of others on similar occasions, will appreciate the miseries inflicted by careless or inexperienced sportsmen. Nowhere can the foolishness and harbarity of shooting at fowl at long distances be more distinctly seen and understood than by those who kill wild-fowl over the ice in the winter season. While the ice is sufficiently thick to bear the weight of men and boats there will be numerous open holes in which decoys may be set. Numerous flocks will, of course, pass by a long gunshot off. If these could be allowed to pass unmolested, they would during the

enable us to follow the burds through the air, this system of long-distance shooting will render the birds utterfy unattainable by the methods now in use. Doubtless many persons have happened to stumble on the retreats and secluded nocks where these wounded birds seek retuge, either to die or convalesce. These spots resemble nothing so much as the deal-house of the hospital on the Mount St. Bernard, where human renains may be seen in every stage of dissolution.

The penuriousness of the professional ganner is also an incentive to unnecessary cruelty to water-fowl. To save a charge of animunition he will chase a crippled bird for a mile or more on the water, or so long as the setting-pole of his shooting beat will reach bottom. The sensation of the wounded bird thus pursued must be similar to that of the condenned man who, with a rope about his neck, witnesses the crection of the gallows on which he is to be executed. It may be argued that wild-rowl have not the finer sensitiveness and reasoning power of a human being. They certainly have many qualities in common. For example, when a he-duck, accompanied by the female, is shot down, the latter, if untouched, immediately deserts him; the male, on the contrary, when a similar fate befulls the female, returns again and again in search of her, and often falls a victim to his constancy and devotion.

constancy and devotion.

From time to time an outery is raised, on the ground of inhumanity, against the practice of shooting pigeons from traps. In point of fact no form of sport is more humane

As a money consideration is involved in trapthan this. As a money consideration is involved in trap-shooting, its followers must be more or less expert. More-over, the birds are released at a distance which is positively indicated, and within casy range: consequently, if hit, they are usually killed outright, or so severely wounded as to fail within a limit whence they may be speedily retrived. It will be found that those which escape entirely do so mharmed. Pigeous which return to the dove-cote in a crippled condition are probably the victims of others than those engaged in trap-shooting. If fowl in the field could be killed with the same certainty as over traps, a vast amount of suffering might be sparced the feathered race.

spared the feathered race.

As these lines are being written, the report of fire-arms may be heard. Off the meadow points of the bay, opposite the residence of the writer, duck decoys are glistening in the sam. By watching carefully with a powerful class, flocks of ducks may from time to time be seen glanning by these ducks are reported to the property of the prop seen glancing by these From two to five guns of ducks may from time to time be been glancing by these decroys, considerably out of gmishot. From two to five guns are discharged at each flock with no apparent effect; but if, as a bunch continues its flight, we keep it within the focus of the glass, we shall see now one and then another of the birds composing it leave their companious, spread their wings, and settle disabled to the surface of the water. In the evening, if the opposite shore from these mendow points be searched, a number of cripples will be driven from their hiding-places, and painfully attempt to reach the water. If one is captured, it will be seen that he has been struck with the largest size shot. As this has occurred two weeks before the opening of the close season for duck—October 1—it may be readily inagined what will be the chances to kill birds on and after that date, when so early in the season they have been barried imagned what will be the chances to kill ords on an that date, when so early in the season they have been I at long distances, and with such heavy shot.—Geston . Harper's Weekly.

#### FIELD NOTES.

WILLIAMSPORT, P.A., Nov. 6.

WILLIAMSPORT, P.A., Nov. 6.

Two ruffed grouse shooting, particularly as he accurately describes the manner in which we hum them here. In my estimation there is no kind of bird shooting which brings the capabilities of man or dog to greater perfection than shooting ruffed grouse over a setter dog.

In one thing I cannot agree with "Bell Muzzle"—that a man who kills six out of twenty ruffed grouse is an arist. I could find several men here—particularly one gentleman—who would make such an "artist" feel like a bungler if he was out with them. Within five miles of this city ruffed grouse are getting very searce, and of course proportionately wild. It is seldom that more than eight or ten birds can be raised during a day's hunting. Yet the gentleman referred to usually bags from three to six birds out of from five to nine shots, and he fires if he sees only the flash of a wing inside of sixty yards. Taking such chances it is of course simply impossible to kill all the birds shot at, but I will venture to say that he kills two-thirds of the birds fired at during the season. This shooting is not phenomenal, but simply the result of years of practice. When a bird gets up close, and bounds up well above the scrub oak, take thin as coolly and deliberately as a pigeon out of a trap, you then have plenty of time, if your nerves are only not upset by the unise he made in "jumping;" if, on the other hand, you only catch a glimpse as he is pitching for a thicker part of the coppice, have the gun to your shoulder you are come. Have one barrel loaded with three to three and a half des, quick the powder and one ounce of No. 8 or 9, and the other with four to five drs. best coarse powder and No. 0 shot. While bringing your gun to shoulder you must make up your mind which load will be shoulder you must make up your mind which load will be shoulder not mean a half of the coppice, have the suit of the coppice, have the gun to your shoulder you must make up your mind which load will be shoulder you must

to snottder you must hake up yotr mind which is an when load with the suitable one for the way or distance the bird is risin and your finger must instinctively find the right trigger. To E. G. B., of Elmira, we would state that we also notic the "gray backed and tailed" ruffed grouse be refers to, a this is the first seas in we have noticed them. Can they be a grants from the North?

BOBOLINE.

Wellsville, N. Y., Nov. 8, 1880.

"Bell Muzzle's" article on ruffed grouse shooting in the last number of Forest and Stream was very interesting to me, and just hit the spot.

My experience corresponds with his as to the habits of the ruffed grouse. I have hunted these birds considerably in this vicinity for two or three years last past, and during that time cannot recollect of seeing a bird "free" upon being flushed. After the leaves are off the trees, when a ruffed grouse is flushed, he starts off as if he had a head of 130 pounds of steam on and was working.

I have a triend living here with the starts of th

grouse is flushed, he starts off as if he had a head of 120 pounds of steam on and was working.

I have a friend living here, with whom I have lunted much, that "Bell Muzzle" would have to concede an "artist." He can, and does, bag on an average more than six grouse out of every twenty shots made. I have seen him make five consecutive shots without a miss, and quite a number of times have known him to make four consecutive shots without a failure to bag his bird.

Convex way to be served with us this year than usual. We

without a failure to bag his bird.

Grouse are much scarcer with us this year than usual. We had extensive forest fires in June, and I think they destroyed many nests. Most of the birds we get are old ones. Last Wednesday three of us, with two good pointers, hunted all day over the hills, travelling not less than twenty niles, and we started about a dozen birds, of which we bagged four. I weighed two and found them twenty and twenty-two ounces

It wish to say to "E. B. G." of Elmira that occasionally we get a gray tailed partridge with the others, but probably not one in thirty. I killed one last year and one the year before. In the southern part of Livingston County, Michigan, they were as common as the other birds ten years ago. Woodcock have left us. I have not been able to find one since the 28th of October: they seldon stay with us later than October 10, and generally leave in September. Deer are said to be quite abundant on the head waters of the Sinnemahoning in Potter County, Penn., south of us. This is hearissy. I hope to be able to give you some primary evidence upon this subject before the month ends. F. wish to say to "E. B. G." of Elmira that occasionally we

ANN ARBOR, Mich., Nov. 6. On the 1st of November, the open season for quail having begun, as announced in the Forest and Stream of the 28th of October last, Dr. Plowers, of Columbus, Ohio; Mr. Haskell, proprietor of the Franklin Kennel, Bradner, Ohio, and myself met at the butter place to try our cunning on the numerous Bot Whites that were said to inhabit these parts. Mr. Haskell Turnished for the occasion his three incomparable Gordons, Familic, Ned and Suc Packing our traps together in a ferm wagon we started for the shooting grounds at ten

o'clock Monday morning, some ten miles distant. During the trip we were intensely amused by the fund of wit, humor and story that flowed from our golden-mouthed friend, Flowoclock Monday morning, some ren mlles distant. During the trip we were intensely amused by the fund of wit, humor and story that flowed from our golden-mouthed friend. Flowers, like water from its sparkling fountain. We opened up our day's sport in a likely piece of meadow adjoining an open woods. All being ready, the three dogs started off at a slashing gait, Famy taking the lead. We had not gone far before Famy dropped on a trail, with Ned and Suc crossing on the quarter. All three roaded up the game to the top of a little bill, when Famy struck a point, and the two others backed in splendid style. Moving up gradually the dogs were ordered on and the brids were flushed, the three dogs dropping to wing, and four were retrieved in handsome style showed how well Haskelf had trained his dogs for the field. Again the dogs were cast of down the wind in a ragweed field across the road. Away they went at a rapid gait, ranging and quartering in grand style, till Ned struck scent, when he roaded them up cautiously and neatly for over fifteen yards, when Famy and Sue were ordered to charge, the pointing in this case having been given to Ned, which he did handsomely and effectively. Ordering him on to the flush we banged away and bagged three more, which were handsomely retrieved by Ned. At this point Dr. F. was so captivated by the dog's movements that he bantered Haskelf for his purchase, which ended in the dog's safe for S75: and when his owner realized what he had done he almost shed lears to think he had broken the brace of that grand poir of pups. I don't think the old man did any more good shooting that day. The next day, however, we started off at 8 o'clock a. M. for the same grounds and took with us Jim, another of the same litter, with Fanny and Ned, and never did dogs behave better. One of the finest specimens of backing fever saw done was by Jim, who, while jumping the fence, saw Fanny on a stiff point, and balancing hinself upon the top-most rail, backed his mother in the most splendid style. I was asked to

#### PHILADELPHIA LETTER.

OUR sportsmen are now all off for the stubbles, most of them having postroned their three leads to be a stubble of the stubbles. OUR sportsmen are now all off for the stubbles, most of them having postponed their departure until they had cast their votes either for Garfield and Arthur or Hancock and English. This morning's 7:15 Del, train took two carboads of men and dogs to be distributed along the line of the road and its branches through Delaware and Maryland. Patter present of the train took two carboads and its branches through Delaware and Maryland. Patter present of the train took two carboads are the first present of the train took the success that was hoped for, owing, we understand, to a scoretty of birds and had weather. Your correspondent should have been pleased to have noticed the further work of the Laverack setter Thunder, as he was his breeden, having sold him to Mr. Snellenburgh with a litter brother, Essex (since dead), at five or six months old. We expected great things from Essex, and was sorry to learn of his poisoning. Mr. S. should have Beaufort, Thunder's brother from Fairy's second litter by same sire? But where is he?

It is very strange to me that so few sportsmen visit the middle section of Florida, and that almost every account from tourists in your journal names the Sl. John's River region as having been their objective point, when most everlent sport can be enjoyed all along the line of the Jacksonville, Pensacola and Mobile R. R., from Sanderson to Chattahoo-chee. In the neighborhood of Madison and Live Oak the shooting is especially good. Quail are plentiful, wild turkeys abound, and the lakes near Monticelon, northwest of Jacksonville, teem with mallard and teal, and its borders furnish good feeding ground for siple. Deer sire readily found, and almost every tarkey with a hound will agree to drive one within shot. Were it not for the musquitoes of this State that never die, Florida would be a sportsman's paradise. At Gaines-ville, on the Atlantic, Gulfa' West India Trunsit Co. R. R.,

shot. Were it not for the musquitoes of this State that never die, Plorida would be a sportsman's paradise. At Gaines-ville, on the Atlantic, Gulf & West India Transit Co. R. R., there cannot be found better upland shooting, and Lake Pithlachoco, a few miles northwest from the town, is visited by myriads of water fowl. Cedar Keys, the Gulf terminus of this road, affords a splendid field for the ornithologist, and the collector would find the Fort Gadden region, on the Appalachicola Rilver, n most excellent section likewise.

#### TRAPPED QUAIL.

New York November 6 1880

Editor Worest and Stream

Editor Forest and Streem:

If there is such an institution as the New York or the Long Island Game and Fish Frotective Association I hereby end broth and the state of trapped and shared birds, not only in our open markets, but also upon each and every train of the Long Island Railroad.

This idourish of trumpets to gain new members for their pigeon clubs, this offering of rewards to anybody giving them clues toward the detection of the infringers upon the laws, when the best proofs are right under their very nose; this wanting all the time of proofs, and all sorts and kinds of excuese, are getting, to say the least, rather stale. We want actions, we do not want any more resolutions on paper. It cannot be possible that every sportsman of New York and Brooklyn has turned into a pigeon shooter. Assuredly there must be some true sportsmen left in those cities. If so, let them cone forward, let us start an organization that will act, a club whose sole purpose will be the enforcement of the ganc laws, a club that will spend its money in the detection of the law breakers. Those old so-called game associations are played out. Let us start some new ones, with young blood in them, with men at their head who will talk at a meeting, not for the sake of seeing their name in print the next morning; men who know more about a dog and gun and less about pigeon trap—then, but not until then, we shall have sport again in the field.

To prove what I say, and for the benefit of the Long Is-

the field.

the field.

To prove what I say, and for the benefit of the Long Island Game Association, I will give them facts which happen every day in the week right under their nose.

As soon as the trains enter the stations along the L. I. R. R., either from Greenport, Port Jeiferson or Patchogue, there will be seen all along the road, a hoy handling to the there will be seen all along the road, a noy manning to the baggage master of said train from one to six quail or partridges as the case might be. The baggage master will hand then to the brakesman, who in his turn will hand them to the Union News Company's boy. Said boy will peddle them

openly from one end of the train to the other. By examinppenly from one end of the train to the other. By examining those birds any shooter will see at a glance that they are all trapped birds. Things have come to a very low standard, and the snarers have become very hold indeed, when to let you shoot on their lands the farmers will exact from the shooter before he begins the promise not to touch their snares. I say, stop the employees of those railroads in the sale of those trapped birds, and the farmers and their boys will of their own free will stop snaring, sait will not pay them to send to the city one or two birds at a time. Before the first of November we all heard of the large quantities of qualities were all the sensor user those bore quantities of qualities were shown to be send to the sensor user those bore quantities of a six of the sensor user those bore quantities of some part of the large quantities of the sensor cannot be sensor user those bore, quantities of the sensor cannot be sensor user those bore, and the sensor cannot be sensor user those bore, and the sensor cannot be sensor user these bore and the sensor cannot be sensor to the sensor cannot be sensor user these bore, and the sensor cannot be sensor to the sensor cannot be sensor user these bore and the sensor cannot be sensor user these bore. of Accember we all heard of the large quantities of qualtifuce were, but when the senson came those large quantities were not to be found—they had disappeared. Bevies that six weeks ago had from twelve to fifteen birds each did not have one-half of that number on the first of this mouth. What had become of them? The farmers themselves will tell you, very innocently, that they guess that their boys have been snaring them. A Thue Loven of the Spott.

LARGE GAME IN New York.—The New York Times has the following correspondence from Montfeello, N. Y.: "The Immers and trappers that annually find both pleasure and profit in the portions of Sullivan, Delaware, Ulster and Greene Counties that are still in a condition almost as primitive as they were when the Indians held possession of the region, are now out in full force, seeking their favorite game, which, from the timid rabbit to the fierce bear, has not been more plenty for many seasons. The mountains of northern Ulster and the lower part of Greene, and the rocky hills of Neverlink and Rockland Townships, in Sullivan County, are the shosen resorts of the hear hunter, while the idges approaching nearer the Delaware boundary of the latter county, and vertooking or holding on their crests many of the lates that abound in the county, are sought by the lover of the deer chase. Scores of sportsmen from New York City have engaged quarters at the well known backwoods retreats that the election is over an influx of this class of sportsmen seed the season of the compact of the part of the season and particles are everything that can be asked for, they overcome the dislike of gnests to a drive of eight or ten miles to reach the hunting grounds, and many sportsmen remain here for the season rather than seek the taverns in the very midst of the ridges, swamps and swalls. 'Dave' Avery, of the Mansion House, of this village, is a crack shot with both rifle and shot-gun, knows every inch of the woods, and is always ready to go after a deer, hear, for or wild cat, as the choice of a 'visiting sportsmen in the woods along the Benver Kill. Catamounts have no them on the woods along the Benver Kill. Catamounts have no toeen so numerous and bold for years, and the dreaded lynx has made its presence known in the Black Lake region. The appearance of these animals, all dendy enemies of the deer, is certain evidence that their prey is here in unusual numbers this season."

Pattern Tests.—It is impossible to fix upon any one pattern as a standard by which to gauge the shooting qualities of individual gaus, because of so wide a diversity in the degree of choke. We have therefore selected the two extremes, a cylinder bore and a very full chokehore, and give below such patterns as good gams of each chess should make. Between the two limits of 110 for cylinder and 240 for extreme choke most of our readers will probably find their records to accord with the divergence of their gams from these two hores.

bores.

A cylinder bore gun foaded with 14 oz. No. 7 shot should
put 110 pellets into a 30-inch circle at 40 yards.

An extreme chokebore gun, foaded with 14 oz. of No. 7
shot should put 240 pellets into a 30-inch circle at 40 yards. A good cloke bore, such as we prefer for general shootin ould put between 180 and 200 pellets into the same circ ider the same conditions. should

under the same conditions.

The patterns given above are with the following charges of powders

THE GAME LAWS IN MARKE.—The following letters came to us in the same mail. We publish them together. The letter signed "Bangor" is the best possible comment upon Mr. Smith's plea that the demands upon the Commissioners are beyond their ability to meet, and that plea is the hest possible answer to "Bangors" complaint. Perlups by another year the people of Maine may be encouraged by the good already done to increase the appropriation and enlarge the facilities for coping with the work:

year the people of Manie may be encouraged by the good already done to increase the appropriation and enlarge the facilities for coping with the work:

"We wish it to be distinctly and clearly understood that we shall rigidly enforce to the utnost extent of our power and resources these laws against all parties, whether guides or principals, who shall be guilty of their infraction."—E. M. Stilwell, Commissioner of Pisheries and Game, in last week's issue of Fonest and Stilwell, Commissioner of Pisheries and Game, in last week's issue of Fonest and Stilwell, Commissioner of Pisheries and Game, in last week's issue of Fonest and Stilwell, Commissioner of Pisheries and Game, in last week's issue of Fonest and Stilwell, Commissioner of Pisheries and Game, in last week's issue of Fonest and Stilwell, the law knowing as they do that nothing will be done as usual. Why, right in the Commissioner's own city there are men who regularly resort every fall to the Lakes in Washington County to hound and butcher deer, and this season finds them pursuing their netarious practices with a greater boldness, born of past immunity. More than three weeks ago a responsible person living near the scenes of the law's violation wrote to Commissioner Stilwell and his colleague to that effect, yet neither officer has put in an appearance nor sent a deputy to arrest the parties; so the slaughter continues and will continue till the deer are exterminated, unless officers are appointed who will do something more than five paper pellets. Some idea of the slaughter can be formed from the fact that twice a week a team goes in from Beddington (five miles distant) to the vicinity of Mopang and Pleasant Lakes and takes on the venison in the night, carrying it to Mibridue for shipment. Then there are parties at Rocky and Lead Mountain Ponds and Alligator Lake in the same business. The still hunters are doing what they can shooting hounds. Two have already been shot by parties at Thirty-five Brook, and at Gray Banda Adams' camp. In conclusion I woul

STATE OF MAINE—DEPARTMENT OF TEBERIES AND GAME—Portland, Nov. 8.—Editor Forest and Stream: As an executive offlicer I am opposed to this constant "tinkering," by special legislation, etc.—attempts to better the form of laws, at the expense of lessening their practical force, we are devoting our personal efforts and energies as commissioners to the enforcement of the good laws that we have, and devote our whole time to the work. We now have added to our duties the enforcement of the grown laws. With the extensive territory and limited means that we have our work is a mountain before us. You will learn from our forthcoming report for 1830 that we have not been idle for a moment. With an american appropriation of funds to depend upon, and a meagre one at the best. We have a great territory abounding with large rivers and lakes and extensive forests that yield abundantly of fish and game. You have in New York State no less than four officers at the head of the Department of Fisheries, and eight to execute the game laws. The work of fisheries, and eight to execute the game laws. The work of restoring our river and lake fisheries (by fishenthre, the construction of lishways and protection), and of enforcing all our fish and game laws, etc., etc., we are prosecuting with our utmost zeal and energy. The fieve that the practical results in Maine are, beyond cavit, appreciated in the United States or the world. Our report for 1880, will be Everett and states. STATE OF MAINE--DEPARTMENT OF FISHERIES AND GAME-

TENNESSEE MOUNTAINEERS.—Thomas Hughes has been down to Tennessee to found a colony, and this is what he has to say of the mountaineers of that country: "Most of these mountaineers, but not all of them, own a log cabin and a minute patch of corn round it, probably also a few pigs and chickens, but seem to have no desire to make any effort at further clearing, and quite content to live from hand to mouth. They cannot do that without hiring themselves out when they get a chance, but are most uncertain and exasperating laborers. In the first place, though able to stand great fatigue in lumting and perfectly indifferent to weather, they are not physically so strong as average English or Northern men. Then they are never to be relied on for a job. As soon as one of them has carned three or four dollars he will probably want a hunt, and go off for it then and there, spend a dollar on powder and shot, and these on squirrels and opossums, whose skins may possibly bring him in ten cents as his week's earnings."

Bereshire County—Stockbridge, Muss., Noc. 5.—Owing to the swamps and low lands being so very dry this season woodcock were searce compared to what they usually are. Ruffed grouse about the usual number, but are to be found more in marshy tracts than in their usual haunts on the hills. Ducks at times common shooting, but come in small flocks Ducks at times common shooting, but come in small flocks mostly black duck (A. Msoure). The beautiful woodduck breed in this section quite common. Rabbits abundant, grey squirrels common, and in some of our neighboring hills quite

plentiful.

If has always been a very rare thing to see or hear quail in this section, but this hast season they have been quite com-mon, especially in the spring and summer. Their genial cry of Bob White could be heard every day in different parts of

our fownship.

Our game laws are well kept of late years. Were it not so with our great number of hunters and fishermen our game and fish would soon be annihilated.

R. C. M.

AN UNUSUAL BA9+-Prekskill, N, Y, No., 5 -Mr. Eugene Depew and myself bagged yesterday in this county within forty miles of New York thirty-seven quail, all fine, full-grown birds. All shot over my frish bitch "Gussic," and all but two were shor over points.

W. H. Perger.

but two were snor over points.

FLORIDA ORANGE GEOWEIS=—New York City, Oct. 26.—
Editor Forest and Stream: Could you kindly put a couple of young men in communication with any of your numerous contributors to the Fonest and Stream in regard to orange growing in Florida? We have read with interest the valuable work outlided "Camp life in Florida," but the book scarcely meets our wants; we should like fuller information as to the prospects of orange growing, and to know of the most suitable lands, also State Laws relating to purchase or otherwise.

Cambridge—Oct.—Will you please answer through your valuable columns the following questions: What are the prospects of a young man going to Florida to engage in the orange business? What part of the State is best adapted to the business in regard to headlifthness and profit? How long before one begins to realize any profit from the business? What is the amount of capital required to start with? What time of year is best to begin? Is there my book that gives reliable information on the subject? Please answer as soon as space will permit and oblige,
Will some one of our Florida correspondents—not one who

has a grove to sell- give us some facts on this point?

has a grove to sent give as some and a guardens and form of the sailing ducks election day on Long Island Sound near this village, I came upon a Canada goose which, evidently tired from a long flight, was resting on the water. It allowed me to approach within about fifty yards before rising, and it had so for a far when an ounce and a quarter of "B" shot Bafer. to approach within about fifty yards before using the amount got far when an ounce and a quarter of "B" shot overtook it and proved too heavy a load to carry. Before dressing it weighed \( \) to B. Thow does that compare with the average? Cocasionally goese are seen flying over here in the fall, but shooting one is a very rare occurrence. My "bg" for the day consisted of, besides the goose, three ducks.

The Berdoodle.

The bird killed by our correspondent was of about the average weight.

A Curnostry.—The lugg gun which is elsewhere offered for sale by Mr. Wm. R. Schaefer, of Boston, has a history, and we advise the man or the club purchasing it to get the story along with it. If we remember rightly, this small cannon was imported for use on Chesapeake Bay, but its terrific echoes awoke the righteous wrath of the sportsmen of that region, and the gun was incontinently stormed, captured and sent out of the country. Eventually it found its way to the Hub, and has there long been an object of open-mouthed wonder to the modern Atheniums. If some of Jour wild-geese thought friends of the Equific Coact wint to preserve their der to the modern Athenians. If some of our wild-greese plagued friends of the Pacific Coast want to preserve their crops we recommend Mr. Schaefer's punt gun. The wea-pon would make an interesting ornament for a gun club

MARYLAND—Dover, Det., Nov. 4.—W. G. Smith, trainer at K-9 Kennels, has just returned from a ten-days' bunt in Queen Anne County, Md. He reports an abundance of qualis and a good number of woodcocks. Knowing the country as he does we are not surprised at his success in finding so many of the latter. For comrades and co-workers he had "Lothair," of Orange Valley, N. J., and "Fritz," of Cumberland, Md. Owing to an unusually large crop of acorns, among which is the pin oak variety, a choice article of food, quail were found more frequently in the woods than in the open. The rain which is now commencing may drive them out to feed.

Hambelless Guns—Boston, Noc. 4.—1 am about to purchase a fine breech loading shot gun, ten pounds, ren gauge, but an undecided whether to get one with or without hambers. The mechanism of the hamberless seems simple and strong, and easier to keep free from rust, but I have never seen one in use, and do not know how they are liked. Again the action bed seems short on all that I have seen, and I should think they would be more liable to get shaky. What do you think of them? Will some of the readers of Forest and Stream who are using the hamberless give me their opinion of them through your columns? A. B. C.

We should be pleased to hear from those who have used the

hammerless gun.

Onto Qual Shooting - Wanson, O., Nac. 3.—1 think your correspondents are mistaken when they assert that in Ohio quail cannot be killed before Nov. 15. The law of 1879 to which they refer was passed prior to the code. The code supersedes—codifies all laws in force January 1, 1880. One game law in the code supersedes the law of 1879, and repeals that law by implication. If the law of 1879 is in force, then, often Nay 15 them they is no description. that law by implication. If the law of 1879 is in force, then, after Nov. 15, then there is no close season, and quall may be killed all the year round as that law contains no prohibition after that date. The judge of our courts concurs with me in this view Quail shooting is fair, and some woodcock yet linger with

SPORT ABOLT NEWARK. A local paper thus sums up the reports of the opening of the New Jersey game season thereabouts: Quail were found abundant and in large bevies, the birds well-grown and strong of wing. Quite a number of broods were reported in Essex and Union counties. Two gentlemen from this city killed a dozen on Tuesday between Elizabeth and Roselle, and said that they left plenty for breeding purposes. The grouse were unusually plenty in their mountain haunts. Woodcock are very scarce and no good bags have been heard of this fall, but the prospects are that the recent rains and mild weather may yet furnish some sport with these highly prized birds. Rabbits, our only ground game, hardly lore out the promise held by the favorable season, as they were not found to be any more plentiful than usual. than usual

than usual.

An Earnest Worker New York, Nov. 1—Editor Forest and Stream: The readers of Forest and Stream will have noticed the article in your issue of Oct. 28, by W. Holberton, on "Subbath Maranders" at Paskack, N. J. This is by no means the first evidence brought to my notice that Mr. H. is interesting himself to prevent the Higgal depletion of game and other birds in this vicinity. We have plenty of sportsmen who have time and money to sparse for associated effort expended in regular meetings, big talk, trap-shooting, grand suppors, etc., etc., but here is a man disposed to do a little actual work. I hope that not sportsnen alone, but all who feel an interest in the preservation of the feathered tribe in this section from the incremary and wicked assaults of por luntress and wanton butchers will lend him a band. And as "fine words butter no parsaips," let that hand transmit a \$5 note for his campaign fund.

H. H. Thompson.

QUALL IN New JERSEY—Avar York, Nov. 5.—Our efforts to stop shooting at Pascack, N. J., before the law was off were entirely successful, and the parties have not put in an appearance since. I regret to say, though, that during two days' shooting (Nov. 1 and 2) in Jersey, I heard but one story from farmers and others, and that was that there had been quali shooting going on for two weeks before the 1st. The wildness of the quail and small size of the hevies amply proved this fact. Some bevies would not let the dogs come within twenty yards of them. Quail were quite plenty early in the season, but the "woodcock shooting" thinned them out, so that there are not enough left at this early day to make it worth while going after them. W. Holebeton.

make it worth while going after them. W. Holberton.

Quall. IN Indiana. Closerdate, Noc. 5. Our prospects for small game -the only kind which we have—are indeed flattering. Quall were perhaps never so plenty. The season this year was particularly suited to them, being dry during their nesting and latching time, and they are now well grown, strong and ready for dog and gun. Although our law has been off for a few days, I have as yet to see my first dead quait; nor have I heard any shooting. By rising about day-light any morning, I can course perhaps a dozen covies by their calling, and have in the last few days seen two or three covies a hundred yards of the house. I know of no place in Central Indiana where devotees of the gun can secure so good sport as here. Should sportsmen from alvoad desire to make a call we will do everything we can to make their stay pleasant and insure plenty of sport. Watersfowl have as yet given us the go-by, nor do they tarry long when they do stop. Black bass, since the cool days have set in, have been doing good work taking the minnow, for you must know that the fly is as yet unknown.

THE BLAIR COUNTY METHOD.—A young man in Blair County, Pennsylvania, has discovered an ingenious and successful way to capture squirrels, dead or alive, without either gun or ammunition. His outift consists of a set of climbers, such as are used by telegraph repairers, a sheath knife, a pack of fire-crackers, box of matches and a dog. The dog holes the game. The young man puts on his climbers, and goes up to the hole in the tree, lights a tire-cracker and drops it into the hole. When it explodes, the frightened squirrel rushes out into a bug held over the hole, or if he wishes to kill it he strikes its head off with the sheath knife; if he misses, the dog soon finishes it. By this novel contrivance he often brings in from ten to twenty squirrels a day. Large game is captured in the same way. Ex.

CONNECTION: Patham, Not 6,—Sportsmen of this section (Windham County) report quail and woodcock more pleuty since the light rains, and it is considered good huning at this time, especially in the runs and small timber.

Gray squirrels are very plenty, and parties bring in large bags of them. It is safe to say that squirrels have not been so plenty for several years. Readers of Forket and Strram in this part of the State will welcome with delight your decision to discontinue the cricket department, as there is not one in twenty in this State that cares to see it. What we like to read best is what we understand best.

E. T. W.

Another Florida Party.—We have the name of a gentle-man who wishes to form a small party for a trip down the west coast of Florida, and if there are among our readers any who have such an expedition in view they are requested to communicate with S. S., this office.

Stoles Guss. Carenoria, N. V., Oct. 31. W. Dwyer had a new gun built to his order, and one night forgot and left it with Burr Wendell in his restaurant, and some villain broke in and stole it and an extra pair of barrels belonging to Charlie Morse's gun. It was evident that the robbers wanted dangerous weapons, as the above and two pistols were all the articles missed.

HAMMERLESS.

Texas.—There is a great need of better game legislation in Texas. Cannot the clubs of the State unite to carry through such a law as they shall determine to be proper? A correspondent writes from Waco: "Very little interest is taken here now in sportsmanship, on account of not having a game law. I have heen trying for a game law for four years, but have not yet succeeded."

Havre de Grace, Md., Nov. 3.—Two parties off Battery, Spesusi Island, yesterday killed 173 ducks—20 canvas-backs, 23 black-heads, and the rest red-heads. The canvas-backs have not yet come on.

A Winter Home, — Topeka, Kan., Nov. 1,—I see in "Information Wanted," "W. K." writes he is a consumptive and desirous of passing the coming winter where it is healthy and game is plenty. This is the place. Hive near the city, alone, have an old darkey couple who have charge of my dogs under my guidance. Live comfortably and nice, and would like a companion for the winter. It will not cost him \$5 a week. Tell him to correspond with me. A. E. WADDELL.

QUALLON THE TRACK.—One of the best finds for quail in the Ohio Valley is along the lines of the various railroads. Strange as this may seem at first reading, it is not odd when the reason is known. The birds are attracted there by the large amount of grain which sifts through the cars and the dusty condition of the ground between the rails. They become used to the sound of the passing trains and frequently run out of the way instead of flying.

—There is not much game in market, owing to the warm and wet weather. Small quantities are received from the following localities: Bear from Maine; quali from Pennsylvania, New York and Virginia; deer from Pennsylvania, lowa, Minnesota and Maine; ducks mostly from Harve de Grace, Md.; rabbits from Pennsylvania; woodcock from Tempkins Comnty, N. V., and Bucks County, Pa.; pinnated grouse from Wisconsin and Minnesota.

SHOOTING DAYS AT SHINNECOCK BAY.—In answer to numerous inquiries we may say that the law recently passed by the Supervisors of Suffolk County affecting the shooting of wild fowl at Shinnecock Bay and other neighboring resorts permits the birds to be shot only on Monday, Wednesday and Friday of each week. and Friday of each week.

WILD FOWL IN NEW YORK CITY .- On Sunday, Nov. 7, a flock of four canvas-back ducks were seen flying across the city above St. Nicholas avenue at 152d street. They were a little high to shoot at, but we think that a 20-pound P. Mullin breech-loader would have reached them.

A pair of green-winged teal dropped into the waters at the northerly end of Central Park Sunday morning, and after paying a visit of an hour or two to the tame ducks and drakes who, under protection of the Park police, occupy that aristocratic puddle, they splashed out, and rising into the air headed for the Southeast.

Texas Indianola, Nov. 3.—Since writing last have had another large flight of ducks, nearly all red-head and black ducks, and some jacksnipe. Was out one day last week on a marsh close to town, and bagged a dozen. Geese and braut very scarce as yet, and no swan. By going eight or ten miles from town fine shooting can be had at ducks, chickens, quail and snipe.

G. A.

A Kansas Device.—An ingenious youth living near Burton, Kan., has devised an ingenious method of enticing the wild geese within range of gunshot. He captured two or three wild geese by breaking their wings, Inriated them out till they recovered and now he takes them down into the wheat field, covers himself up and pinches their legs, making them squawk, which attracts the others which are almost constantly flying over.

Large Antlers.—Patchogue, L. I., N. Y.—Will you be kind enough to give me any address, or put me in the way of getting a large pair of deer auther from the sporting grounds of Vermont, New Hampshire or Maine? I. W. Meeks, Jr.

Indian Territory—Fort Gibson, Nov. 1. -All kinds of the plentiful; season splendid; sport fine. Mark.

#### SHOOTING MATCHES.

#### TORONTO GUN CLUB.

THE members of the club arranged to have a shoot at pigeous at Woodbue Track, on Thanksgiving Day, Nov. 3, there being five prizes to be competed for-namely: For first prize in first class—The Dilly Mail newspaper for one year, donated by Mr. Good, the sporting editor of that paper. Second prize—A very fine pickle cruet, given by Mr. Joseph Taylor, of the Dog and very time pickie cruet, given by air. Joseph Taylor, of the Dog and Duck saloon. For first prize in second class:—A box of cigars, value 55, given by Mr. Harry Keeble. Second prize—A box of soap, given by Alderman Tayler, value 83. For first prize in third class —A very fine jewel case, value 812, given by Mr. Harry Cooper.

In donating this prize Mr. Cooper stated that, as he was a young shooter, and wishing to see the third class men take a lively interest in the shooting, he thought he would encourage this class, and

that at a future shoot he would even encourage them more Mr. W. Bagg acted as referee and Mr. Lott Dean puller. First Class -7 birds each; 100 yards boundary; 26 yards; Mr. Small won first prize. Ties in shooting off resulted as follows:

The following shooters had  $\mathfrak a$  sweepstakes at 5 birds each, 26 yds.

C. C. Small ... 1 1 0-2 W. G. Gooderham ... 1 1 J. B. Graham ... 1 1 0-2 Geo. Leshe ... 0 1

The shoot-off, miss and go out, resulted in Mr. Geo. Leslie killing two birds in succession, getting second money; J. B. Graham, thard money, killing his first bird and missing the second bird. Mr. Small and Mr. Gooderham missing their first bird. This ended a very pleasant morning's sport.,

J. B. Graham, Sec'v and Treas.

DEXTER'S PARK—Jamaica, L. I., Nov. 9.—Ninth monthly contest of the Brooklyn Gun Club for the double bird trophy, shot for at seven pairs each from H and T plunge traps, handicap rise, 100 yards boundary; Brooklyn Gun Club rules. Ties shot off at three pairs each :

Spencer, Mass., Nov. 3.—The Sportsman's Club have changed their name to the Star Gun Club. To-day they dedicated their new range and grounds by a friendly contest between the clubs of Brookfield, North Brookfield and their own club, also with an odd team made up of sportsmen from Worcester, Brookfield and North Brookfield. The traps were so located that the balls would sometimes go up between the marksman and the sun ; this will account for some of the poor shots. The day's pleasure closed with a collation. The following is the score: Brookfield Club.

New York Gun Club-Bergen Point, N. J., Nov. 6.—Match for birds, shot by Dr. Zellner, Mr. L. F. Martin and Mr. C. Lawrence, at 50 birds each, from five ground traps, special rise, 80 yards boundary. New York Gun Club rules.

Fell dead out of bonds.

-You can save Doctor bills and keep your family always well with Hop Bitters.

# Archern.

Sabatoga Springs.—On Nov. 2 the following match was shot, Mrs. Townsend Davis and Mr. Frank Sidway, of the Buffalo Tox-ophilities against Miss Corinno B. Bramlette and Mr. Frank H. Walworth, of the Saratoga Bownen. Each team shot bu its own range. Ladies, 96 arrows at 50 yards; gentlemen, 96 arrows at 60 yards. The match was to be decided upon the greatest gross score: Buffalo Toxopilite

Total 163-845 Saratoga Bowmen. 

The Saratoga Bowmen won by 76 points.

The ladies' share in the match is too great a credit to their respective clubs to admit of an apology; but it must be stated in justice to them, that their score fell quite below their better practice, by reason of their having to shoot at a disadvantage. Mr. Walworth, after discharging but two arrows of his third dozen, turned to speak to a friend, and Miss Bramlette, supposing he had completed his end, stepped to the line ten yards in front of him while he was in the act of aiming his third arrow. The sudden warning which the lady received from several quarters at once so startled her that she scored but a few points with her next dozen arrows, and could not recover her equanimity to the end. Thanks are due to Mrs. Davis for having shot at all, as she had but little more than nominal practice since winning the distinguished title of championess over the most accomplished lady archers in the country at the Grand National, last July.

## The Rennel.

#### FIXTURES.

Meeting of the Eastern Field Trials Club, Thursday, Nov. 11, 1880, at 3:30 P. M.

National American Kenuel Club's Second Annual Field Trials, Vincennes, Ind., Nov, 15th. Chas, De Ronge, Secretary, 51 Broad street, New York.

Meeting of National American Field Trials Club, at University Hall, Vincennes, Ind., Nov. 15, 1880, at 8 P. M.

Eastern Field Trials Club's Second Annual Trials, Robins Island Peconic Bay, L. I., Nov. 29. Jacob Pentz, Secretary, New York.

How to Get to Vincennes.—To those who propose to attend the meeting of the National American Field Trials Association at the meeting of the National American Field Trials Association at Vincennes, a word as to the best way to reach that eity may be acceptable. From New York go via Pennsylvania R. R., 8:55 a. M., or 5:55 r. M.; to Futsburgh at 11:45 r. M., or 9:00 a. M.; thence by Pittsburgh, Cincinnati & St. Louis R. R. to Vincennes, arriving 9:35 r. M., or 12:05 neon. Or Leavo New York by Eric R. R. 8:45 a. M., or 6:45 r. M.; to Salsmanca at 11:50 r. M., or 11:20 a. M.; thence by New York, Pennsylvania & Ohio R. R. to Cincinnati, arrive at 5:00 a. M.; or 6:00 r. M.; then via Ohio & Missonri R. R. to Vincennes, arriving at 5:05 r. M. or 1:18. Vincennes, arrive at 2:05 P. M., or 1:18 A. M.

### HARE SHOOTING WITH BEAGLES.

Granby, Ct., Oct. 22, 1880.

Editor Forest and Stream:

The sport of shooting hares before beagles is yearly increasing in popularity, and is more and more enjoyed as game birds grow scarce near large cities, and compel sportsmen to look partly to other than feathered game for sport. Those who have once enjoyed listening to the music of the little hounds as they follow the timid hare in her windings through the thick undergrowth will often afterwards leave setter and pointer at home to enjoy the exciting sport.

I have no doubt that hare shooting would have been practised more if the bengles could have been readily procured, and at reasonable prices; but it is only within a few years that they have been bred here, and in sufficient numbers to supply the demand.

In regard to color of beagles, I much prefer white, black and tan, as being more readily seen on either snow or bare ground than dogs of solid colors, and a dog standing from 13½ to 15 inches at shoulder is preferable to a smaller one that will tire soon if used in deep snow. As the music of the pack constitutes one of the chief enjoyments of the show, I always select those dogs having the prolonged bark of the foxhound, and they should also be matched in speed, so as not to bave any stragglers in the pack. While it is not necessary to have more than one dog, a couple are destrable, for the more dogs the merrier the cry, and the more game they will find.

not to have any stragglers in the packs. While it is not necessary to have more than one dog, a couple are destrable, for the more dogs the merirer the cry, and the more game they will find.

A few hints on the training of young dogs may not be out of place, and will be of use to those who have not had experience in working young beagles.

By far the best time of day is the forepart of evening, as the hares then come out to feed, and if the dogs strike a trail it is fresh, and they will not have to follow it far before starting the game, and there is no secut left in trails unade the night before to mislead and trouble the dogs, as there is when they are taken out in the morning. In the evening, too, the ground is usually damp enough from falling dew, and the air favorable for the seen to lie, so I always select that time of day to teach my young dogs, and, instead of walking about, select a favorable spot for game, and sit down and let the dogs lead off and work over the ground, giving them plenty of time before changing position if they fail to start game.

I have seen many houters keep walking, and the dogs, being young, would not lead off, but simply follow a heed. After they have been introduced to game, and started a few hares in the evening, then I take them out by daylight, and if I shoot the hare do not go to it and pick it up, but let it lie where killed until the peak come up and see that it is dead, and has not vanished in mid air, as they would be likely to think if picked up. The day I consider most favorable for the sport is when the ground or snow is dump, and air mild: a southerly wind is favorable for the scent to lie, but any cold, dry wind seems to dissipate it. It does not lie well in an east wind or when the leaves begin to fail, but a warm, cold, dry wind seems to dissipate it. It does not lie well in an east wind or when the leaves begin to fail, but a warm, cold, dry wind seems to dissipate it. It does not lie well in an east wind or when the leaves begin to fail, but a warm, cold, dry

circles until shot.

The hunting of hares does not compel one to take long walks through thick bushes, which New England bird-shooters have to take, but one can take his little pack into ground

where hares live, and sit down on some log or stump com-

where hares live, and sit down on some log or stump commanding a runway and listen to the industrious little hounds until their near approach warns him to be on guard and not let the little quarry steal by unseen and unshot at.

The writer is fortunate in having both varieties of the hare within easy reach, and they can be hunted in winter when pointer and setter are useless; and many a day the coming winter will my pack of beagles make the woods ring with their music as they follow the great white har in his ghost-like flight.

N. ELMORE.

#### THE CARE OF DOGS.

#### CHAPTER II.

HAVING provided a proper kennel, and hinted the general arrangement of its occupants, let us give them a "square meal."

The Arrivage a project beamer, and induced the testing a sequence of the control

below:

1 beef head or 2 large beef shins, 2 heads of cabbage, or
1 peck of turnip or polatoes, 6 onions, 1 teacupful of sail, 1
ounce black pepper. Cut the vegetables into fine pieces, remove as much meat as possible from the bone, chop it fine
and crack the bone. Throw all into an iron kettle and add 7
buckets (8 quarts) of water. Boil one hour and remove
bones. Thicken to the consistency of cold soft soap with the
following mixture: Corn meal 1 bushel, out meal 1 peck,
wheat bran 2 pecks. Stir in while the soup is boiling and let
it continue to boil three hours longer. Do not let it scorch.
Feed cold.

Feed cold.

A good winter food is made thus: Put into the iron pot 1 peck of hominy, pour on it 4 buckets of water, and boil 1 hour. Chop up 4 lbs. fat pork (fresh) and 2 pecks of potatoes (skins on), put them into the pot and allow water to cover them, boil one half hour and then stir in a handful of salt, the same of black pepper, and sufficient coarse wheat flour or middlings to make it stiff. Boil until hominy and potatoes will mash with a spoon, and feed moderately hot, say "spetty warm."

Plain coar meal mush, with meat fibring or cracking

potatoes will mush with a spoon, and feed moderately hot, say "pretty warm."

Plain corn meal mush, with meat fibrine or cracklin cooked in it when the latter article is not burned—as is often the case when it is not convenient to examine before purchasing—is very wholesome; but where skin diseases are concerned, avoid fat or cracklin, which contains more or less. Use in its place lean meat, neck pieces or other cheap parts. Better use no meat than fat. Feed cold.

As a staple article for all seasons I would recommend baked corn bread with cooked meat cut fine and stirred in before baking. The meal should be mixed with cold water, seasoned with pepper and salt, and baked (for a loaf two inchest hick) one hour in a hot oven, turning the loaf when the top is browned, if bottom does not brown well. If there is any kind of surfeti, leave out the meal, giving plain corn bread alternated with well cooked vegetables, and where convenient, an occasional feed of fried fish. Feed cold. Except in the case of very young pups, there is no danger in fish bones.

Where dogs will eat them—and few but will—give occasionally a raw, ripe tomato, or two small white polatoes between meals.

Soun once or twice a week in cold weather is good; but

tween meals.

Soup once or twice a week in cold weather is good; but soup in warm weather is a nuisance. It often sickens a dog and causes him to lose his appetite; easily spoils or sours by keeping over night, and, if fed in that state brings on diarrice.

hoea.

Bones are of more importance than most persons think. Each dog should have a bone to gnaw, and a few small or thin enough for him to grind and swallow, at least once a week. As a mechanical agent they cleanse the teeth, strengthen the jaws and harden the gnms. Taken into the stomach they contribute a large amount of phosphorus and lime to the bone, muscle and brain, and assist wonderfully in causing worms to loose their hold upon the intestines and expelling them from the bowels. The exercise and enjoyment which a dog derives from gnawing a hone are very beneficial to his health. Fresh water, cold and clear, is one of the most important

Fresh water, cold and clear, is one of the most important items. It should be renewed three times a day in Summer, and once a day in winter, rinsing out or serubbing the buckets each time. Warm, dirty, slimy water is almost as injurious to a dog as it it is nauscous to a person. A man who neglects to keep up a constant supply of clean, fresh water is no more fit to have charge of a kennel than a monkey is to

CURRENT DOG STORIES.

D. M. Cobb, the possessor of extensive pastoral interests in this section, has a shepberd dug that discounts the majority of the canine family for faithfulness and staticle series to place a master. The dog, it seems, has no higher ambition to satisfy than togratify her master, and so sensitive is she that any manifestation of displeasure on her master's part at her beheaver appears to amoy her exceedingly. About six weeks ago Mr. Cobb left for California, leaving this dog with others in the cere of the herder. He also turned has mule out on the range to pasture at leisure until he returned. When his sheep were gathered about the camp at night the dog discovered that her master was absent, and seemingly over this fact she grew very naxious and uneasy. The herder observed this restlessness on the part of the dog, but supposed that she would be all right next norming. When morning came, however, the dog was gone. A few days subsequently the herder discovered her on the range with the mile and succeeded in including her to follow him to camp, where he fed her. She again disappeared her on the range to get his mule, which was also a dutiful animal, and to bis amazement and relief he found the faithful dog in company with his faithful donkey far out on the range, apparently contented and happy componions. At the spath of her, master, however, the dog became perfectly frantic with ecstacy and manifested her manloyed raphure by actions that were as easily comprehended by him as though they had been spoken in words.—Nate Lene (Cd.) Herald.

VI.

Animal instinct of a very high order was a little words.

Animal instinct of a very high order was exhibited at the Buildog ranch last Sundary. Mr. Piper, of Rapid City, was there with a fine pointer dog. All hands were seated at the dinner table, when all at once the dog went up to his master and commond whining. The attention of the master was attracted to the dog and turning around he asked him what he wanted. The dog reached up and dropped a gold badge in his hand that he had picked up somewhere. Dr. Meyer recognized it as one that had dropped from his vest, but know nothing of the loss until the dog found it. Deadwood (Dak.) Times.

VΠ.

As an evidence that whisky is an infallible antidote against poison, we will state that Mr. J. W. Jackson, while out on the prairie some few days ago with his fine-blooded hunting dogs, had one of them blitch by an enormous moneasis snake. The reptile one of the dog's tongue, from which a perfect stream of blood sense. The dog's tongue, from which a perfect stream of blood sense. In the dog's tongue, from which a perfect stream of blood sense. In the dog's tongue, from which a perfect stream of blood sense. In the dog's tongue and lower jaw had commenced swelling rapidly and plarmingly. The owner, having with him a flask of whisky, lost no time in pouring down the animal's threat about one-half of it. As soon as the whisky took offect the dog lay stretched out as if dead, but he was only drunk, as he soon revived from his stupor and was secuningly as well as ever. The place struck by the snake rotted and fell out.—St. Landry benaveral.

VIII

Lost evening, as the through mail on the Baltimore and Ohio Road was passing Alpaville, a dog started across the track. The pilot of the engine struck the canine, and the engineer supposed that it had been ground up by the train. When the engine reached the city the freman was surprised to find the dog sended on the ash-pan under the turnace. The dog did not seem to have been severely injured by the pilot, but the hair was burnt from its back during the long ride of twenty-one nules on the ash-pan. This morning the canine appeared quite frisky, and was sent back to its owner at Alpaville.—Express.

Policemum Charles Ecol. of the Twenty-weeped dictrict who

owner at Alpsvillo.—Experss.

IX.

Policeman Charles Egolf, of the Twenty-ninth ward lying around natrost that dismal part of the Twenty-ninth ward lying around Mineteenth street and Indiana avenne denominated "Stifftonn," is generally accompanied by the station bouse bloodhound "Nig." This was an advantage to him on Friday night. Egolf found Join Brannan beating his wife about 10 o'cleck, and attempted to arrest him. Brannan knoeked Egolf down with a brick. A party of roughs gathered to Brannan's assistance and in a trace Egolf was down and being vigorously beaten. Then the bloodhound came into play, like another dog of Montagris and other celebrated hounds of history. He dashed not the crowd, bit right and left and kept the assailants at bay midt Egolf arose and went at Brannan with a blackjack. He speedily subdued Brannan and conducted him to the police station, his four-leged auxiliasy limping along on three feet and with a couple of broken ribs. Egolf fell fainting upon the floor and when picked up it was found that his scall was upon the door and when picked up it was found that his scall was appeared to have been the his face was badly contused. Brannan appeared to have been the his face was badly contused. Brannan appeared to have been the his face was badly contused. Brannan appeared to have been the his face was badly contused. Brannan appeared to have been the his face was badly contused. Brannan appeared to have been the his face was badly contused.

A BAD BIRD. -The following story comes to us well authenticated: At a certain club house in Boston there was kept in the billiard room a parrot which was so tame and such a favorite that it was not confined to its cage, but was allowed the liberty of the room, and was often seen perched upon the furniture or wandering about the floor. On one occasion, when the bird was seated in one corner of the room, a gentleman, a Mr. B., entered, followed by his dog, whether a pointer or a setter we do not know. The dog after a few moments winded the parrot, drew on it, and finally stood fast. The bird, which had been up to this time apparently oblivious of the presence of the canine, now turned its head slowly and in tones expressive of the utmost contempt said, "Go home, you darned fool." The dog started, looked, and then turning tail, slunk out of the room. It is said that although up to this time the animal had been a splendid hunter, he would thenceforth never point a bird.

GUESTS EXPECTED AT VINCENNES .- The following gentlemen are expected at Vincennes during the trials: Mr. Luther Adams, Boston: Messrs. J. W. Munson, St. Louis: D. Sanborn and A. H. Moore and party, Phila.; C. H. Raymond and party and Chas. De Ronge, New York: James Moore, Toledo; J. H. Dew, Harry Bishop. E. C. Sterling, St. Louis; H. L. Smith and Brother, Strathroy, Ont.; Chas. H. Turner, St. Louis; Dr. McDermott, Cincinnati; also a number of prominent sportsmen from Boston, Chicago, Pittsburgh, Toledo, St. Louis, Dayton and Cleveland.

NATIONAL AMERICAN FIELD TRIALS' CLUB MEETING .- The annual meeting of this organization will be held at University Hall, Vincennes, Indiana, on Monday evening, November 15,

The National Trials—Vincennes, Ind., Nov. 6.—Already all the rooms in the Grand Hotel, which is one block away from University Hall, where the meetings are to be held, are engaged, and the other hotels, the La Platte, Union Depot and Central are certain to have their quote of sportsmen. Mr. H. M. Short, who handled several dogs at the late Penna.

State Field Trials, is seven miles away from here having excellent sport. Mr. C. B. Whitford is also in the neighbor. cellent sport. Mr. C. B. Whi hood getting his dogs in trim.

EASTERN FIELD TREALS.—We are informed on the authority of Dr. H. F. Aten, President of the E. F. T. Club, that there is an abundance of quail on Robin's Island, sufficient to ensure a successful meeting whether others are obtained or not. A meeting of the club will be held this afternoon at 2500 cm. 3:30 P. M.

ensure a successful meeting whether others are obtained or not. A meeting of the club will be held this afternoon at 3:30 r. m.

Some Massachusetts Doos — Ishfeld, Mass., Nor. 5, 1880 — Editor Forcet and Extrem: I have been shooting this fall over Cloud sired by Afton, and litter sister to S. T. Hammond's Thiste, and owned by R. E. Sabin, of West Spring-field, Mass. She exhibits fine nose, and great speed and endurance for a pup of seventeen months. Must also make mention of two or three other of my particular "pets." First comes Rex, a pure Lavernek, one year old, by Lathron's Dick, out of Lathron's Luna. He is owned by F. H. Fuller, of Springfield, Mass., who has also lately purchased Luna. Rex is a king among pups, and if he is kept up to the "scratch" as he has started he will give the "cracks" cause to look to their hards at no very distant day. Next comes locetor, as ix months old pointer pup out of Lathron's Kane, and a remarkably promising dog every way for one of his ago. He is owned by E. H. Lathrop, Esq., of Springfield, Mass., that will talk and hold a big grouse in his mouth at the same English settler owned by G. W. Gunn. of Springfield, Mass., that will talk and hold a big grouse in his mouth at the same time. His name is Lark, and I have dubbed him "Old Honesty" from his quaint, honest ways, though he is but a pup. I was out with him Wednesday when he came to a point by a hembock thicket in the alders I passed quietly around to the other side and flushed a grouse and shot it. I sent him after it, and he had just proked it up and taken a few steps toward me when he suddenly stopped and made a rigid point off to the right. As there was no mistaking the point by a hembock thicket in the adders I passed quietly around to the other side and flushed a grouse which rose above the bushes and passed directly over Lark, and when it was about forty yards distant it passed a little opening, and I cut it down. Lark stood staunch as a rock, but turned his head and watehad the bird until it fell, when he gave weather drives them out into the sun. RUFFED GROUSE.

they are scattered. The shooting rather improves as cold weather drives then out into the sun. Refer of Grots.

What is a Cocker?—Editor Forest and Stram: I am much pleased indeed to see that Mr. G. D. Maedougall has taken a step in advance of other cocker spaniel breelers in his endeavor to get at a standard by which they may be judged and bred up to. I would be very sorry if his very landable attempt should be frustrated by breeders themselves. Let your correspondents give us their opinions as to what cockers should be like and back up their opinions as to what cockers should be like and back up their opinions by showing wherein their ideal spaniel is superior to all others, not by pitching into each other and their does. It is all moonshine, in my opinion, to say that one man's dogs are half King Charles and another man's English water spaniels (if there is such a breed). We will never come to anything definite in this way. Let them preface their remarks by saying that the modern cocker spaniel is a "mongrel," which no one can deny. There is a little of almost very breed of field spaniel in them except the clumber, consequently we have the various colors—liver and white, liver and tan, liver, black and tan, black and white, black. It is a well-known fact that if the lemon and white is crossed by any other breed of spaniel the lemon color is lost and that liver color takes its place. The old Welsh cocker, lemon and white, is no doubt the foundation of the modern cocker, but as we rarely ever get that color it is a sure indication of a cross.

I have written this to endeavor to show that because a cocker spaniel is not a certain color or weight it does not necessarily follow that it is not a cocker. What Mr. Macdougall wants, and I place myself in the same line, is to know what the various breeders consider the very best style of dog of this particular modern breed. Hugh Dalziel in his work gives two classes, the black cocker and the cocker. I think he is quite right; the black cocker and the cocker. To repeat

modern cocker.

To repeat myself, let the various breeders and fanciers of modern cockers go to work and describe in every particular, give the weight and measurements of the breed, length of body, height at shoulder, length of ear, position, size and shape of eye, description and character of hair, and all other points necessary to make up a standard. Thus I would suggest that the Kennel Editor or other impartial authority should analyze what has been written and give the result, for we may be sure that no two writers will agree on this important subject.

tant sunject.

I will at some future time give what I consider the proper size and shape of the cocker. Although not myself a breeder I take a great interest in the merry fellows, be they sixteen or forty pounds.

London, Ontario, Nov. 7.

The Dog-dealing English Cleric.—The dog-dealing clergyman is a type of the amateur jobber. He often breeds some rather uncommon kind of dog, possibly a species of wolf-hound, the progenitors of which he purchased during his travels in the East, perhaps at an Armenian convent. He invites inspection of these interesting animals, and the intending purchaser makes a pilgrinage to the hermitage of the clerical breeder. This he finds to be an unusually swag country rectory, looking the perfection of all that can possibly be expected in a well-ordered parsonage. Pictures of the Holy Land hang on the walls of the drawing-room, and an oak pric-dieu, in a little tecess lighted by a stained glass window betokens the devotional habits of the family. The divise

The Bifle.

himself presently appears, dressed in strictly clerical, but sen-sible garments, well suited for hard work in a country parish. He will be delighted to show his pets to his guest, but first he would like to take him into the church. In the dim religious would like to take him into the church. In the dim religious light of that lately restored building it seems profane to think of dog-dealing, but the clergyman observes with a pleasant smile that the handsome rood screen, which is not yet completed, has been paid for chiefly by money obtained by selling his dogs. A few minutes later, when the ecclesiastic stands on his lawn, in his rough serge cassock, staff in hand, while three large wolf-hounds bay around him, he looks quite like an Eastern monk or a Greek patriarch. No money (so he says) would purchase either of the magnificent beasts which are playing round their reverend master, but the visitor's nu are is entered in a book in which it is arranged that the first (i) — no of the big hounds has puppies he is to buy one of the lit, whings as soon as it is weaned, for 10 guineas, and, after givin — pound toward the host's collection for a new lectern he de etc.—The Saturday Reciee.

Dog Losa - 1,182 Checkaut Street, Elizabeth, N. J., Nov. 6.— Editor Forest and Stream: On Tuesday, 2d. I received from Gouverneur, N. Y., the cocker bitch Black Bess, which I purchased from Mr. Geo. P. Ormiston. On Wednesday morning, after I had gone to business, she jumped a 53-foot fence and escaped. She weighs 25 lbs., is long and low, but only moderately so, is well feathered, heavy cars, coal black, not a white hair, very wary coal, but not actually curly. Her right eye is distigured by a cataract, caused by a blow received a few weeks since, and is still sore. Her tail is cut pretty long, and is carried high, and last and most important, she was coming in season at the date I lost her. Should this meet the eye of any gentleman who has seen or heard of her, in this neighborhood or elsewhere, he will greatly oblige a brother sportsman by sending word to the above address. brother sportsman by sending word to the above address.
GEO. D. MACDOUGALL,

New York Kennel Club Augiton.—The following draft was recently sold at Goshen, N. Y.: Rake, Jr, red setter dog, 14 months old, by Rake out of Belle II. (‡ Laverack, ¾ Irish). George III., black and white pointer dog, 14 months old, by Dr. Strachau's Flash out of Lady (grandson of Sir Fred, Bruce's George and one-half brother of Whiskey and Flake's. Black and white setter puppy, 8 months old, by Dr. Strachau's imported field trial setter Argyll, out of Flora, both first class field dogs. Black, tan and white setter puppy, 8 months old, full brother to the above.

#### KENNEL NOTES

NAMES CLAIMED—Jel.—Mr. H. Allerton claims the name of Jet for black cocker dog pup (formerly Davy Jones), purchased from Mr. George D. Macdongall Com.—Dr. F. H. Rehvinkle, of Chillicothe, Ohio, claims the name of Com (short for Comceticut) for his English have beagle pup out of Lucy by Victor, received in exchange from N. Elmore, Esp., Connecticut, for bitch puppy out of owner's Beanty out of J. H. Stovell's imported dog Chanter. Belte.—Professor W. B. Hall, of Lancaster, P.a., claims the name of Belle for a black, white and tan beagle puppy, whelped May 1, 1880. Bred by Geo. Pownall, Christiana, Lancaster County, Pa., by Jam out of Bess. Duke Professor W. B. Hall, of Lancaster, Pa., claims the name of Duke for a black white and tan beagle puppy, whelped May 1, 1880. Bred by Geo. Pownall, of Christiana, Lancaster County, Pa., by Victor out of Beauty.

SUMMERIAND SKETCHES. By Dr. F. L. Oswald. Philadelphia. J. B. Lippincott & Co.

phila. J. B. Lippincott & Co.

The "Summerland Sketches," which have appeared from time to time in Lippincott's Magazine have just been issued by Messrs.

J. B. Lippincott & Co. in book form. Thus brought together in the form of a continuous narrative, they form a volume of more than ordinary interest.

Though much has been written in a more or less desultory way about Mexico, its wonderful climate and its vast natural resources, we are still without anything like an adequate comprehension of the wonders and attractions of that great southern land. Dr. Osthe wonders and attractions of that great southern land. Dr. Os-wald's book, though nothing more than a series of "sketches," goes far toward helping ur to appreciate the enthusiasm of travel-ers who have pashed through Mexico. His descriptions of the climate, the faums and the flora or this little known happy land are to graphic and so charmingly written that in perusing the volume one becomes infected with no small share of the author's enthusi-asm for what he calls America felix.

The book is repicte with descriptions of the wonderful scenery of both Tierra Fria and Tierra Caliente, but there is no lack of of both Tierra Fria and Tierra Canana, but there is no near of incident, and the interest is always kept alive. Interesting notes of the habits of insects, birds and beasts abound throughout, and, though the author's science limps a little when he attempts to identify animals by their schentific names, there is no reason to doubt the correctness of most of his observations.

The "Summerland Sketches" form a very attractive volume, and one which we can conscionationally recommend to our readers.

BULLETS FOR HUNTING.

A T the risk of occupying with details too much valuable space A and, though somewhat late, the information asked for Hunting Rifle" and others is herewith subjoined. The The bullet which they question about is a smooth, patched one (for a .44 calibre), with six shallow grooves of two thousandths (.002 inch) inch depth : diameter at butt, four hundred and thirty-nine thousand the (439 inch) inch; at fifteen hundredths (.15) inch length from butt the diameter is four hundred and thirty-eight thousandths (.488) inch.

At one calibre length from the butt (.44 inch) the diameter is four hundred and twenty-seven thousandths (.427) inch, and thence, with a proper taper to the point. Length of bullet, 2s inch; with orifice in point of 3-16 inch and 21-32 inch deep. Weight of ball, alloyed with 5 per cent. tin, is 275 grains lead. Ball, 280 grains. The ball patched in the ordinary way, with two thicknesses of paper. Width of patch from ball should be .55 inch. The ball should be loaded into shell about twenty-two hundredths (.22 inch) of an inch, not further. The ball moving from the shell bears on the lands at a point (.33 inch) thirty-three hundredths of an inch from butt, which appears to be sufficient bearing to keep it true to the centre line of the bore when clean. The indentation of the lands on the ball is about one quarter of an inch.

Halls loaded in the shell, "crank-sided" or "out of true" and shot appear to vary very little in accuracy from those loaded true to the centre line of shell, which goes to show the bearing is long enough to correct this "crank-sidedness," as well as to insure the proper "spin."

The power sufficient to overcome the inertia of a light bullet is not sufficient to "up-set" it enough to fill the grooves. So that with such it is necessary that the butt when patched should fit the grooves snug enough to make the bore gas-tight; and, of course, the balls are more or less forced according to the depth of the grooves. This ball flies true with lands two thousandths (.002 inch) of an inch deep, but it might not with the same bore grooved deeper. In cases where the grooves caliper .446 inch instead of .444 inch, it is probable the butt of ball, unpatched, should caliper .440 inch with the dimensions heretofore given increased proportionately. A ball of .40 cal., from 24 to 35 inch length, 200 to 230 grains weight, or of .45 cal. and 15-16ths of an inch in length, weighing 290 grains, properly modeled after the above and with the same taper, would give satisfactory results for hunting.

Modeled from a .45 cal. English bullet it has more taper, quite an advantage in hunting, as it prevents the "jamming" of the shells

Those who have used the ordinary factory ammunition much for the sporting rifle, with balls of from 1 1-16th to 1% of an inch, shooting consecutive shofs without wiping, have felt this annoyance, and sometimes with serious consequences. The principal cause is the slight taper to the bull ordinarily used. After the second or third discharge powder cake forms at the end of the shell and commencement of the bore. The next shell loaded, the edge of the patching comes in contact with this powder cake. It is either torn, creased or doubled back, according to the force used, and in the latter case the shell can occasionally neither be shoved and in the latter case the sheri can occasionally define be showed home nor taken out. Sometimes, after the patching is creased or "rucked" up, the discharge of the bullet cuts off a circular disc of the patch at the base, which, remaining at the commencement of the parch at the ones, which, remaining at the border content of the bore, sometimes slips over the next builtet, forming a double thickness of patching, which, of course, prevents the cartridge from being forced home or pulled out, and there you are.

If there is a fat built elk or white-tail buck that you have missed,

and has now stopped broadside, within 200 yards, to find out "what's the row," it is very annoying. If with the previous shot you have killed a grizzly, who, after going through the usual "blank motions" of one in mortal agony, has just righted up and is bearing down toward you, the word "annoying" fails to do jus-

tice to the subject.

I have killed a great deal of game with the 1½ inch ball (450 grains), and, as long as the ball was scated down well into the shell, had no great trouble; but when loss of powder and consequently had no great trouble; but when loss or power has considerable power was fully realized, I changed to the 11-16th ball, and then to the shorter, hollow-pointed ball. The shorter the ball the less trouble from "jamming," because there is usually more taper. Were I to use a solid ball again, one of about an inch in length and weighing not exceeding 350 grains would be my choice, and I have no doubt one of that weight, properly shaped, would fly true. The trajectory would be much more favorable, and with equal kill-ing power with the heavier ball, as it would pass through almost any animal hit with 105 or 110 grains of powder behind it. I used the 1 1-16th inch ball last season (with a 10-64 hole drilled down through the point) on bear and elk, but, it occasionally "jumming," I became afraid to use it on grizzlies after the first shot, ming," I became afraid to use it on grizzlies after the first shot, and would be ready for the second shot with the light hollow ball before described. This latter ball never "jammed" or became fastened, the reason being that there was so much taper to it the edge of paper patch did not come in contact with the rim of caked powder, but, passing under or within it, the wedged-shape section of ball forced sway, to a certain extent, the powder cake on the lands, and there was never any trouble from this cause in forcing the extribile places, and there was never any trouble from this cause in forcing the cartridge home; nor does the patch strip or crease to any extent. Doubtless in firing without wiping, the patch, as the bullet is forced through the bore, is sometimes stripped off, but, judging from the amount of leading, not so much so as with the longer ball. This stripping of patching and consequent jamming of shells appears common with the patched ammunition (.40, .44 and .45 cal.) of all the factories, and to such an extent that an experienced gundealer in the Territory got up a tool for gyring a longer slope to the lands at the oud of the shell. This corrects the jamming difficulty, but whether at the expense of securacy I have never understood. Certainly some remedy is essential. I see no complaint on this point in the London Field, and think their rifle makers must have found a remedy. I once saw a Wesley Richard's bullet cast with a thin projection of lead just in front of the patching, and of sufficient depth to protect the edge of patching, which lng, and or sufficient depth to provect the edge of patening, which seemed an excellent idea. This difficulty does not occur so much on moist days, and is modified a good deal by blowing moist breath through the barrel after each discharge; but it is still of sufficient consequence to demand a remedy from the rifle makers.

"H. R." asks my opinion of a Sharps mid-range rifle, 40 cal., for hunting. There is no better of that calibre with proper ammunition, but the objection before described holds with regard to the ammunition usually put up for this calibre. I recently used this rifle at a target with the 70-370 grain cartridge. The taper to the bull was so slight that the end of patching fifted tight in the bore when clear a remarkance. when clean, so much so as to render such ammunition useless for game where you need ammunition with which you can fire six or eight shots consecutively without cleaning, with reasonable accuracy and without danger of your shells "jamming." This ammunition was evidently put up for target practice, and for that purpose was the thing, as the long-tapered ball has, without doubt, advantages in point of accuracy. I have failed, however, to appreciate the advantages of .40 cal., either for mid-range target practice or hunting, over the .41 or .45 cal. With a suitable hellow-pointed ball and proper charge of powder, for deer and ante-lope it would be more efficient than a .44 or .45 with solid ball. It is not suitable for larger game. The ball "Bear Paw" recom-mended (192 grains) would suit the 70 grain shell. I would prefer measure (122 grains) would mit me to grain small. I would prefer the 90 grain shell with a built heavier, as 220 grains, or as long as could be made with the taper before given. The grooves of this ritle being three thousandths of an inch (.003 inch) deep, the ball at butt should be .400 inch. At .13 inch from butt, .399 inch did ameter; at .40 inch from butt, .388 diameter, the usual thickness of patching being used. With new shells some trouble may be experienced in placing them in the shell, in which case, with a "folower" made a few thousandths of an inch large, the mouth of lower" made a tex thousands or at men argo, the mouth or shell can be expanded the proper amount. Let orlice in point of ball be expanded an eighth of an meh in diameter, and three-quarters the length of ball. The usual reloading tools, as given in the catalogue, is what "H. R." needs. A shell can be used from five to ten times without reducing, according to strength and quickness of powder used

The question of the "reducer" is one of dollars and cents, depending on the extent of his hunt and number of cartridges t I have never heard of any one using a smooth maked ball. I have known hunters tear off the patching from the ball outside the shell in order to avoid the jamming trouble before alluded to, which might with some cause the impression that the balls were naked. I know not how accurate such balls flew, nor I think did those who used them ever know. Should think the remedy worse than the disease.

It will be more satisfactory if "H. R." does his own experimenting if he has not yet a projectile to suit. That should be determined before going into the field after game. Why not try the naked ball the rifle companies advertise? It might suit him. Don't adopt or diseard any ball without a thorough trial with and without wiping. As the old song goes, "If at first you don't suc-ceed, try, try again." First-class results are dependent upon three reed, try, try aga eced, try, try again. First-class results are dependent upon three conditions: First-class rule, first-class ammunition, and first-class "holding," "sighting" and "pull off," the absence of either conditions giving "wild" results. About as much experience is required in loading (embracing, as it does, choice of powder, uniform packing in shell, uniform weights to powder and ball, etc.,) as in the act of shooting. Bullets, especially the light hollow-pointed (as well as the patching) should be perfect; the angles at point and butt well filled out, so as to give the full bearing in the lauds.
To insure uniform packing a three-foot loading tube should be used, and I usually weigh the charges of powder even for hunting. The extra trouble is trilling.

#### RANGE AND GALLERY.

MANDIOTH RIFLE GALLERY-Boston, Nov. 5,-The Inaugural Rifle Match for October is ended with some very fine shooting. Although no clean scores were made, four of the leading contostants were nearly successful in getting the extra prize of ten dollars which the management offer to any one making a score of eight consecutive bullseyes. Mr. U. A. Pollard wins the first prize of seven dollars with a fine record of 191 out of a possible 200. Mr. E. F. Richardson wins the second prize of six dollars with 191, but outranked by Mr. Pollard. Mr. J. Mervell takes the third prize of five dollars with 190. Mr. Frank Hollis takes the fourth prize of four dollars with 189. Mr. Geo. F. Ellsworth wins the fitth prize of two

dollars with 183. Mr, L. W. Farrar takes the sixth prize with 182.

This last week there has been added a line pistol gallery, with some new pistols of the latest pattern, and those who dosire to practice with this favorite arm can have a good opportunity here. A great novelty is the bullsoye. It is connected to an electric battery, which rings an electric bell at the firing point. It is a

ovel idea and very pleasing. The Excelsior Rifle Match for this month has shown good shooting for so early in the month.

The subjoined summary will show how the Luangural Rifle Match ended : 50 yards, rounds 8, possible 40 : five scores to win.

Non. 6.—There was only a fair attendance to-day of riflemen to inaugurate the new matches previously announced for the day. A heavy fog hung over the range like a pall, and it was nearly impossible to discern the eight-inch bull. In the afternoon there were better weather conditions, after a sharp shower had cleared were center weather conditions, after a snarp shower and cleared the atmosphere. A good graw light was experienced during most of the shooting, but the damp, heavy weather caused the smoke to hang tenaciously to the ground before the butts, and caused much annovance. Six new matches were on the day's programme: A ring target match, off-hand; a ring target match, at rest; a Massa-chusetts target match at rest, and the same off-hand; also, a Creedmoor match and a new amateur match. Captain Jackson's score at the Massachusetts at rest was magnificent—118 out of the possible 120. He again did fine shooting at the ring target at rest rolling up 111, the bullseye being only two inches, which counts 12, and then inch rings counting down to one. Only the best scores are given in the various contests. The conditions of the new matches are as follows: To begin Saturday, November 6, and continue on successive Saturdays, until closed by the executive committee; open to all comers; 200 yards; rounds, ten: rifle, any within the rules, with sight on the grip. Non-members handi-capped by executive officer or committee. Prizes to be won on the aggregate of each competitor's best four scores, one of which must be shot off-hand on ring target, one off-hand on Massachusetts target, and one of the remaining two, one on each of the above-named targets, any position. Tres, equal scores, will be decided by the drawing of numbers instead of shooting off. Twenty-five prizes. Competitors making the lowest score to be awarded one year's subscription to Forest and Stream, donated by T. C. Banks,

In connection with the above, an off-hand handicap match will be shot on Creedmoor target, subject to the same general rebest three scores to win. Scores to-day stood:

SCHUETZEN NOTES .-- At the monthly meeting of the Jersey Schuetzen Corps, Capt. A. B. Hardckopf, held at their headquarters, the following programme of the fall shooting, to be held on Thanksgiving Day at the Schuetzen Park, Union Hill, was adopted:

Target of Honor--One hundred dollars worth of poultry will be distributed on this target in about forty prizes. Tickets, \$1 each. Prize Target—One hundred and seven dollars in fifteen prizes on

this target as follows: First prize, \$20; second, \$15; third, \$12; fourth, \$10; fifth, \$8; sixth, \$7; seventh, \$6; eighth, \$5; ninth, \$5; tenth, \$4; eleventh, \$4; twelfth, \$3; thirteenth, \$3; four-teenth, \$3; fifteenth, \$2. Tickets, \$1 each.

reath, \$5; inteenth, \$2. Tracets, \$4 each.
Bullseye Target—First prize, \$4; second, \$3; third, \$2. The
rst and last bullseye, \$3 each, and 25 cents for each bullseye shot.
Sckets, 10 for \$1. The shooting will commence at \$30. All rifle-Tickets, 10 for \$1. nen and lovers of this fine sport are invited to participate. Shooting Masters—Henry Ochl, Julius Dehmke.

Shooting Committee—A. Ermisch, J. Blumenberg, F. Horstmann, F. Hansen, P. Rademann. A. Appel, Secretary.

A motion to hold a ball in January, 1881, was also adopted, of hich we will give particulars in due time. New members were elected by ballot and new candidates were proposed.

#### THE WIMBLEDON SCANDAL.

GRAVESEND, ENG. Nov. 1.

THE discussion on the position of the N. R. A. after the curiou I finding of the court martial, still continues among British riflemen, and the general feeling is that it is incumbent on the Association to consider the advisability of making some public state-ment at the earliest possible moment, and also of convening a special meeting of the members of the Association for the purpose

of considering the present position of affairs.

Some of the authorities appear to consider that if some few alterations were made in the way in which the scoring is to be checked, that is all that is necessary to satisfy the Volunteers. In this they are griovously at fault. It is impossible for matters to remain as they are. Without the element which constitutes the success of the great rifle meeting at Wimbledon every year, and of the minor meetings which take place throughout the country, the Volunteers, as a force, would simply crumble to pieces. It is too much the habit of partially-informed critics to assume that the drill and discipline of the Volunteer forces are the sole matters with which they need concern themselves. Others more observant are convinced that without due consideration of the shooting ele-

with which they need concern themselves. Others more observant are convinced that without due consideration of the shooting element of the forces it would rapidly dwindle away to nothing.

It is to nean of this stamp that the proceedings for many years past have been a source of bitter and grevious disappointment. Doubt has now ripened into certainty, and unless the National Ride Association, by radical changes, both in its organization and in its relations to the outside world, can manage to restore the confidence which has at present been destroyed, the meeting of 1881 will be which has the present been destroyed, the meeting of 1881 will be made to the fact that the firing points, as to establish in the minds of Volunteers of Great Britain such a feeling of confidence in the Executive of the National Ride Association as will insure to them the certainty that, whatever manecures or dodges may be resorted to by either competitors, or markers, or register keepers, the Executive will have sufficient ability to keep ahead of any such unancourses, and at the same time—which is perhaps more difficult—will have sufficient modesty to be thankful for hints from persons who are probably more experienced than themselves in such matters. It is to want of modesty on the part of the Executive that the present seanable is mainly due. Upon the reconstitution of the Council—and the Executive especially—much present. One may search in vain though the columns of the official organ of the Volunteer Force, or of the National Ride Association, for some practical remarks upon this very grave question. The official organ is never the vaint hough the columns of the official organ is never the vaint hough the columns of the volunteer Force, or of the National Ride Association must inevitably pass before the confidence of those who are affected by them to the ytem servious nature of the crisis through which the Association must inevitably pass before the confidence of those who are affected by them to lay them serviously to heart.

-Hop Bitters cures by removing the cause of sickness and restoring vitality.

ONE OF MANY LETTERS-Belleville, Ont .- A military friend

One of Many Letters—Belleville, Ont.—A military friend of the writer, who has been spending a few weeks on leave at his home here, but who has since reverted to his regimental duties in England, writes me regarding your paper as follows: "Of all the sporting papers which find admission to our mess there is not one, I think, at all preferable to Forest and Stream, copies of which I have to thank you for sending me from time to time, etc., etc."

Under the circumstances, I have resolved to ask you to forward my friend a copy of the paper for a period of six months. At the expiration of which term we will be under orders for India, and as such, uncertain as to his address. With regard to your very valued paper, I cannottell you how much I have been gratified with it, nor how often I have been indebted to its columns during the last six months for frequent additions to my sporting "outfil."

E. H.

Novel Surr.—To secure a water supply, the corporation of an English town have laid pipe across a moorland, of which nearly 8,000 acres are agrouse preserve. The owner has brought suit for damage for alleged deterioration of value, affirming that the drainage of the land has diminished the running streams and consequently injured the supply of birds. Damages are fixed at £30,000.

#### A DEER HUNT IN SOUTH WEST VIRGINIA

CTOBER 18 found us on our way to the mountains. A half day's ride from "Pearisburg, Va.," brought us to Mr. Wickline's residence—our favorite camping place—with about 6 days rations, each with a good muzzle loading double gun and a pack of nine hounds, consisting of some as good hounds as ever trailed a deer.

On our way and within four miles of camp our dogs started two deer. We managed to get all the dogs off but two which followed on out of hearing. Dogs struck another trail within half mile of camp. We blew the horn and they all came in about sun down. We did not wish to let dogs out as we had a heavy load of baggage and could not well get to the stands.

about sun down. We did not wish to let dogs out as we had a heavy load of baggage and could not well get to the stands.

It was late in the day when we reached Mr. Wieldline's, However we procured a room, made our fire, got supper, and prepared our guns for the morrow's hunt.

October 16.—After a good night's sleep in good beds, we arose at daybreak, ate breakfast, wen loud about one mile from camp and started a deer. As we had but three standers the deer passed through a stand unoccupied and made his way to parts too far off for us. At 2 o'clock the dogs had not returned and I started on my way to camp for dinner. As I advanced through a thicket of red brush-keeping a close watch for a deer, wild cat, or other animal that might chance to be lurking thereabouts—I heard a noise in the brush directly behind me. On turning my head I observed something approaching cantiously through the bushes.

I turned and brought my gun to rather a presenting position until I could tell what kind of an animal was there before me. Presently it worked its way out in plain view and there stood—not more than 75 yards distant—one of the finest does I ever saw. I raised my gun, took good aim just behind the shoulder and fired. At the crack of the gun it sprang off down through the bushes, giving its tail a flap or two as it went, my thoughts were, 'Have I missed!' I went to where it was standing, neither blood nor hair could be found and had it not have been for the deliberate aim. I should have called it a clear miss.

To investigate the matter more closely I went to camp, which was about two miles distant, and brought a dog, took him to the place where the deer was standing when I shot. He stuck the trail and after considerable dodging about through the bushes to stopped and cansed to give tongue. I went up and there lay my deer dead enough.

One shot had entered near the heart, one in the side, one in the breast and another glanced and cut through the skin on the head. Had ten large buckshot in a 12-gauge, 32-in. double gun, with 3

ing of camp, blew my horn and soon one of our party came to my assistance. We reached camp with our deer about

rest of the boys had all come in from their stands with

the rest of the boys had all come in from their stands without killing anything.

\*\*October\*\* 20.—Only one deer passed through my stand today, and that passed through before I reached the stand. Two packs of hounds have been running very briskly today. Fourteen fresh dogs were brought in by several parties to-night. A great many shots to-day, but no deer killed.

\*\*October\*\* 21.—One deer passed through my stand to-day; it was in sight, but about 200 yards off. There being so many trees in the way, I did not shoot. As one of our party was passing a fallen tree top a small deer jumped out and he killed it. Two deer were crippled to-day, but made good their escape. I plainly heard one bleat as one of our standers fired his mountain gun. He said he knocked it down, and was going to stick it, when it jumped up and—to use his expression—"went through the bush like a streak;" the dogs came and followed on, and it is not known whether they caught it or not.

and followed on, and it is not known whether they caught it or not.

October 22.—A great deal of shooting done to-day, and only one deer killed. The deer killed Tuesday, 19th, spoiled. We hung it up without salting, thinking the weather cool enough to keep it. The skin I sold for \$1 at camp.

October 23.—We had a short drive this morning before leaving camp for home. We had up three deer at one time. One was shot through with a rifle, and a party with their pack were after him. On reaching home, I found the dogs that had run a deer off on our first day's hunt. They ran it to the river, about fifteen miles from where it had been started. Some one on the river killed the deer, and the dogs came home. Our friend Mr. Wickline furnished us a room and good beds, and, as we fell short of horse feed, he also let us have three pecks of corn-and some fodder, and only charged us 50c. each for a stay of nearly five days. Moreover, Mrs. Wickline cooked our venison for us in the most substantial manner without any extra charge. Mr. Wickline and his family used every exertion in their power to make the sportsmar's stay a pleasant one, and how well they succeeded I can attest by saying that every one who goes there once comes even hields please. attest by saying that every one who goes there once comes awap highly pleased, with the intention of returning next

awap nigniy picased, with one there are season.

The water is freestone, and so pure every drop sparkles like so many diamonds. Iknow of no better place for dyspepties who prefer hunting as a recreative medicine, and who do not care to visit more expensive places.

I might add, good trout fishing may be had within half a mile of camp. New River, which flows within three-quarters of a mile of our camp, will soon be noted for its black bass fishing. The rivers have been stocked, and they seem to be multiplying very rapidly.

None of the farmers here object to any one hunting or fishing on their lands.

ing on their lands.

THE HERRESHOFF SYSTEM.

E take pleasure in presenting to the public the Government report on the recent exhaustive competitive trials between the Herreshoft and the ordinary systems of steam generation and pro-pulsion. We do this with pleasure because they indorse all we have said in favor of the coil boiler, the incomparable engines of the Herreshoff's, and the peculiar and original style of construction they follow in their bulls. For adapting means to an end the Herreshoff's certainly carry off the palm. Some persons have deemed us a trifle "enthusiastic" in the praise bestowed upon their methods and work. They are recommended especially to this report made by a disinferested and professionally competent board of engineers. The trials in their thoroughness are an example for others, and are in strong contrast to the slipshod statements by which it was ineffectually sought to capture investors for the Perkins adaptation of the same principles. When the Government re-port is made concerning the full consumption of the coil, and the Perkins copy thereof we will not be found in error in our previous estimates in taxer of the Heireshoff boiler. After giving the following report consideration it may well be questioned why the tu-bular boiler has not long ago been abandoned in launches and

yachts:

New York Navy Yard, Oct. 26, 1880.

Sie—In compliance with the Burean's telegram of the 21st inst., to forward a preliminary report in general terms of the results of the competitive experiments made at Bratol, Rhode Land, by the Bard of Chief Engineers of the Navy convened for that purpose by the order of the Navy Department, dated June 4, 1890, on a Navy steam famely and two Herreshoff steam faunches, we have the honor to submit the following:

All three steam famiches were of composed; the other two were uncoppored, but smoothly painted. The Herreshoff almaches were duplicates in all respects except engine, one of them being ditted with compound and the other with simple engines of equivalent power, but the boilers and screws of both were doubted. The engine of the Navy Amnel: consisted of a single non-condensing engines by the control of the Navy Amnel: consisted of a single non-condensing engine of the Navy Amnel: consisted of a single non-condensing exclusive theory of the Navy Amnel: consisted of a single non-condensing exclusive theory of the Navy Amnel: consisted of a single non-condensing exclusive theory of the Navy Amnel: consisted of a single non-condensing exclusive theory of the Navy Amnel: consisted of a single non-condensing exclusive theory of the Navy Amnel: consisted of a single non-condensing exclusive theory of the Navy Amnel: consisted of a single non-condensing exclusive theory of the Navy Amnel: consisted of a single non-condensing exclusive theory of the Navy Amnel: consisted of a single non-condensing exclusive theory of the Navy Amnel: consisted of a single non-condensing exclusive theory of the Navy Amnel: consisted of a single non-condensing exclusive theory of the Navy Amnel: consisted of a single non-condensing exclusive theory of the Navy Amnel: consisted of the Navy Amnel: consisted of the Navy Amnel: consisted on the Navy Amnel: consisted on the Navy Amnel: consisted on the Navy Amnel: consisted on the Navy Amnel: consisted on the Navy Amnel: consisted on the Navy Amn

four bladed, 34.5 mence in the measurements in the medium in pit.

The cylinder of the Navy Januah was Sinches in diameter and 8 melos in stroke of piston. The boller was of the cylindrical return tube types medium the dissequence for of grate surface. The array was four-bladed, 35 inches in diameter, and 54 inches in

methos in stroke of piston. The boller was of the cylindrical return tube type and contained 6.5 square foot of grale surface. The screw was four-bladed, 35 inches in diameter, and 54 inches in pistch.

With the launches and machinery above described there were made muncrons series of experiments as evhandively as practicable. The vessels were fried over a measured base at ejecules varying from 5 to 11 statute, miles per later, increasing the arrong hyster. The mechinery was theorogically read to the very possible variation of bodie pressure from 10 lbs. to 100 lbs. per square inch above the atmosphere, increasing by 5 lbs. at a time; with every possible variation of piston speed, preserving the same piston pressure obtained by first depressing the sterns with weights, and then rusing them by means of a floating derrick; with every possible measure of expansion for the stean of the different bodier pressure obtained by first depressing the sterns with weights, and then rusing them by means of a floating derrick; with every possible measure of expansion for the stean of the different bodier pressure cylinder of the compound engine and per different bodier pressure, measures of expansion and piston speeds as before. In brief, the experiments were made to cover every possible variation of speed of vessel, bodier pressure, measures of expansion and piston speeds as before a pressure, and speed of piston, and for both the simple and fine compound engine. Lastly, an extensive series of experiments were made to cover every possible variation of speed of vessel, bodier pressure, measures of expansion for the stean, and speed of piston, and for both the simple and fine compound engine. Lastly, an extensive series of experiments were made to ever every possible variation of speed of vessel, bodier pressure, measures of expansion. Each of the simple and the compound engine. Lastly, an extensive series of experiments were made to ever every possible variation of speed of vessel, bodier pressure, measures of expansion of ex

ling general opinions arrived at by close observation during these long and exhibite experiments, can be depended out with every contidence that they will be confirmed when our report is made in the continuous of the continuous continuous and the distribution of their weights have been so perfected by long and intelligent experience and experimenting as to scarcely leave room for improvement, the Herreshoff Manufacturing Company having for many years made as specially of designing, constructing and testing steam families, exceeding a significant of the construction of the hills and the construction of the hills that the lest quality, well easiered and are refully selected. It is so distributed in the construction of the hills that explaines and perfection of the factoring being depended on, instead of masses of material points of the factoring being depended on, instead of masses of materials, and the state of the factoring the state of the factoring the state of the factoring being depended on, instead of masses of materials and work of the factoring the state of the factoring the state of the factoring the state of the factoring the state of the factoring the state of the factoring the state of the factoring the state of the factoring the state of the factoring the state of the factoring the state of the factoring the state of the factoring the state of the factoring that the state of the factoring the state of the factoring the state of the state

In the navy launches, steam of high pressure (80 to 100 lbs. per square inch above the atmosphere) is used almost without expansion and it is generated in a type of botiler whose strength is only a son and it is generated in a type of botiler whose strength is only but is exhausted direct into the chinney of the boiler to cause auticious draught for generating the dispreparitional plant of steam required with this system.

In the navy launches the steam is thus used with the least possible economy, being worked almost without expansion against a considerably higher back proseaure than the atmosphere owing to the resistance of the blast; hence, for a given power, more machinery is required, with its mercased money cost and weight and bulk or activities of the control of the co

iron which, deprived of that protection, specific bursts out. The coil boiler is the lightest ever constructed for its power, and the weight of water contained in it is the least. This boiler is the pocaliar feature of the Herreshoff system and the only part patented.

The engine is condensing, the steam from the cylinder being exhanted into a surface condenser of the simplest design and lightest execution, formed by a copper pipe secured to the outside of the boiler of the

Very respectfully your obedient servants,

B. F. Istrawoon, Chief Engineer,

THEO. ZELLER, Chief Engineer,

JOHN B. CARRESTER, Chief Engineer,

WM. S. SHOCK, Engineer-u-chief, U. S. Navy.

Chief of the Bureau of Steam Engineering, Navy Department,

THE CUTTER BEATS THE CAT.

"TELL it not in Gath." At last it has happened, and just as minded "spread-englesm," which blunds so many to the truth, has no effect in these pages. We have to chronicle the defeat of the "world-enouved" Newport cat-beat by the real article in the way of the cutter. The lattle Ayrabire Lass, a deep draft, "dragging a keal" and "lugging lead" with a "richculous cutter rig," has a keal" and "lugging lead" with a "richculous cutter rig, has the in spite of the latter's light draft, centre-beard, great beam, and displacement, that bettom and "rich all the sail no ne." Rational people, who watch such matches, will conclude, as we have done, and as secuence very clearly points out, that the theories in favor of beam, centre-beard and light draft, prevailing among the "Know Nothings" in America, are vain and boilt upon sand from these dalvanced by the high-draft Bourbons. But the average excepted "practical" man is as olduse and oldurate as a nucle, and will profit maght, though he might see keels of moderate from outsail the washbowls every day in the year. He will carry the musty lore of his venerable progenitors to the grave; he is beyond argument. The intelligent reader of Protzer Axo StratA. Him, and when he luids and listons to some romance spun him shoul light draft for speed, he will put his tongone by in his check and wink his left eye. In the vivid imagination of your patriots, especially of the loud-spoken kind, who hang about the country grocery store, and whose mental functions are shrivelled to the level of the village gossipa, there exists nothing in this world which can approach the Newport cat-boat in perfection. It is a line and with the left eye. In the world and the suppression of the pet hobbies ridden to death by your bacched, chemsy right even any order of a super bound of the pet hobbies ridden to death by your bacched in the case of swells, was like a mad bull whose before the wind, and and the world when a suppress that we are a suppressentative of the pet hobbies ridden to death by your bac

Norst to be owner ready for the control of the surface and the surfac

REAL YACHTING.—The 20-ton yaw! Falcon, Mr. E. F. Knight, left Southampton, England, during the latter part of August for a croise to Southampton, England, during the latter part of August for a croise to South America. Sho arrived at Porto Grande, St. Viticent, Cape de Verde Islands, Sept. 21, having left Funchal, Fayal, on the 18th, making the run of 1,040 miles in less than right days. The yaw! experienced strong northeast winds, and one day it blew a gale from that quarter. Suc carried spinnaker and topsail all the way, and generally made 184 miles per day, or over seven knots. The Falcon left Porto Grande for Rio Jaineiro Sept. 28, the distance to be made being 2,619 miles. Her crew are all amateurs, and consist of the owner, Capl. Jardein, Mr. Andrews and Mr. Arnan, also a boy shipped at Southampton.

Agr. Armai, also a looy simpled at Southampton.

Kraif's Nautr Desides.—We are informed that hereafter Brentano, of Union Square, will, by contract, sell Kemp's popular works at Lomdon prices, "Yakeh Dossigning" for \$15, and "Yacht and Boat Sailing" for \$6. The latter book, besides being the most complete and ablest compendium on fore-and-aft scanmachip, is replied with details of small yachts, how to build them, etc., something which the title does not fully indicate. The works are standards, and give expression to the observations, collections and investigations of one of the most experienced yachtsmen of the day, who is besides a thorough sailor, draftsman and mathematician.

who is besides a theoroigh sailor, draftsman and mathematician.

Is a Shaway. A correspondent who has seen the new "90," Suncein, in bad weather says she is a grand sea-boat, and throughout the season has not dipped her bowspirt. Her dimensions are: Length on water-line, 80ft; beam, 16,2ft, and about 12ft, hold. Her displacement is 140 tons. This testimony goes lar to prove the soundness of Mr. Dixon Kemp's proposition that sea-going qualities are benefited by length, depth and large displacement, and that beam is not a factor in the matter, but rather the reverse. This coincides with our own experience in different types, the beamy boats being the worst and slowest in rough water. Just where the line is to be drawn is, of course, hard to say, so truch depends upon other co-relative elements.

A Yacur Cutra roa Hamilton, Ont., Speciator will soon take detual shape, and one more club be added to the swelling list haling from the lake ports:

"It is expected that a yacht club will be organized here next feason, and it is certain that one or more of the celebrated flyers built by Cuthbert, of Trenton, will be added to our fete. The citizens generally are taking an active interest in yachting matches, and we may expect Hamilton to make a good show at the grand regatta which the Royal Canadian Yacht Club propose to hold at Townton in 1881. gatta which t

The Outginal Ron Roy.—The first modern cance was built for McGregor by Scarle & Son of Lambeth, She was principally of solk with celar decking. Length, 15 feet, width, 28 inches, and 9 inches deep, drawing 3 inches of water. The paddle was double-laded, 7 feet long. The well was elliptic, 54 inches long and 29 wide, and a MacIntosh cover served as a protection in wet weather. She weighted a little over 80 pounds. In this boat McGregor "ran" the Maine, Meuse, Sambre, Ilbine, the Dambe and Seine, completing a cruise of over a thousand miles without serious mishap to the canoe.

#### POINTS IN CANORING.

Fillior Forest and Stream:

AGREE perfectly with "McGregor" in his remarks about canocing, if he refers to the double-bladed paddle. As to the single blade I abjure it; puts the working muscless askew, and here is too much lost power and too much loeway. Oars are the things to go ahead with if you want speed, of course; but the way to make a canoe trip, for comfort, pleasure or sport, is to go est you look, with the motive power caulably distributed and easily applied. And as to gunning on water it is about perfect. More than once I have laid the peadle athwart-ships, raised the gun, and cut down an unlucky duck before it could get a dozen varies start. The only valid objection I ever heard to the double blade is that as you raise and lower the blades alternately there is a constant only of water that eventually wets everything in the canoe. I was surprised to hear this objection raised by a gouldeman last summer al Blue Mountain Lake. I answered the objection by handing him way paddlo for inspection. He took one look at it and handed it blade, remarking, "That kills the last objection to the double blade.

bled, remarking, "That kills the last objection to the double blade."

As there may be a few cancemen who do not know how to flank blis dripping easily, I will explain: It is simply two pieces of solid upjer leather, on so as to fit around the stem in the shape of tournels, opening toward the blades and fitting tightly in the centre. Any one who can use his hands can fit them on. They should be mear cough the blades to clear the gunwale, and not so near as to dip in the water. A little judgment will place them aright, and rour cance will go through an all-day trip dry as inder.

I see one of your correspondents is a strong advocate of the canvas slogether. It is partable, light, buoyant, and very handy in trapping or gunning, sad an excellent boat in which to go a fishing. I came near taking one into the wilderness last summer, but the lightest Messre. Ospod and Chapin could furnish weighed 20 lbs., and the cance I family took along weighed less than 18 lbs. On narrow, still waters, on creeks, buys, purpholes, etc., the canvas boat is good, but don't take her into the northern wilderness. She has been tried there, and the guides say he is utterly unit for the lakes. When the wind is at all brisk on the lakes you can't get anywhere 'this her, and in case of an upset, which is always liable to happen, you are left sprawling on the water like a broken-legged frog 'Beleens up redar will keen your head above water until you can gake the shore.

If you contemplate an extended trip by river and lake, with car-If you contemplate an extended trip by river and lake, with cerrice at frequent intervals, get a cedar canoo as light as a compatible with your own weight. Always rig her to carry on a neck-yoke and have it made as light as possible. The average neck-yoke used in the wilderness is just twice as heavy as it need be. Have a light, strong cord for a painter, and, when on the larger lakes, make the line fast to your knapsack or blanker roll, and tie the end around the guard of your gun. Iteason why: Any man who travels a few miles in the North Woods, and sees the immense number of upturned trees, will infer that furious gusts or whirlwinds are not infrequent there, and the inference will be correct. Now, you might go over a great deal of water without an upset, but you are liable to it any day.

go over a great deal of water without an upset, but you are liable to it any day.

Suppose it comes—unexpectedly, of course—and you are organized for it, as above mentioned. If your gun and camp-kit were loose they would all di-appear at once and forever. The canoe would blow away from you at a hopeless rate, going three yards while you were swimming one, and you would have only the paddle and your hands with which to make the shore. But if you have taken the one minute necessary to make your dumaage fast to the canoe you are safe. The gun will weigh little in the water, but it will hold the other duffel under, and the whole will act as a storm anchor. The canoe will move very little, and if you can swim ten yards you may keep your head above water for hours. Help will come ; or, if not, and you become it off and beaten, cut the line and paddle ashore with your bands. With an open canvas or paper boat, or, worse than all, a metallie boat, you would lose your traps and most likely drown.

#### PUBLISHER'S DEPARTMENT.

—Holabird Shooting Suits. Upthegrove & McLellan, Valparaiso, Ind.

-Sportsmen would do well to notice new Adv. of Wm. R. Schaefer this week.

—Robust and blooming health in Hop Bitters, and no family can afford to be without them. Attention is called to Adv. of Vitalized Phosphites. It is con-sidered very beneficial for the brain and nerves.

sucrea very benencial for the brain and nerves.

—Mange-ine curse, or no pay. Trial bax mailed for stamp. Hepworth, Druggist, 226 Madison street, Brooklyn.

There will be a sale of 'about 40 Sullivan and Powell & Schilling fine Breach Loading, Double Gunn, at auction, by Barker & Co., 47 Liborty st., on the 23d. Por full particulars see adv. next issue.

—The handsomest firearm catalogue ever published is that issued by Messrs. Sunth and Wesson, descriptive of their revolvers. The circular is elaborately illustrated with lithographs, and is a credit to its publishers.

ons punnsners.

—Mr. Chas, Ritzmann, of this city, has a fine display of choice guns and sportsmen's equipments, and a call upon him will repay the time spent in looking over his stock. Mr. Ritzmann is situated uptown, and deservedly commands a liberal share of the patronage of New York sportsmen. See his advertisement cleowhere.

Anousing trus Beaders,—An alarm of fire at midnight is a starting thing, but not half so startling to many who hear it is as would be the sudden knowledge of their own dangerous physical condition. Thousands of thousands are hurrying to their graves because they are carelessly indifferent to the insidious incodes of disease and the means of cure. It is the mission of H. H. Warner & Co., with their Safe Kidney and Liver Cure, to arouse men to a sense of their danger and cure them.—Memphis Appeal.

sandpaper, then emery, oil and the palm of your hand.

T. M. D., New York.—We have heard of the guns, but have never examined them and know nothing of their merits. TREBLA, New York,-For robins load your 12 bore with 3 drs.

powder, 1 / oz. No. 10 shot; for squirrels same load No. 6 shot. A. V. De C., New Bedford,-Thanks for the map. We have added it to our list. 'The island ought to make an excellent gunning park.

RAMBOD, Mt. Vernon, N. Y.—The name is not that of a manufac turer, but it is put on the guns as a trade mark. considered good.

A., Pittsburg, Pa.-1. We believe the gun to be safe, but do not wouch for it. 2. Your load might be increased, say to three drams. 3. Yes. Send us the reports.

Subsculber, Chicago. - 1. We answer your inquiry by reprinting in our game columns the pattern records published last winter in this journal. 2. See advertisements of single-barrel guns elsewhere.

- W. C. E., Chicago.—1. Perhaps an advertisement would call attention of a buyer for your back files of FOREST AND STREAM. 2. You can probably find Maltese kittens by looking around in Chicago bird and animal stores.
- G. W. B., Biddeford, Me,-We have never heard anything but praise of the gun you mention, and we believe it to be safe and reliable, when properly loaded. We are in frequent receipt of letters expressing satisfaction with the arm.
- W. S., Waterbury, Conn. I have often seen in mrusoums animals stuffed with their tongue showing, and they looked good, too. Can you tell me how these tongues were made? Ans. Such tongues are usually made of wood, though sometimes, in large unimals, they are skinned and stuffed.
- J. E. L., New York.-My dog, a large mastiff, has, I fear, canker within the ear. The crevices are discolored by a black discharge and the dog frequently shakes and scratches his ear. Ans. Keep the ears clean with warm water and castile soap, and uso as a lotion dilute lead water once a day,

- N. E. S., Sparta Centre, Mich .- 1. You will find much information about choking in W. W. Greener's book on "Cheke Bore Guns;" but if you want your gun choked we would advise you to send it to a regular gun maker who has the requisite tools and ma-2. We know of no place in this country where you can get the caliners.
- C. J. G., Lebanon Springs, N. Y.-1. The relative strength of the different barrels depends upon who makes them and the care taken in their manufacture. 2. The rifle is safe and serviceable. 3. Conical base shells have no advantage over the ordinary shells.

  They were originally made because it was thought that they would prove like the conical-bored muzzle-loaders. 4. The thread-wound cartridges have proved to be all that is claimed for them, when they lit the bore of the gun exactly.
- M. W. Q., Titusville, Pa. --My small setter dog, eight years old, is not right this season. Nose warm and dry. No appetite at times-Weakness of the bind parts, so that he cannot jump logs, etc., in the woods. Tires out very easily. His eyes are bright and his coat fair. He howls much at night, especially after he has been worked, He shivers constantly. He seems restless. His food is scraps from the table. If it is not "old age" please advise me what to do for him. Ans. The trouble with your dog should not arise from age Give a teaspoonful of sulphur once a day for a week and two pur-ges of castor oil three days apart. Also administer two grams of quinine three times a day for several weeks. Write result.
- G. A .-- 1. Have a 1014 lb. choke bore gun, do you think they are as good for duck shooting as the cylinder bere? I do not find that I kill as many in thock shooting as the cylinder bere? I do not find that I kill as many in thock shooting. 2. What would you say was the proper load for such a gun? I use 4 drs. powder, 13, oz. shot No. 6, 3. Will choke bows shoot large shot as well as they shoot small? Ans. 1. Practically settled at the present day in favor of choke bores. Your gun may be choked excessively so that its shooting is too close. 2. Your loading will do. We should use large shot, No. 4 at least. 3. Choke bores will shoot buckshot if the shot are properly chambered. To do this put in a wad 1/2 in. Irom muzzle at ascertain proper number to be put in layer. See game columns.
- W., Cosumnes, Tex,-1. I will find time shortly to write something of our game and its habits, and methods of hunting it. have noticed lately an advertisement in the N. Y. Sun, of a re peating rifle, and offering very liberal terms to parties who wish to send for six of the rifles. We have some of us thought of send ing, but as it is an arm with which we are not familiar, would like to know something of it from a disinterested party. Will you please tell us? 1. If the rifle in your judgment is equal to the Eurgess.
  2. If the firm is a responsible one? Aus. 1. We should not recommend the arm. It is inferior to either of the others. have been arrested on the charge of obtaining money through the mail by false pretenses.
- J. R., Junior.-1. Can one get a double barrel muzzle loading gun for \$12 or \$15? 2. What is the advantage of bar locks over back actions? 3. For how little money can a double barrel breach loading gun be bought? 4. Is the gun all that is claimed? 5. how little money can a good setter puppy be bought? 6. How now into money can't good setter puppy be bought? 6. How cheap can a pointer puppy be bought? 7. Do Railroad Companys charge sportsman anything additional for dog that he takes on shooting trips? Ans. I. Yes. 2. More compact and considered more durable, 3, 8,35 to \$40. 4. Yes. 5 and 6, Depends upon who has it to sell, the strain, age, and a dozen other conditions. From \$10 to \$15 ought to be sufficient to secure a good animal. Some roads do and some do not.
- E. J. I., Mound City, Iowa.-1, To brown gun barrels: Tinct, of E. J. J., Mound City, Iowa.—I. To brown gun harrels: Thirt, of muriate of iron, one ounce; nitric ether, one ounce; sulphate of copper, four scruples; rain water, one pint. First, securely plug up both ends of barrels, leaving one plug in each end of sufficient length to be used as handles, then thoroughly clean with soap and water, after while cover with a thick coat of lime, slacked in water, and when that has become dry, remove it with an iron wire sevarabush. Then apply a coat of the fluid is to remove all dirt and grease from the barrels. Then apply a coat of the fluid with a rag, and let it stand for twenty-four hours, when a slight rust will have appeared; then take barrels and immerse them in a trough containing boiling hot water, after which scratch them well with the scratch brush. Repeat this until the color sunts, which will be after three or four pplications. When completed let the barrels remain in lime rater a short time to neutralize any acid which may have peneapplications. Take great care not to handle the barrely during operation, for the least particle of grease will make had spots. 2.

  A barrel 32 in, long (10 gauge) is longer than necessary; 28 inches would be equally effective, and the gun appreciably lighter. 3. See the account of Minnesota shooting in recent issues of this
- T. S. M., Newark, N. J .- I have just had a dispute relative to the names pike and pickerel. I maintain that they are generic names for the same fish, admitting that there are several varieties of the same in this country, but no specific fish scientifically known as pike, different from the pickerel. Ans. The names pike and pickerel are common and not scientific. The first is the old English name for the single European species, and the latter is used for younger or smaller specimens, is a diminutive, like cockerel, etc. younger or smaller specimens, is a diminutive, like cockerel, etc. The generic name is Esox, the name that the Latins called the pike, and therefore can be said to mean a pike. In the vicinity of New York the "great lake pike," which is identical with that of Europe (Esor lucius), is miscalled "pickerel" when weighing ten or more pounds. There are some fine species of Esocietic in America, the Eubility, or mascallenge, and the one named above being the largest. Then comes a fish not distinguished by either market men or anglers from E. lucius which is also called "pickerel" and which might very properly retain the name of the good old English "pike" was restored to heicias as it is in our Western and Southen country was restored to *lucius* as it is in our Western and Southern country. This fish grows only to three or four pounds weight and is marked by black net work, or reticulations, on its sides, which is some in-dividuals is quite distinct. This is *E. reticulatus*. The other species are insignificant. Following old custom and allowing the old Eng-lish of many centuries to prevail, the large fish of the lakes, he with the eval white spots on a darker ground, should be known as a pike. This name obtains also in all parts of America, except in the re-Inis name outains also in all parts of America, except in the re-gion about New York and on the southern shore of the Great Lakes. In the South, as in England, a smaller one of five pounds or less is a "jack." We think the term "pickerel" should be confined to the smaller one, E. reticulatus,

Servs -Prime the skins well with pulverized alum, salt and salt-SKINS.—Frime the skins wen with pure each mun, said said said said said and dry in open air without exposing to the sun. Before folding up for transportation thoroughly smear with arsenical soap. To tan small skins you may adopt either one of the follow-

ing methods : Ing methods:

1. Take equal parts sait, alum and Glauber saits, and half a pint saitpetre; pulverize and mix. Handle the skins and rub the mixture in well three or four times a day—the oftener the better. If there is not sufficient moisture in the skin to dissolve the saits, put a little water into the latter. We are assured that no moths will ever attack furs the pelts of which have thus been prepared.

2. Mix the proportion of six pounds of alum and three of salt. Dissolve both in about a gallon of warm water. Use when cool.

Place skins, not too lightly packed, in a barrel or keg, and nour in mixture. Skins without injury to hair may be kept any length of time in this way, and all in good order at any time to stuff.

3. Take two parts of saltpetre and one of alum, pulverize them well together; spread the skin carefully, fur side down, before it has dried; apply the mixtures evenly, being careful to touch every part in sufficient quantity to thoroughly wet the surface after it dissolves; double the flesh side an roll it up closely; put it in a c ol place, out of the way of the frost, and let it remain three or four days or more according to thickness; then unroll, and when it gets nearly dry with a dull knife remove the fat that may adhere

in spots, and a little rubbing makes it pliable and fit for use.

4. Glauber salts, two pounds; rock salt, one pound; alum, two

pounds; all to be dissolved in boiling water; leave skin; in about ten days, take them out occasionally for a little while during that time; cut the edge of the skin to see if the tanning has gone through; then take them in the hand and beat them over a round stick or block until the are soft. They are to be heaten with the

#### FOREST AND STREAM.

NEW YORK, THURSDAY, NOVEMBER 18, 1880.

This is an excellent time to call the attention of your friends to the merits of the Forest and Stream. We shall be happy to supply specimen copies of the paper to any addresses which may be sent us for that purpose. ---

NEXT week the Forest and Stream will go to press a day earlier than usual. Correspondents will please bear this in

THE LONDON FIELD'S list shows that there are in the British Islands to-day between three and four hundred packs of hunting bounds, and the indications are that the chase is assuming each year greater proportions. Some of the English packs have been in existence no one knows just how long, and it is claimed by one hunt that their hounds are lineal descendants of the dogs introduced from Normandy by William the Conquerer.

STILL REVERBERATING .- Perhaps no other article ever published in an American sporting paper—certainly no one ever before printed in the Forest and Stream—had such a widespread influence as did the discussion, in our issue of Sept. 23, of the "Dittmar Sporting Powder." And we very much doubt if any other article published in any sporting paper was ever received with such a cordial and decided indorsement from its readers. We stopped publishing the letters of our friends on this subject some time ago, but hardly a mail comes to us that does not bring words of approval and appre-The echoes are still reverberating. To the writers, one and all, we beg leave to acknowledge our satisfaction at knowing that the Forest and Stream has won their increased respect, and to express the hope that our future may be attended with equal satisfaction.

#### MANSLAUGHTER ON THE RANGE.

UR readers will notice in the rifle columns an account from a Prince Edward's Island correspondent of another of those so-called accidents on the range, which are becoming altogether too frequent. This affair does not differ materially from the usual run of such killings. It may be taken indeed as a typical one and a study of it will show that these miscalled accidents should be treated and punished as cases of manslaughter. It is entirely possible to so construct a target with its accompanying arrangements of marking that it will be impossible for the flying bullet to hit the marker. This being the fact, any contrivance of marking butt by which a man's life is sacrificed should be regarded as a man trap and the contrivers and controllers of the engine of death held to a strict accountability. It is no answer to say that had sufficient care been exercised here no accident would have taken place; the loop-hole for just such an accident was left open, and as it is entirely inexcusable that such a contingency should exist, so the results should meet with no cloaking over under the title of a mishap.

If a man should construct a boiler, and conclude to make up for the absence of a safety valve by enjoining extra vigilance upon the engineer, he would be held as liable for whatever damage might result from the explosion of that boiler. He is bound to provide the best appliances known for the purpose, and he resorts to any half-way measures and mean pinch-penny and slovenly devices at his own risk. He invites disaster, and when it comes he should be prepared to meet the legal penalties of his carelessness. This reasoning applies to the rifle range, where an association, a club, a military organization or it may be a private proprietor by a faulty construction of butt invites the killing of an employee. Wimbledon went on for years without a single death from gun shot, though bullets by the million went whizzing over the range. Creedmoor has yet to have recorded her first con-tribution to the death list. Meantime with two such examples of what can be done by proper precautions, we are called upon every now and then to record the striking down of some hard working marker on some one of the miserably appointed and wretchedly contrived ranges scattered here and there over the country. A range may be small, but it is always large enough to serve as a slaughter pen, if proper safe guards are not thrown about the practice. At Creedmoor the most careless marker cannot by any possibility put himself before the target while the firing is going on. He is placed in a pit and stays there, and at most can only receive flesh wounds from the spattering of the lead after striking the target's face. In addition to being safe it is a really very expeditious way of signalling the location of hits; on the other hand the little ranges are generally found to consist of a heap of earth near the target, behind which very secure breast work the marker retires after signalling the shot. There is a certain time of exposure, and a period of occultation of the marker so far as the firing point is concerned. Now if there is a certainty that the delivery of a shot and the exposure shall not be simultaneous, all is well, but the only way of securing their proper alternations is the waving of small flags, or merely the exhibition of them. By the doctrine of chances the time must come when the marker will catch the coming bullet in some portion of his body. This system of marking invites just such a climax; and while that possibility remains the system should find no use on the rifle ranges. the application of vigorous legal definitions, the range officer who permits such an apology for a marking butt to remain is made to feel after one of these accidents that he has the blood of a fellow being on his hands, perhaps something will be done to remedy it. The incarceration of a few rifle-range magnates to answer a charge of manslaughter might have a healthy deterrent effect on the managers of other ranges and lead to an over-hauling of the arrangements on many a shoot ing ground where affairs are conducted in this happy-go-lucky, slip-shod murderous fashion.

. If the progress of modern rifle-practice in this country is to be punctuated in this fashion by lifeless markers, it is well that the thing should be known generally. But we object against any such line of murders, for they will be little else after the many warnings which have been given on this point. They all lead to one simple conclusion: That any system of marking that permits any exposure of the marker o the pathway of bullets must lead sooner or later to the

striking of one of these employees. That risk can be blotted out by the use of a properly-constructed range, and any shooting ground not so arranged ought to be closed at once, and not another shot fired upon it until the possibility of an accident has been entirely removed. In the present case a complaisant jury have made haste to lay the blame on the dead man; and he, too, in the brief interval between the receiving of his wound and his death confessed that he was to blame. He probably thought so, but the real one to blame is the man or set of men who set this place up as a range, and probably boasted of it as such when in reality it was nothing but a lottery with death, with now and then a blank-drawing in the shape of a slain marker. Rifles and guns are sufficiently dangerous to make the best of precautions necessary for their proper and complete enjoyment. The records of the large, well-appointed ranges prove that it is entirely possible to have rifle practice even on the largest scale without accompanying slaughter, and the little pest-holes of ranges that do not present these conditions should be blotted out at once.

#### INDIAN BURIAL CUSTOMS.

MANY influences have of late years conspired to give a decided impulse to the study of anthropology, and students of the subject have not been slow to recognize the magnitude and importance of the field open to them on this Continent. The special task of stimulating and directing researches into the customs and social life of the Indian tribes has been assumed by the Bureau of Ethnology of the Smithsonian Institution, a most wise provision, whereby the labors of indi-viduals, which would otherwise be desultory, or at least incomplete, are combined into a systematic and intelligible whole.

At present we have as the result of the work of the Bureau a series of introductory volumes, the direct purpose of which is to serve as guides for further prosecution of each division of this special anthropological observation and research. The first printed was the "Introduction to the Study of Indian Languages," by Maj. J. W. Powell; the second, an "Introduction to the Study of Sign Language among the North American Indians," by Col. Garrick Mallery, and the third. which is now before us, is an "Introduction to the Study of Mortuary Customs among the North American Indians," Dr. H. C. Yarrow. Other volumes to follow will treat respectively of Medical Practices, Mythology and Sociology

None of these branches of the subject possess a deeper interest than the one to which Dr. Yarrow's volume is devoted. for aside from the attention with which we cannot fail to regard the mortuary rites of any people, these customs are, more than all others, significant also of the modes of thought of those who practice them, and of their belief respecting the questions which are of the deepest human import. The way in which these savages, who went before us on this Continent, regarded death, the notions they had respecting departed spirits, and the solution they gave of the mystery of the future-all these are told in their manner of disposing of their dead; and through these we may determine the motives and beliefs which governed their lives. his sepultures and tombs the American aborigine has left us the key to his life and character.

In the final work, of which the present volume is the introduction, it is proposed to collate all the trustworthy information contained in several hundred of these volumes. In addition to this material, Dr. Yarrow has, by means of circular letters, sought to gather all the results of present study among the various tribes of the West, and of exploration among the remains left by them in other parts of the country; and the pages of his Introduction give ample evidence that the author has been fortunate in securing the intelligent co-operation of those who enjoy the best opportunities for collecting data.

For the general purposes of the work at its present stage Dr. Yarrow has divided the different modes of sepulture practiced by the Indian tribes into the provisional clases of (1) inhumation in cists, pits, graves, caves and mounds; (2) cremation; (3) embalment or munmifying; (4) aerial sepulture on scaffolds or in trees, and (5) aquatic burial beneath the waves or in canoes which are turned adrift. The inquiry also embraces all the various rites pertaining to each of these cus toms, the mourning observances, feasts, food, dances, songs, games, fires and other ceremonies; also the superstitions connected with or inspiring each.

Concerning each mode of burial, and indeed the subject in general, the author has collected for his introductory work an immense amount of information which gives promise of the great value of the final volume and its interest to the general reader as well as to the special student in this particular field.

The purpose at present we are told is "to make a purely objective study of the Indians, and as far as possible to leave the record unmarred by vain subjective speculations;" and hence we are to look for plain recitals of facts, and not for generalizations drawn from the facts. But, as we have said, the chief interest with which we regard the mortuary cus toms of tribes and races centres in the story they tell us of the . beliefs which prompted them. The ultimate object of the study of the subject reaches beyond the Indian's material disposition of his dead and aspires to determine the mental and moral ideas which inspired his life and shaped his character. To rightly draw these conclusions must be the task of those who shall have for their guidance a most comprehensive and authentic collection of facts.

The task assumed by Dr. Yarrow is a preliminary one-it is the foundation; it is therefore most important, and the character of this introductory volume now put forth is a sufficient guarantee that the work is in able hands.

#### ----NEGLECTED FISHES.

THERE are tons upon tons of good food thrown away within a hundred miles of New York through senseless prejudice, and hundreds of families in the city suffering for want of something to appease their hunger.

This food is mainly fish, against which nothing can be said except that it is not customary to eat it, and so it never becomes customary. A society exists in New York composed of gentlemen interested in fishculture, and those who approve of that excellent work, which has for its object the eating of the class of food to which we refer. They had two or three meetings, but have not been heard from lately. They called themselves the Ichthyophagists, and whether the name was a greater burden than they could bear or not we do not know; but their object was a noble one, taking upon themselves, as they did, all the risks of dispepsia by eating Eumesogrammus subbifurcatus immediately after Priacanthus macropthalmus, and the dangers of nightmare by following a course of Eugon phodus littoralis with fried Branc'iostoma caribaum and boiled Limulus polyphemus. Think of it! Not only these evils may occur to these philanthropists, but they are also exposed to derangement of the jaw in pronouncing the names, which may result in loss of molars or at least further torture at the hands of the painful dentist.

We are moved to these remarks from having recently dined upon the "wing" of a skate, a fish commonly caten in Europe, but cast aside by our people for no good reason. It was broiled and was truly good. The opportunity occurred while inspecting a pound net on Long Island in company with the landlord of a hotel, and we took out a large skate from the net for anatomical purposes and then proposed to eat it. The table contained fresh roast pork, roast beef and roast duck. We tasted lightly of the latter, but made the entire dinner on the skate.

These foolish prejudices are found everywhere. In one place it is against sturgeon, lampreys, turtles, ecls, frogs, or other aquatic animal which is eaten in other parts as a deli-The squid is eaten in some countries, but our fishermen won't even try it, although it is held in high esteem at some New York hotels, chiefly Spanish and Italian. In speaking on this subject the Duke of Argyll, in a late number of Contemporary Review, says of the markets of Munich: "The hinder legs of frogs, nailed upon triangular pieces of wood, and a large piece of snail (Helix), with the aperture closed, apparently by a sort of operculum of clay, seem to be a well recognized article of human food." Further on he says: "In Munich frog legs are much used, and not only over the whole of the south of Europe, but over the United States. In New York they are among the established dishes of the breakfast table."

The squid, Loligo, to which we referred, is only used as bait with us, but the Duke has seen them eaten raw. "Seeing a little squid taken from a net some tells it thus: years ago at Mentone I asked one of the fishermen whether it was good to cat. 'Ecco!' was his reply; and, suiting the action to the word, he popped the poor squid alive into his mouth, and the beautiful eyes of the little cuttle were seen gleaning with an imploring look from the closing cavern of the Italian's jaws. This is rather an extreme case, but well cooked with vegetables the gristly substance of the cuttles is a wholesome and excellent article of food." And while we think it possible that it may be an excellent dish if properly cooked, with or without the ink-bag, we would hesitate at a raw one. They are sold occasionally in New York at \$1 to \$1.50 per dozen, but we do not know of Americans who eat

The main obstacle to introducing skates, sculpins, gurnards and other strange fishes, which are thrown from the nots by the ton, into our markets at a price which would induce poor people to cat them, is the freight; and it seems to us that an opening for a lucrative business could be made by some enterprising fish-dealer, who would take these fish from the fishermen at a low figure and establish a market in the poorer quarter of the city. He could most likely get favorable terms from the railroads in consideration of the fact that these fishes pay no frieght whatever now. The man who will do From Seventh to Eighthis a stift carry of three-quarters of a mile, which rather turned my hair, for it was a warm morning; but from Sixth to Seventh it is clear paddling. From Seventh to Eighthis a stift carry of one mile and twenty

this, and introduce good and cheap food to the million who do not ask nor expect salmon, Spanish mackerel, brook trout, nor even shad, when at its cheapest, will do a good thing for both humanity and himself, and will be more deserving of a statue in Central Park than some men whose effigies have been mentioned as deserving that honor.

Let us have skate.

THE WICKERSHEIMER FLUID .- The publication of the formula for making this preserving fluid, which we gave in our last issue, has brought us many letters of thanks. An old subscriber writes: "The publication of the recipe of this famous fluid is alone worth the price of many subscriptions. I have no doubt that if some private individual had the formula before it was published, he could have made thousands of dollars while it remained a secret. We have long needed such a preserver, and now that we have it we will not only prize it but also the paper which gave it to us."

Our esteemed correspondent, Dr. Sterling, writing from Cleveland, says:

"I am glad to see your article on Wickersheimer's fluid. The man should have a fortune on it, and a monument, too. I have experimented, and find it is all we wanted. I know it will produce a revolution in the preservation of perishable

VENNOR, the weather man, has almost completed the preparation of his almanac for 1881. This seems a little early for even Vennor to talk about next year's weather; but we presume that he knows what he is about; and then, for that matter, we should have faith in his predictions for five years We believe in Venuor, and there are 100,000 others who believe in him enough to read his almanac ----

Anonymous letters do not receive attention at this office. If this is remembered, much time will be sured to those curie individuals who pen them.

# The Sportsman Tourist.

ROUGH NOTES FROM THE WOODS.

A CANOE TRIP TO BLUE MOUNTAIN AND THE RAQUETTE WATERS—STEAMERS AND THE WHISTLES THEREOF— WATERS—STEAMERS AND THE WHISTLES THEREOF GUIDES—THEIR BOATS AND WATS—COMFORTS OF TH CARRYING SYSTEM; AND A WORD ABOUT THE LAKES.

-Yes. Let us leave the hot pavements, the baking, blistering walls, and sweltering sleeping, or sleepless, rooms. Let us, i' God's name, take to the cool waters and calm shades of the forest.

For brick and mortar breed filth and crime, And a pulse of evil that throbs and beats;
And men are withered before their prime
By the curse payed in with the lanes and streets.

And lungs are smothered, and shoulders bowed, In the poisonous reck of mill and mine, And death stalks in on the struggling crowd, But he shuns the shadow of fir and pine.

T was on the morning of the last 7th of August that ever was when I started for Third Lake to fish for salmon, as take trout are invariably called here. The weather could not have been fairer. I was well organized to fish a buoy of my own, with an informal permit to fish others, and I had not bake trous are meaning, have been fairer. I was well organized to fish a buoy or my own, with an informal permit to fish others, and I had not the slightest intention of doing anything else. And just here comes in the fascination of this happy-go-lucky, care-free sort of forest life. You never know, or care, one day what you have a life of the next. comes in the ascination of this happy-go-ducky, care-free sort of forest life. You never know, or care, one day what you are going to do the next.

After a delightful paddle through First and Second Lakes, I

or lores line. Tool never know, or care, one day what you are going to do the next.

After a delightful paddle through First and Second Lakes, I passed the Eagles' Nest and entered the Third. Then it occurred to me that 1 had a blanket roll at Sam Dunakin's camp, consisting of gum coat, blanket, pocket hatchet and revolver. It was a good time to get the traps. Fourth Lake is at times rough. Now it was smooth. Sam is one of the old-cst guides in the wilderness, and of course we had a chatty sort of a visit, which made me a little late in paddling out for the Third Lake.

Now, a short mile below Dunakin's camp is the cold-spring, or Suyder camp, which I had a standing invitation to visit. As I was passing, Mr. M., the head man of the eamp, halted me with a cordial invitation to land. I did. Found the cold-spring camp rather a high-toned affair for a forest residence. There was an ice-bouse, a good boat-house and a log-house that would be a palace to an early settler. They had a guide who, like most guides, was an excellent cook, and of course I was not to be let off until after dinner. I wish to record the fact that the best lake from I have eaten in the wilderness was at that camp. They were also capable of a glass of good wine, and people of culture, withal. What wonder if it was 4r. M. when I said good-bye, and paddled out into the Fourth? Then it struck me that I had a seven-nile start toward Blue Mountain Lake, with such weather as I might not get again in a month. True, I had no supplies, but they could be had at Arnold's, some two miles above, and I struck across and up the lake for Arnold's place. Got some lunch, arranged my duffle for a trip, and paddled out for a log camp I knew of at the foot of the Flifth Lake. It was getting dusk when I struck in thet, but I found the eamp in good condition. There was fresh twowse and plenty of dry birch wood, with a roof invulnerable to rain. I had no tea or coffee, or any sort of dish, but I foraged an old tomate can and made a pot of hemlock tea, had a glorious fi coffee, or any sort of dish, but 1 foraged an old tomato can and made a port of hemlock tea, had a glorious fire, and a night just such as a woodsman loves. There was not a soul within miles of me, and the shriek of the steam whistle was afar off, beyond the keenest carshot. The owls were plentier than usual, and in exceptionally good voice, while a loon, just above in the Fifth, kept up his strange wild cry at intervals through the night.

At daylight I repeated the dose of hemlock tea, finished the little lunch I had left, and paddled up the Fifth Lake, which

rods, according to the best informed guides, and before I got

rods, according to the best informed guides, and before I got over this I was pretty well winded.

At the landing on the Eight I met a young maa, one of a party of two engaged on the Adirondack survey, and who very considerately invited me to his camp for dinner. It was well. Like Palstaff when he took a foot command, I was well. Like Palstaff when he took a foot command, I was well. Like Palstaff when he took a foot command, I was well. Like Palstaff when he took a foot command I was well. Like Palstaff when he took a foot command I was well control the south side of a point which makes out from the mainland, and their landing so hidden that they were not likely to be bored with yisitors. Stayed with them two hours and got partially rested; also was feasted on pork and beans, and paddled around the point to the carry, not feeling very well competent to make it. To a strong, well man it might have been a trifle. To me it was most exhausing. I arrived at the landing on the inlet so tried and beaten that I lay down on the leaves for more than an hour before hunching out. I found the inlet to be modeled after the letter S, with an occasional oxbow thrown in for variety, and a dull, sluggish stream, deep and dark, fringed with aquatic plants, shrubs and dank cold grass, with not a place in its course of four miles where I would like to venture a landing. At last the broad Raquette lay before me, dotted with green islands, and with its quaint bays, points, headlands and islands so mixed and mingled to the eye that although my directions had been lucid I was puzzled just which way to steer. My destination was Ed. Bennett's, and I was to turn a green island which lay to the left, when I was assured I would see his lauding with a flagstaff and lag, which on the larger lakes is the usual sign of a forest hostelrie. I saw no flag, but after off was was been down to be a new building, and from thence came a sound as of one who drives nails into resonant boards. As I liveit turned out to be a new building, and from theme c

on the little steamer with the unpronounceable name. Across the lake we made another landing—Kenwell's—and found ariother hotel, new, neat, well found and moderate in price. Kenwell's terms are \$1.50 per day, \$7 to \$8 per weck, and his place is very pleasantly located. From Kenwell's to the Forked Lake House landing, and here I struck tourists and guides in force. Leavit was full to overflowing. I could find a place to siece after some managing, and the table was excellent, but people were becoming too numerous, and I had a suspicion that I had left the wilder part of the wilderness behalf and when I left the Eighth Lake. Game and fish were by no means plenty. The Forked Lake House had a corps of guides employed, but they could not keep the house in fish or venison. I did not take either after leaving the Pulton Chain. All the same every tourist had his breech-loading buttery, and

behald hie when the the Legion Lake. On the and hen were by no means plenty. The Forked Lake House had a corps of guides employed, but they could not keep the house in fish or venison. I did not take either after leaving the Pulton Chain. All the same every tourist had his breech-loading battery, and a full supply of rods, reels and lines, which is a great comfort to the average tourist and does small damage to trout or deer. From Forked Lake I went by steamer mostly to the carry on the Marion, made the carry, and found another little steamer to make connections on the up-river side. Went on board of her, and became resigned to stram and a teeming civilization that increased nearly every hour.

Passed up the Marion, through Utowana and Eagle lakes and saw an old settled farm and an ordinary farm house on the northern shore of the latter, which being the only imitation of a farm on the trip usually induces inquiry. You will be told that long before the grand rush of tourists and the advent of costly hotels this place was cleaved and occupied by "Ned Buntline." Here he secluded himself during a part at least of every year for many seasons; here he did his literary work, and the place is, and probably always will be, known as the "Ned Buntline Parm".

A very clear and beautiful sheet of water is Blue Mountain Lake. It has often been called the gem of the wilderness, But its days of natural wildness are gone forever. There are three large hotels on its banks filled to overflowing with guests. Lines of stages leave daily for different points to the Eastward. All luxuries of the season are to be found at the hotels, and billiards, croquet, boating, lounging through the groves, singling and piano-playing give the shores of the lake quite a Long Brunely air. Besides the hotels there are pleased to call camps.

The Blue Monntain Lake House, kept by a genial, thorough kndlord, once a guide, had a hundred and fifty guests, and more coming in, the house was overcrowded. John Holland is not the man to turn anybody out of do

guides at 11 r. m. took their blankets and went out to seek a spot to camp in for the night. And little more than eight years ago there stood a bark shanty just above, the only sign of human habitation on Blue Mountain Lake. Speaking of this rush to the Northern Wilderness in '79, Colvin says "Where one came last year the come this, a hundred the next." He is just well right. You meet them everywhere. They permeate every accessible lake and stream, and it is hard to say what lakes and streams are not accessible. You meet them in the most out of the way places, just where you expected to be alone, and always with breech-londer and fly rod which they hang to like grin death. Said an old guide to me. "If they averaged one deer to three guns there wouldn't be a deer left in the wilderness at the end of three years." Said another guide, one of the oldest and best, "What few deer are killed here had better be killed by parties who employ us; it encourages them to come again." And P. Jones, guide to the Stickney camp and one of the most intelligent, spoke thus: "We don't care to Rill many deer ourselves, or to catch too many trout. Just enough for use. When we hunt for market we go to Michigan on the Au Sable. Killed twenty-five there last fall, and am going again when the guiding season is over. The deer in these woods are worth more to us guides alive than dead. They are worth fifty dolhars a head as they tun." That is about the view taken of fishing and hunting by the average guide in the north woods.

As I had come to do the lake and mountain I concluded to go through. Climbed Blue Monntain on a hot August morning and on arriving at the verge found Colvin's look-out ladder, made by mailing cross strips to the trunks of two spruce trees. It was rather an old affair and looked shaky, but I woot up and took in the view, which was really extensive and fine; and then I followed the trail which leads to the signal on the lightest point of the mountain, clanked the signal, and tried to make out the 28 lakes I had been te

by each other in a manner to throw an ordinary mind into a state of temporary imbecility.

I could dimly discern Marcy, and I thought I identified Mounts Haystack and Skylight. But they rose in such immerable and unknowable billows, peaks, points and ridges, that the mind—at least my mind—can retain only a confused recollection of them. It had been hot work making the uscent. It was cold and windy on the summit of the mountain, and the immediate surroundings were cheerless and desolute. One entire summit had been slashed in 1873 to give an outlook for the signals of the survey, and the dead, decaying trees, lying just as they fell, were not pleasant to look upon.

There was an excellent bark shanty between the spruce ladder and the signal, and in a swampy depression near the

Inter was an exception takes saminy depression near the summit, and under the edge of a boulder, I found a pool of cold spring water which rendered the hothe of water I had brought from the hotel quite superfluous. (N. B. When you climb Blue Mountain It is not necessary to carry up a bottle

con spring water which renerred the hoole of where I had brought from the hotel quite superfluous. (N. B. When you climb Blue Mountain it is not necessary to carry up a bottle of water.)

Thad done the mountain, and it seemed the proper thing to do the lake. I did it. I paddled in and around among the islands, landed up and launched out again, greatly to the delight of the youngsiers, who were there in force with parents or chaperones and who were exceedingly taken with the little boat, and then I ignobly placed her on the deek of the round-sterned little packet and paddled by steam to Ed. Bennett's landing on the Raquette. And then it came down to the double blade again. After a night's rest and an excelent breakfast I started out to cross the lake, and rather got down on my muscle, for the wind was ahead and rising. By the time I got into smooth water at the mouth of Brown's Tract. Indetit was getting rough, and I was glad to be in the tortuous but safe inlet once more. A teilous paddle of four miles, a weary carry of one and a half, brought me to the Eighth Lake. Wind ahead and hard traveling. Another tiresome earry of a mile andover and I was on the Seventh, with the wind strong and the second largest lake of the chain to cross. I was a long time making it, and was almost too tired to make the next energy from Fifth to Sixth, but I finally shouldered the cancer larger shade of the chain to cross. I was a long time making it, and was almost too tired to make the next energy from Fifth to Sixth, but I finally shouldered the cancer larger shade of the chain to cross. #### SUMMER SPORT IN ALASKA.

SUEAL AUG. 2, 1880.

TWO-THIRDS of another summer had passed away, and but for our almanacs we would hardly realize it, for our countain tops are still snow-chad and our winter clothing in deuand. Since early spring when the ducks and beach birds gathered in countless numbers preparatory to their flight northward our guns have lain idle. Now and then an Indian, undeterred by any scruples, has slain a mallard or buffle-head which are, I believe, the only true ducks which nest in this vicinity, and an occasional grouse or ptarmigan, whose hare breast showed that its duty to posterity was being performed when killed, have been all the feathered game obtainable for the table. But we have shot quite a number of odd-looking fowl which Cours' Key identifies as puffin, anks, guillimots, grobes and divers, and of each genus several species. I find in my note-book the names and dates of killing of Northern diver, red-throated diver, Western grobe, horned puffin, horned-billed and knob-billed Aleutiar auks, marbled, 300ty, and pigeon'guillemots and divers other shags, coots etc., etc. Venison has been plentiful and good, antimproving weekfy as family duties and cares have grown lighter and the grass more plentiful.

Fish of several varieties have been plentiful, and we have add better soor treat which are the search treat where the search treat we have been plentiful, and we have add better soor treat which are the search treat whether the search treat when he are a search treat whether the search treat when he are a search treat when he are a search treat when he are a search treat when he are a search treat when he are a search treat when he are a search treat when he are a search treat when he are a search treat when he are a search treat when he are a search treat when he are a search treat when he are a search treat when he are a search was a search and the search and the search and the search and the search and the search and the search and the search and the search and the search and the search and the search and t

re plentiful.

Sish of soveral varieties have been plentiful, and we have
l better sport trout lishing than we did last summer, when
is time we were sated with the work of hauling out
shels of fish that were to be captured by the veriest tyro,

with the rudest gear. This year they have been far less plentiful, and a good basketfull is not a certainty.

The cause is one worth noting; it is simply the immense body of snow still resting outthe momentains, which has kept the creeks high with snow water, and the temperature as a consequence low. The salmon trout (Salmo spectabilis) still lie outside in the warm, sall water, running in for a brief space on cach flood tide, and finding no salmon roc (for as yet the salmon have not taken to the streams) soon returning to the warmer salt water.

Thus the element of chance has entered into the problem, and the fishing has assumed more the character of sport; the

yet the salmon have not taken to the streams) soon returning to the warmer salt water.

Thus the element of chance has entered into the problem, and the fishing has assumed more the character of sport; the more so as although we are pretty sure that each flood tide will bring the trout into the streams, we have no way of finding out, except by actual trial, just how far they will run up, or where we will find then, or when they will run in.

The salmon have been cruising around as usual, but except the first run early in. June none have gone into the streams. They appear for a few days and the channels are lively with them, and the pursuing porpoises then they disappear, and for several days none are visible.

There have been five varieties which I know of up to the present date, and just now a run is in, which is composed of two kinds—viz. the hump-backed—Garbosha (Russian name), a fish of very little value except for smoking, and the Kibon, a very fair table fish and valuable for canning. Among some three hundred brought in by our boat this afternoon the two varieties mentioned were about equally distributed, and there was one only of a variety, the Russian name of which is Kessich. This fish is considered to be the best of all, and is the bask kind which run, it not being due before the middle of August. It differs from the Kibon and other goodsalmon in this, that the tail is nearly square, the scales allithelarger and the roof of the mouth is black. I bought this fish for two hits, buying at the same time for use as halbut bait three of the gut-boshers for the same sum.

The loss of the creeks has been our gain, for having no other occupation for their time, the salmon have annused themat our expense, in taking our spoons while trolling for a fish which has been very plentiful, and which hard Dr. Bean came among us we called black sea bass, but which now we who are better taught denominate the (Khirns. Of these there are two species—virs: the Constellabus and the Decongranus. We get them weighing from one u

no particular pains either in providing very strong gear, or in handling.

When, however, one day an eighteen pound salmon took hold of a bass spoon, fortunately attached to a good line and trolling rod, handled by a young gentleman from San Francisco, Mr. Ben Woodworth, now spending a month with us, who under such circumstances thoroughly understands his duties, and therefore landed his fish, and when the next day, an eight pounder took the same liberty with a beautiful little spoon attached to a line made fast to a behaying cleat, and was hauled in hand over hand by a lady and her Insistand, both perfect tyros in the gentleart, and who from the description of eye witnesses, exhausted nearly every source which would ordinarily prove sufficient to get rid of even a bunch of kelp, but in spite of which the fish was saved, and hauted into the beat without the aid of gaff or exhaustion, we concluded it was worth while to fit out for salmon.

I of course had not wasted a minute in getting to work, and, fortunately for my reputation as a fisherman, my fifteen-pounder was safely in the boat nearly an hour ahead of the feat of my pupil—the lady.

Then everybody went at it. I had five spoons, which had done good service at Alexandria's Bay, Piseco, and Lake Ontario.

train.

I loaned three, and with the result usual under such circumstances—all of the three were appropriated by salmon, which in contests of strength land got the best of the fishermen. I then lost another myself, and on my only one left no salmon will strike. No times will express my feelings more vividly than those from the "Ancient Mariner."

"Wester water everwhere."

"Water water everywhere, And not a drop to drink

which with slight verbal changes will fit.

I have tried small trout strung on large Limerick bass hooks, after a fashion I learned at the Gallonps, by which a curve, which secures spinning, can be obtained. These work well enough in getting strikes, but the double guts twist up so hard that at each strike the smells smap and I lose my fish and hook also.

and hook also.

I spoke of purchasing salmon to use as bait for halibut.

This may sound odd to you East, somewhat equivalent perhaps to using gold for the procurement of copper; but in Alaska it is different. Fresh mackered or membaden is not better bait for fish of all kinds than fresh salmon, and there

neuter ban for an 80 at 81 mins fram fresh satmon, and there is nothing cheaper than salmon here.

Within a radius of five miles from the ship there are quite a number of sand banks on which halibut, are plentiful, and other rocky patches, where immense rock cod (1 caught one weighing twenty-three pounds). Norway haddocks and other large fish abound, and the only drawback to good lishing being the usual one. A supersimption of deep that when ing being the usual one, a superabundance of dog don't seem to be at all parcicular, haunting the res

sorts of fish.

The halibut of Alaska are bound to help develop the country. They are plentiful and of excellent quality, and we get them in from five to forty fathoms water.

The schooner General Miller, Capt. Morrissey, 100 tons capacity, left. San Francisco, June 13, to search for halibut. Tried thoroughly Queen Charlotte Sound, Dixon Entrance, Chatham Straits and various other places on route here unsuccessfully. July 15, in sight from this ship, she began to take in fish in paying quantities, and on the 21st when I bearded her she had with three of her six dories (a new bout in this locality) taken about seven tons. With her other dories, three in number, the time was occupied in seining salmon for bait.

ten-pound salmon can be bought for five cents, and

was 5 ft. Sin. long. I had a log of wood slung with spans attached to the end of fifty fathoms cod line, and it was very exhiliarating to see that log go diving under at about ten knots an hour.

I learn that within a short distance the halibut are far more plentful than here. So there can be no question but that in time the business will be well followed up, that is if this present venture finds a good market, which, as most all South Americans like sat fish, I fancy it will.

Mining enterprises have received little attention this year. The snow has postponed everything. We live in hopes.

Piseco.

#### NOVEMBER.

NOVEMBER'S frosty days are here, With faded grass and foliage sere; The tufted woodland tops are brown, The oak tree wears a yellow crown. The landscape far and near Is painted with a russet hue; The distant hills, erewhile so blue Reddened by autumn's lavish brush, Glow with an evanescent bluck Enchanting to the view.

The brooks that thro' the meadows sweep, Or thro' the taugled thickets creep, No longer flash and gleam ; For dead leaves fill the woodland walks : The wild flowers droop their wither'd stalks And choke and stain the stream. The mill-pond where the wood-ducks swim Swoll'n by fall rains to the brim, Pour o'er the mill-dam's mossy stone A tide that makes the old wheel groan, Revolving on its beam

The angler no more plies his craft In shapely boat or anchored wift By brook or poud or bay; But now it is the joyous time, When crispy grass is white with rime; -It is the sportsman's day ! The brown quail fill the stubble field; In the bare woods, but half conceal'd. The partridge is his prey.

And where the salty marshes spread The bay-snipe circle overhead; And where the breezy bays expand, In shallow cove, by shelly strand, The honking, quacking wild fowl poise, The honking, quacking who remains a land yield the gunner endless joys.

ISAAC McLellan.

Shelter Island, Nov. 7.

TRIGGER AND REEL ON MARTHA'S VINEYARD.

TRIGGER AND REEL ON MARTHA'S VINEYARD.

WHILE such a vast number of the countless resorts for the sportsman with their manifold allurements have been so closely, and I doubt not faithfully, described in the rolumns of the Forest AND STEEAM, I have never seen during the time I have been a reader of that journal even an allusion, if I may be allowed to except a single hotel advertisement, to the by far more than ordinary facilities for healthful and sportive recreation offered to votaries of the rod and gun by the interior and southern and western shores of the "far famed isle" of Martha's Vineyard, which though situated within easy access of the fraternity from nearly every city of the Eastern and Middle States is as yet well nigh aberra incognition to the sportsman from those districts.

The island of Martha's Vineyard, situated as it is in a position peculiarly adapted for the purpose, forms a sort of medius res, or middle ground, for large thocks of Canada honkers and immense numbers of widgeon, teal, bluebills, sheldrakes and whistlers, with an occasional mallard more hardy and nomadic than its wont. In times past mallard were found here in abundance, but with the genesis of "bottom action shooting irous," as those not fortunate enough to be the owner of a breech loader sarcastically term that useful innovation upon the "Queen's Arms," the last named has almost entirely disappeared, and during the spring and autumn flights of these birds it is in the sheltered bays and lagoons of this island, he fore the advent of the sunner visitor, and after the exodus of the camp neeting pilgrims, for which latter this is a verificable Meeca, may rest in comparative security from the lahors of their wearismen mared from Northern or Southern flets, and with but little fear of that obliquitous pest, the pot-hunter, plune themselves for the homeward run. This is a verificable portion of his time within the walls of the county jail; for although there is no regularly organized sporting association here, which is a matter to b

min to pain trigger upon an dissispecting feather out of season.

But for a sportsman, whose nature would revolt at the idea of practicing the nefarious slaughter so easily accomplished with the battery and its swivels, who is willing to give the birds a fair chance of retaining their liberty, the sport is abundant and well worth a trial: and any son of Nimrod possessed of a good gun, a sharp eye and moderately controlable temper, can reap here as large a crop of pleasure and ruddiness as anywhere upon the Atlantic coast. The large ponds and coves which abound here and in close conjunction are favorite resorts for the different species of ducks of which I have spoken, as well as of large numbers of the dusky—or what is more commonly known as the black duck—which, unlike the others, make this a permanent abiding—which such seasons are such as of large numbers of the dusky—or what is more commonly known as the black duck—which, unlike the others, make this a permanent abiding As a ten-pound salmon can be bought for five cents, and caught perhaps for less than a cent, and as one such fish will cut up into about thirty bair, which will probably catch not less than 500 pounds of hallout, it is evident that the cost of batt on our Eastern banks.

The schooner has just came in from a ten-days cruise among the outside banks, during which her catch has averaged over 7,000 lbs, per day, and she is now over a third loaded with every prospect of filling up during August, which is always a cabo, pleasant month here.

The salt used is procured in San Francisco, at \$16 per ton, and is manufactured at Redwood City from sea water. We all got the halibut fever, and have had lots of fun, hard work and excitement. My biggest so far weighed 150 lbs., and fairly easy to secure. Although this locality, isolated as it rarry easy to secure. Although this locality, isolated as its, includes a territory of but small compass, and is stationed like an advance post upon the very border of the restless Atlantic, there are many other varieties besides migrating scalarity.

lantic, there are many other varieties besides migrating scafowl.

In no other portion of Massachusetts, and 1 know not if in any of the Eastern States besides, can be found the gany and toothsome prairie chicken, which abound here in quite large numbers and retain the primitive purity of its Western fellow. Many have supposed this to be the ordinary partridge, so common throughout the sections of this and other New England States: but examination has proven beyond question that this "beath hen," as it is called here, is the veritable pinnated grouse of the prairies, but in what manner they came to locate here in preference to any other portion of the 0ld Colony is not known. However, they are quite abundant and extremely tame, and being well protected during the greater part of the year by a special law, they are allowed to breed in security, and their ranks are but slightly thinned during the "off months."

Here also are quite large numbers of quail, which during the season form one of the most pleasing subjects for the

Here also are quite large numbers of quail, which during the season form one of the most pleasing subjects for the sportsman's cunning. Although the winters here are, short, yet they are sometimes very severe, which, coupled with scarcity of food and the destructive fornging of, hunting features, of which there are hordes here, tend to reduce their numbers very materially.

In their season, plover, willet, rail, snipe and most of the shore birds generally found along our sea-board, are to be had in abundance, and the immense flocks of coots, which lie just of these shores, afford very exciting sport to those who are willing to risk a wet jacket or a cold bath in the small dories used by those who make it a business to go after these fowl. The gunner finds no difficulty in approaching within dories used by those who make it a business to go after these fowl. The gunner finds no difficulty in approaching within shot of them, and if after several shots have been fired they show signs of uneasiness, or an inclination to seek less disturbed waters, it is only necessary to wave a red handker-chief, or any other piece of red cloth, in the air, attached either to a tilter or gun sick to bring them back at once to gratify their eager curiosity and learn "what's in the wind." To the novice "cooting" is a strange chapter of amazement and unishaps at first. If the sea is somewhat rough and the small boat at little unsteady, the young man who can show a score at his sporting club is well calculated to excite the envy of even veteram marksmen, if he has even been out after score at his sporting club is well calculated to excite the envy of even veteram markshene, if he has seen been out after coots before in an open dory, will be very apt, immediately after pulling the trigger, of what has always before proven list trusty choke bore perhaps, and with his imagination fired with the certainty of bagging at least four or five fowl, to be dumbfounded at seeing the crest of the onconing wave not two feet from the boatside, blown into watery ribbons after receiving the entire charge; but practice and perseverance in this as in other cases bring about better results, so that in a short time the tyro learns to his profit that it is better to fire when mounting on the crest than to shoot through a following sea, while the small boat in which he is is pitching in the trough. It is but little use to endeavor to pick up crippled ing sea, while the small boat in which he is is pitching in the trough. It is but little use to endeavor to pick up crippled coots: either they must be shot dead at the first fire, or the gunner must wait for another chance. A wounded or wingbroken coot no sooner strikes the water than under he goes and is lost to all sight, and it takes a very keen eye to discern the tip end of his bill above the surface, an eighth of a mile nearly away, when he rises for breath, and a very quick hand to send the shot into the back of his head before he dives again, to add that duck to the day's string.

But I have digressed from my purpose, and instead of describing the shore game of this island have returned to the sea fowl found on these shores. I must not forget to mention the raccoon as one of the game subjects of Martha's Vine-

sea fowl found on these shores. I must not forget to mention the raccoon as one of the game subjects of Martha's Vincard. Upon being informed of the presence of these animals here I must own that it was not until after I had received conclusive evidence of that fact before my incredulity was overcome. Nevertheless, there are "coons" here and in plenty, and so amoying and destructive are they that "coons" and black-birds are but secondary objects of the farmers' dread for the safety of his cornfield. They are but fittle hunted, because of the scarcity of dogs suitable for that purpose; but with a good "coon" dog, and I must not forget to say with sufficient previous experience to enter into the hunt with open eyes, but few localities can afford better facilities for this historic pastime of "coon" hunting than this very island. And eyes, but tew actoric pastime of eyes, but few localities can afford better facilities for this historic pastime of "coon" hunting than this very island. And for those who despise not little things, there is as fine rabbit shooting here in winter as any man of moderation can desire. Thus far I have confined my very meagre description of the sporting character of Martha's Vineyard to the fur and feather of the island, but in my next paper disciples of the rod and line, which can be used to such varied advantage as is offered by few resorts, shall receive their meed of information.

E. A. D.

#### TENNESSEE HUNTING GROUNDS.

TENNESSEE HUNTING GROUNDS.

In a former article I briefly mentioned some of the geographical features of the Cumberland table land, which is situated mostly in the north middle part of Tennessee. This rable land has an elevation of 1,000 feet above the valley of East Tennessee, and its area is about 5,000 square miles. The eastern rim is bounded by a continuous line of rocky bluffs, which break off abruptly, forming a barrier which in most places is impassable for man or beast. The western edge is more ranged, and notched by deep, narrow valleys and gorges at irregular distances, and separated by huge towering cliffs that rise in massive grandeur far above the average level of the table land. This broad and extensive plateau extends from northeast to southwest about 100 miles, and has an average width of fifty miles. The C. S. R. R. crosses the northeastern part, thence following down the Big Emory River into the Tennessee Valley. The provailing limber is oak, of which there are several varieties. The woods are open except occasional thickets, and during the summer the whole country is covered with a thin growth of wild grass.

summer the whole country is covered with a think growth of wild grass.

Here, if history is correct, was once a noted buffalo range. In Heywood's "Early History of Tennessee" he says that when the first settlers came to the bluff, in 1779, nothing was presented to the eye but one large plain of woods and came frequented by buffaloes, elk, deer, wolves, foxes, panthers and other animals suited to the elimate. The lands adjacent to the French Lick was a large open space, frequented and trodden by buffaloes, whose large open space, frequented and trodden by buffaloes, whose large paths led to and from all parts of the country and there concentrated. He says that here were evidences as everywhere else of having been inhabited many centuries before by a numerous population. At many springs is the appearance of walls inclosing ancient labitations, the foundations of which were visible wherever the earth was cleared and cultivated, and to these walls enterenchments were sometimes added.

Mr. J. G. M. Ramsey, in his "Pioneer History of Tennessee," says: "The woods abounded in game, and the hunters procured a full supply of meat for the inhabitants by killing, bears, buffaloes and deer, and that a party of twenty men went up the Caney Fork as high as Flinn's Creek, and returned in canoes with their meat in the winter: that in their hunting excursion they killed 105 bears, 75 buffaloes and more than 80 deer, and that this source of supplies furnished nost of the families at the Bluff with meat during the winter."

nished nost of the families at the Biun with meas outline winter."

Cancy Fork is made up of numerous small streams, which drain a portion of the table land, and after running zig-zag courses between outlying ridges and over precipices and through deep gorges, finally breaks through the western rim into the Central Basin, which is drained by the Cumberland River. This great Central Basin, which is drained by the Cumberland and its tributaries, seems to have been a theatr of stirring historical eyents. Here the Indians and white men contended for the mastery many years, until the pale-faces conquered, as usual, after much bloodshed, terror and distress. The whole region of country, enbracing the tributaries of Cancy Fork, remains a wilderness still. The surface is rough and as usual, after much bloodshed, terror and distress. The whole region of country, embracing the tributaries of Caney Fork, remains a wilderness still. The surface is rough and broken. Deer and wild turkeys are found here in moderate numbers, with a few bears, and occasionally some gray wolves are found; but the oldest mountaineer cannot remember better that the moderate. er back to the time when elk or buffaloes roamed through

ber back to the time when elk or buttaioes roamed these forests.

The Sequatchie River drains a portion of the southeastern part of these table lands. This stream is about forty miles in length and runs a southerly course through a rich fertile valley, which has been sparsely settled more than fifty years, yet the beavers remain here still and are frequently caught during the winter months. Otters are found in most of the smaller streams; also raccoons and mink; but the latter are not plenty, and the fur is rather of a poor quality, and I have seen no real prime furs here. Wild turkeys and and I have seen no real prime furs here. Wild turkeys and quail are found more or less through the length and breadth of the State.

ne State. Tiney Falls, Tenn.

I have so frequently noticed inquiries made in the FOREST AND STREAM as to where good hunting and flahing could be had, I fancy that an answer from nue would be opportune. Tennessee is the place; it is easy of access, thickly populated by a most hospitable people, has a temperate climate, and as many varieties of game and fish and more of them than any other State in the Union. In the mountains black bear are numerous, in the middle and western counties deer and turkeys are abundant, millions of quali, while at Reelfoot Lake ducks, geese and sawar can be slaughtered by the wagon load. The greatest trouble the huntsman would encounter would be the embarras de cloize. The following letter to Col. Geo. P. Akers from the famous old sportsman, Matt McKinney, gives a fair evidence of the above assertion.

A turkey hunt to be supplemented with a fine old "buck" is not met with frequently, especially in a country where

is not met with frequently, especially in a country where every thicket has its covey of quail and the trees made musi-cal by the chattering of squirrels. When the weather is fine is not met with frequently, especially in a country where every thicket has its covey of quall and the trees made musical by the chattering of squirrels. When the weather is fine and the carth illuminated by one of our almost ropical moonlights, the wily Reynard can be chased or the sly "possum" may be hunted. Satiated with these sports, at each few miles streams filled with the most fish, such as bass, perch, suckers and catfish, are met with, and from which the expert disciple of Sir Izaak can derive the most delightful pleasure. The beauty of this section is the climate and the conforts which the sportsman can enjoy while in the midst of the hunting grounds. Birds are abundant within a few miles of this city, and a good fox chase can be had within the same distance. For the larger game more remote places must be visited, but in no case a very great way from telepraphic communication. There is searcely a farmer who will not provide confortable board, wagoons and horses, and in most instances be glad to join in the chase or fishing near his place. Or if the party prefer camping out, as I have already said in the Fords and Strikan, they can do so comfortably even in the depth of our winters. Parties coming this way had hetter bring their own degs and equipments, although we can boast of a finely bred and well trained dogs as are in the country, and several of our hardware merchants keep on hand good stocks of fishing tackle; and we have also a gunsuith, who can furnish ammunition and all the paraphernalia which may be required. I mention no names, but simply the facts, so that unnecessary preparations may be avoided by gentlemen who will be induced to visit the "Voluntere State."

\*Vosultere State.\*\*

\*I have been idle all the referred to is as follows: I have been idle all the referred to is as follows:

Nashville, Tenn. The letter referr

"Volunteer State."

"Nataville, Tean.

The letter referred to is as follows: I have been idle all this full and I have put in my time hunting and fishing pretty well. Last week, having grown a little weary of the monotony of this side of the river, I proposed to Major Binghan that we would cross the Oumberland at Rock Castle and go out in the bottoms and kill a wagon load of trekrys. He agreed to it forthwith. So early next morning I heard Bingham's horn, and a yelp from Tom and Jin, his two fanous old deerhounds, told the story at once that his carrirdges were not all charged with turkey shot. He had sent up to the Springs for his son By; and off we went.

Well, we crossed the river at eight o'clock and landed at old Sam McWaters', about three miles above the Barbour place, about nine. Old Sam was adjusting the sights of his rille. I never saw as much turkey sign in my life. By ten we had fed our horses and were out for a hunt. I did manage to kill one stray turkey, but saw very soon from the motions of Bingham and old Sam that devilish little turkey hunting would do them. In about half an hour a yell from the two hounds and a scream from old Sam confirmed me.

A large old buck was up, and away they went, Bingham and old Sam with them. The wood-choppers had fortunately scattered a fock of turkeys, and while the old fellows were following the Buck, By and I succeeded in bagging two more young gobblers. In about three hours they returned, having stopped the dogs at the celebrated old Post Oak stand, between Skinnerton's and the old Colley Place. But nothing damned, in they went again through the same drive, and with about the same success only. This time he made for the Cumberland instead of the Tennessee, and old San got a shot about a quarter before he took water at the mouth of frooked Creek. So you can very well see now, with those the Cumberiant instead of the Interest at the mouth of Crooked Creek. So you can very well see now, with those two old hunters in the woods, that there was a dull prospect for turkey hunting. But we talked the matter over that two old hunters in the woods, that there was a dun prospect for turkey hunting. But we talked the matter over that night, and they both agreed to do better next morning. By sunrise the horses were saddled, and a blast from Bingham's horn was the signal to be off. We hadn't gone a quarter before, under the pretence of a turkey hunt, I saw the old hunters meant the same programme as the day before. So I placed By at the old well, and I took up a position at the deep out on the old railroad track. In about twenty minutes,

sure enough the dogs and old Sam and the major were all booming. They were gone up the river out of hearing for about an hour. But we held our places, and here they came. About the old Wimas House I heard the dogs separate. Tom About the old Wimas House I heard the dogs separate. Tom put one through about 300 yaros below By, and I could hear Jim coming like a locomotive directly for my stand. I could see in a twinkle that I "held the ago" on him; and sure enough here he came, a four point buck. Two shots in quick succession as he crossed the railroad truck, my Barlow in his throat, Jim ahold of his quarters, and the Jig was up. We landed with him and three turkeys in Wallonia by three o'clock in the afternoon. Wharton's hunt comes off immediately after the election. I am going to slip over again next week. I don't think I can go in their regular hunt, but will be slipping round on the outskirts.

# Matural Distory.

OUR WATERFOWL.

П.

PRE-EMINENT among our waterfowl stand the Swans. Their very name has become synonymous with grace and purity of coloring, and a wild swan is certainly one of the most beautiful as it is one of the most majestic, of birds, The sportsman, however, usually regards his game from a practical rather than an æsthetic point of view; but viewed in this light these birds are no less interesting. We know of no game that will cause the blood of the man who uses the shot-gun to course through his veins with more rapid flow; and the prospect of getting a shot at a swan is worth almost any amount of crawling through mud and wet. They are very wary birds, and besides, even after one has come within gunshot of them he is by no means sure of his game. They are so large and so well protected by feathers that unless they are struck in the bead, neck, or wings they are very likely to escape the disappointed gunner. If wounded only, their tenacity of life is great, and their strength is such that they will fly or swim for a long time after having received a fatal wound. Although swans appear to little advantage on dry land they move through the air or over the water with great swiftness. It would scarcely seem possible that such great birds could fly with the enormous speed which they at-It is, however, a matter of some difficulty for them to rise from the water, and they are obliged to thy and run along its surface for some distance before they can fairly take to On some of the small alkaline lakes of Nebraska, wing. where Cygnus americanus certainly breeds, and perhaps also C. buccinator, we have seen them fly several times around the lake, the repeated striking of their wings against the water sounding like a rapid succession of pistol shots. Once under way, however, their powerful wings bear them along with astonishing speed, and it is necessary for the gunner to aim well ahead of his birds if he is to bring them to bag. progress through the water is so swift that they can without difficulty outstrip a boat propelled only by a single oarsman-Audubon testifies to this, and mentions that he frequently pursued the Trumpeter swan in canoes without being able to approach near enough to it either to shoot or to force it to take to wing. He also quotes from a letter received from Dr. Sharpless, the following statement with regard to the American Swan: "A gentleman who resides on the Chesapeake, near Brush River, informed me that a few years since he had wounded a swan, and afterward cured and tamed it. To prevent it from flying away he clipped its wing, but it occasionally escaped to the water, where he had often followed it for several miles, with two rowers, before he could catch it.

The range of the Trumpeter Swan appears to be restricted. to the western portion of North America, and ornithologists generally speak of it as not being found east of the Mississippi River, though it is included in some lists of birds of the more eastern States, on evidence, however, which is not alto-gether satisfactory. The supposed Cygmus pusumrei, which is quoted by Dr. Coues as belonging to this species, was taken in Canada. Cygnus americanus is found throughout the United States,

although on the Atlantic coast it does not appear to be common either in New England or south of South Carolina. The centre of its abundance on this coast would seem to be the Chesapeake Bay and the Virginia coast generally. In the west these birds occur in small numbers during the summer, and we have found them breeding in small alkaline lakes about fifty miles north of North Platte, Nebraska. It is only during the migrations, however, and in winter that they are found within our boundaries in any considerable numbers. They breed, however, in Alaska, according to Mr. Dall, where also the Trumpeter is found in summer.

As these articles do not pretend to have any other purpose than to teach the sportsman how he may without difficulty distinguish one species of water-fowl from another, any extended remarks on the habits of the different species would be out of place. For a like reason it is unnecessary to give the special character by which the swans are to be distinguished from their nearest allies among the Anatida. No one who shoots one of these birds in this country will be in doubt as to whether or not it is a swan, and it is therefore only necessary to compare the two species.

Cygnus huccinator, Richardson. Trumpeter Swan. White bill and feet black. Tail of (usually) twenty-four feathers.
Bill longer than head. The nostrils nearer the base than the point of the bill. Usually larger than U. americanus.

Cygnus americanus. American or Whistling Swan.

Bill and feet black. The former with a yellow spot. near its base, and shorter than the had. Nastrits about mid-

The young of both species are gray, and are smaller than The spot on the bill of Cygnus americanus is not always to be found, being often absent in young birds, in which the bill is sometimes flesh colored. The size of the which the bill is sometimes flesh colored. bill, position of the nostrils and number of tail feathers will, however, serve to distinguish the two species.

The goese of North America belong to four genera, one of which, Dendrovygna, is quite southern in its distribution, and is scarcely likely to come to the notice of any of our readers, except those of Texas and Southern California. One species. D. autumnalis, merely crosses our southern boundary line, while D. fulva reaches California, and is stated by Belding to occur as far north as Stockton, Cal. The former species is reported by Dr. Merrill to be extremely abundant in the vicinity of Ft. Brown, Texas, where it is called patos maizal, or cornfield duck, from its habit of frequenting such localities. A correspondent of Forest and Stream recently gave some account of shooting this species in Texas. The birds included in this genus are duck-like, tree-inhabiting geese, and serve to connect this group with the true ducks.

Typical forms of the three remaining genera of our geese Anser, Chen and Branta, are to be found generally distributed throughout the United States during the migrations. these by far the most abundant and generally known is the common gray or Canada goose, and this is probably the only one which ever breeds with us, all the others proceeding to high latitudes for the purpose of nesting. The peculiar little "wavy" Chenrossii is more Arctic than any of our geeso, and is very rare in collections, but reaches the United States in winter, and has been taken at San Francisco. The Painted Goose, Philacte canagica, is an Alaskan species, and is only found on the northwest coast.

TO BE CONTINUED.

Editor Forest and Stream:

Editor Forest and Stream:

Dr. Stradling, surgeon on board the British man-of-war Elbe, is credited with having made a very foolish experiment by allowing himself to be bitten, on the 1st of 1sst August, by a rattlenake (Cfrotatus horridus). The doctor seems to have provided himself with the usual antidotes, such as ammonia, brandy, escharotics and ligatures, but feeling no immediate bad results from the bite permitted himself to be thrown off his guard and failed to make use of them. After the lanse of some four hours he was found suffering under

mediate bad results from the bite permitted himself to be thrown off his guard and failed to make use of them. After the lapse of some four hours he was found suffering under oxcessive prostration, and was restored to life again through amweried exertions, lasting over two or more days.

Such is the account I have just read in a leading American journal, purporting to be taken from an English scientific publication, in which the details of the occurrence are minutely given. It differs materially from another narrative that I have seen in several papers, to the effect that the Quixotic experimenter professed to have discovered and used an infallible remedy against snake bites; did actually resort to it successfully at Rio, and subsequently aboard ship. I refer to this circumstance simply as introductory to an event, magna para fui, which interested me very much at the time, and which seems to me worthy of being generally known.

Intending to spend the summer several years ago in the mountains of Virginia I took with me, to have constantly about me as a precaution against the perilous venom of rattlesnakes, a small vial of ammonia. One day while out shooting with my son, and being a short distance from him, I heard him call several times loudly to his dog, and finally fire his gun.

Instantly I heard the yelp of the dog, a pointer, and the

heard him call several times loudly to his dog, and many me his gun.

Instantly I heard the yelp of the dog, a pointer, and the voice of my son urging me to come to him. Hurrying to his assistance, questioning whether he had shot the dog or had himself suffered some injury, I found on my arrival near him that the dog had pointed a copper-head snake (Grigono-ceptisons contertries), or rather two of them, which seemed to be mule and female, and had been strack by one of them on the force leg just above the ankle joint. My son had shot the one he observed with head erect, which probably had inflicted the Wound, not seeing the other which was killed a few moments later by a companion.

the "wound, not seeing the other which was killed a few moments later by a companion member and a companion of the poor dog seemed to be suffering great agony, and was struggling about on three legs uttering incessant crics of pain. It was the work of a moment to bring forth my hartsborn and thoroughly saturate the wound, the situation of which was very apparent from the presence of a drop of blood that stained the hair around it. The relief seemed to be instantaneous. Not another cry he uttered, and seemed to experience no ill effect except that the leg and corresponding shoulder swelled to twice their natural size, and remained so for a day or two. Could the remedy have been instantly applied it is quite possible even this result of the wound might not a day or two. Could the remedy have been instanty applied it is quite possible even this result of the wound might not have taken place. Two or three minutes elapsed between the infliction of the bite and the employment of the remedy. In India it is a common practice, I understand, for the army surgeous to have about them convenient for instant use

surgeons to have about them convenient for instant use supplies of Aqua ammonia in order to neutralize the poison of the deadly cobra Why should not convenient to the poison of the deadly cobra. supplies of Aqua ammonia in order to heatrance the poison of the deadly cobra. Why should not sportsinen, and hindrer especially, and all other persons according to the measure of their exposure carry with them in their mountain expeditions a small glass stoppered phial filled with the same liquid as a precaution against mischief from the hardly less dangerous copper-head and rattle snake?

\*\*Cambridge\*, Md. Nov. 9, 1880.\*\*

DOES THE PANTHER SCHEAM?-In FOREST AND STREAM Does the Pantier Scream?—In Forest and Stream for October 14 your correspondent "Ap-wa-cu-na" expresses a doubt of the screaming of the catamount or panther. While I leave it to Mr. Cornish to describe the "kind of noise" his animal made, I beg leave to say that if the Northern panther is identical with the panther or jaguar so common adong the banks of the Amazon and other parts of South America, its vocal powers are decided enough. Its common cry is a loud, sandling yell, increasing in shrillness and, volume, and then gradually diminishing in sound. When the opposite sexes meet, they play cat in a manner that makes the surrounding forest pretty musical, as each strain is generally answered

by the whistle of the monkeys and screams of the alarmed parrots. I have no doubt that in such districts as the Adirondacks, etc., where the larger animals have hard time to hold their own against the frequent incursions of hunters and other visitors, they are more silent and hideling in their habits than they are in the jungles and forests of more unfrequented places. Such has been my experience everywhere with wild animals. I believe all the Feldon have the sume habit of screnading as our domestic cat: I know the South American and African species have. Like the questions, Do snakes hiss? and Will the shark attack a man? I presume there will be plenty of answers in the affirmative to the question, Does the panther scream?

There is no doubt that the panther (Felis concolor) does scream. Its cry is merely an exaggeration of the voice of the cat. We have frequently heard caged animals of this species give utterance to sounds, which, were exactly similar to cries heard in the Rocky Mountains and said by old hunters to be made by panthers.

It should perhaps be remembered that the jaguar spoken of by "Percerine" is not identical with the panther. The latter is found in South America, but is apparently an inhabitaut of higher ground than the former, its range including mountains and elevated plains, while the jaguar seems to prefer jung le and river bottom.

RALIDAE IN KENTUCKY—Bardstown, Kentucky, Nor. 10.—Editor Forest and Streem: A good many sora rail have been killed in this vicinity this fall, a bird which, so far as I can learn, has never been found here before. In October I also shot two yellow rail (Porsuna noreboraceusis, Cass).

The coot (Fulica americano), another bird which seems to be entirely new to this region, has lately been found here. I have only heard of four, and they were all captured alive, as they were apparently unable to fly. Now as they were expanded in the some way, and couldn't very well come by rail and steam, will you kindly explain how they accomplished the feat? I obtained two of them and have had them in confinement for over three weeks. They thrive well and are becoming quite tame, eating freely from the hand. They appear to be rather omnivorous, their menu yesterday consisting of grub-worms, angle-worms, crickets, fomatoes, corn brend, grass and calbage leaves; the latter they seem to be particularly fond of, Quail are abundant here this season.

C. W. B.

It occurs to us after mature consideration that perhaps they

It occurs to us after mature consideration that perhaps they

It must be mentioned that most of the members of the rail family live in such localities that the sportsman might not in a long time catch sight of one. Most of the rail fly only when forced to and usually run away through the tangled grass or high and thick reeds so swiftly that they cannot easily be flushed. If it is really the case that they are now but rarely found in Kentucky the fact is an interesting one, and we should be glad to hear more on the subject. It seems likely that the coots in question had been blown out of their course by recent severe storms and this, if true, might account for their inability to fly.

We hope that C. W. B. will advise us of the success which may attend his attempts to domesticate these birds. We believe that they can be domesticated and that they will very likely breed in confinement.

WINTER BIRDS COMING ON.—The appearance of some birds which are with us only during the winter months would seem to hint that cold weather is near at hand. We noticed in Connecticut, Nov. 6, specimens of Spizella monticola and Ægiothus linarin, and in this city near One Hundred and Fifty-seventh street and Eleventh avenue, a specimen of Loxia lencaptera was seen feeding on the hemlock cones, Nov. 2.

Late Stay of Swallows—Editor Forest and Stream: On the 13th of October, being at Clark's Island, Plymouth, Mass, I observed an immense flook of the white-hellied swallow (T. bieolar). It seemed as if all the swallows of the castern part of the State were collected at a single special point of departure. There were certainly one or two thousand of then covering the laystacks on the marst, the wild plum bushes and every place available for alighting, even the swaying leaves of the beach-grass. At one time when wheeling about over the water they took a notion to alight on the rigging of the sloop yacht Siren—no mean rival, by the way, of the swallow in speed, as your columns have recorded in the two seasons—then at auchor off the island, and shortly every part of standing rigging was occupied, and many not finding foot-room there descended to the boom or rail. They perched with almost mathematical regularity, with intervals of say three inches between every two birds (just enough to novid interference of the wings in alighting I suppose), presenting a very curious appearance, as if the ropes were regularly studded with large knots. When the skipper wert abourd and saw coronce of the wings in anguing 1 suppose), presenting a very curious appearance, as if the ropes were regularly studded with large knots. When the skipper went aboard and saw the condition of his decks his remarks indicated that he held swallows in about the same estimation as Dr. Coucs does English sparrows.

F. C. Browne. English sparrows. Framingham, Mass., Nov. 4, 1880.

The swallows were certainly late, for they usually leave early in September. The species referred to, however, comes first of all our swallows and is the last to leave us.

In connection with this note we may mention that we saw in this city on the evening of October 24 a night hawk. The bird passed close to us and the identification was unmistakable.

Habits of the Beaver-Vale, Iora, Nos. 9.—Editor Forest and Stream: I have just been to the river to visit the beaver dams I mentioned some time ago in Forest AND Stream. I find they have just completed a large new dam, not more than twenty rods from a farmbouse which stands on the bank than twenty rods from a farmhouse which stands on the bank of the river. There are seven dams within three miles of this town. "Nessnuck" terms these beaver semi-domesticated, which may be true; but if beaver are so shy and so dread the presence of man as Nessnuk would have us believe, how thid they become semi-domesticated?

While living on Cedar River in this State some twonty

navigable stream, which is some 300 feet wide and steamers. The country is now thoroughly settled, and has been for years, but there are beaver to be found there yet. They only disappear about as fast as they are caught off. There were two shot near here by a boy only a few days ago. "They have disappeared."

# Mish Culture.

THE CULTURE OF CARP.

THE widespread interest manifested in the culture of this fish since its introduct. I fish since its introduction by the U.S. Fish Commission is so great that we are certain that our readers will find the following letters from Mr. Rixford and Herr von Behr, the well-known President of the Deutsche Fischerei Verein. who has done so much for fish culture in Germany, of great interest.

Although we have many fish which excel the carp as a table fish, yet we believe that its introduction will prove of the greatest value in those portions of the country where the warm waters produce nothing edible, and that we could with more profit dispense with any other fresh water fish, outside of the whitefish of the lakes, than the carp, speaking from the fishculturist's and an economical point of view : for there is no fish which in confined waters will turn out so many pounds of food as the carp, and its food costs little or nothing. Its rate of growth here has exceeded that in its native land and its introduction into American waters will prove to be worth a vast sum within the next ten years to our hog-eating farmers, who seldom get a fish dinner. With this preface we give the following correspondence:

RINFORD, Sumannee Co., Fla., Nov. 1.

\*\*Editor Forest and Stream: Your favor of the 23d of October covering a very interesting letter from Baron von Behr, came to me in due senson. It appears that I am indebted to you for this correspondence, as it was through the medium of the Forest ND STREAM that the Baron's attention was drawn to myletter to Prof. Baird, which you published, and I cheerfully send you a copy of his letter for your use, as well as a copy of my reply, which you can use or not as you deem best.

Geo. C. Rixford.

Schmoldow, in Pomerania (Germany), }

October 4, 1880,

Mu deur Mr Rieford :

It is after having read in Forest and Stream of Sept. 16 your letter about carp that I take the liberty of writing you me mics. I bave been receiving such manifold assistance from your

your letter about earp that I take the theerty of writing you some lines.

I have been receiving such manifold assistance from your countrymen in my fisheultural interests, that I am glad to be able, perhaps, to assist you, though, of course, Prof. Baird will have furnished you with the most needed hims.

I dare say earp will delight in the climate of Florida. They are a fish liking warmth before all, and therefore retire in my climate (Northern Germany) from October to May, into the deepest possible mud in the ground of our carp lakes, and seem to slumber there in entire apathy. They spawn with us in May, June and July, the special time depending entirely upon the warmth of the water. We are of the opinion that they need for spawning something like 15 deg. Reaumur\*. All this is rather superfluous for you, but now I may be able to give you good hints.

We put branches of different trees—evergreens or others—in the pond a short time before hatching begins, fixing one end of the branch in the soil, and leaving it swing in the pond some inches below the surface. As soon as the carp begin to spawn they fix their glutinous (adhesive) eggs in innumerable quantity upon the branches we had put in, but alast at the same time Mr. and Mrs. Carp begin to ent eagerly their own eggs. It is only in consequence of the immense quantity of eggs they spawn that the carp is as plentiful as it is. But as for your country, which wishes to get quickly great quantities of young carp, you could make no better arrangement Han to take out, after seeing the branches overed with eggs, either these branches (transplanting them in a tub of water in order that the eggs do not get dry) and bring them to a neighboring pond, quite empty of other fishes, or take out the old carp altogether from your spaxming pond and leave this alone to the young ones, which after a short thur will swarm there by ifamy thousands, and very soon begin to take food of any kind, say cooked potatoes or bread. By giving bread containly my chiefuleren got our carp soo t

they would come and cat mean from their manner. Let yew yers tame indeed.

The best plan is to have many ponds for the carp all of them being arranged in such a way that they can be made entirely dry. That gives you the possibility of having the carp divided according to their ages—say of one, two, three or four years.

At four years they will grow in your climate to about ten pounds easily. You know that in rare cases we have carp of thirty or forty pounds, while it is nothing unusual to have them up to twenty pounds. If you read German, or have anybody who understands this, my language, I could send you by care of Prof. Baird some books about earp, their breeding and nursing. You know that the Greeks (Aristotle), and 4d Romans know this. They came from Italy to Germany by care of Prof. Barra some books about carp, their breeding and nursing. You know that the Greeks (Aristotle), and old Romans knew this. They came from Italy to Germany in the eleventh century—of course by the monks who were the great protectors of fishes.

In the ponds which contain your carp of two, three and four contain will de gridely be seen with them.

In the ponds which contain your carp of two, three and four years you will do wisely to keep with them a few voracious fishes as Eswa (pike), or similar ones. This seems to prevent their desire to spawn, and therefore assists their quick growing. This principle is generally followed wherever we have large carp culture in Germany or Austria (Bohemia). Beware of having other fishes of a similar faulity in the same pond with your carp—the crossing gives very bad fishes full of homes and of had test. of bones a d of bad taste

of bones and of fad taste.

Now this, my letter, may go. If it reaches you I hope you may find it of a little use. I finish as I begin. I got such kind assistance from your countrymen that I shall be very glad to be useful to you. Newspapers make now in a few weeks le turn de monde. Let everybody try to make use of

<sup>\*</sup> About 66 degreesFahrenheit.

them, and be of use through them to mankind. "Good will to Nations" is a beautiful duty. I subscribe myself,

President of the German Fisheries Verein.

RIXFORD, Fla., Nov. 1.

President of the German Fisheries Verdin.

Boron ron Behr:

My Dear Sin, —Your letter under date of the 10th of October, was forwarded to me through the courtesy of the Foirser And Signal and reached me in due season. Allow me at the outset to express my hearty thanks for your kindness in writing me, as well as for the valuable information you have given. My carp (which are of the scale variety) continue to thrive splendilly, and are a marved to all who see them—especially those who saw them when I first procured them in November last, when they were only about three inches long—and who now compare them. Many of them are from fifteen to seventeen inches in length, and six to seven inches long—and who now compare them. Many of them are from fifteen to seventeen inches in length, and six to seven inches in breadth. They show no signs as yet of going into winter quarters, coming for their food regularly, and I hope to be successful in carrying them through the cool weather without their resorting to the old habit. I find our natural ponds are not exactly fitted for them, as they are generally inhabit them, which were better destroyed, as they will likely feed upon the eggs. Turtles are also plenty, but we must do the best we can to destroy the pests.

Your information that the carp devour their own eggs was new to me, and has sugested the idea to me that possibly at that time they need a different variety of food, and I shall about that time change it to one composed more of meat. At the same time I can protect the bushes on which they have deposited their eggs from their depredations by a wire fence. I expect they will spawn in the early spring, say March or April. I will be much obliged to you for any works on their culture that you may send me, as I have friends who will take pleasure in translating them for me, and the publication of them may benefit others who have the fish in other particus of the country. Vou will. I am sure, pardon me for the liberty I have taken in sending a copy of you letter to the Foie

GEO. C. RINFORD.

#### THOSE RANGELEY SPAWNING TROUT.

PORTLAND, Me., Nov. 13.

Editor Forest and Stream:

In Forest And Stream of Nov. 4, a correspondent ("Fair Play") writes of Rangeley Lakes as follows, in criticising a mode of bait fishing that he advertises to the uninitiated as being very deadly, etc.: "Parties who had permits to fish out of season, granted them by the Fish Commissioners in five days took over fifty breeding trout, weighing in the suggregate over two hundred pounds. Every fish was taken off the spawning beds, and no man can say how many young trout, which would have aided in the restocking of that great fishing resort, were destroyed by these captures." Editor Forest and Stream:

suggregate over two hundred pounds. Every fish was taken off the spawning beds, and no man can say how many young trout, which would have aided in the restocking of that great fishing resort, were destroyed by these captures."

Lest "Fair Play" misapprehends the facts and by his strictures mislead others in their inferences I will state briefly that the taking of those fish was in no sense a matter of sport but of business. The fish taken under permits from the Commissioners were kept alive until ripe, their eggs then taken, impregnated, and placed in a hatching house, and from those eggs will be produced ninety-five per cent, yield of young front instead, of a probable increase of less than ten per cent. In the fish bred naturally, leaving the majority of their eggs unimpregnated and only such of the balance as escaped destruction to hatch young fish that would be exposed to all their natural enemies during the first few weeks of their existence, when they are so helpless. But it seems idle to repeat what is presumed to be well-known to "Fair Play" and all the readers of Forest axos Stream. In taking fish for the purpose of artificial propagation it is impracticable to depending on the fish without and the fish for the purpose to take the fish without an injury and release them alive after the eggs are taken.

The Commissioners realizing fully the great evil that would result in any abuse of our permits for this purpose use all precaution to intrust the business to honorable men. We must of necessity depend upon the noblesse oblige of the holder of a permit to guard against any possible abuse. My colleague, Hon. E. M. Stillwell, and myself visited Rangeley Lakes early in October, and finding that many of the fish then being taken at Rangeley Stream were "spent," laving deposited their eggs ere caught, we instructed Messrs. Sinaley and Henry to sulfer no further delay but to earth the desired number of fish in the most expeditious manner, authorizing the sold of a net for the purpose.

At the upper dam a fine t

hatching house.

inken as fast as they became ripe, and placed the eggs in the latching house.

We have no reason to believe that any permits have been abused, and regarding the holders of the only permits granted this year as sportsmen and gentlemen we must rely upon their honor that the work shall be so guarded and conducted as to accomplish all the benefits sought and protect us from incurring the abuse that so often is the only recompense received for our efforts to benefit the public.

Should there ever be any wrong committed under the cover of permits granted by us for this important work of fish culture it is within the province and duty of every sportsman and citizen to bring to our knowledge the facts. But we cannot act upon mere insinuations, nor prosecute violations of the law upon charges unsupported by evidence.

We regard our permits as sufficiently guarded and explicit in their stipulations, and as this is public business all the details are open to public knowledge. Permits to take Irox the control take lake salmon in Dobois stream and adjacent waters for a similar purpose was granted Harvey Jowell, Esq. The conditions of these permits require that "the fish

shall be returned alive to the waters whence taken and none destroyed for any purpose," and that "the eggs shall be properly taken from all such fish and hatched. Furthermore, "no eggs or young fish shall be disposed of in any manuar except by and according to the written direction of the Commissioners,"

except by and according to the written direction of the Commissioners.

Under our present laws it lies within the power of my person to bring offenders to justice, and those interested in the enforcement of our fish and game laws should bear in mind that an officer is powerless as regards prosecutions unless there is evidence to accompany complaints. To your correspondent. "Bangor," who dates his letter at Mopang Lake, we would say that we had no funds to comploy a special officer to go to the locality mentioned, and we cannot find one who will devote his services to such work solely from a public spirit to do good. The Commissioners had absolutely no more power in the case referred to than "Bangor" himself, nor even as much if he has evidence to prove his assertions in regard to violations of the deer law. We do not have the power of arrest such as is held by wardens or police officers, and could not even obtain a warrant on complaint without having in our possession enough evidence to nt least show "probable cause" or conviction on trial.

Our duties are too multifarions and continuous to permit personal service as wardens or constables, but we will personal personal service as wardens or constables, but we will personal by necessary ampropriations, are created for the use of the first part of the present the necessary ampropriations are created for the use of

sion.

If the necessary appropriations are granted for the use of our Department of State we can have at our command an organized police force with which we can respond to good effect to specific complaints, and have the means to employ special service whenever and wherever it may be needed, and make justices swift and sure. We regret to say that there is much work left undone, but we have truly accomplished a great deal with the few tools at our command. With a more complete equipment we can accomplish still more in the future. We have the will and know the way. Furnish us the means.

This plain and straightforward explanation by Commissioner Smith must certainly convince our correspondents that there has been some error on the part of their informants, or that they did not get at all the facts. The commissioners are evidently doing their best to increase the fishing - 181 -

THE CULTURE OF THE SUN-FISH, -We learn that Dr. J. J. Seeley, of the "Water Cure," Cleveland, O., has a pond devoted to the little fish which bears the above popular name. The pond is an aere and a half in extent and the quantity of 'pumpkin seeds" in it is said to be considerable. Whether he "kivers" it in winter or not our informant saith not. The "sunny" is a lively little fellow, i' faith, and a handsome, and the Doctor takes pride in him. Well, he was our first love when we courted him with a pin hook, and many a spanking from the maternal slipper he brought for luring us to the muddy mill pond, to the complete demoralization of trousers. Ah, me! So long ago, and yet but yesterday.

Mons Carp for Distribution.—The demand for this fish is increasing from all parts of the country, and for the first time the U.S. Fish Commission has been able to meet the demand. They have been sent all over the Southern and Western States, as well as to the East and Camada. Mr. E. G. Blackford, of Fulton Market, New York, is the distributing agent for the East. His first lot were all called for, and this week he has received from Professor Baird twelve hundred more. Persons in adjacent States wishing a few may apply to him. Dr. E. Sterling, of Cleveland, O., bas also received twelve hundred for distribution to applicants in his State.

Carp for Onio—Clereland, O., Nor., 6.—We received here Monday, the 1st inst., 1,200 European carp through the Smithsonian Institution, of which Prof. Baird is the honorable guardian. They are being well distributed to the many applicants. The introduction of this cultivated fish I consider as one of the best works to the present time of the U.S. Fish Commission, and I doubt if Congress in the last ten years has done better work for the interest of the people than the appropriation it has made for the culture of fish and fish protection.

Dr. E. Sterling.

Fishways are being constructed in the Contoocook, at Hillsborough Bridge, N. H. Salmon fry were put into the headwaters of that stream two years ago.

# Sea and Biver Hishing.

GRAYLING FISHING IN NORTHERN MICHIGAN.

A VISIT TO THE STURGEON RIVER.

A VISIT TO THE STURGEON RIVER.

IN the latter part of July last there were encamped on the banks of the Indian River near where it debouches from Burt Lake, the following gentlemen: Messrs, Dunmead and Hubbard, from Columbus, Ohio; Prof. Franklin, of the Michican University; Mr. Keeney, of Cincinnaid, Ohio; the veteran steamboat captain and fisher, David Smith, of Cheboygan. It was agreed that after surfeiting ourselves with lake fishing, where we took captive scores of pounds of maskalonge, pickerel, black bass and perch, we should try our skill on the gamy heauties of Sturgeon River, which was said to be the best place for grayling fishing about these parts. The day fixed for the expedition was one of the most delightful of the season, and this to our inaginative minds was to be the rowning success of all our pleasure excursions. Getting all things ready, our pack wagon well stored with food for the inner man, and our camp equipage lashed to the box, we jumped into the boat that was to carry us across the river, and in a trice were landed on the opposite shore. Here we found our teamster and guide ready to move; our wagon that was to jumble us together over the woody road, made up in size what it lacked in show, and its seats were not overheading with ensilons or springs. We rode "on top," and experienced a kind of elevation that does not belong to the spritual order. It required all the dexterity of a circus performer to hold on to our seats, and frequently we found our selves occupying each other's seat when we least expected it. It was the roughest and most animated road I ever passed over, yet in this country it was called a good turaptike. After holding on for two or three hours and all tired with the effort I

of keeping our equipoise, we halted at an ice-cold spring to take a drink and catch a mess of grass-hoppers for bait, 'Finding our labors poorly compensated by individual running after and grabbing the little jumpers, we conceived the idea of the control of the control of an oscillation of the control of

THE MIGRATION OF EELS .- About this time, as the almanacs say, look out for a movement of eels from the mill-ponds toward salt water. All cels who pretend to any style at all think it necessary to spend the fall and winter months near the sea-shore, while the poor cousins go into the mud hoping that the neighboring catûsh will imagine that they are at Newport

or Nahant among the sea-serpents. The family occurving Esopus Creek, New York, have begun to move, with a few exceptions, who stay behind to see the mud turtles bedded down for the winter. In moving a sad accident happened which we publish for the benefit of other excursion parties of While leaving the mill-pond on the creek the advance guard by accident mistook the way and got into the turbine wheel of the grist mill of Jacob Freligh at Saugerties. and many were cut to pieces before the mass of bodies stopped the wheel. Many bushels of eels were killed or captured and their friends at the sea-side will await their arrival in vain.

A MANTIS SHEMP IN THE EAST RIVER. - Arthur Boyce. of No. 45 Whitehall street, one of our oldest readers, and a noted fisherman of the Black Warrior region, has kindly sent to this office for inspection what he and others regard as a very interesting nondescript. It was caught on the surface of the water, in the slip of the Hamilton Avenue Ferry, New York side. It was swimming apparently in search of food. Captain Peter Silvie, of the above named ferry, captured it in a scoop net on the night of Oct. 21. It proves to be a very fine specimen of the Squilla empusa, or Mantis shrimp.

This species of shrimp, though not common in our waters. occurs quite frequently. It is found along our Southern coast as far as eastern Florida. In countries where it is sufficiently abundant the squill is highly estcemed as food.

The specimen captured by Mr. Boyce is an unusually large and very fine one. It has been preserved in alcohol, and is at present at this office.

Another Big "Small-Mouthed" Bass-Cincinnati, O. ASCULER BIG "SMALL-MOCTHED" BASS—Clincinant, O., Oct. 31.—I nodice in your issue of October 28 an account of a black bass of 64 pounds weight. I also contribute a photograph, but whether of a small or large monthed bass I won't venture to say. The fish was caught at Middle Island, Lake Eric, in the fall of 1878, by a gentleman, a minister, I believe, of Indianopolis, Ind., and was the first bass he ever caught. The bass weighed 64 pounds, and was also short a lead sinker. Juo. S. Dollar, Put-in-Bay, O., can furnish direct testimony to the above.

Heavy Bass.

The picture is that of a "small-mouth black bass" (Microp. terns salmoides, and the weight given is exactly that of the one sent by Dr. E. Sterling; of Cleveland, and we now think it firmly established that this fish reaches a weight of 61 lbs. in Lake Eric, but whether it grows as large as that in any other water or not we cannot say, as before the two pictures were sent we doubted its ever growing above 5 lbs. We learn as we live, however, and may yet learn that other large and deep waters contain as large fish of this species. The other one (big mouth) grows very large, especially in Southern

The Arenovy—Philadelphia, Nov. 12.—Mr. John A. Ryder, in giving me the account of the eggs of the American anchovy referred to the silver sides, Chirostoma Notata, not to the so-called spearing, Engraulis vittatus.

We were misled by the common name, never having heard C. notata called "anchovy." It is known as "friar" and "sand smelt" in other parts, while "silver sides" is common to both fishes named and also to others. It is important to know what fish Mr. Ryder referred to, and we are glad to be

ENFORCING FISH LAWS IN NEW JERSEY-Red Bank, N. J. ENFORCEM FISH LAWS IN NEW JERSEY—Red Bank, N. J. Xue. 10.—A case of great interest to the people of the State, particularly to those engaged in the fishing business, has just been decided by the Supreme Court. An act passed April 5, 1873, prolibits the use of seine nets in the Shrewsbury and Navesink rivers. More than a year ago George Curtis, Fish Warden of Monnoult County, caused the arrest of Jehn P. Cooper for dragging a seine in the Navesink River, and at the trial before Justice Jacob Curlis, judgment was given in favor of the Fish Warden. Thereupon the case was removed on certiforar to the Supreme Court, which Court affirmed the judgment of Justice Curlis.

CATFISH TAKE THE FLY-Twin Lakes, Fla., Nov. 10-You CATISH TAKE THE FLY—Twin Lakes, Fla., Nov. 10—You have noticed two instances of catish taking the fly—I add a third. A neighbor fishing in the St. John's last season for bass with the fly caught a catish that rose finely. Now we have started this tibing I think "cats" can be educated.

Ducks tlying frequently within a week.

S.

THE SILVER BASS OF CANADA-Quebec, Nov. 11.-Inclosed Please find sketches of fish sent me some time ago, and in reference to silver bass you will see it is the fish you call white lake bass, or Rowers krippips, and is caught only in the Lower Provinces. Black bass are the only kind caught west of the Miramichi.

## Game Bag and Gun.

GULL ISLAND CLUB.

OR several years past certain members of the Jersey City Heights Gun Chib with others have taken their yearly trip to Southern waters in pursuit of swap, geese and duck As year by year the water-fowl seemed to decrease or go further South on account of the multiplicity of the shooters, a project often talked of and over by the above mentioned members has finally assumed tangible shape. The Gull Island Club was formed with the following officers and members: Ben Payne, President, J. C. H. G. C.; Livingston Gifford, Secretary, J. C. H. G. C.; A. Heritage, Treasurer, J. C. H.

Members.—T. Hall, J. C. H. G. C.; R. C. Johnson, J. C. H. G. C.; F. C. Cummins, J. C. H. G. C.; J. H. Van Gilder, J. C. H. G. C.; D. Toffey, J. C. H. G. C.; John J. Toffey, J. C. H. G. C.; Wm. B. Wheeler, J. C. H. G. C.; G. B. Eaton, J. C. H. G. C.; J. B. Burdette, J. C. H. G. C.; F. M. Thomson, J. C. H. G. C.; N. E. Nash, R. I.; Capt. J. Brown, R. I.; E. Z. Wright, Utica, N. Y.; F. Harrison, Newark, N. J. (Essex G. C).; R. Heinrich, Newark, N. J.

A committee with full power, consisting of Thos. Hall and N. E. Nash, was sent down last spring to Pimlico Sound; and Gull Island, noted for its splendid swan and geese shooting. was purchased. Gull Island, about one and three quarters of a mile long by half a mile in width, contains about 200 acres. The club also secured by deed over ten miles of marsh guarding all the points, including several small islands that are contiguous to Gull Island, making one of the finest shooting preserves for water-fowl and snine in the United States The laws of North Carolina amply protect property owners in the matter of shooting preserves. The club have erected a substantial club-house, and, 17th inst., Al. Heritage (jolly old "South Paw") and Capt. Johnson ("Ye Ancient Mariner"). committee, will ship by Old Dominion Line fifteen cots and mattresses, fifteen comforters and pairs blankets, two stoves (one large cooking and one office do.), together with ounned meats, hard tack and other provisions too numerous to mention, to say nothing about the ton and a half, more or less, of ammunition.

Capt. Johnson, Al. Heritage and Nash will start the last of next week for the island to get everything in shape for the rest of the boys, who expect to leave Jersey City, Dec. 4, for a three weeks shoot

'The club have moreover some 140 live wild geese decoys, that they purchased and are already on the property. Thirteen of the members will positively be on hand at the dedication of the new club-house. As your correspondent proas possible, the big stories told, the wonderful shots made and tremendous bags brought in you will probably hear of

Don't you wish you were going yourself .?

JACOBSTAFF,

#### PHILADELPHIA LETTER.

I was told by good authority this morning that there is a movement on foot by the members of the West Jersey Game Protective Association, residents of Pennsylvania and the former mentioned State, to try the experiment of importing from England a large number of English pheasants and liberating them in the five lower counties of New Jersey. I cannot see why such a project would not succeed under the management of this indefastigable society, as its members exercise a great influence over the farmers of this section of the State and many of the latter are a part of the association. I understand a subscription will be made for the purpose, my informant expressing his intention of donating. Should we be blessed with a mild winter following the importation of the birds, and it be succeeded by a favorable batching sesson and a stringent law protecting them for five or ten years be passed, we have no doubt that success will follow the efforts of this model association of sportsmen.

follow the efforts of this model association of sportsmen

The English pheasant is in a measure soon domesticated and will readily be drawn to the barn of the farmer for food in severe winters, and if the proper means be taken to thoroughly interest this class of the community in the enterprise much can be gained in this way for the protection of the

Sportsmen who were at Havre de Grace last week and those who are there at this writing are having great sport duck shooting. The bulk of the fowl being killed, however, are red-heads and black-heads, very few canvas-back having yet come on. Shooting, you know, is allowed on the flats at this point only every other day, as the machines or batteries being moored or anchored directly on the feeding grounds, would soon have a tendency to keep the ducks from visiting hem at all if prosecuted every day. As it is the number of canvas backs at Havre de Grace is diminishing every year. We beard of one hundred and twenty-five red-heads and black-heads being killed there in one day last week by one sportsman and his attendant.

We were shown this morning a very remarkable Irish setter dog, the property of our mutual friend Mr. John S. Davis, of Philadelphia. Dash, the youngster in question, was sired by Mr. D.'s Glenn, so well known on the snipe meadows in the neighborhood of Philadelphia. rus. Sportsmen who were at Havre de Grace last week and thos

of Philadelphia. Dash, the youngster in question, was sired by Mr. D.'s Glenn, so well known on the snipe meadows in the neighborhood of Philadelphia, and was broken by John Rickhardt. The dog is of a beautiful deep red, handsomer, I think, than his sire, and as Mr. Davis tells me wonderfully staunch at his point and as firm a dog to charge at the report of a gun as he ever saw. Mr. Rickhardt, his breaker, still uses a muzzle-loader and insists upon all his dogs remaining steady after fring until he has leisurely re-charged. All his setters and pointers are as firm. Does not the fact of his use of a muzzle-loader account for the steadiness of his animals? Pive years ago your correspondent wrote his views on this subject, and as practical illustration here presents itself the article will be reproduced.

article will be reproduced.
"It was remarked to me a few days ago by a prominent

sportsman of Philadelphia that since the invention of breech-loading shot-guns we have fewer steady dogs at the charge than before, and the reason given was that the reloading of the breech-loader took such a short time the dog naturally became more careless on account of the brief space required of him in which to remain with the gun before advancing; more so also from the fact that the sportsman himself anxious to make a large bag moved forward at once as soon as he had recharged. In old times when we used the rannrod it took some minutes before the sportsman was in readiness, and during this time his dog remained charged and steady until his master had reloaded. This practiced him in obedience and staunchness. In conclusion my friend said to me, 'Marsk what I say, and I wish you to note it, the man that still ness a muzzle-loader has the best trained dog.' I confess I scereason in what my friend said, but do not know why one cannot be particular in this branch of the dog's tuition and be more on his guard to have his dog obey. It is a common fault in the hurry of the moment and the excitement of behag among a beyy of qualt, to push forward too quickly after sportsman of Philadelphia that since the invention of breechnow now ou ms guard to have his dog obey. It is a common fault in the hurry of the moment and the excitement of being among a bevy of quail, to push forward too quickly after killing a bird and paying little attention to the dog, now that we can reload so speedily. Our four-footed companions in their eagerness are ever ready to take advantage of the filterty unintentionally given them and forget gradually that part of the education which is so necessary to good sport and success in the field. I find a great many of my friends are breaking their dogs to come in before charging, and they give me as a reason that in cripple shooting, woodcock shooting and the like it is far better to have your setters come to you and charge that you may know where they are before starting them for fresh game. I do not see the utility of the method especially in the case of a retrieving setter or pointer, for in the usual manner of breaking your dog charges at the report of the gun and remains so until he is ordered to seek and bring the bird to you."

Since writing the above I have had many proofs of the correctness of my feinder stone.

the above I have had many proofs of the Since writing the above I have had many proofs of the correctness of my friend's views, but I would not have it understood that I deery the use of the modern breech-loading shot-gun. Their invention, however, should make us all the more careful that our dogs are not lost sight of and are kept in as full subjection as in the days when the shot pouch and powder horn were carried to the field.

I am rapidly becoming a convert to the English style of breaking, rever to allow a field dog to retrieve. There are, I know, many opponents to this system, but say what you will, a setter will become unsteady eventually if he is permitted to touch a bird at all.

### THE LONG ISLAND TRAPPED BIRDS.

Editor Forest and Stream :

Editor Forest and Stream:

In the Forest and Stream of November 11, 1880, appeared an anonymous article entitled "Trapped Quail" and signed "A True Lover of the Sport." It was in substance a charge by the writer that a regular business of trapping quail and of the sale, possession and transportation of trapped quail existed on Long Island. It implicated the employees of the Long Island Railroad.

The Long Island Sportsmen's Association, including most of our leading clubs, stands pledged to prosecute all such infringements. We cannot play the part of detectives. We protest against the prevalent custom of making sweeping charges without an iota of proof to suppoir them. We denind a pseudonym and have not the maniliness to turnish a responsible name.

We demand that your correspondent immediately furnish us sworn evidence of the graye charge made by him or that

We demaid that your correspondent immediately furnish as sworn evidence of the grave charge made by him or that he forever hold his peace. We will guarantee him exemption from expense. He has rushed into print with full knowledge of the existence of this Association, instead of visiting any of our officers, and we believe his notive was mere covert notoriety and a desire to abuse rather than assist us. We respectfully request henceforth that you publish no anonymous charges against this Association, which you certainly know to be unfounded, but on the contrary that you will insist upon printing the true name of your informant as an evidence of good faith and a duty to us.

By order of the Standing Game Law Committee of the Long Island Sportsmen's Association.

ABEL CROOK.

Авкі. Скоок. Secretary L. I. S. A.

The request that the necessary evidence upon which to base an action be furnished is certainly a fair one, and we trust that it may meet with the proper response. As to the "unfounded charges," we may be allowed to suggest that so long as the illegal traffic in trapped birds, now alleged to be carried on along the line of the Long Island Railroad, is not stopped, criticism of game societies is both well-founded and legitimate. Nor can game societies ever hope to accomplish much if they are content to wait for the information volunteered by outsiders. They must "play the detective" them-If the Long Island Sportsmen's Association are not prepared to adopt the initiative in such action, we prefer to ascribe this to some other cause than their failure to recognize the propriety and necessity of their undertaking this kind of We know that the Association is young, and not vet, perhaps, in trim for solid work; and for that reason it may demand reasonably that its character be not hastily prejudged. It has an extensive field of effort before it, and are quite confident that the Association is now in the guiding control of men who properly appreciate what a true game protective society should be, and who must ultimately give character to the society.

Losg Island Teappen Birds—New York, Nov. 13, 1880.—Edibor Forest and Stream: In reading your editorial of the 11 inst., in regard to my letter Nov. 6, 1880, one might infer that I conveyed you the idea that the employees of the L. I. R. R., were all willful law-breakers. In justice to those men I would say, that they not being shooters themselves and not knowing trapped game from shot game, might morally be as innocent as you or I. They have game offered to them cheap and of course take advantage of it. But let them be stopped from buying or selling game on their train and this will all cease. My letter was intended more for the farmers and their boys who really are the guilty parties. I also notice that in my letter I forgot to insert the word rabbits, when I wrote that the boy hands in from one to six quall or part. I wrote that the boy hands in from one to six quail or part-ridges. It should have read, from one to six quail, partridges or rabbits, as the case might be. By inserting the showe you will oblige A TRUE LOVER OF THE STORT.

#### SHOOTING IN VIRGINIA

WYSELF and Dr. Talbot left Pier 42 on the Old Dominion TYSELF and Dr. Talbot left Pier 42 on the Old Dominion Lineship Manhattan—Captain Kelly and Purser Llewellyn, by whom we were treated elegantly. Seen off of course by some Fountain Gun Club boys in their usual manner. Arriving in due time at Norfolk, Va., we went from there by cars to Belfeonte, Nothaway Co., Va., where we were received by our kind host, Captain Taylor, formerly of the Forest And Strekan staff, a right good sportsman and a pleasant companion. Getting dogs, baggage and ourselves in shape, we started for Taylor's Retreat, five miles from the depot, where we put our traps in order for the fray. Monday, on quali, three runs bagged forty-twy. Tweeday two curs. hithy we put our traps in order for the fray. Monday, on qualt, three gams, bagged forty-two. Tassday, two guns, thirty-seven. Wednesday, raining nearly all the day, two guns, twenty-seven. Thursday, seventy-three head of game over two guns. Friday, fifty-four and Saturday thirty-seven ducks,

etc.
We left for home Sunday night, 5:50, arriving at Norfolk We left for home Sunday night, 5:00, arriving at Norfolk that night, and the next morning went on board the ship Brenkwater. Captain Gibbs, a thorough sportsman, who kindly gave us a few homes shooting with the engineer Larfand, on Major Mulling's plantation, where we bagged seventeen qualt, or "right smart gangs of partridge," as the term is in Virginia.

reached New York Tuesday night well satisfied with

in Virginia.

We reached New York Tuesday night well satisfied with eur trip, which we enjoyed much.

In reference to the country, game and people I would say the country is fine open plantations of tall grass, wheat or ray wheat and cotton, surrounded by vast pine forests. Deer and turkeys can be shot, but require time and patience. Deer are shot on runways by the use of hounds. Turkeys are first flushed by a dog, then a blind is built where the gunners are concealed, and when the turkey begins to gobble he is answered until close enough for a shot. The qualific, generally speaking, close to the pines into which they go "tript samrt," sometimes alighting in the trees, and of course sportsmen well understand it is useless to try to do may thing with them on such occasions. When, however, they go to the open fields then they begin to collect in the bag. The birds are full grown and ify fast. Most of the grounds are posted, but permission can generally be had by asking for it and by behaving like gentlemen while on the grounds. As far as we were concerned we were used with the very best, and both Dr. Talbol and myself returned all our sheere thanks for the generous hospitality showed us, not forgetting Handy, our guide, who is a character. His "Look out dar! there goes Old Tlate," was side-splitting. Old Aunt Mary was always beight with the sportsmanlike surroundings.

In conclusion would say to sportsman they can find good.

ings.
In conclusion would say to sportsman they can find good quail shooting in any direction from Norfolk at a moderate SMOKE.

#### THE CHASE: ITS HISTORY AND LAWS.

BY THE LORD CHIEF JUSTICE OF ENGLAND.

A T a time when Parliament has recently been occupied with an important modification of a portion of the law relating to game, it may not be uninteresting to pass in review the leading incidents in the history of the chase, and the laws which have regulated its exercise or determined the laws which have regulated its exercise or determined the extent to which property could be asserted or acquired in the wild animals which it is beyond the art or foreign to the purpose of man to domesticate.

From the carliest ages of man's history, the chase has been one of the havorite as well as one of the necessary occupations of mankind. Abut has been a lumier from the beginning. The state of the hunter must have preceded that of the slopherd; it must equally have preceded that of the tiller of the soil, which was probably of still later date than that of the slepherd. In the early stages of his existence man must in a great degree have depended for food on the animals he was able to eapture; and though the facility with which certain kinds of animals could be brought under his dominion might give rise to the pastoral state at a comparatively early period of human existence, yet he would have to wage war with the leasts of prey for the protection of himself and his belongings.

beasts of prey for the protection of himself and his belongings.

Ilow, in the beginning, without weapons, or such only as modern discoveries have shown him to have possessed for ages, man can have succeeded in defending himself against the flererer animals, or in capturing even the least active of those which served him for food, while in their wild and undomesticated state, it is difficult to imagine. Yet his cardiest implements have been found in connection with the hones of the lion and bear and other beasts of prey, as well as with the remains of the animals which has served him for food. It was not till after the lapse of ages that, in addition to or superseding those of stone, implements of wood and bone—the harpoon, the lance, and lastly the arrow—the sinews of the shaughtered animals serving for the bowstring—enabled man like better to supply his wants or to cope with his natural enemies. The domestication of the dog—the animal the most readily attaching itself to man, and in all ages the willing instrument and ally of the hunter—which most probably preceded that of any other animals—would tend materially to improve the position of man with reference to his power over the nimals by which he was surrounded. The instinctive habit of the dog, and other animals of the canine race, to hunt in packs, would be observed by man, and after a time would be made available for his purposes.

The domestication of the animals canable of being tamed.

inade available for his purposes.

The domestication of the animals capable of being tamed inade available for his purposes. The domestication of the animals capable of being tamed, and thus rendered subservient to the purposes of man, would be the next step in the conward march of human progress. The cultivation of the soil, and the systematic raising of the cereal products which form so essential a part of man's nour-ishment, would be an equally important incident in the history of mankind. But neither the pastoral nor the agricultural condition would supersede the calling of the hunter, though it might diminish its importance. The flesh of the wild animals in for the nourishment of man would still form a valuable article of food—not the less so on account of its avery character—and their skins would be useful for clothing. Above all it would be necessary for the protection of the domesticated animals, as well as for that of man himself, that the number of beasts of prey should be kept down as much as possible. Happity, the discovery of the metals, and their use in the fabrication of weapons, which doubtless had its origin in the East, as well as the manufacture of the net, perfected by the invention of twine and cord now substituted for ruder materials, placed the hunter in a more favorable possible of warring with his four-footed enemies. The paramount importance of this warfare could not fail to be appreciated. It is in the primitive period of the world's history

that so much admiration and respect attaches to the character of hunter. It was the duty of the chieftain of the tribe—or, when tribes had grown into a people or nation, of the king—second only to that of heading his warriors and defending his subjects against their foes, to hunt down the wild beasts, which, next to the external enemy, were the terror of the peaceable and industrious inhabitant. Hence, in the legendary hero the character of hunter is commonly associated with that of warrior. The legendary Nimrod is not only a 'mighty one in the earth,' but also a ''mighty hunter before the Lord.'' The fabulous Nimus was as renowned as a destroyer of wild beasts as he was a conqueror. The legendary heroes of Greece, of whom Xenophon gives a long list, were all renowned as hunters. He suggests that their merit as such may have contributed as much to procure for them the character of heroes and the admiration of mankind as their other exploits or virtues. ''A conqueror and founder of an empire,' says Mr. Layard—herein corectly expressing the sentiments of the ancient world—'' was at the sume time a great hunter. His courage, wisdom, and dexterity were as much shown in of the ancien window was to be sure the a great numer. His courage, wisdom, and dexterily were as much shown in encounters with wild animals as in martial exploits. He rendered equal service to his subjects, whether he cleared the country of beasts of prey or repulsed an enemy."

The keeping down the number of the beasts of prey, as one

country of beasts of prey or repulsed an enemy."

The keeping down the number of the beasts of prey, as one of the duties of kings and rulers, appears to have been fully recognized from an early period, at least in the Eastern world, where the fiercer and more destructive forms of animal life were unhappily far too abundant to be consistent with the werfaire or safety of man. The frequent representations in the Assyrian sculptures of hunting scenes, in which the king is the principal actor, is very justly referred to by Mr. Layard as a proof not only of the chase being deemed the fitting occapation of a king, but also of the high estimation in which it was held by the principle actor. Assyria the sculptures of the galaces of Mineveh and Babylon, made known to us by Messrs. Layard and Botta, exhibit, in all its energy, the royal sport of some thirty centuries ago, when a king of Assyria or of Babylon went forth to give battle to the monsters of the forest or the plain. In the Assyrian bassreliefs the king is represented, when hunting, as in his warchariot, well furnished with arrows, darts and spears, and as accompanied by warriors fully equipped for fighting. The same thing took place in the neighboring kingdoms. We are told by the Greek writers that in Persia the kings went out on such occasions at the head of a large force, as on a military expedition, the march spreading over a considerable extent of country, and sometimes occupying several days. Xenophon describes a Persian king, when you forth on such an experi expedition, the march spreading over a considerance extent of country, and sometimes occupying several days. Xenophon describes a Persian king, when going forth on such an expedition, as accompanied by half his guard, each man fully armed as if he were going into battle. Kings and great men were proud to have the fact that they had been hunters and slayers of lions and wild beasts inscribed on their monuments. Darins is said to have desired to have it stated on his tomb that he had been an excellent hunter, as well as a steadfast friend and goodhorseman, audone to whom nothing had been

But hunting was not confined in these countries to kings But hunting was not commen in mess countries to sings or their attendants, or to the pursuit of the more ferocious animals alone. Game was abundant, and the love of the clase universal. Mr. Layard is supposed to ascribe to the Assyrians the first establishment of the inclosed parks, which at a later period were maintained on so extensive a scale by the Persian kings and great men. In these parks game of at a later period were maintained on so extensive a scale by the Persian kings and great men. In these parks game of every description was preserved for the purpose of sport—according to Greek writers, lions, tigers, and other heasts of prey, as well as ordinary game. But this may well be doubted, as the destruction of the other animals, if shut up with the beasts of prey, would have been such as in a very short time to leave nothing but the latter. When, therefore, lions and tigers are represented as being hunted in these inclosures, the probability is that, if this took place in fact, the animals had been captured and purposely introduced, with a view to their being forthwith hunted and killed. In a series of bass-reliefs, discovered at Kouyunjik, and now in the British Museum, the king is exhibited hunting jons, which are turned seum, the king is exhibited hunting lions, which are turned our of eages in which they have been brought to the hunting grounds. That at a later period wild beasts were taken alive for the purpose of being afterward killed is, of course, a

well-known fact.

The Babylonians appear to have been as keen sportsmen as The Badylomain appear in the Assyrians. We now know from the modern discoveries that the walls of their temples and palaces were ornamented with pictures and sculptures representing the class; and similar subjects were even embroidered on their garments.

with pictures and sculptures representing the chase; and similar subjects were even embroidered on their garments. As appears from the bass-reliefs, the animals hunted were, besides the beasts of prey, the wild bull, the wild ass, the boar, the different kinds of antelope and deer, the wild goat and the hare. The game, if it escaped the arrow of the hunter, as caught with the lasso, or driven into the nets-and so taken, or was run down by large and powerful hounds. Like their Asiatic neighbors and congeners, the Egyptians were ardent followers of the chase. Lion-hunting, we are told by Sir Gardner Wilkinson, speaking from the representations on the tombs, was a frequent occupation of the kings, who were proud to have their success on such occasions recorded. Anumoph the Third boasts of having destroyed no less than 102 head in one battue. Ethiopia, in which lions abounded, was the principal scene of this sport, but lions were also to be found in the deserts of Egypt. Atheneus mentions one as having been killed by the Emperor Hadrian when hunting in the neighborhood of Alexandria. According to Sir Gardner Wilkinson, the kings sometimes went far to the south in the pursuit of elephants. He does not mention whether any representation of an elephant hunt is to be found on the monuments. The taste for hunting Sir Gardner wilkinson, and elephant hunt is to be found on the monuments. The taste for hunting Sir Gardner wilkinson, and a leases. The aristonary had their parks for preserving game in the valley of the Niley which though on a less excusive scale than those of

found on the monuments. The taste for funding Sir Gardner tells us, was general with all classes. The aristocracy had their parks for preserving game in the valley of the Xile, which, though on a less extensive scale than those of their Asiatic neighbors, were still sufficiently large to enable them to fully enjoy the sport.

The animals they chiefly hunted were the hare, the gazelle, the stag and other deer, the wild goat or ibex, the oryx, the wild ox, the kebsh or wild sheep and the porcupine. The ostrich too, was pursued for the sake of its plumes, which were highly valued by the Egyptians.

One form of sport in which they indulged was that of pursuing the game with dogs, which, however, do not appear to have been used on such occasions for the purpose of inding the game, but were kept in slips, ready to let go as soon as the game was started. If the dogs succeeded in catching the animal, well and good; but generally their speed was not trusted to alone, though this might sometimes be done. Usually the sportsman followed in his cluriot, and, urging his trusted to alone, though this might sometimes be done. Usu-ally the sportsman followed in his churiot, and, urging his horses to their utmost speed, endeavored to intercept the ob-ject of pursuit, or to get sufficiently near as to be enabled to use his bow with effect. When the nature of the becality pre-vented the use of the chariot, the lumter, taking advantage of

the sinuosities of the ground, endeavored to get within reach of the game as it doubled, and to bring it down with an arrow. The horned animals of the larger kind, such as the they, oryx or wild ox, if wounded only, sometimes turned on the hounds, and required the spear of the hunter to dispatch

Sometimes, especially when they wished to take the ani-

them.

Sometimes, especially when they wished to take the animals alive for the purpose of placing them in the parks, they caught them with the lass or noose, in the use of which be Egyptian huntsmen appear to have been extremely skilling, throwing the noose around the neck of the gazelle or der or over the horns of the wild ox.

It may not be uninteresting to observe that while the Egyptians had several varieties of dogs—some of them clusen, Sir Gardner Wilkinson slyly observes, "won the present day for their preculiar ugliness"—probably the pet dogs of the Egyptian ladies—the hound, as, e. g., exhibited in drawing 236 of Sir Gardner Wilkinson's work, has, as with us, it peculiar and unmistakable characteristics. The hound in the Egyptian painting would give one the idea of a crossbetveen the English harrier and foxhound, though perhaps a lifteralter and longer than the former and lighter than the late. The head is unmistakably that of the hound. The kings and great men sometimes hunted with lions tamed and trained, as the cheetabs are in India, expressly for hunting. In No. 240 of Sir Gardner Wilkinson's drawings is the representation of a lion, with which the chasseur is hunting, and which has just seized an ibex.

When sport was desired on a larger scale than could be beful the country of the state of the characteristic cycle, of electric deserts. When this was to be done a considerable except.

ma just seized an ibex.

When sport was desired on a larger scale than could be her
in the immediate vicinity of the Nile, where the land was enity that the immediate vicinity of the Nile, where the land was enity and thickly peopled, it was sough in the neighbories
deserts. When this was to be done a considerable extent of
ground was inclosed by nets, into which the animals were
driven by beaters, the place chosen for fixing the nets being
if possible, neroes narrow valleys of torrent belong, lying beween rocky hills. In the Egyptian paintings these long reis
are represented as surrounding the space in which the hin
is to be carried on. The net need for this purpose is thus tescribed by Sir Gardner Wilkinson, and the description, see
responding as it does with that given by Xenophon, may be
taken as perfectly describing the nets in universal use in the
ancient world. "The long net was furnished with sectoropes, and was supported on forked poles, varying in longle
to correspond with the inequalities of the ground, and we a
contrived as to inclose any space, by crossing hills, valleys, o
streams and encircling woods, or whatever might present
self. Smaller nets for stopping gaps were also used; and
circular smart, set cound with wooden or metal nails, and it
tached by a rope to a log of wood, and used for catching der,
resembled one still made by the Arabas. "Being Husinelose,
the game was started by beaters with dogs, the sportsmentstoring so placed as to waybay the animals or toget wildin race
of them with the bow. A spirited sketch of a chase in bidesert of Thebaid, copied by Sir Gardner Wilkinson from a
tomat a Thebess, gives a vivia representation of such a baneing scene. Hares, deer, gazelles, wild oven, the Bex, acoryx and ostriches, together with foxes and hyenas, purend
by hounds, are dashing at full speed across the plain, while
the midst of them is a porcupine who is taking things rey

Not less striking than their hunting was the fewling of the

which they could be taken. The peacher appears to have been unknown.

Not less striking than their hunting was the fowling of the Egyptians. The lakes and marsh-lands of the Delta, ast the recely marshes which in many places line the banks of the Niel, have ever been the resort of innumerable wild took Hence fowling appears to have been a general pursuit. The professional fowler, who followed it for his livelihood, and nets and traps; but the sportsman brought the bird-down with the throw-stick—a stick made of heavy wood, from a foot and a quarter to two feet in length, and about an and and a half in breadth, slightly curved at the upper end, and which, being flat, and thus encountering but little resistance from the air in its flight, could be thrown to a distance, unly when thrown by a dexterous hand, with considerable acce we for the paptrus as noiselessly as possibe into the reeds, the height of which conocaled their appears in the reeds, the height of which conocaled their appears, in the receipt in prints made of the paptrus as noiselessly as possibe into the reeds, the height of which conocaled their appears, in the receipt in the result of the paptrus as noiselessly as possibe into the reeds, the height of which conocaled their appears, in the receipt in the result of the paptrus as noiselessly as possibe into the reeds, the height of which conocaled their appears, in the receipt in the result of the paptrus as noiselessly as possibe into the reeds, the height of which conocaled their appears to he receipt a protect of the paptrus as noiselessly as possibe into the receipt and the receipt and the receipt and the receipt and the receipt and the receipt and the receipt and the receipt and the receipt and the receipt and the receipt and the receipt and the receipt and the receipt and the receipt and the receipt and the receipt and the receipt the receipt and the receipt the receipt and the receipt the receipt and the receipt and the receipt and the receipt and the receipt and the receipt and the receipt an pursued as an anusement, or on an extensive segret of Asyria. The prohibition as to eating the field certain animals, as the wild swine, the large and the onst elsewhere the objects of pursuit but forbidden by the destalway, no doubt on the supposition that their flesh was wholesome to man—though we are at a loss to see why flesh of an animal which chews the end but does not do the hoof should necessarily be unfit for man, and still as

so to account for the lawgiver having fallen into the mistake so to account for the lawgiver having fallen into the mistake of supposing that the hare and coney were animals which chewed the cud—may have tended to check the practice of hunting, the pursuit of the hare and the wild boar, especially the former, forming generally so large a portion of the hunter's occupation. It does not appear from the Bible that the Jews availed themselves of the service of the dog in the pursuit of game. Possibly the prohibition contained in the seventeenth chapter of Leviticus against eating the flesh of any animal that had been form, may have led to the non-use of the dog, a serious drawback to the success of the hunter, and which would necessitate the use of the sare, the trap and the pitfall in substitution for the chase.—Ninetenth Gen-brev.

TO BE CONTINUED.

PRIZES FOR THE STATE CONVENTION .- The Prize Committee for the State Convention, appointed by the Long Island Sportsmen's Association, are: Chas. W. Wingert, chairman; A. Eddy, Chas. W. Rodman, Leslie Wild, also Presidents: Abel Crook, G. A. Chappell, Dr. Aten, Dr. Wynn, Austin Appleyard, Judge Henry S. Scott, C. W. Havemeyer, Chas. E. Fiske, Henry Altenbrand and Samuel S. Conant.

Orders for voluntary prizes should be sent to Chas. W. Wingert, No. 54 South Portland Ave., Brooklyn; or to Abel Crook, Bennett Building, No. 93 Nassau street, New York city. All prizes are to be delivered by March, 1881, to enable proper classification and preparation of programmes and advertisements.

GUNS IN PASSENGER CARS.—Different regulations are in force on different ruilroads respecting the carriage of guns in passenger cars, and these rules are in each case, we opine, made for the purpose of securing to the general traveling public the greatest security and convenience. Some roads do to permit a man to take his gun or ritle into the car with him; and there are several very good reasons why this rule should be enforced, primarily out of deference to the rights of others, and particularly of the lady passengers. On the other hand, the sportsman who possesses a costly gun hesitates to entrust it to the tender mercies of cuployes. But we have travel de xtensively over the railroads of this country and have never found any trouble in satisfactorily disposing of our arms and aumunition. A slight fee to the porter or a special word to the baggage-master has always secured from them satisfactory care in handling and keeping in safety. We received not long ago a letter relative to this subject, a proof of which we transmitted to the General Passenger and Ticket Agent of the road in question, and below we publish the letter and the reply from the agent: GENS IN PASSENGER CARS.—Different regulations are in

Editor Forest and Stream:
I have returned from a hunting trip in Dakota, and for the

Editor Forest and Stream:

I have returned from a lumting trip in Dakota, and for the benefit of fellow sportsmen I desire to acquaint them with the inconvenience they will be put to should they patronize the line of the Pittsburgh, Chicago and Fort Wayne Railroad. Should any sportsman attempt to enter the passenger-cars of that company with his favorite ride, endeared by many long and fatal shots, no matter if the weapon be carefully eneased in a neat cover, he will be met at the door with what will at first impress him as the owner of the road, by the officiousness of the individual, but who will prove to be the brakennan, who, in an insulting manner, will order you out of the car, or prevent you entering with your gun, no matter how carefully covered. Now you can imagine the feelings of a sportsman who is obliged to consign his rifle to the baggage-or ar without cheek, fee the baggage-porter, and trust to luck that your gun goes through the journey uninjured.

The New York Express arrives in Pittsburg about 2 o'clock in the morning; all the baggage is changed to another car, and one must be on hand at that hour to take charge of his Sun.

Nearly all of the railroads in the West extend to the sportsman many courtesies, and if this road should prohibit sportsmen with uncovered guns, accompanied with dogs, from entering first-class railway coaches it would be to their credit; but to a fatigued traveler, with a gun in a neat case, to be obliged to pass it over to the tender mercies of a baggage-sunasher makes one pass a series of resolutions, among which are to rush into the fostering arms of the Forest's AND STREAM, ever open to project her patron huntsman, and a determination to advise all of your sporting friends who contemplate visiting the West, not to go via Pittsburgh, Chicago and Fort Wayne Railroad. Nearly all of the railroads in the West extend to the sports

Chicago, Nov. 9. Editor Forest and Stream: Editor Forest and Stream: CHICAGO, Nov. 9.

I have received your kind note of the 4th inst., with copy of article by "Trajectory," for which I am nuch obliged. The subject of carrying of guns and fixed ammunition in our passenger coaches has had full and serious consideration, and if sportsmen would contemplate the danger to which a carlond of passengers are exposed from such explosive materials they would not sak in a thus general them. Sportsmen with load of passengers are exposed from such explosive materials they would not ask us to thus expose them. Sportsmen with guns in cases most always have a quantity of unused annulation, and should an accident occur to the train this amount of deail-dealing material would, or might, seriously jeopardize the lives of not only the sportsmen, but all others in the car. I can readily see the inconvenience to this class of our patrons from not having their guns checked as any other baggage, and I can see no reason why guns in cases should not be checked, except that then the company would assume a responsibility without receiving any compensation for it. Many guns are very valuable, and my experience with a borrowed one fully impresses me with an idea of how much a Many guns are very vanuance, and my experience with a nor-rowed one fully impresses me with an idea of how much a sportsman values his own. I trust you will not publish this as coming from me. I am modest and do not want to see my name in print, but you can rest assured that I will estab-lish any rule which I can do consistently to avoid any cause of complaint such as this gentleman makes.

FLORIDA RESORTS—Putnam, Nov. 8.—It may be interesting to many of your readers to know one of the most desirable places in all Florida for a hunting visit. I would recommend Bay Port, for I have just received a letter from my friend there, who writes me that game is very abundam, there there is the property of the pro there, who writes me that game is very abundani, there having been no hunders there since I was there three years since. Bay Port is situated fifty miles south of Cedar Keys, on a point of land at the mouth of the Wichawacha River, a swift clear stream abounding in fish and waterfowl and otter. A mail steamer touches twice a week also two miles from the interior. The Gulf Hammock is just one mile on the east side while the waters of the Gulf bound the west. A little place of eight families, the nearest village, is

twenty miles inland, and the Gulf hammock, six miles wide, abounds in deer, wild turkeys, bear and game of lesser size with catamount and an occasional panther. Mrs. Garrison, of Connecticut, has a very desirable hotel or boarding house. I stopped there one winter, and with her New England cooking, soft beds and homelike comforts I enjoyed myself more there than in any other place in all Florida—and I have spent seven winters in the State, for I prefer comforts combined with sporting to roughing it. There are some three or four boats always to be had free, and pushing out 100 feet, one has to be lively to attend to a line for trout, black bass, jack, red fish, channel bass, red snappers, groupers, slacep heads, sailor's choice and many other kinds of fish abound. I nevry saw fish in such abundance in any other place in my life. A mile and a half tramp into the Gulf Hammock brings you to the first deer crossing, where deer paths are worn like sheep paths. Two Kentucky gentlemen located their families four years ago on the pine lands, just six miles from here, for the purpose of hunting and raising stock, but the deer and wild turkeys ate up their garden and the panthers and bears ate up their stock, and they abundoned their dwelling, which still stands there empty. Board can be obtained, and is solicited by Mrs. Garrison, at 84 per week, and she reserves the oranges on the large trees in front of her house for the special benefit of her guests. A mong other things to sure and take with you two or three large steel traps that will hold a hear ateu. The other above the party and the part and the large trees in the deep the steel traps that will hold a hear atter. twenty miles inland, and the Gulf hammock, six miles wide, one oranges on the large trees in front of her house for the special benefit of her guests. Among other things he sure and take with you two or three large steel traps that will hold a bear or ofter. The otter abound, and those I caught there I sold for \$\frac{1}{2}\$ each in Boston. I am sure I could catch a dozen a month with three or four traps. My friend writes he never saw so many semi-tropical birds there before as are there this year.

G. F. Willes. pecial benefit of her guests.

are there this year.

Nebeask Game.—The Omaha Herald of a late date says:
"The fine bag of game made by S. A. Tucker, representative
of the Parker gun, of Meriden, Conn., and J. W. Petty, of
this city, on their expedition Monday, shows the possibilities
of hunting on Nebraska waters. Pamous bags have been
made herefore on the North Nebraska lakes and along the
sandhars of the Platte, and this last achievement comes simply
to emphasize what they lead already proclaimed. In one day's
shooting Messers. Tucker and Petty, hunting along the Platte
River between Clark's and Silver Creek, about 11s miles west
of Omaha, captured 64 geese. 8 ducks and 12 quail. There is
no doubt but that if they had carefu o shoot more they could
have bagged a hundred birds; but they did not know what
to do with all they had, and were not disposed to slaughter
uselessly. Neither is there any doubt that they could have
gone out on the following day and with proper management
gave brought down a hundred more.

to do with all they had, and were not disposed to stauguard uselessly. Neither is there any doubt that they could have gone out on the following day and with proper management gave brought down a hundred more.

"MIT Tucker is an enthusiastic and observant sportsman, and his business tukes him to all parts of the country, where he has splendid opportunities for shooting. He has studied the feeding grounds and habits of sea flow, particularly of ducks and geese. In view of these things a Herald reporter sought Mr. Tucker's opinion on the hunting along the Platte as compared with what he had seen elsewhere.

"Mr. Tucker's said: 'I think there is no place in the United States this side of the mountains where a man can get so large a bag as on the Platte River. Have shot on the Sacramento River in California, on the Currituck Sound, North Carolina, and at other famous localities for years, nearly all over the United States."

mento River in California, on the Currituck Sound, North Carolina, and at other famous localities for years, nearly all over the United States."

"We find the Canada goose," he added, 'ns far cast as Maine, but they winter as far South as Currituck Sound. The Hutchins and snow geese are not found in large numbers there, and the white front, or western beaut, which is also abundant here is very searce there. I shall try to find, on my trip South, where the white fronts and snow geese winter. They do not get as far East as New York, and I presume they winter in Texas."

Winter in Texas."

Kortii Carolina Game Groudds—Warrenton, N. C., No., 8.—I notice in a recent issue of your paper an inquiry from some Northern gentleman asking where good qualt shooting could be found in North Carolina. I answer in nearly every part of our State, and it is very good in this section of it. This (Warren County is bisected by the Raleigh & Gaston Railroad. Warrenton, its county seat, a pleasant town of fifteen hundred people, on the railroad, is thirty-six miles from Weldon by rail, twelve hours' of New York, and four of Pittshurg, Korfolk and Richmond. It has a daily Northern and Southern mail. It is no great work for a couple of good shots to bag from seventy-five to a hundred partridges in a day. In addition to partridges, which are numerous because of the dry summer, deer are plentiful and three or four fine bucks are sometimes killed in one day by the same party of sportsmen. Squirrels, old hares and coons also abound. The Roanoke River, ten miles distant, is covered with wild geese from December to February. Six or eight varieties of ducks—some very fine—abound in cold winters on our creeks and ponds.

Fox hunting is also one of our best sports. The hunting here, however, is rougher than up North because we have less cultivated land. I have frequently seen five full covies of birds in a ten acre field. We have but little "posted" land, and every one can hunt pretty much where he wishes. If your Northern greitends wish good sport let them come down and they will get it—also a kind welcome. Our reasons for wanting intelligent Northern gentlemen to visit us are patent. Any Northern gentlemen who wishes to spend with us a pleasant, though possibly monotonous winter so far as theaters, etc., are concerned, will be treated just as gentlemen know how to treat each other. Our hotel, the Carolina House, is well kept, and is a model of neutness and comfort. So come to Warrenton, Warren County, N. C., and we will try to make your time pass pleasantly. NORTH CAROLINA GAME GROUNDS- Warrenton,

Chicago, Nov. 8.—Good shooting continues in this vicinity, and game seems more plenty than ever before. Mr. George Farmer, of this city, just returned from a week's shoot at Senachwine, where he bagged 175 ducks and two goese of the class known as the "wavy" or snow goose. These, I the class known as the "way" or snow goose. These, I am informed, are the first of this kind ever killed in this vicinity, their flight when migrating being usually through Montana.

The geese referred to are probably snow geese (Anser hyperboreus) and not wavies (A. rosii).

Chioago—Nov. 13.—Messrs. Slade, Mears, Cowles and Oliver, of this city, returned yesterday from the woods of Wisconsin, where they had been spending the nast ten days. Besides good bags of small game, these gentlemen killed twenty-nine deer. The following item, clipped from the baily News of this city, may interest you: "The succulent prairie chicken, which formerly was exported to the East from Illinois, Wisconsin and other States on the alliuents of the Mississippi, the New York journals now state is taken to that

market almost entirely from the prairies beyond the Mississippi. The reason given is that Illinois, Michigan, Indiana and Wisconsin have become so depleted that they can ufford to export but very few. It is staied that formerly the fine bird was abundant all through. Northern New England and the Middle States, where it was long known as moor-hen and moor-fowl. The plains and pine-barrens of Long Island and New Jersey were especially its favorite resorts. Utilike its woodland cousin, the ruffed grouse, however, this bird could not withstand the pressure of civilization, and migrated to its present ranges on the Minnesota and Nebraska plains. But may not the New York journals be mistaken as to the falling off in the numbers of the birds in the States named? They forget that the Western people are graving rich, and can now afford to eat that which we formerly were compelled to sell." market almost entirely from the prairies beyond the Missis-

to sell."

Nebraska Game—North Platte, Nov. 3.—If any of the sportsmen of the East want a good place for sport they can find it here. Game of all kinds, deer, autloine, elk, ducks, etc. One man killed twenty-four deer, thirty miles from here, up the North Platte, in two days. A man killed two ducks to-day, and brought them into my store, of a kind I have never seen. They have a topknot on their heads two inches long. Can you tell me what kind of ducks they are? Major North came in to-day from his ranch on the Dismal River, sixty miles from here, and reports game of all kinds out there thick—the best shooting for years. The Major is the best pistol shot in the West, and killed two deer with his pistol coming in. By the way, thanks for that Dittmar powder expose. I am a dealer, and had two dozen cans on hand when I received your issue of Sept. 23. Those cans are now at the bottom of the North Platte River. I could not afford to take the risk of selling them.

M. The ducks mentioned may have been wood ducks, though The ducks mentioned may have been wood ducks, though

It is impossible to identify them from so meagre a description.

Hammerless Guns—Providence, R. I., Nov. 13.—I would certainly advise your correspondent A. B. C. to purchase a hammerless gun. I have used a first quality W. W. Greener hammerless gun (which was made to order through his agent Henry C. Squires) since the commencement of last season. I am perfectly satisfied with its performance, and consider it a valuable improvement over the old style of hammer guns. The relief from the catching of hammers in brush, briars and in boat adds greatly to the safety and comfort of shooting. There is no reason why the hammerless guns should become shaky sooner than the old style. The action plate is made shorter to increase the loverage and make the cocking caster, but is compensated for by increased thickness of the plate and extension of the rib.

out is compensated for by increased thickness of the plate and extension of the rib. It will probably be but a few years before the breech leader with hammers will be classed with the obsolete muzzle loader. Gun makers and dealers will not push the sale of hammerless guns until their stock of the old style is disposed of. F. II.

THEOTON TO THE MISSOURI.—The Chicago and North THEOGOH TO THE MISSON BL.—The Chicago and North Western Railway hasextended its Central Dakota lintot Fort Pierre, on the east bank of the Misson; in nearly an air line east of Deadwood. The North Western Stage Express and Transportation Company run a daily line of Concord stages for first and second class passengers, between Fort Pierre and Deadwood, and a line of fast express wagons for third class passengers and freight. The distance from Chicago to Fort Pierre by ruli is 780 miles, time 34 hours. The distance from Fort Pierre to Deadwood by stage is 180 miles, time 30 hours. Bargere destined to any point in the Black cago to Fort Pierre by rail is 780 miles, time 34 hours. The distance from Fort Pierre to Deadwood by stage is 180 miles, time 30 hours. Bargaage destined to any point in the Black Hills can be checked to Fort Pierre. The raitroad carries 150 lbs, free for each passenger. The stages carry 50 lbs, free. The fare from Chicago to Deadwood is, first class, 849 25; second class. 840: third class, 830.

\$49.25; second class, \$40; tunio one.

Iowa—Dubuque, Noc. 12.—Everything in the shooting line is quiet at present, and we won't have much until spring. Duck shooting was unusually good for a short time, but the weather turned rough so suddenly that most of the boys missed the golden opportunity and only those that happened out at the time had any luck. One party of three killed 130, mostly mallards, in about four days' shoot. Their shooting was done on the river about 80 miles north of here; and another party of four who went later killed some 250, but consider party of four who went later killed some 250, but consider party of four who went later killed some 250, but consider party of four who went later killed some 250, but considerations. was done on the river about 80 miles north of here; and another party of four who went later killed some 250, but considering the weather both had poor luck. Jacksuipe were very plenty and could have been killed in large numbers, but all were after ducks. Ruffed grouse are in their prime now, and a good bag can be made by taking a little trouble. Quali scarce and hard to find,

Ruffen Grouse Treeing—Nor York, Nov. 15.—In reading the latest issue of your valued paper I noticed the article from "F" relating his experience as to the habits of the ruffed grouse.

I wish to say that my experience does not agree with his, because when on a shooting trip last season, and while hunting for ruffed grouse, a bird flushed while the dog was yet twenty yards away, and thew to the branches of a tall oak on which he rested for a second and then darted away.

With quall I have had on one occasion a similar experience. While shooting on the "first" this senson I flushed a bevy of quail, one of which I noticed flow to a tree.

It of course remained there only an instant.

A. S. P.

Kentucky—Christian County,—Game of all kinds scarce here this season. The largest bag of quail heard of was made by Will. Gaul and Geo. Merritt, twenty-six in one day. Tennessee is reported to have a great many quail this season Party from here going there in a few days. Will report when they return.

F. L. E.

Mallard Shooting in Indiana—Vincennes.—There has been great mallard shooting here. The storm on the northern lakes two weeks ago sent down thousands of ducks. Three men, J. M. Sheer, Richard Roe and A. McMeintz, of Fast St. Louis, Mo., killed 157 mallards in one evening and morning at Ellison Prairie, seven miles away. There are plenty of snipe and a fair scattering of woodcock.

burn wood and bake. If so who is the maker and where can the stove be got?

The Hobb's stove, manufactured by W. A. Percy, Plattsburg. N. Y., and the camp stove made by the Taunton Iron Works, Taunton, Mass., are both highly spoken of by those have tested their merits.

— The game in market is improving in both condition and quantity. Bears are now beginning to come, a few having been received from Tioga County, Pa. Deer are received from Pennsylvania, Massachusetts and Nebraska, Elk from North Platte, Neb., ruffed grouse from Pennsylvania and Massachusetts, quali from Pennsylvania, Massachusetts and New York, English suipe from Hummelstown, Pa., grass plover from Quincey, Mass., woodcock from New York and Pennsylvania, and ducks from Havre de Grace, Md., and New Jersey.

Weight of Ruffed Grouse—Monthello, Sullivan County, N. Y., Non., 10, 1880.—Editor Forest and Stream: I have hunted and shot these birds from my beybood, and desire to state that the largest that I ever brought to bag weighted thirty conces each. I also once killed one that weighed 28 onnecs. I consider that twenty-six onnecs is above the average weight of grouse, and should be disposed to consider twenty ounces as nearer the mark. Cras. F. Kent.

Why He Appreciated IT.—One man came into this office the other day who said that he had appreciated the recent articles regarding Dittmar powder, and the great scar on his hand caused by an accident with the powder was sufficient evidence that he ought to have appreciated them.

BROOKLYN.—Mr. Gustave Spiegel, says the Eagle, one of the best known of Brooklyn sportsmen, took a trip last week to Havre de Grace. While there he met with extraordinary success in duck shooting, and returned with twenty-three as fine canvas-backs as ever tickled the palate of mortal man.

RHODE ISLAND—Xerport, Nov. 1.—Some few snipe remain on our marshes. Wild geese are very shy hereabouts.

Occasional.

Pennsylnania—Cooperstown, Noz., 9.—Am going to For County next week with a party after deer and bear. Whe there several weeks.

O. C. W.

A Word to Our Readers.—Every reader of the Forest and Stream is requested to send us the names and addresses of such of his friends as are interested in field sports, but who are not among our subscribers.

#### SHOOTING MATCHES.

THE NEW YORK TOURNAMENT.

Editor Forest and Stream :

The writer has just returned from a visit to New York, and in his peregrination's was fortunate in meeting a number of the Long Island delegation, who made themselves so famous and pleasantly prominent at the Scheca Falls State shoot in June. They are all enthusiastic, and every man is working like a beaver. There is scarcely any doubt but that the meeting of 1881 will be the largest, most attractive and enjoyable of any ever held. Permit me through this medium to present to the State committee and President Crook a suggestion that will render the event still more at tractive. It is this: Let all winners of prizes in previous contests be handicapped back five yards, more or less, according to the judgment of the committee, and it will then be of some encouragement to those of us who always weaken and lose before such cracks as Newell, Smith, Witmer, Crouch, Tompkins, Hooker, Hudson, Luther, Wingert and West, et al.

son, Lutter, winger and west, et al.

There can be no question regarding the propriety and justice of
such a restriction, and I trust the delegates and members of the
clubs of the association may give us through your columns their views on the subject in extenso. Another suggestion has been de: Let the association offer a first, second, third and fourth prize for the best retriever. Let entries be made by such owners of eligible dogs as desire to, and let every bird hit be retrieved, thus killing two birds with one stone, satisfying the scruples of Mr. Bergh, and doing that which neither bench shows nor field trials fully accomplish.

Owners of valuable dogs will hardly wish to enter them for pigeon retrieving, as this bad work for them.

ROTARY TRAP RULES .- Rochester .- Our habit in this neighbor hood of ball shooting from rotary traps is to call "Ready!" puller to set the trap in motion, and then "Pull!" for him to spring the trap. We are governed at present by Bogardus rules, which were made for his traps and not for the improved rotaries and these, it seems to me, should be revised. In a recent match here a man was challenged, and his ball, though broken, declared lost by the judges on the ground that after stepping up to the score, and before saying ready or pull, he had raised the gun above his elbow, not however to take aim. Some of us contended that a man cannot be considered at the score until he says Ready! When a man takes his position at the score it often happens that the ball falls from the trap, or the cord requires winding up, and what more reasonable than that during this delay the butt of the gun should be dropped under the arm as the most natural and restful position: but according to our judges (and in the strict interpretation of the Bogardus rules they seem to be right) this cannot be allowed. The sensible plan it seems would be to make rules as near a possible like those governing bird shooting from traps—require a man only to have his gun below his elbow at the word Pull and until the ball leaves the trap. Under the Bogardus rules it is allowable to raise the gun to the shoulder at the word Pull, and many take advantage of this. This is clearly wrong, as it is contrary to the natural habits of field shooting, where certainly one would not put his gun to his shoulder before the bird leaves the ground. Will the readers of Forest and Stream please give us their views of the interpretation of the Bogardus rules, and inform us whether there are other and newer regulations governing ball EN GARDE. shooting from rotary traps.

ALGONQUIN GUN CLUB.—New York, Nov. 8.—The following is the score of the semi-monthly shoot and first contest for a gold

badge, presented by our ex-president, Jas. P. Robertson. The sun reflecting on the balls accounts for this poor score :

MOBILE, Ala., Nov. 10.—The monthly shooting match for the club medal by the Gulf City Gun Club did not take place yesterday, owing to the property of the club at their lodge having been seri-ously deteriorated by some ruthless fiends, without any cause or purpose. The traps were found broken, the screens shot to pieces, and the internal accommodations of the club room seriously damiaged. It is hoped that the perpetrators will be caught and se

FIXTURES.

Eastern Field Trials Club's Second Annual Trials, Robins Island econic Bay, L. I., Nov. 29. Jacob Pentz, Sceretary, New York.

[From a Staff Correspondent THE NATIONAL FIELD TRIALS.

Vincennes, Ind., Nov. 8.

O'NOW covered the ground here on Saturday, but yesterartions have been made for the coming Field Trials, and
they are the topic of conversation at all the hotels. The
grounds where they are to be run are on the estate of Col. A.
G. Sloo, about six miles southeast of this place. Whitehall, as
Col. Sloo's seat is called, is beautifully situated, and his resipence is almost in the centre of his property, which contains
between thirteen and fourteen hundred acres. The manor
house is on a high ridge or back-bone, and to the north and
south large fields of sixty or seventy acres stretch forth, intersected with numerous ravines running almost parallel to
each other. These are filled with stunted brush and fringed
with weeds, affording the best of lying cover. Fortunately
the weather has been moderately wet of late, and the scenting promises to be excellent. We have shot for many years
in this vicinity, and know to our sorrow what a dry season
means. The land is covered with a dense undergrowth,
which in a drought emits the finest kind of dust. This when
disturbed by the dog's passing through the weeds is inhaled
by him and destroys his scenting powers. We could not
conceive of a more appropriate place for the running of dogs
than the one described. It is a wonderfully picturesque spot.
Moderately large groves of beach and walnut are dotted here
and there across the property, having been left standing
more for the shade which they afford the cattle than for tim-Vincennes, Ind., Nov. 8

hundred acres belonging to two adjoining farms, which have been preserved also with the most vigilant care. Birds are said to be plenty, but before the trials are run the ground is to be drawn, and if it is found that there is not a sufficient number, a large number of trapped birds are to be procured, so that in no event will the trials be a failure on that score. Judging from the test made last February, when this section of the country was first talked about, there should be a large number of bevies on the beat. Col. Sloo and Mr. Sambern both drew the grounds at that time, and then found fourteen bevies, the smallest containing seven birds and the largest twenty-twe. Since then not one gun has been fired on the range, and the past season is considered to lave been a fine batching one. We will be able to determine more positively, however, within a few days. hatching one. We will be all however, within a few days.

Vincennes, Ind., Nov. 15.

The National American Field Trials opened to-day the Derby alone having 118 entries in all, equivalent to seven hundred and eighty-five dollars in entrance fees. These are the largest stakes ever run for, and their amount and the number of the entres speak volumes for the interest taken by our sportsmen in the success of the Trials, and show, too, how wide-spread this interest is.

During Saturday and yesterday every incoming train brought sportsmen from all parts of the country, and as the trials have very influential support they promise to be eminently successful in every way. This morning at 7 a. M. the drawing in the Derby Stakes took place at the Grand Hotel, the headquarters of the officers of the club. The judges were Capt. Patrick Henry, of Clarksville, Tenn.: Theo. Morford Esc., of Newton, N. J.; D. C. Burgentlal, Esq., of Indianapolis, Indiana, three gentlemen whose well known capacity have inspired the confidence of both owners and handlers. An early start was made for the grounds.

The trials will hast throughout the week, many crack dogs being expected to be present.

tandlers. An early start was made for the grounds.

The trials will hast throughout the week, many crack dogs being expected to be present.

These are the arrivals to date:

Capt. Patrick Henry, Clarksonville, Tenn., judge; D. C. Sauborn, Baltimore, Mich.; Isaac Yentsdey, Jr., Coates, ville, Pa.; Thos. H. Windle, Coatesville, Pa.; George Fox. Phila., Pa.; J. W. Patterson, Phila., Pa.; H. M. Short, Pittsburgh, Pa.; F. A. Taft, Dedham, Mass.; E. S. Wanmaker, Cold Spring, N. C.; C. S. Whitman, Chicazo; John Davidson, Momroe, Mich.; Dr. Wm. Jarvis and B. F. Clark, New Hampshire, Luther Adams, Boston; C. E. McMardo, Lynchburg; Geo. Waddington, Geneva, Iowa; Chas. S. Raymond, New York; Theo. Morford, Mewton, N. J. The stakes to be run for and the entries are given below. Avocaber 15, 18rdy Stakes—For puppies born on and after April 1, 1879—Closed with one hundred and eighteen cutries, S5 forfeit; \$10 additional for starters; \$300 added money—\$450 to first, \$100 to second; \$50 to third, with forfeit money divided to winners in ratio with added money. Avocaber 16, Free for-All Stakes, \$500—\$250 to first; \$450 to Second; \$100 to third. \$10 forfeit; \$15 additional for starters; to close November 15, 1880, at 8 o clock r. M. November 17, Brace Stakes, \$500—\$150 to first; \$515 to third. \$10 forfeit; \$15 additional for starters; to close November 15, 1880, at 8 o clock r. M. November 17, Brace Stakes, \$500—\$150 to first; \$550 to second; \$250 to hird. \$10 forfeit; \$150 additional for starters; to close November 15, 1880, at 8 o clock r. M. November 17, Brace Stakes, \$500—\$150 to first; \$550 to second; \$250 to hird. \$10 forfeit; \$150 additional for starters; to close November 15, 1880, at 8 o clock r. M. November 17, Brace Stakes, \$500—\$150 to first; \$550 to second; \$250 to second; \$250 to hird. \$10 forfeit; \$150 additional for starters; to close November 15, 1880, at 8 o clock r. M.

dog, by Leicester-Sauborn's Nellie; born May 8, 1879.

J. Hopkins Smith's (Portland, Mac.), Jill, red setter bitch, by Elcho-Meg; born July, 1879,
Against Mr. Robert Sewell's (New York) Cocile.

J. Hopkins Smith's (Portland, Mc.) Jack, red setter dog, by Elcho-Meg; born July, 1879, a byc.

The weather here has not been pleasant since my arrival. Since reaching Vincennes snow has fallen more than onec, and it has been cold, raw and disagreeable. This morning opened with a cold cast wind, the sky was cloudy and the air raw and piercing. The weather looked threatening and there opened with a coastactor and piercing. The weather looked threatening and carry are no seent.

was every prospect of snow; besides this, the ground was frozen and there was no scent.

After drawing for places, the party left Vinconnes at 8 a.

After drawing for places, then, since it had been learned that birds were not as abundant on Col. Sloo's land as had

that birds were not as anumant on Cot. Shows many as man been supposed.

Col. Show met us with wagons and saddle horses for the conveyance of the party to the grounds. Messrs, Patterson and Luther Adams were chosen field marshals, and with about sixty spectators on foot, and the judges and reporters on horseback, the trials began.

#### THE DEERV.

Dick Laverack against Dodo.

Dick Laverack against Dudo.

The first brace ordered down were Dick Laverack, handled by Mr. Short, and Dodo, handled by Mr. L. R. Morris.
They were put down at ten o'clock in the old field, with high covers and woody brakes. The ground was gone over and the whole field drawn blank. This was a surprise and disappointment, for, when he went over it before the trials, Col. Sloo had moved four bevies. Dick Laverack exhibited the highest speed, but the burrs were exceedingly troublesome to both dogs. At eleven o'clock they were ordered up for rest and to be run again. both dogs. At elev-and to be run again.

Frost's Leak against Abbey Whinnery.

Frock's Leak against Abbey Whinnery.

Frock's Leak against Abbey Whinnery.

The second brace at once put down were Frost's Leah, handled by Capt. McMurdo, and Abbey Whinnery, handled by Mr. Short. The rag-grass fields which they entered were very dusty and hard for the dogs. Passing into an old orehard they showed equal speed and not very great speed at that. No birds were found here either, although it was supposed that they were on this beat. By the creek Leah made a false point, Abbey backing her beautifully. In the tall rag-grass bottom of a little vale on the leeward side of a knoll Leah pointed a large bery, which Capt. McMurdo was ordered to fush. The birds divided, part of them flying along the fence along the woods, and the rest going toward the bottom. Leah feathered and flushed again. Later Abbey made a capital point and after allowing her to stand staunch some time the birds were sprung. Going forward Leah made a magnificent point on five birds and Abbey backed her in grand style, the two making a fine picture, which was appreciated by all present. Leah afterwards in running down the wind flushed a bird in the weeds. At one o'clock the dogs were taken up and the party repaired to luncheon.

After an hour and a half work was resumed in a spitting snow. Abbey won the heat.

Peep o' Day against Dairy Laterack.

Peep o' Day against Daisy Laverack.

Peep o' Day against Daisy Laterach.

The third brace were then put down. Peep o' Day, handled by Mr. Whitford, and Daisy Laverack, sister to Dick Laverack, handled by Mr. Short. Peep o' Day was very fast, and proved a fine open ranger with superior pace and style, and capable of good work. She was bunted last September on prairie chickens in Minnesota. The brace passed a large bevy, which the judges walked up to and flushed. The birds pitched into a thicket, where Peep o' Day pointed them. Daisy showed herself to be a smart, sharp, busy worker and quick in her turns. She pointed the birds in the thicket; and again a single bird, which was shot at and missed. Daisy dropped.

The brace speeded in the open; and Peep o' Day flushed a bird in the thicket. They were a wonderfully fine pair, and showed excellent work. I was a well contested heat, considoring that the ground was a hard one for the dogs. Daisy is a superb cover dog. The dogs then passed into a sedge field, which was drawn blank, Peep o' Day making a false point and a flush when running up the wind. At 2:40 o'clock, after a grand trial, the heat was closed and the brace taken up, Daisy being awarded the heat. Mr. Short was now cheerful, as he had reason to be.

Bruce against Abbess.

Bruce against Abbess.

The fourth brace put down were Bruce, handled by Whitford, and Abbess, handled by Davidson. Abbess was out of sorts, having a bad diarrhea, and needed urging. In the tall cover Bruce pointed a bevy, which lifted and lit twenty yards away. Bruce flushed, and both dogs were sent into a deadening. Bruce showed a fast gait and good style. Among the logs he flushed a bird in the dry leaves, but dropped to wing. Bruce again pointed three birds in a brush heap, Abbess hacking him in grand style. During a rapid spin in the open Abbess proved herself a fine quarterer, and under better control than Bruce, who at one time ran fur. The dogs were laken on a mile of fearful cover of high weeds and standing corn, and very dusty. Bruce pointed a bevy in the high taken on a mile of tearful cover of high weeds and standing corn, and very dusty. Bruce pointed a bevy in the high weeds. They ran. He then roaded, and pointed again. There was here a fine exhibition of sharp all-round handling. Abbess made several flushes going down the wind and false points. Bruce pointed true and Abbess backed him. Again, Bruce false pointed and Whitford was too quick in claiming the point. Three hirds were marked down in a wood, but the deep failed to fail them. Abbess returned about on the point. Three the dogs failed to the point. Three brids were harbed about, out the dogs failed to find them. Albess pottered about, orderly ont of condition, and Bruce failed to mind and did not work to the gun. Abbess pointed in the briars, but she failed to trail and find. She was kept on the point for Bruce to back. The brace was taken up and Bruce awarded the

neat.

It was now dark, and the party, men and dogs, returned to the hotel. The annual meeting of the club was adjourned to Tuesday night.

SECOND DAY.

VINCENNES, Ind., Nov. 16.

The weather to-day was warmer and more favorable, with a wind blowing a little south of west. The ground worked over was on Col. Sloo's farm, a clay soil.

The farm was reached about a quarter past ten,

Count Noble against May Laverack.

Count Noble against May Laverack.

Of these Count Noble was handled by Mr. Sanborn and May Laverack by Mr. Short. The dogs were put down in the rag grass, and Count Noble, having the wind in his favor, soon pointed, and then roaded round a bey of birds. May was called up to back, moved in from the place where Noble pointed and stood staunchly, and a moment later Noble made a point on a large bevy on the far side which were scattered in a brauch in the grain field. Noble has a fine head and is a powerful dog. The little hitch and Noble were given a spin in the grass field, and she proved herself a rapid flyer, superior in pace and quartering, exciting the admiration and surprise of all at her speed.

The dog being in a grain field, Noble at once ran up the leeward side of a branch filled with briars and weeds, and seventy yards further on came to a point in sphendid style. May was called up to back him, but she refused, when Noble settled down on his hind quarters on the point, Sanborn

Daay was canced up to back film, but she refused, when Noble settlied down on his hind quarters on the point. Sanborn flushed and killed, Noble retrieving it and fairly locating another bird which had been winged and had fallen in the open; May then flushed and Noble made a flush in the briars, but dropped on point and remained staunch in a very awk-ward position for five minutes, when three birds were put up. The brace were dayen twenty minutes. Noble winning the significant The brace were down twenty minutes, Noble winning. He is a wonderfully fine dog for his age, level headed, with good nose and displaying much brain power.

Dodo against Dick Laverack.

Dodo uquinst Dick Lawerack.

Dodo, handled by Monis, and Dick Lawerack, handled by Short—the first brace run yesterday—were again put down by this same branch where several birds had been marked. They had several trials, Dick showing himself the busier worker, Dodo lacking ambition. After the brace had been down half an hour the judgesdecided that neither could win, and ruled them out. They were only ordered up yesterday after running a long time to find both poor.

Little Lady against McDuff.

At quarter past eleven o'clock Little Lady and McDuff were put down, the former handled by Mr. Sanborn—against his own

At quarter pasi eleven o'clock Little Lady and McDuff were put down, the former handled by Mr. Sanhorm—against his own dog because he trained her—the latter by Mr. Short. A spin through a grass field showed that Lady, the faster of the two, had the better style, though she held her head a little too low. Running down the wind a bird was flushed on the edge of a deadening, and Lady having been sent across the fence into some briars flushed a bevy which were marked down on the hillside in the deadening. McDuff appeared somewhat out of sorts and did not work as well as had been expected. A bird was flushed from a fence corner by the spectators, and Lady pointed where it had been. The dogs having been sent into the briars McDuff made a point in the ravine. Som the hillside in the deadening. McDuff appeared somewhat out of sorts and did not work as well as had been expected. A bird was flushed from a fence corner by the spectators, and Lady pointed where it had been. The dogs having been sent into the briars McDuff made a point in the ravine. Soon after he pointed fur and Lady refused to back. A little later Lady flushed a bird along the fence. At 12:30 the dogs were ordered up by the judges with the privilege of ordering them down variables. ordered up by the down again later.

Coxat Nailer against Nimrod

down again later.

Count Nailer against Nimrod.

Count Nailer, handled by Dew, and Nimrod, handled by Short, were now put down. Nailer is a litter brother to Noble by Count Windem out of Nora. A short spin in the grass field showed that the dogs were about equal in pace, style and quartering. A bevy, moved in the deadening by the crowd was marked down in the bottom of a ravine, where Nimrod flushed three birds, the rest having apparently run into the standing corn. A large bevy was flushed by the noise and skimmed along the corn. It was followed up, and on the bill in the corn Nailer made a rattling down-wind point, which did, not, however, count. At the side of the ravine Nailer pointed fur and Nimrod at the bottom made a false point. On the hill-top, near a heap of logs, Nailer made a point and Nimrod, who had been called up to back, also pointed what proved to be three scattering birds. The dogs stood beautifully, and the picture was as pretty a one as is often seen. When the birds were moved Mr. Short killed two at one discharge of the gun, but, as retrieving did not count in the Derby stakes, the birds were not retrieved. Both dogs now made several flushes. At 2 o'clock luncheon was served, and at 2:30 the dogs were again put down in the same gully, lower down. In some high corn a point was scored for each of the dogs, and at 3:20 they were taken up, Nailer being awarded the heat. The weather had now become much colder.

Jill hapulled by Mr. Toft, and Cecile, by Mr. Moore, were

Jill against Cecile.

Jill, handled by Mr. Taft, and Cecile, by Mr. Moore, were next put down in corn. The crowd flushed a large bevy, which flew a long distance. The cover here was very bad, and the place a hard one for the dogs to work in.

After making some flushes, the brace were ruled out, having shown no style or quartering.

ing snown no style or quartering.

Little Lady against McDuff.

Little Lady and McDuff were now ordered down in high corn where some birds had been marked down. None were found, however, and moving back toward the starting point, Lady made a flush. The dogs were now ordered up as it had become dark! McDuff was given the heat. A drive of seven miles back to town was a tedious one. The roads were very bad and the transportation poor. The judge's wagon broke down, and many of the spectators had to walk the whole way in. The grounds are inconvenient, as it takes too much time to reach them.

There was a large attendance at the meeting of the National American Field Trial Club held at University Hull at 8:30 in the verning. Mr, C. H. Raymond occupied the chair. The Secretary read the minutes of the meetings of November 24, and 27, 1879, which were adopted. Mr. Raymond stated that Mr. Samborn had selected the grounds for the present trials and that the club had every reason to congratulate itself on the number of entries. The Secretary's report was read and adopted. The Treasurer's report showed a balance of 8593.48 on hand, exclusive of the entrance fees. The election of officers was next in order. It was moved that a committee of three be empowered to make nominations. Chair apthe number of entries. The Secretary's report was read and adopted. The Treasurer's report showed a balance of \$552.48 on hand, exclusive of the entrance fees. The election of officers was next in order. It was moved that a committee of three be empowered to make nominations. Chair appointed Messrs. Jarvis, Morford and Rowe, and the following officers were elected for 1881: President, P. H. Bryson, Memphis, Tenn.; First Vice-president, Luther Atlans, Boston, Mass.; Second Vice-president, Henry Bishop, Louis-ville, Ky.; Treusurer, Jos. H. Dew, Columbia, Tenn.; Exceutive Committee, Thos. Morford, N. J.; L. H. Smith, Strathroy, Can.; E. C. Nichols, Battle Creck, Mich.; P. Henry, Clarksville, Tenn.; M. C. Campbell, Spring Hill, Tenn. Board of Appeals—C. H. Raymond, N. Y.; Anthony Higgins, Delaware City, Del.; John Fottler, Boston, Mass.; Wim. Jarvis, Clarenont, N. H. Committee for field trials next year: The President, the So-

Win. Jarvis, Claremont, N. H.
Committee for field trials next year: The President, the Socretary, and Messrs. Bishop, Campbell and Henry.
Mr. Bryson said that for several reasons the trials could not he held again at Vincennes. There are more birds further South. Mr. Dew suggested that some place south of the

snow line would be better, as the birds were so often destroyed from this cause in the North.

Mr. Henry said that the trials could be held later in some more Southern locality.

Mr. Adams moved and it was carried that the committee

Mr. Adams moved and it was carried that the committee report through the sporting press by Feb. 1 the selection of some grounds which would be suitable for the trials. Mr. J. H. Whitman was appointed a committee of one, with power to add others to it, to arrange special rates with railroad and express companies.

Mr. J. J. Snellenburg suggested a change in the field trial rule with regard to the withdrawal of the winner of a heat. The matter was left to the standing committee on field

trials.

The following were elected members of the club: J. H. Whitman, Col. A. G. Sloo, Geo. Fox, L. D. Runsey, Issue Yearsley, Jr., Wm. B. Banks, J. B. Hendricks, J. W. Orth, B. F. Wilson, D. McKinney Lloyd, W. H. Drane, Dr. H. T. Drane, Ed. Drane, T. F. Henry, W. T. D. Orth, Frank P. Gracey, Walker Williams, Dudley Ware, E. S. Wanniamsker, John H. Wise, Clarence K. Drane, Dr. Jus. Rodman, Geo. Waddington, D. C. Burgendthal.

At oleven o'clock to-night there is a heavy full of snow, which if it continues will interrupt the trials.

LATEST NEWS FROM THE TRIALS.
VINCENNES, Nov. 17.

Snow is still falling and it is impossible to go out. There are now two inches on the ground

## WHAT IS A COCKER?

WHAT IS A GOCKER?

Editor Forest and Stream:

Your correspondent, M. B., has, with his usual acumen, hit the nail straight on the head in his communication which appeared in your last issue. Every one, whether interested or not in the breed, must be aware that we are at present navigating our cocker ship without a rudder, and are hopplessly floundering about. The rudder we want in this case is a standard to breed to, and we must have it, or what is the use of breeding cockers for exhibition purposes, and filling the benches with a variety or miscellaneous class under the name of cockers. All of our English authorities steer clear of any definite description of a cocker, though clumber, Sussex and black spaniels are treated at length, and specified points given for the guidance of breeders and judges. I think it may be accepted that by a cocker we mean a small field spaniel, and such being the case, the line of demarkation is evidently one of size or weight, the latter being the easier point to arrive at with accuracy. Beyond that we must of course have the full details given as to the make, shape and style of dog, with a code of points indicating the value of each property. Color, full details given as to the make, shape and style of dog, with a codo of points indicating the value of each property. Color, as in English setters, is a matter of fancy, and while on this subject I would like to ask where the authority is to be found for the statement of M. B. and others I have conversed with, that Welsh cockers are lemon and white. Welsh cockers from the best of my knowledge and belief, and I think Stonethenge and Mr. Dalziel will bear me out, are liver-colored, while the lemon and white is to be found in the Norfolk spaniel.

tenion and white is to be found in the Norfolk spaniel.

I am certain that cocker breeders will agree that a standard
must be made, and the sooner the better; and now how is it
to be done? My notion is that we should get up an American
Cocker Club, and that that club should not a standard and
the old in its proper to a discovered to the control of the cold in the control of the cold in the control of the cold in the control of the cold in the control of the cold in the control of the cold in the control of the cold o to be done? My notion is that we should get up an American Cocker Club, and that that club should alopt a standard and do all in its power to advance the breed by a combined effort. There is no surer and more direct manner to bring any given breed prominently before the "doggy" public, and I speak from experience gained in England, than by having the interests of the breed looked after by a properly constituted club. It is possible that some breeders may fear that such a club would be worked to the advantage of certain parties, but any such idea is ridiculous, and perhaps I had better outline the work which falls within the province of such a club. First of all, a Secretary pro tem, is requisite, and I would nominate Mr. Geo. B. Macdougall to fill that position, if he will kindly accept it. All who are in any way interested in the breed should at once send him their names, so that communication may be established with them. From the list thus obtained a committee of say half a dozen should be struck—it would not be possible at present to hold a meeting and elect a committee, but the leading breeders are sufficiently well known to enable the New York residents who could meet to get up a committee, but the leading breeders are sufficiently well known to enable the New York residents who could meet to get up a committee to hold office until the armual meeting, which should be held here during the Westminster Konnel Club show week. This committee should without delay draw up a cocker standard and rules for the government of the club, and the enrollment of members would then be in order.

The annual dues should be small, say \$2 or \$2, \$5, so that no one could complain of being excluded by a high tariff, and this money should be used for the purpose of giving special prizes or augmenting premium lists at the various shows throughout the States and Canada. A list of known competent judges of the breed should also be compiled, and when money is added to any premium list it should be with the specific understanding that

eific understanding that a special judge must be selected from the list so made up. Dog slow committees will always gladly concede this point if thereby they can have better prizes to offer and be assured of the support of the prominent exhibitors. Beyond this the club would in no way interfere with breeders, so that it will be seen that all the acts of the committee are fair and above board, and the programme of the club managers being made public with the premium list for each show, every member of the club would be on an equal footing when it came to the judging.

Time, ink and paper have been wasted long enough in discussing the question of "What is a Cocker ?" and it is high time an answer was supplied, so I hope next week to read Mr. Macdongal's acceptance of the position of Secretary protem, when it will be in order for all of us to send him our names and so start the machine and have things in running order for the shows in 1881. It in my small way will do all can to induce my friends to join whether they are cocker men or not, for it is not necessary for a man to own and breed cockers to procure admission to such a club as I propose.

I would just add that if a line is drawn at a certain weight, I favor 25 lbs, for bitless and 28 lbs, for dogs. It might be advisable to call all above that weight field spaniels, either that or divide cockers into large and small classes at somewhere about the weights stated.

\*\*Men York, Mon. 12.\*\* the list so made up. Dog show committees will always gladly

where about the weights stated.

New York, Nov. 12.

EASTERN FIELD TRIALS CLUB.—A meeting of the officers of the Eastern Field Trials Club was held on Thursday the 11th inst. It was resolved that the money collected for Mrs. Tileston, amounting to \$791, should be given to her with a copy of the resolutions passed by the club at the time of Mr. Tileston's death.

It was reported that there were at least two hundred and

fifty birds on Robins Island, and in case the club was not able to get any more there would be enough to run the trials successfully. A committee of ten was appointed to solicit special prizes. The following gentlemen were appointed: Mesers, Donner, Livingston, Coster, Von Lengerke, Hamilton, Pentz, Danforth, Leech, Munn, and Aten. There was quite a discussion in regard to the question that if in the first trial beats two dogs should run together and the winner should withdraw, whether the other dog should have a chance for second prize or be thrown out. The gentlemen present were decidedly in favor of giving the dog a chance for second prize, but it was finally agreed that it should be decided by the stewards of the trials. It was decided that the trials would be run in the following order: Nov. 29, the Nursery Stakes: Nov. 31, the Puppy Stakes; Dec. 1 and 2, the Allaged Stakes: Dec. 3, the Bruce Stakes, and Dec. 4, the Club Stakes.

The next meeting will be held at No. 24 Park Place, Nov.

We learn from Mr. Hall, of the Eastern Field Trials Club, that a large number of quail have just been turned out on Robin's Island, so that there is every prospect that there will be no trouble on that score when the trials are run. There are now believed to be about 600 birds on the island, or about one to the acre, and they can't get away.

#### FOLLOWING THE HOUNDS

FOLLOWING THE HOUNDS.

Not death of the red fox some half mile from where I was unhorsed by a collision against a tree. I soon recovered from the accident, and as soon as the cool nights and heavy dews occurred I was again in my saddle and eager for the sport.

On the 9th of August at early dawn I set out for the scene of my mishap, and was scarcely as far advanced in my hunting grounds as on the 33d of July, when the joyous note in its full volume of Logan greeted my ears simouncing that a hot trail of a red was there. The pack hurried to his summons, and in a few minutes the fox broke cover and passed me in lightning speed and made up the Roanoke for a half mile, then abruptly whistling back again passed me with no diminution of speed but increased fright. The race then embraced a compass of half a mile, fierre, turious and carnest when the earth was sought for safety after only thirty minutes of from. I examined his hole and discovered that I could easily reach him, but preferring to save him for more sport did not attempt it. On the 11th of August the race was repeated and differing in one essential front that of the 9th but on the 13th of August, starting as before, I encountered the old male near the same point and a severe run indeed he gave me. If went up the Roanoke into the County of Mechlenburg, Va., before he was caught; on the way several fine dogs Joined in the chase and aided in its favorable termination. Every other morning with no intermission I have been in the field, and each day was a repetition of the preceding with one exception, when I put a red to earth who stealthly crept out at a lower hole from the one he entered and made his escape. On the 6th of September I was again in the field and on the same ground. As before I struck a lively trail and soon had what proved tobe a very old mile red on his feet. He dashed of my the Roanoke some distance in advance of his pursuers for three miles into the Eaton estate and above Eaton's Ferry. There he doubled back, passed me in double quick but ev

A SAD ACCIDENT.-A lamentable accident occurred week before last in New Jersey, which resulted in the death of a valuable pointer dog. The circumstances, which were peculiarly distressing, are as follows: Mr. K., the owner of the tiog, with a companion, had been shooting, and had killed several birds. A bevy having been flushed Mr. K. killed two birds with one barrel, and after loading, the dog was sent to fetch the birds. As he approached with one of them, his master took a few steps forward, and catching his foot in a grapevine, fell forward upon his gun. The stock was broken and the gun discharged, the entire charge passing through the dog, which was now within a few feet of his master. The brave animal, without uttering a sound, continued to advance, dropped the bird at his master's feet, licked his hand, looked up into his face with an expression of foudest affection, and fell over dead.

Pointers vs. Setters at Vincennes.—All those who have shot in the southern part of the three States—Indiana, Illinois and Missouri—know that the sheep-burr is a great drawback to the sport. Setters that are well feathered are crippled within a few hours if not properly sheared or trimmed before taking the field, and then they are liable to take cold. We have found from experience that a moderately coarse haired pointer is the most killing dog for these sections.

Two Belles.—Mr. H. B. Harrison, notice of whose purchase of Belle (Pride of the Border-Derby) appeared in our issue of Nov. 4, wishes to have it understood that his Belle is not the Belle referred to as having whelped to Count Royal, Oct. 23. Mr. Harrison's Belle is now in whelp to Paris, due Nov. 28.

Cocker Pedigrees.—We have received from Mr. Burrollis, of Hornellsville, N. Y., pedigrees of his Wildair, elle and Topsy W., all well-known cocker spaniels.

The Stud Book.—Volume II, of the National American Kennel Stud Book will be published immediately after the running of the field trials at Vincennes, Indiana. It will contain over 1,200 entries.

Beagles—Thomassille, iia.—I don't know much about cockers; they seem to engross the attention of many of your correspondents just now, but I do profess to know a beagle when I see him. I have a little dog that I bought some time ago of G. W. Pownall, of Christiana, Pa., and am willing to match him against any other beagle i America. II.

POLLY TO GO TO VIRGINA.—The Westminster Keunel Club's newly imported setter bitch is in this city, and will be sent at once for work to Mr. Hammond, in Virginia. She will run in the Eastern Trials.

POINTER FOR SALE .- We understand that the N. Y. K. C. have a very fine young pointer bitch, eighteen months old, for sale. She is by Dr. Strachan's Flash and is half sister to Flake, Whiskey, etc. She is said to be fairly broken, points, retrieves and hunts well. She is to be had, we understand, for \$50.

#### CURRENT DOG STORIES,

S.

S.

But if you are looking for dowaright intellect call on the pointer dog. It is safe to say that the pointer has mind enough for anything. He is far more human than the monkey, and, we cheerfully acknowledge, far worthier of the relationship. Why, look at "Jeff"—overlybody knows "Jeff"—Dr. Mattaner's live-colored pointer. The dog carriers notes, goes for the lones and buggy, goes for bear, and fatches ice regularly Besides all this, "Jeff" has many accomplishments that make him a this-hed dog. Would anybody deny "Jeff's intellect? Hardly, Why, last week "Jeff' was sent for ice, and what did he do? He started with a towel, in one corner of its end of the sent of th

XJ.

At the Saddleworth Potty Sessions a few days ago a man named John Torkington was charged with stealing a dog valued at £5 belonging to a man named Hosen Hill. The prisoner stoutly denied the charge, and set up as his defense that the animal know him and was very fond of him. He saw it following him and did all the could to send it away again, but it it would not return. The chairman asked if the dog was h court, and on being answered in the affirmative he ordered the prisoner to call the dog by name. This was done, and immediately the chain was taken from its neck the dog left its owner's side and, bounding on the platform where the prisoner stood, rearred itself on its hind legs and placed its forepass on the man's breast, joyously wagging its tail, the incident causing considerable merriment in court. This evidence, coupled with the testimony of other winesses, satisfied the Bench so much of the man's innocence that they discharged him.—English Ex.

#### KENNEL NOTES

KENNEL NOTES.

NAMES CLAMED—Mand 2d.—This name is claimed for a brindle greylectuid bitch by Spring out of Mand. These dogs were sold together for the benefit of the Herald Irish Belief Find, and are now owned by Fred. J. Englehardt, of Chiengo, Romnic.—Mr. Elliott Johnston, of New York, clams this name for a Scotch celle bitch out of Downey's Lassie, by Watts' Rog, whelped March 3, 1880. Bonnie is a tawny fawn, agood deal of black in in tail and cars edged with black with tethront. Blanche Hubbell—Mr. Burr Hollis claims the name Blanche Hubbell for his black and tan bitch puppy out of Belle by Wildare, whelped Oct. 29, 1880. Burdelte Kennel for his Burdette cocker spaniel Kennels for nake a specialty of this eclebrated strain of occlers only, the eclebrated betwint and tan Burdette eccker stud dog, now known as Waddell's Benn, will be added to his kennel on or alount Dec. 15, 1890. # Archern.

A PROPOSED MATCH,-On November 25 a match will be shot be Theorems artificial representation of the match to be a rows at 60 yards. These gentlemen desire to make the match to be open to all comers, and to that end, and for the purpose of obtaining a fair test of the general accuracy of American archery, they suggest that all archers desiring to join in the match shoot the 96 arrows in four lots of 24 arrows each, without any trial shots or preliminary shooting at any range, each arrow shot to score in the match. If archers so shooting will forward their scores to Will. H. Thompson he will put them in tabulated form and cause them H. Hompson be with fat them in about the 4-in and cases than to be published. They should be sent to Mr. Thompson, recorded thus: First 24, second 24, third 24, fourth 24, total. E. T. Church: 18-92, 21-113, 17-91, 22-110—78-406. Let us all sho be the weather good or bad. "PAINTER" HUNTING IN THE OLDEN TIME.

FIN SILSBEE thus discoursed to a World correspondent. The locality referred to is the Delaware Valley, Pennsyl. vania, and the time many years ago, when Fin was a young

man:

"I never was much on the painter hunt, but I never took any extry steps to get out'n the way o' one. I've made many a one o' the onsartin cusses claw the dirt. I huppened by once, up uigh the S'trucky Creek, jist as a wholiopin' big painter dropped out'n a tree on to a doe that was takin' a snooze on a bunch o' sweet fern. The deer blatted like a stuck call, but that painter never got his sucker in on her throat, for I let ole smooth-bor talk, an' Mr. Painter clawed around on the earth a spell, an' then his lamp didn't continner to burn no longer. The doe wa'n't hurt much, but she was so infernal skeert that she stood there a trembling like a yaller dog on a frosty mornin', an' looked at me with eyes bigger'n a couple o' tea sassers. "Thinks,' snys, I, 'my lady, mebbe you won't strike such good luck some other day, se I'l jest put you out o' the way o' these wicked painters'. An' I did. She didn't scarcely kick, an' so never knowl what a favor me an' ole smooth-bore done her.

"Talk o' painter hunters! You orto hear Pete Stewart, o' Rockland, tell about killin' the varmints. He's gethered 'em in by the dozen. An' there's Nelse Crocker. If he hadn't a went an' shot bisself 'cause he couldn't keep the temprince pledge, he would tell you things that 'd raise yer hair. Vol

"Talk o' painter hunters! You orto hear Pete Stewart, o' Rockland, tell about Isilin' the varmints. He's gethered 'em in by the dozen. An' there's Nelse Crocker. If he hadn't a worta m' shot hisself 'cause he couldn't keep the temprince pledge, he would tell you things that 'd raise yer hair. Well, not exactly he wouldn't nuther, come to think on a, fur he killed hisself in 1820, m' he was about seveny then. Colonel Bush, o' Liberty, and Flip Hurley, also o' Sullivan County, war proba'ly, from all accounts, the boss painter-killers the region ever see.' They begun temake the woods warm for painters about 1814. I was 'long about ten years old then, an' fore I was a year older Isollowed and killed a painter myself, 'cause it had unade a meal off n a caff that b'ionged to us. We usty hear o' Bash an' Hurley's doin's, an' I remember one o' their hunts that some feller from over there told my father.

"Hurley's doin's, an' I remember one o' their hunts that some feller from over there told my father.

"Hurley's doin's, an' I remember one o' their hunts that some feller from over there told my father.

"Hurley's doin's, an' I remember one o' their hunts that some feller from over there told my father.

"Hurley's doin's, an' I remember one o' their hunts that some feller from over there told in grain the state of the swamp, not more'n ten feet from his door. He know'd they was a heap of fun waitin' fur kings one slips over to tal Bush's cubin an' tells him. Cal had the only good painter dog they was in the woods. They took the dog, their guns an' their knives an' axes, an' in lesthan an hour they know'd by the dog's bark that he had painter up a tree. They didn't get to the ree none too soog, fur the painter was jist in the act o' lettin' hisself slide frouther tee onto the dog. He'd and you wonded, and to save his dog, which was no gritty as sandpaper, Bush had to fall into the painter may significant the him an' made him fall a leetle short o' his mark. But he was only wounded, and to save his dog, windward by belie

Canda Duck Shooting.—Away down in Canada, below Amherstburg, can be found the spot; but the time, an! no, alas, years ago, when no business cares compelled us to remain pent up in the city. Then we camped from Julyo September, when school would compel us to return. The next few years found us with more time to ourselves, and from August to November would catch us sure. Now'l we can get "two weeks," well enough. The writer has for some days been confined to his rooms by malaria, etc., and may not get his "two weeks."

The margin of the marsh wus, of course, spong, sod many footprints of snipe, etc., could be seen on the sortation of the soft soil, while up the hill the trees were thick are near at hand could be seen our two tents, and six of users posed the party.

The morning had opened grandly. The boys had world two quicily left us—Mike and I intending to rest until some Then taking a short trip through the woods after dimar to partialize, to return to the hill to view the "open water, which from the hill you could plainly see. The tents wo'n in the hollow and on the other side, and our companions were absent in the adjoining marshes demolishing snipe, etc., in sportsman-like way.

As my setter Zero was absent. I heard Mike, who follows?

in the follow and on the other site, and our conjuntuous absent in the adjoining marshes demolishing sulpe, etc., as sportsman-like way.

As my setter Zero was ahead, I heard Mike, who follows up the rear, say, "Wud yer plaze look in the thra on the posite from yiz," and glanneing to the left I observed aware mous eagle perched on the branches of a half dead oak. I looked so grand that although I had time to bring him low I allowed him to fly gracefully away, and up through the trees he sailed round and round until he became a subspeck in the air. What a beauty he was, and so different for the poor "jaundiced beaks" birds in captivity: The next ing passed, and with fair lock I had managed to obtain passed, and with fair lock I had managed to obtain brace of fine birds, when on getting near a lot of lazel bashmics or less than a swarm of bees. A faint report technor or less than a swarm of bees. A faint report technor or less than a swarm of bees. A faint report technor or less than a swarm of bees. distance had seen the duck and tried to obtain him. By this time they are near here. I hear the whistle of the wings. time they are near here. Thear the whistle of the wings. The trusty breech-loader comes up like a feather and the charge leaves the muzzle. Yes, he dropped. I had aimed some six feet ahead, and by the time Zero had retrieved the duck a faint hurral was borne to my ears. A true had congratulated me. When the boys came in A true sportsman had congratulated use. When the boys came in two were at the tents and met me, immediately picking up my duds and allowing me to walk in with not a shell's weight. We had scales. The duck was twenty-nine inches long, over forty the extent of wings, and weighed over five pounds, and often now I glance toward the big mallard.

Begg. NAVABRE. had congratulated nic.

REPT NAVARRE

"Nessmir," writes: "I am among the oldest canocists in the United States. Have a record of over forty years, and am frosted east iron for the double-bladed paddle as against oars or canvas. Shall go through further and faster next season than I did this, and with a longer, larger canoe, say of twenty-five pounds weight and of racing model. I take no guide—I am a guide myself wherever I can get a clean four inches of water. I am never half as much at home and never find myself so easy as when I am lost in one of our forests, where there is no track or trail, save of the wary natives I there meet."

-Indianola, Nov. 6.-Game now in abundance and Texas—Intumola. Not. 0.—Game now in administer and continually arriving. Saw several flocks of swan this morning, the first of the season, and a great many geese and brant. Was out this morning close to town and bagged one fine goose, one brant and a brace of fine ducks, and was not gone from home altogether over one hour and a half. Every cold snap there is a regular fusitade at the passing fowl—every one who owns a gun or musket turns out.

G. A.

SHEEP vs. DERR,-It has been a frequent complaint in Sitter vs. Deer.—It has been a frequent complaint in Scotland that a potent cause of many evils, especially deopulation and high-priced neat, was the large extent of the lands devoted to deer forests instead of to sheep culture. Attention has been called to the subject by a discussion in the London Times. In 1873 a select committee of the House of Commons was appointed to inquire into the merits of the case, and that committee reported that the evidence bore out none of the charges.

—The Scientific American of last week contains two full-page illustrations of Captain Eads' proposed railway for transporting ships with their cargo across continents. Captain Eads claims by his plan to be table to take loaded ships of the largest tonnage from one occan to another across the Isthmus of Panama, as readily as can be done by a canal after the Lesseps plan, and at a much less cost for engineering construction.

# The Rifle.

PLEASE VISIT THE RANGES—Charleston, S. C., Nov. 8.—Seeing what Mr. Murphy, of Worcester, has done in shooting, I send you this: Oct. 16, 45 shots, one hundred measured rods, at 10-inch bulls eye, other ways third-class target, he made 32 bulls, 10 centres and 3 inners Nov. 1, 40 shots, 500 yards, at 8-inch bull and four-foot Score--29 bulls and 8 centres; 22-inch, 2 inners. One target. outer the first shot.

The shooting was done by James Pixley, of Otsego County, in the presence of ten or twelve persons. He has now returned home. Sight on heel of gun. He used Kemington Creedmoor ritle, 107 grs. Hazard, 550 bullet, his gun kicking so one would think it was impossible to hit anything across a barn-yard. He did his first shooting at long range this summer; first score was 179, last 217 Is also splendid off-hand shot, Will sight his gun on anything distance nuknown, quickest of any man I ever saw. shoots he always paces to see how far, and calculates his elevation

#### NEAR-SIGHTEDNESS.

In your issue of October 21 I see a communication from "Phila" on the subject of near-sighted persons shooting with glasses Having had much experience as a near-sighted shot for the las seven years, and as your correspondent's case seems so similar to my own when I first began to use the glassy ovals, I venture to give a small bit of personal history which may probably interest other near-sighted sportsmen.

From earliest childhood I have been an ardent lover of every

kind of shooting. As a youngster, too small to walk, I followed the hunters on my pony, my older friends kindly pulling down the rail fences for my passage. Near-sighted! I never thought of it. Grown older and swinging my light squirrel rifle I found I could kill more than my school-mates, but one or two of them could always beat me shooting at a mark. I would not admit even to mysolf that I was near-sighted. In fact I doubt if such a thought ever entered my head in those days. Yet how distinctly I even now remember what a large, dim, hazy look each scrap of white paper assumed that was put up for a target. In 1873 I began my college course in New York city. Troubled in copying the intricate formula from the board, and seeing others with glasses, I bor-rowed a pair from a class-mate, and oh! wonders! I hadn't imagined any one could see so plainly. Returning home I resumed my hunting and target practice, always using glasses, feeling convinced it was the only way for me ever to become an excellent shot For two years how it troubled me to see that front sight plainly: a thing very easy to do without the spectacles. I painted it every color of the rainbow. But in the two years' practice I had trained my eyes so as to see the naked gray sight on a long Springfield rifle as plainly as any one could wish. How well, my winning many successive prizes can testify. In my earliest experiments I discarded eye-glasses completely, as, no matter how good, they are utterly unfit to shoot with, jumping off at every explosion of four drams of powder in shot-gun or rifle, and, worst of all, by actual experiment causing the bullet to always go wide of the markseveral inches at 100 yards, the variation increasing or diminishing as the distance became greater or less. My belief is that all glasses which hang disgonally across the eyel cause a certain amount of

refraction, which is the case with almost all eye-glasses. Perfect sight can only be obtained by looking perpendicularly through the very axis of the glass. Good spectacles are all arranged according to this fact. "Phila's" glasses may all be badly ground, which would of course cause much aberration of sight. Vet I think the difficulty lies in their not standing squarely across the centre of the eye.

Lown a number of rifles, shot-guns and pistols, and shoot then constantly, and from my long thirty-four inch to my short three-inch Derringer, I have found, by repeated contests with others. that there is no variation in the amount of elevation necessary be ordinary eyesight and my eyes assisted by glasse have sighted many rifles for friends, and have repeatedly taken un a gun never in my hands before and shot as well as with my own showing my sight was not made abnormal by the use of glasses. Pardon me for my intrusion on your valuable space. My only excuse for speaking so much of myself is the hope that it might aid urage others afflicted as OCNUESEE

Five years ago I accidentally discovered that I had become near sighted. So gradually had the focal point changed that I was unare of it until I happened to try the glasses of one of my near sighted friends, when lo and behold! a brighter world lay me. Previous to that time, when in the woods, I experienced some difficulty in judging distances, and detected myself squinting squinting continually, as that seemed to clear the vision somewhat. At the ordinary reading distance my eyesight is perfect, apparently beyond that a glass about No. 30 is necessary to give me a clear

outline of anything.
In shooting with a rifle or gun I always use glasses, but have never experienced the difficulty that "Phila" complains of—viz., shooting over; and, if he will use his glasses whenever he does his rifle, I think with properly adjusted sights he will have no trouble. I have made and used several varieties of fixed rear sights, but the very best one I have ever had I have just purchased from Wm Lyman, of Middlefield, Conn. The front sight viewed through this, as well as the object simed at, is rendered perfectly clear.

This sight is one of the many good things with which I have be come acquainted through the columns of Forest and Stream. As a relief from the cares of business, it is hailed from week to week with delight. Aside from the information that interests all lovers of red and gun, it stimulates a desire for more out-of-door life and sensible recreation. Long may it wave. D. H. S.

Riverton, Conn

#### HUNTING RIFLES.

N your issue of November 4 I read a letter signed "Otto," with reference to the Kennedy magazine rifle, and claiming an undisputed superiority for it in its class as a repeating arm. have very lately had an opportunity of inspecting a Kennedy rific and of comparing it with one of the Winchester pattern, but to see any advantage in the new arm that is not possessed to an equal extent by its older rival, and am inclined to look upon it conv in which the modification of parts is so trilling as hardly to constitute a difference. With the comparatively small powder charge used with both these rifles (small in a sporting sense), I do not fear any chance of one of them on either system bursting at the breech; and should any accident occur from the explosion of a de fective cartridge, the results would be more serious in the Kennedy than in the Winchester, as the sliding lock cover in the former is closed when the ritle is fired and the escape of gas is retarded while in the latter the lock cover remains open, and the gas can escape freely into the air. Were I buying a rifle I would prefer the old well-known arm, whose performances in skilled hands are of world-wide renown. I do not think that the limit of excellence has yet been reached in repeating arms, and as a hunter I would welcome any improvement that would lead to the greater efficiency of the arm. The small charge of powder and consequently low velocity of the projectile is the weak point of the repeater, and I would suggest to the manufacturers to direct their attention to the production of really powerful Express rifles on the repeating principle-arms that would compete with the performances of the English Express rules, and capable of being safely used with large charges, say 135 grains of powder behind a 300-grain bullet in a

Constructed as the present repeaters are, a charge like the above might be dangerous, as any flaw in the parts of the mech sustaining the breech-stopper might cause it to give way and give sustaining the oreconscipper might cause to give up and give rise to an accident. The breech stopper itself does not entirely close the barrel, as any one can observe for himself, a ring of the metal of the base of the shell being plainly visible and unsupported, and this in some cases might give way and allow the gas to flash back. To obviate anything of this kind, I would recommend that etal of the cartridge shell should be encased in that of barrel, the breech end of which should be recessed to include the should be made mitre-shaped to fit into this recess and effectually seal the end of the bore. An arrangement of this kind would give perfect safety in the event of the bursting a weak cartridge. I emains to be seen to what extent the present breech mechanism will be able to resist the backward strain of a heavy charge, but in every ease some arrangement should be added, that in the event of anything giving way, the bolt be kept from being liable to fly back in the firer's face.

To fully secure the advantages of the Express system, such a velocity must be communicated to the bullet that after the penetration of any soft body, it should break up and the component fragments fly forward like a charge of buckshot just after leaving the muzzle of a gun, and convert the parts lying in their path into pulp. I have seen a tiger drop stone dead on being hit by a bullet fired from a Henry Express ritle, using five drams powder, and on opening the careass hardly a trace of the metal of the bullet could be found, but the work done inside the animal was terrific The lungs were pulped into a semi-fluid mass that could be ladied This was with a soft-skinned animal, and done out with a spoon. with a soft metal bullet with large central cavity. Against thick skinned game the hardness and cavity of the bullet must be medi-

fied, the cavity in some cases being entirely suppressed.

I am certain if your rille makers would turn their attenti toward the perfecting of a powerful repeating Express ritle that it would meet with a ready sale in all parts of the world where the sport-loying Anglo-Saxon seeks the excitement and pleasure of the

#### MILITARY SMALL-ARMS

BRIG-GEN'L S. V. BENET, Chief of Ordnance, U. S. A., has D just made a very interesting report of the doings of his de-dartment during the past year to the Secretary of War. In addit-ion to the routine notes of progress he gives very fully his views about the advantages of a really National Guard. Speaking of the Frankford Arsenal ammunition he says :

"It has for some time been my intention to recommend the adoption of a reloading cartridge as an economy, and the trials and ex neriments conducted with that in view will soon enable me to reach a definite conclusion. The present long-range excitement points to heavy charges and severe recoils, but the experience of other armies and a little reflection convince me that for Army purposes the best average results can be obtained by keeping the charge with in moderate limits."

The report shows that there were manufactured at the Springfield Armory during the fiscal year, 20,387 rifles and carbines, and on this subject Gen. Bennet says:

"The operations at the armory have been conducted in the admirable and satisfactory manner which always characterizes the performances of every duty by Col. J. G. Benton, commanding. The reputation of the work there done has never stood higher than now, and it can safely rest on the deserved excellence of its arms known and recognized everywhere.

"On the 1st of July there were in store as a reserve soundy including the above number made, only 22,979, showing that the number on hand at the beginning of the year had been well-nigh exhausted during the twelve months, by issues to the Army and malitia, etc. At this rate of manufacture and consumption, the day is far distant when our reserve supply of arms will have reached what all nations consider a proper one.

"At its last session Congress made an appropriation of \$300,000 for small-arms, being an increase of \$50,000 over the appropriation for the year previous, and I indulge the hope that the amount will continue to be increased from year to year until the country is bet

ter prepared for any unforeseen exigency.
"The Springfield rifle continues to give very general satisfaction, and the complaints made against it are not greater in number nor more intense than is the case in other armies the world over. I am satisfied that as a single breech-loader it has no superior as a military arm, and that it will not be superseded by anything short of a magazine gun. The latter will unquestionably be adopted, and we will as certainly do so, as not many years ago we adopted the revolver. No magazine gun has yet attained that perfection and completeness that will warrant its general introduction in the army. The Hotchkiss has met with reverses, due to hasty manufacture and imperfect design in some of its minor parts, which can hardly be charged to the invention. It is believed that these defects, in which the mechanical principles of the invention were not involved have been corrected in the new model, and more favorable res may now be anticipated. The manufacturer's experience with this gun proves that difficulties are ever to be met and overcome in perfeeting a new invention that, has to stand the severe test of field service. As a rule, a first-rate military arm must be of gradual growth; and be finally made up of successive improvements renessary to correct defects developed in the hands of the The principle of the Hotchkiss is a good one, but there seems to be some prejudice existing in our sevice against the bolt system and its awkward handle that time and custom may overcome.

"The calls for magazine guns by our cavalry, the improvements being made in these arms, and the necessity of extending the inquiry in order to get the best, induces me to recommend that an appropriation be made to enable this department to further study and test by trial in the field a few of the best magazine systems.

"An appropriation of \$500,000 for the manufacture of the Spring field gun during the next year is deemed a reasonable one. strongest and most convincing argument for a continued beace is eing thoroughly prepared for war. Our armories and arsenals fully stocked with war material, our fortresses well armed and our malitia well organized, armed, and equipped to march shoulder to shoulder with our small body of regulars constitute the best peace offering we can present to the world. In the matter of preparation economy during peace means extravagance in war and, as a finan cial problem, the wise and timely expenditures of the present will be the truest economy,

As an appendix to the report there is an account of a series of were conducted by Col. Benton and Capt. J. E. Greer. These rials were undertaken and prosecuted under instructions from the Ordnauce office, and the work has been performed with a great de gree of thoroughness and completeness. These reports will amply repay careful perusal by those in the Army and out of it who ested in ritle firing, and much of the data given v found new and useful. The use of the telephone in determining the time of flight of projectiles, especially at very long ranges, was first made at the Sandy Hook Proving Ground, and its application in these expriments was found most valuable and important

Among Captain Greer's conclusions are the following :

As a result of these trials it will be seen that the service rife with service cartridge is samply sufficient to disable and possibly to kill up to nearly 3,000 yards; that the same is true of the carbine using the rifle cartridge; that the 500-grain bullet fired from any rifle with a twist sufficient to give the necessary rotation will range nearly 3,700 yards; that variations in weight of powder charge within ordinary himits have no effect on elevation at extreme ranges, velocities approximating to each other; and finally. that with a cartridge prepared as at present, but with an increased weight of ball, the service rife may be made, if desired, as long a ranging As a result of these trials it will be seen that the service rifle ith service cartridge is amply sufficient to disable and possibly to

Another Range Slaughter-Charlottelown, P. E. Island, Nov. 4.—We are having an inquest to-day over a dead marker, shot in the usual manner by stepping out from the target while shooting was still in progress, and Jas. J. Heartz was pierced with a bullet Capt. Longworth who fired the fatal shot tells his version of the manslaughter by stating that "Nov. 3 was set apart for the band's annual shooting match, and as it is attached to the 82d Battalion, myself and Lieut. Daniel Stewart, attended in command. When I ont to the range before the match commenced, I found there were no signals. I immediately sent to town for them. When they arrived they were put in the proper places and given to the proper parties, and the match commenced-deceased, acting as marker, received the signals which the marker uses. Everything went on well. When the bandsmen had finished shooting at the 500 yards

range, Lieut. Stewart and myself were to fire, but Lieut. Stewart was not ready, and Mr. Hooper asked permission to fire a few shots. He got up and when he fired, I took up my rifle. I noticed the danger flag on the proper post and proceeded to take aim. My eye was then on my rifle sights and target. The instant I pulled the trigger I saw the marker run out. The next instant he toppled over. I got much excited. A few of the firing party wont up and when they returned informed me that he was wounded on the hip. I then went up and spoke to him. He said he was badly hurt. He also said 'I wish they would come '-meaning the doctors. Dr. Dawson came and Mr. Heartz shortly expired,

pelieve that all the ordinary and necessary signal precautions were taken in this match. I attribute the accident to the man's going out to the target when he knew that shooting was progress. ing. I cannot account for the fact of his going out. I attribute his death to a mere accident, which was totally unavoidable on my part. The deceased was in the butt when I arrived on the shooting range. I did not see him until he was lying dying on the ground. He does not belong to my company. We were always on the most intimate terms."

Capt. Longworth sapiently replied to the question of the corone that the practices were all conducted as carefully as possible. He did not think there was any danger at the butts; on the contrary, thought them perfectly safe, but he thought the system of marking should be improved.

ing should be improved.

Another witness said when questioned by the coroner "that the danger-dag was up when Mr. Hooper fired, but the deceased took if down when Capt. Longworth was about firing, but the captain did not see him taking it down; neither did any of us. The flag is visible from where we fire, but if a person was taking sight he would not see it. I have large experience in shooting matches and believe that all the signal precautions were taken in this match which are taken in others. I attribute the death of Mr. Heartz to coming out after marking a shot and when the band was playing."

The Jury finally concluded "that the deceased came to his death from a ball fired from a rifle in the hands of Capt, F. S. Longworth, and that the accident occurred on account of the deceased neglecting to show his danger signal before leaving the butt."

#### RANGE AND GALLERY.

MAMMOTH RIPLE GALLERY -Boston, Nov. 12.-The Excelsion Hille Match, which commenced on the 1st, has shown for so early in the month very fine shooting. The gallery has been well filled, many nembers of the Massachusetts Rifle Association and the Medford Rifled Association being among the number. This last week Mr. F. H. Holton, of the famous Empire Rifle Club of ! York, visited the gallery and proved himself a capital gallery shot. taking a place with the leading competitors. In the Excelsion Rinke Match, Mr. U. A Pollard heads the list with 184 out of a pos-In the Excelsion sible 200. Mr. Frank Hollis is second with 182, closely followed by Mr. A. L. Locke, the Rod and Gun Club of Springfield, Mass, with 180. Fourth on the list is Mr. Chas, B. Robinson with 177 Next in order Mr. L. W. Farrar with 177, but outranked by Mr. Robinson. he sixth place Mr. F. H. Holton, of the Empire Robinson. The sixth page are R. R. Holton, of the Empire Chub of New York, with 175. This match will continue through the month, closing on the evening of November 30. The following are the leving competitors, 50 yards, rounds 8, possible 40, five scores to win or possible 200 :

Camden, N. J., November 1.—Fifth Sharp's match for military rifles; open to all comers, 200 yards; ten rounds. Prizes -To the highest score in each competition a Sharp's military ritle, model 1878 (Borchard pattern), value \$25.00. 26 Entries, possible 50. Best scores: Col. G. E. P. Howard, 45; Maj. W. H. Cooper, 41; Maj. Jos. H. Burroughs, 40; Geo. D. Bower, 30.

Newron, Mass., Nov. 13.—The Newton Rifle Association gave a

NEWTON, M688., AOV. 13.—110 Acwton tune Association gave a house warming this Saturdhy afternoon, on the occasion of the opening of the new wintershed at their range at Newtonville. In spile of the weather, a considerable number were present. The following are the best scores at 200 yards:

Officement and the second of t

MILITIA RIFLE SHOOTING,—Walnut Hill Range near Boston will be given up to militia shooting on Nov. 22. The price of entries to be 50 cents, with re-entries at 25 cents each. Five shots will constitute each score. The amount of prizes, four in number, in the ineach score. The amount of prizes, four in number, in the in-dividual unatch, aggregate \$75. The confidite of arrangements have decided to use the new Lowell amountition. Shooting will commence at 11 o'clock a. m. Separate prizes are offered in the officers' match, which will be shot in teams of five mer cach. In the matter of using "Backhorn sights" on the weapons used in these competitions, it was voted that the contestants be required to use the regulation rifle furnished by the State, with no change of sights.

PORTLAND, Me., Nov. 4 .- The Regulars at Fort Proble and the Militia of Portland enjoyed a match to-day, with a not unexpected victory for the troops of Uncle Sam. The match grew out of a challenge issued by Major Haskin, of the Fort Preble Garrison, for a trial of skill.

But a few days clapsed after the issuance of Major Haskin's challenge before he received word from Captain Davis, of the Mechanic Blues, that his company had taken up the gauntlet thrown down by the regulars, and that Nov. 4, at 2, p. M., should be the day and hour for the struggle.

Although a little chilly, to-day was propitious, and with fair weather, a good range and good targets.

Promptly at the hour appointed, Capt. Davis and Sergeant

Knight of the Blues faced the target at 200 yards the toss deciding that the Blues should lead. The Captain opened with a center: Sergt. Knight following with an outer—neither bringing out white disc during his shooting. Thirty-six and thirty were their totals. Licut. Best and Sergt. Broderick, of the regulars, following with scores of 34 and 32 respectively, thus leaving the teams field at the end of the first stage.

Thus the shooting continued, each team shooting by pairs until Thus the shooting continued, each team shooting by pairs mith the end, the regulars, meanwhile, pulling slowly ahead, the close showing them victors by 75 points, as shown by the detailed scores following, Bugier Emerson and Private Donahue closing the match in fine form.

# Bachting and Canoeing.

THE record made by Mischief during the past season has performance of Arrow is to be recicled as something which may fairly attention having been called to the sailing of the Two-doult fly over a telephone of the control of the con

enough, and comes from very good authority into the bargain. Idler got around first, Palmer next and Arrow a few minutes later. It was her big displacement and fine lines that did the business, but it was rough on hull and gear. The weather was really no more than a good racing breeze—it would not have bothered in the second of the seco

and the Bonnett Challenge Cup both went into her locker. Barring Vindex, the rost of her class went to pieces in a lower sail whiel.

Arrow inrued up again two days later for a start for the prizes offered by the Frondyn Tacht Chib, then still in its pristine days. These however included Estelle, Comet, Lomise and Gypsy; the first-three prices of the control of th

with 2m. 50s. to spare, Comet second, then Gracie, Tunline, Kafe and Estelle. Flying kitse were in denomal all the way home, Array and Estelle, Elizabeth and the two schooners outrunning her on account of size. After allowing time according to the chib seale, Arrow had made the best work of all, her corrected time being 4h. 21m. 3sz., Gracie, 4h., 35m. 4sz., Gracie, 4h., 35m. 4sz., Gracie, 4h., 35m. 4sz., Gracie, 4h., 35m. 5sz., 6sz., 4sz., 
#### GO SLOW ON THE LIVADIA.

S OME contemporaries are again going off half-cocked. The first reports of the Czar's new yacht Livadia are accepted with childlike faith, though chanating from interested sources and exhibiting odear de rose in unstitude quantity. Upon the strength of one flighty cable dispatch our contemporares are once more reveating a revolution. In mayal architecture. The loss on of the reveating a revolution in mayal architecture. The loss on the haste to "create revolutionas" before the facts are in their lived in the second of the loss of the last of the revolution has ended in smoke, and the new one anext the Livadia will fare no better. The "Popoffkas," which are Livadia's, "only a little more so," were lailed with the same delight when they first appeared, but have since proven grote-que failures. The Livadia is a territic pounder in a sea, and for flat resson alone cannot be fast or manageable in rough water, whatever report may say to the contrary. Moreel permanently in the Neva, she will say to the contrary. Moreel permanently in the Neva, she will say to the contrary. Moreel permanently in the Neva, she will end to the proven a season of the last or the proven of the large permanent of the section of the last or the last of

and a lingo white elephant. The supposition that she is fast is an error. For the power applied, she is very slow. The idea that she is form can be made to pay commercially is an hallucination; freight cannot be carried cheaply at an enormous expediture of power, nor will passenger traine of the high-priced kind be large enough for many years to come to support alone such an extravagant vessel as the Livadia, even supposing her to be of very great speed.

gant vessel as the Livadia, even supposing. her to be of very great speed.

Enterprising contemporaries engaged in "creating revolutions," are too much in the habit of overlooking very ordinary logic, and to it we invite their attention. The science of naval design is the result of many verar of observation, thousands of experiments and an unrield amount of patient and accurate investigation. Is it lakely that the lobbies of a haplograft duning, a prince, or even the world has developed and collected during fifty years with a simple snap of their ingres? And mhess they can the Livadia is destined to be a failure, and will become known as such just as soon as the bottom facts ical conf.

In the case of the Anthracite, the garmtons and entirely unsubstantiated stories of an illiferate engine driver were accepted as reason enough for a summersault "revolution" in steam engueering; and now we have an anonymous cable dispatch, evidently detated by a non-professional person, as the basis of another great "revolution," this time in the halls of vessels, and as likely to play the prophets false, as did the Anthracite quackery.

#### THE AMERICA CUP MUDDLE.

THE AMERICA CUP MUDDLE.

HOWEVER clearly it may be understood by the few gentlemen it is nevertheless true that the conditions under which the America Cup is open to challenge are not in the possession of the public at large, least of all are they comprehended by our consists across the see. The unfortunate Ashbury imbrugilo has served to mix up natters to a deplorable degree, and the impressions of former differences have not yet worn away. "What do we care whether the English send over a yacth or not? We don't care a continental for their opinion of ms one way or the other." These and much salbiged was recently hexacled. Such large adoless we continued for their opinion of ms one way or the other. "These and much salbiged was recently hexacled. Such large adoless where a vent for the self-conceit of curbstone partions, but among gentlemen the sentiments are not likely to be seconded with much ferwor. The New York Yacht Club is simply the trustee of the America Cup, and not its owner. It is manifestly the business of the trustees to see to it that the yachting world is given authoritative and official information concerning the conditions under which the cup they have in trust as open to challenge. That it is improper to keep the cup with a suspicion abroad that a fair chance for competition is not afforded, no one will dispute; and that it is the duty of the trustees to avoid even the scalbance of grounds for such suspicions, whether instituted or not, is equally clear. We have have been also also the casted of the N. Y. Y. C. willout necessitating worly warfare and windy correspondence beforehand. Since we foully believe ourselves so safe in the possession of the cup, asking for the publication of the precise terms attaching to a challenge for the same caused be deemed an extravagant request. By accelling to this demand the N. Y. Y. C. will be complying with a wish we know to exist both at has home and abroad, and they will in no wise be compromising their dignity in deigning, once for all, to clear away the

#### YACHTING NOTES,

BROOKLYN YACHT CLUB.—Prom various sources we hear that the offorts of this journal to mullify the scheme of a had character to appure the Secretary's chair will be heartify seconded at the proper time, and that there will be a decided stand made by the members goinst further eneroschienents from the quarter indicated. This is set if should be, for the club must be well sware that a person of organizations to refuse that brotherly recognition which completel the properties of the properties of the control of the

exist among all reputable sailing clabs.

The Leil,—This famous high-speed yacht, the fastest of her length or size in America, has been completely refitted and overhanded by the Herreshofts, of Bristol, R. L., and is now on the market at a very reasonable figure. We have details concerning her, and a line of photos of the Herreshoff boiler, engines and yachts at our office for inspection of interested parties. As we have had the privilege of cruising in the Leila in smooth water we can personally testiff to her speed, and as we have driven her in a seaway we know her to possess extraordinary seagoing qualities for a boat of her type. She can make good weather of it when other steam yachts would break up or be swamped. The builders are prepared, we believe, to substantiate these facts to any parties with bona pick intentions. What a competent board of engineers has to say about the Bristol boats can be found in our last issac, the demand for which has almost exhausted an extra large edition.

Deep Boats,—The tide is on the turn. A gentleman with a

Deep Boars.—The tide is on the turn. A gentleman with a wide range of acquaintance among yachtsmen reports a decided perpendictance in the demand for deep, safe boats, with jeruising qualities as the main consideration.

CRUISING IN CANADA.—The 7-ton cutter, Guinever, 24 ft. water line, 5 ft. 3 in. beam, and 5 feet deep, stowing 4½ fons ballast, and hailing from Toronto, Ont., has cruised over 1,500 miles last-senson, and her owner is so well satisfied with his experience that he pro-puses to do considerably more next summer.

VANDAURA.—Through the kindness of Capt. Neils Olsen, we have covived some photos of the famous Vanduara, taken while in dock Clawes. The speed of this cutter must be a conundrum to the obby ridden, light draft theorists.

hobby radden, fight draft theorists,

A Canozing Tair,—The interesting and humorous descriptive articles of a canoe cruise now being published in the Detroit Free Press, and from which we quoted, are to be credited to the pen of Mr. Fred II. Seymour, not as before reported through attributing the initials to another well known expert with both quill and paddle.

Snear Boxes.—Mr. Rushton, the canoe builder of Canton, N. Y., has recently added a sneak box model to his stock, and is prepared to furnish these useful ducking punts at reasonable rates. They can be shipped to any part of the country.

INTARPID.—Sailed from Cowes Oct. 31 for Alexandria. She will at Lisbon, Cadiz, Gibraltar, Malta, etc., and also visit the Grecian Archipelago.

New Sceam Yacut.—We hear that Mr. Bennett has ordered a large sea-going steam yacht from Messrs. Ward & Stanton, of Newburgh. She is to be 225 feet long and to steam 20 miles.

#### Answers to Correspondents.

#### 18" No Notice taken of Anonymous Communications.

- R. B. F., Sumter, S. C. -See articles on wild rice in our issues of Sept. 30 and Nov. 4.
- IBIS, Saline, Mich. -The work you mention is not highly thought of by ornithologists.
- A. W., Lawrenceburg.-Write to Dunn & Wilbur, game dealers, 192 Duane st., this city. L. H., Atoka.-For the lamps send to any of the gun dealers ad-
- vertised in our columns
- V. B. M., Raleigh, N. C.—For oiling all parts of a gun we have used Riggs' Lelmontyle oil with much satisfaction.
- W. A. W., Charlotteville, Va.-For game and fish at Lake Istopaga see the article "Southwest Florida" in our last issue.
- R. D., Salmon Falls, N. H.-Can I use B shot in an extreme choke-bore? Ans. Yes; we have done so without any bad results.
- O. W. S., Fort Gibson, Ind. Ter.—Is there any danger from docking a dog's tail, he being eighteen months old? Ans. The dog is too old.
- F. W. B .- Confer with Sam'l Holmes, consulting naval architect, 122 Front st., N. Y., for iron steam ships ; or with our advertisers for iron yachts.
- J. P. E., Montreal, Can.—1. For maps write to Colton & Co., 172 William street, New York. 2. We have withdrawn cricket from our columns permanently.
- Novice.—The flatter the floor of your canoe the less will she draw, but for racing under paddles flat floor and much beam will produce a slow canoe.
- "A Young Sport," New York.—Feed your setter on table scraps and dog biscuit. Give no meat unless cooked, and better none at all, except when working.
- C. W. M., Jordan Station, Kentucky. -In his business dealings with us the person you mention has always been found rehable. Further than this we cannot say.
- STAR, Rome, N. Y.—We cannot refer you to a dog fancier, and would advise you to watch our advertising columns, or insert an advertisement yourself telling what you want.
- Massachusetts, Cambridge, Mass.—Will you give me your opinion as to what Western State is considered the best for cattleraising? Ans. Wyoming, Colorado or Nebraska.
- II. II., Rockland, Me.—Is any one liable to bydrophobia if bitten by a dog in perfect health? Ans. No. But if he were would you send an anonymous note for the doctor?
- W. B. N., Gardiner, Mc.—We know of no party who can furnish on wild rice nearer than those whose advertisements have appeared in this paper. For instructions about sowing it see issues of Sept. 30 and Nov. 4.
- A. B.—All modern yachts, American or foreign, have the greatest beam abaft the centre of their length. The "fish model" is ex-ploded. No similarity between fish wholly submerged and ships partially above water.
- E. A. P., Madison Barracks, N. Y .- Would there be any difference between the shooting of a 12 bore 28 inches long and one of 30 inches? Ans. If the guns are bored exactly alike the 30 inch larrels would shoot a little the best. Practically, the difference would
- L. H. H., Savannah, Ga.-Had you been a reader of the Forest AND STREAM you would not have asked about the danger of the Dittmar sporting powder. That subject was very fully discussed in our issues of Sept. 23, 30 and Oct. 4. Read these articles and you will no longer be in the second of the second o you will no louger be in any doubt.
- B. C .- The Cape Ann people have their sails treated by parties in Gloncester in special solution, the formula of which is not made public. Steep your sails thoroughly in 14 gallons of water, I penual powdered alum and 2 ozs. powdered sugar of lead. Will preserve from mildew, keep pliable and white.
- E. P. G., Lake City, Minn.-1. We do not know the name of the gunmaker. Probably a firm name given to the work of some Eng-lish manufacturer. 2. In a No. 10 breech-loader for chickens and ducks use 1/2, oz. shot, 4 to 5 drs, powder according to weight of gun. 3. The boats are good for general sporting purposes.
- E. G., New Orleans.—Do you think it safe to use thread-wound cartridges in a full-choked gun? Also largest buckshot? What is the greatest range of the thread-wound cartridge? I have seen no account of buckshot tests in choke-borres. Ans Yes, if the cartridges will pass easily the choke, and if the shot will chamber in it.
- H. J. D., Phila., Pa.—My Gordon setter bitch puppy, four H. J. D., Phila, ra.—My Gordon satter outen puppy, rour months old, keeps very poor, constantly vomiting its food. Its stomach is very sore to the touch. Sometimes touching its stomach will cause it to have a fit. What can I do for it? Ans. The puppy probably has gastritis. Give cold broths and milk and good fresh air. No solid food.
- L. M., Brooklyn.-Will you please answer, under heading in coming number of "Answers to Correspondents," whether Capitan Matthew Webb did or did not swim across the English Channel, from Dover to Calais, Aug. 24 or 25, 1875, or when? Aus. Matthew Webb swam from Dover Pier to Calais in 21 hours, 45 minutes, August 24 and 25, 1875.
- G. H. B.-1. Can you give me some remedy for the great amount of dandruff on my dog's back. He is combed and brushed daily, and great care given to his cleanliness. 2. What is canker in the 3. Is it always accompanied by an offensive odor? Ans. 1. Wash the dog's back with Juniper tar soap and give a little sulphur with his food for a week. 2. Cauker is an inflammation of the lining membrane of the ear. 3. Yes.
- J. B. W., Lowell, Mass.-1. Why are not the small ducks called —Mange, Canker in Ear, worst cases cured. Sample mailed for samp. Hepworth, 296 Madison street, Brooklyn. —Howorth, 296 Madison street, Brooklyn. —Byspepsia, biliosanesa, nervousnesa and miscrableness all cured fith Hop Bitters. —Hotalird Shooting Suits. Upthegrove & McLellan, Valparaiso, and the free sample of their food, which is mainly fish. 2. Yes, for those that like them. 3. The term was originally used to designate those who sold their game, and is now used about any one guilty of unsportsmanlike-practices. 3. Seyenty cents,

J. D. F., Pittsfield, Mass.-My pointer, three years old, holds his head on one side, shaking it very frequently, and quite often scratches his ear with his foot. Sometimes while doing this it appears to give him pain. His eyes are running more or less, and I sometimes think his hearing is affected. Ans. Your dog has canker. Exercise care in the matter of diet. Cleanse the ear with tepid water, and then pour in a little weak lead water once a day and hold it there for a minute or two.

L. E. W., Hayt's Corners.-1. We know nothing of the man's race; nor would we make any distinctions if we did. race; nor would we make any distinctions it we did. 2. We believe him to be reliable, in the same way that all the established houses who advertise with us are reliable. 3. We know of no pawnbroker to whom we can refer you for second-hand guns, and would advise you to stack to regular gun dealers if you want square treatment.

4. The trouble is not with the revolvers, but with the hand and arm holding them.

5. Patched bullets are not used in Winchester

C. A. C., New York,-1. I have a very fine double gun, muzzleoader, 22-bore, 33-inch barrel, 7 lbs. weight, what would be the proper charge of powder and shot for it? 2. Would a 10-bore, breech-loader, 8-lb. gun, be as safe as a 12-bore breech-loader of the same weight? 3. If I have my 10-bore, 8-lb. breech-loader choke-bored will it be as safe as before? Ans. 1, 21% drams powder and an ounce of shot would be a good charge, though three drams might be used without unpleasant effects, we think. 2. Practically as safe, though of course the barrels of the 10-bore would be a little the thinnest. 3. Yes.

W. M. B., Phila., Pa .- My setter dog, three and a half years old broke through the ice two years ago and was shortly afterward very bad with the distemper. He was cured of that, but was left

with what was at first a very mild twitching. It has grown on him, and now while at rest or attempting to sleep he becomes quite violent, throwing his legs about, barking with his mouth shut. He is worse when heated, and in warm weather. The trouble seems to be mainly confined to the right side, limbs and all. Ans. Your dog has chorea or St. Yitus dance, a result of distemper. There is little hope of a cure. He may be benefited by giving him  $\frac{1}{18}$  grain of nux vomica, with two grains quinine three times a day for a few weeks.

J. M., Chicago.—My setter pup, nine months old, is troubled with diarrhes. She is very much emaciated, her coat looks rough, eats sparingly, and her eyes run to some extent and they do not look very bright. I treated her for about ten days with fifteen drops tincture of catechu twice a day, and fed her on such food as boiled milk, beef toa and a few scraps from the table. She seems to be getting better, but is not gaining flesh. Judging from her general appearance when I received her, I concluded she had worms, and I vecordingly gave her a small dose of pink root tea, but as she did not pass any I gave up the idea, and now come to you for advice. Ans. As long as the diarrheea continues, use as an injection by the bowel fifteen drops tincture of opium and fifteen drops tincture of catechu in a teaspoonful of starch water. Also, give half a teaspoonful of castor oil in a little warm milk twice a day.

S. F., Hollidaysburgh, Pa.—While out hunting recently I shot and wounded a rabbit. Knowing that the same could not go a great distance I sent my setter dog after him to retrieve him. five minutes, and the dog not coming back, I started in the direction whence I supposed the rabbit had gone and, coming to a fence, I saw my dog standing half way up in a field grown partly over with weeds, having the rabbit in his mouth. Calling on my dog to fetch he still stood there, not making any motion to come in.

Thinking something was wrong I started to investigate and, coming near the dog. I found that he was pointing some came. near the a og, I found a covey of quali which be had pointed, all the up to him I found a covey of quali which be had pointed, all the time with the rabbit in his mouth. Have you ever heard of a set-ter or a pointer dog doing the same? Ans. Yes, We have seen several dogs point with rabbits in their mouths. We, however, are opposed to allowing either setters or pointers to retrieve or even

Subscriber, Columbus, O.—I have a Newfoundland dog which has been lately suffering from a peculiar trouble with his ear. I noticed one morning that one of his ears was badly swollen. I took him to a physician, who lanced his ear, taking from it quite a lot of blood. This operation was repeated three times in four days. At the second operation about half a goblet of blood, somewhat clotted, was drawn. To-day I had his ear lanced again, and a wooden clamp, made of two sticks tied together, fixed at the ear to stop the flow of blood from the arteries. I am anxiously awaiting the result of this. In case the ear fills again (it usually swells to about the thickness of an inch or more) what shall I do? Some fever attends it, and a general feeling of sickness and torpor comes over the dog. He is very large, usually very active. Age, five years in February. Ans, There is probably an aneurism of the Pressure after evacuation should be used, and probably an injection of some astringent-as per-sulphate of iron-into the

-One of the firm of John H. #### FOREST AND STREAM.

#### NEW YORK, THURSDAY, NOVEMBER 25, 1880.

 This is an excellent time to call the attention of your friends to the merits of the Po EST AND STREAM. We shall be hoppy to supply specimen copies of the paper to any addresses which may be sent us for that purpose.

Wego to press this week on Tuesday, instead of Wednesday as usual, and many communications which would otherwise have appeared in this number are necessarily deferred a week.

PITHING FISH.—While on a fishing excursion recently we brought in a string of black bass which looked so nice and fresh that all at the country hotel where we stopped thought they must all have been caught on the last day, for they knew we had been in camp three days. When told the fish were "pithed" as soon as caught they seemed no fwiser than before, and so it occurred to us that many other readers of Forest and Steam may not know the word. Take down your "unabridged" and you will find that pithing is the act of severing the spinal marrow, usually next the head, and it probably is so called because it cuts the pith, or marrow.

The operation renders a fish, or any other animal, senseless immediately, bleeds them somewhat and keeps them from bruising themselves while dying in the ordinary manner by asphyxia, or drowning in the air, whereby the gills become dry and the blood clots. All fish should be either bled in the gills or pithed as soon as caught; they look better, keep better and do not suffer.

BACK FROM THE SOUTH.—Mr. S. T. Hammond, whose departure for the South we announced in our issue of October 29, has returned with all his dogs except. This let. She whelped about ten days since and was left for the present in Virginia. Mr. Hammond has been in Virginia and Maryland and reports birds fairly plenty. He is well pleased with the way in which all the dogs acquitted themselves, although the time that he has had them is but short to fit them for the trials. We shall expect to see them at Robins' Island next week.

# A PROPOSITION TO GENTLEMEN SPORTSMEN.

East Rockaway, Queens County, L. L.

I noticed in last week's edition of your paper a communication with editorial comments on the trappling of game on Long Island. The idea of your correspondent and your comments are but in comsonance with the encroachments which are constantly being made upon the liberties of the people by the wealthier classes. The law forbidding the trappling of game on Long Island is, or ought to be, unconstitutional. The farmer, upon whose land the game is found, and upon whose crops it has lived, is virtually the owner of it, and if his children want to trap it there is no equitable objection to their doing so. By what right does that unmitigated unisance—the "real sportsman" (?)—treepass upon our land, throw down our fences, wound our cattle and still game which we have grown, which has fattened upon our crops? The law and the complaints of your correspondent have induced the farmers in this vicinity to club together and put up the required legal notice forbidding all trespassing, and if your correspondent or any other "real sportsman" (?) is caught shooting in this vicinity, he will have a bill of damages and costs to pay. We have determined that, if our boys cannot trap our own game, aristocratic (?) trespassers shall not shoot it, and wee unto any man who disregards our notice.

I. H. GRIFFITI.

I. H.

It is most important in this discussion of the game laws which refer to the game on landed estates, that we should have a clear appreciation of how such laws are regarded by a class who are so directly interested—namely, the farmers. We believe that Mr. Griffith's letter fairly expresses the attitude of thousands of farmers toward the gunners who shoot over their lands. It therefore deserves fair and candid consideration. This we are prepared to give to it.

We do not propose to waste our time by attempting to prove to Mr. Griffith, and to those who share his opinions, that the game which he claims to be his belongs to the State, that the State has then the right to prescribe the conditions of its capture, and that the law against trapping therefore ought to be, and is, constitutional; nor shall we attempt to explain to him the exterminating effects of the practice of snaring game birds. All this being proven even to their own satisfaction would not, we opine, change the attitude toward sportsmen now maintained by many farmers, nor would the end sought, which is the due protection of game, for all our logic, be any nearer of attainment. Indeed, for the time being, we are willing to grant to the farmer all that he claims in this matter: accede to his proposition that the birds on his land belong to him: and even acknowledge that he may do with them as he pleases. For we shall try to show to him a wiser disposition than that of smuggling them with broken necks to the baggage-master and marketman.

It happened that this letter came to us only after that part of the presentarticle, which follows this paragraph, was written for to-day's issue of Forest and Stheam. It is an admirable indorsement of what we had written. A further consideration of it must be deferred to a future number, when, in accordance with our previously determined plan, we shall address the farners directly upon this subject. Our proposition now is to gentlemen sportsmen.

The provision against snaring and trapping game birds is eminently wise and proper, but outside of certain restricted territories which are leased and protected by game societies the law is practically a dead letter; so much so that the traffic in trapped birds is conducted without concealment, and game dealers in New York openly advertise for trapped birds and openly sell them.

The law is not respected by the farmers, who have it entirely within their power, if they will, to prevent the setting of snares and traps on their lands.

They do not regard the law because it is not to their interest to do so. Public opinion in farming communities does not sanction the law. Its enforcement is regarded by land owners as an infringement of their rights and of the rights of their children.

The only way by which this law can be made anything

more than a dead letter is by culisting the interest of the farmer in securing protection for the birds. The policy to be pursued is that which has been repeatedly indicated in this journal. We cannot better outline it than by reproducing here what we have said before, and we accordingly repeat from the FOREST AND STREAM of MARCH 11. 1889:—

"Omitting at present the discussion and even the mention of all other means, there is one precaution and protection, which of itself alone would suffice abundantly to enforce thoroughly all the game laws, and in fact go far beyond the scope of the laws—namely, such a uniform system and policy on the part of all sportsmen as will give all the landowners a warm and steady interest in raising and sheltering and defending all the broods of young birds on their farms. If all the farmers on the Island were one and warmly one in this matter the work would be done up thoroughly, for they are lords of the land.

"In very many instances, as matters now stand, farmers and gunners are not friends in these matters, and have no interest to befriend each other. Without going closely into particulars—which in fact is not necessary—the fact is that there are gunners who are brutes and wild beasts when their gunning fever is at the height, and who, like so many Malays running a-muck, will recklessly trample down crops in ten-mile walk, damage and exasperate the farmers all the way; perhaps if accosted, and that in a proper way, insulting or damning the farmer: or, to the disquiet or alarm of his wife and daughters, shooting into his doves, possibly while the doves are near the house or on the home lot or on the barn roof. Such gunners come out from the cities every year and are a disgrace, and worse yet, a great injury to all the real gentlemen who like now and then to handle a gun in the right way and time. One is an offender and the next ten are blamed and hated on account of this one.

"Let all the farmers and their sons and hired men find that it pays them to protect birds and they will do it and satisfy all parties. The gunners are willing to pay for their sport more than the pittance of ten cents a quail, which a sly and stingy baggage-master hands out secretly to the trapper. The dime is a bigger coin to the hard-handed farmers boy, scanted of spending money, than a quarter is to many a sportsman. Let all parties understand each other and the birds will be left undisturbed and will be carefully protected till the honorable gunners come for the sport at the appointed time and pay for the sport that is then and thus guaranteed them on od grounds, something as in the old country, but in the right way for American citizens. The practical details ought not to be at all difficult to arrange in most parts of the Island. nor in other sections of the country. But if some farmers are dogs in the manger—do not shoot nor let others shoot on their farms—all the better, for there will be safe harbors, secure game preserves, where the birds will come up to full strength, and from which they will take wing, to be shot elsewhere or to procreate another generation.

"If the gunner would always pay for the birds he shoots, and if he shoots only what can be properly used, the farmers of the Island and the State and the Union in a vast majority of cases would welcome such gentlemanly gunners and perhaps be proud to rank among them as warm friends of fair and lawful sport.

These two points, upon which we cannot too strongly insist, are of vital interest to many thousands of men whose interests in the matter are really identical in the long run, if only regarded in the proper light. But if the farmers are expected to protect and support and favor quail and meadow larks in order to let nischlevous or butchering gunners kill ninety-five out of every hundred, without thanks or pay, and perhaps with serious damage to crops, temper and confort, the sport is rather too one-sided. Rather let mutual arrangements be made to equalize it and to harmonize it all round."

Only by adopting such a policy as we have outlined can gentlemen sportsmen hope to preserve from extermination the game of Long Island and of other sections of the country. We commend to game societies and to individuals a consideration of this view of the case.

The Forest and Steem does not stop with a reiteration of the general recommendations here given. It is prepared to go further, and for the benefit of its readers attempt to put this into actual practice by arranging the details and

bringing into direct communication with each other, the gentleman sportsman who is willing to make a suitable return for services rendered, and the farmer who is willing in consideration of fair treatment to preserve the birds on his land.

for services rendered, and the farmer who is whining in consideration of fair treatment to preserve the birds on his land.

We propose the fair trial of a carefully matured scheme of which the general purposes are:

- The protection of game birds by farmer and landowner for the benefit of the gentleman sportsman,
- A fair remuneration of the farmer by the sportsman for privileges granted.
- 3. Putting the two interested parties into direct communication with each other.
- 4. A discrimination between gentlemen and rowdies, and the protection of the farmer and the gentleman sportsman alike from the direct and indirect injury of lawless gunners.
- 5. The uncompromising enforcement of the law against netting and snaring—not in the interest of the sportsman as against that of the farmer; but for the mutual benefit of both.
- 6. The united efforts of farmers and sportsmen to duly protect and replenish the supply of game.

To put into tangible shape such a scheme as this, we must at the outset receive the endorsement and co-operation of the sportsmen who are interested. If we have not mistaken, we shall receive this; and without further preliminaries, we now call upon such of our readers as approve of the plan, and are willing to join us in it, to send their names and addresses to this office. We invite correspondence on the subject.

# THE DEATH TRAP IN SHINNECOCK BAY.

SINCE the publication of our article with the above heading, which was taken up and commented upon by the New York Tincs and Brooklyn Eagle, we have had several letters and interviews upon the subject. A lawyer writes us that he finds that no hav appointing commissioners to locate an inlet for the bay was passed by the last Legislature, and thinks that this may be an error.

We have not looked into this portion of the affair, having received our information from the fishermen about Quogue, Atlantieville, and Good Ground. The facts about the closing of the inlet and the certainty of the death of the fish, if not released, all agree upon. During the past week many young bluefish (snapping mackerel) have come to New York market from the bay, fish of half a pound; and if they serve for food it is better than to have them entirely lost. The bluefish left this part of the coast (Long island) fully three weeks ago; and the millions of young of this species, as well as those of the menhaden, weakfish, etc., should be allowed to go and return with increased growth next season to say nothing of the injury of the bay for spawning purposes by allowing the fish to die there.

Mr. H. D. Butler, weil known as the Superintendent of the New York Aquarium under the old regime, has been at Good Ground all summer. He tells us that the location of an 'n' et has been decided upon, but that it will not be dug until the people have finished their fall farming work, perhaps in January! This is surely covering the well after the calf is drowned. The bluefish, weakfish and menhaden will then have died, and their carcasses, such as are not devoured by the crabs and cels, will lie until the warmth of spring causes them to decay, when the seum on the top of the foul water will repel every fish secking to enter to deposit its eggs. The closing of the inlet has resulted in a rise of the waters of the bay from the inflowing creeks until it is between one and two feet higher than usual, and the cellars in the vicinity are flooded. The only outlet is the filter through the sands of the beach. Mr. Butler stood upon a temporary foot-bridge, made necessary by the rise of the waters, and counted thirty-five dead bluefish in the little creek. They had chilled and died.

The fishermen say that in former years while the bay was closed they got cartloads of large striped bars which, becoming chilled, floated up to the surface. Weakfish of eight to ten pounds are readily caught by dipping up in a net, they being These fish cannot stand the cold weather ton cold to escape. that some of our fish which remain all winter with us do. The different fishes are similar to the birds-some are hardy and will endure cold and others will not. While men are disputing over the location of an inlet, it is well to bear in mind these facts as gained from those long familiar with the bay. Seventy years ago the inlet was away east of where the lighthouse now stands. The one opened last season was two and-a-half miles west of it. All the inlets on the south side of Long Island are working west, The great inlet at Fire Island does not cross the beach at a right angle, but runs from the bay in a westerly direction, and perhaps this might prove of advantage to Shinnecock.

This is a question which does not alone concern the men who live around and from the bay. It has a wider application. It affects the food supply of a great city, and while our Fish Commissioners are giving their time and energies to the stocking of the waters, and the people are willing to furnish the means to do it with, here are untold numbers of fish dying just as they have arrived at the age when they are fit to go to sea to grow. We would like to see our State Fish Commissioners empowered to meet cases like this; they are the ones who should have entire charge of it, and they would arrange the inlet where it would promise the greatest

permanency without regard to any man's front door. They should have a distinct appropriation to meet such a great emergency as this, and we know they would not wait until January to do it.

#### Forest and Stream Bird Notes.

AN INDEX AND SUMMARY OF ALL THE

ORNITHOLOGICAL MATTER IN FOREST AND STREAM, VOLS. I—XII,

#### COMPILED BY H. B. BAILEY.

THIS volume, as its title imports, is a complete and comprehensive summary of all the ornithological matter contained in the first twelve volumes of the FOREN AND STREAM. The material here condensed comprises extended essays and descriptions, field notes and observations by sportsmen and naturalists. They include every part of North America; embrace a period of six years; and relate to the life history, haunts and habits of all the familiar birds of our seashores, fields and forests.

Much of this material has been written by well-known ornithologists, who have from the inception of the Forest and
Stiela recognized its value as a medium for the interchange of information of this character. In addition to having secured the contributions of so many writers of accredited
authority, the paper has been remarkably successful in stimulating original study and observation on the part of its readers, and the good result has been the acquisition of a wast fund
of new and useful information pertaining especially to the
game birds of North America. The great bulk of the book
indeed has been furnished by sportsmen; it embodies their
own personal observation, and is what has interested them.
It is, therefore, what cannot fail to interest all sportsmen.

The labor of compilation, which has occupied the leisure time of several months, was undertaken at the carriest and repeated solicitation of numerous readers of the paper, who were cognizant of the wealth of ornithological material stored away in its files, and who felt the need of having the same in compact and accessible shape. The book as completed fully justifies their opinion; it contains more useful information about the game birds of this country than can be found in any other single volume published.

The plan followed in the preparation of the Forest and Stream Bird Notes has been to make (1st) an alphabetical index, all the articles relating to a given subject being designated, with references to volume, number and page; (2d) an abstract of each article, and so a complete abstract of all the matter contained in the twelve volumes relating to each separate subject; and (3d) a complete list of the writers.

The book will be of equal value to those who do, and to those who do not, possess complete files of the paper. Under each head, as Quail, Ruffed Grouse, Suipe, Wild Turkey, Woodcock, etc., will be found a digest of all the contributions concerning each of these birds, the localities where they are found and the seasons, the migrations of the migratory species, and their breeding and other habits.

The book is now in the printer's hauds. It will be printed on fine calendered paper, with wide margins, and will make a volume of about 200 closely printed pages. The date of publication and the price will be announced in due time.

#### DEFIANCE OF LAW IN NEW YORK.

THE law of the State of New York prohibiting the sale of striped bass (rock-fish) under half a pound in weight has been generally observed by the market dealers of this city, until recently. The fact is that striped bass weighing less than one-half pound are now sold in the New York markets six days out of the seven of every week. It was supposed by the dealers that those who were instrumental in procuring the passage of the law would be on the lookout for its violation and enforcement. This is not the case, nor is it to be expected. Men may advocate the passage of a law and there their duty ends. Neither is it our duty to make complaints to the courts, as we consider that we fulfill it when we publicly call attention to a violation of the law.

The fact is that New York City needs a Game Protector, and Long Island needs another—men who reside on the premises and can watch the markets. These markets, as we have before said, are the great incentive to poachers, and if the sale of their plunder is stopped they cannot follow their unbarful business.

There is entirely too lax a state of public opinion in regard to the violation of the game laws, many people looking at them as a venial offence; but it is robbery; robbery of the whole people, which, if practiced upon an individual, would be dealt with severely. These laws are made, or should be made, to give every man a fair start in the race for sport, and he who starts in a few days, or weeks, in advance is a robber, whom it is base flattery to call simply a violator of the law.

The striped bass law was enacted to save a valuable fish from externihation by the killing off the young—and surely half a pound is small enough limit for a fish which often is seen in the market of thirty pounds, and sometimes of double that weight.

The poachers are now in arms to resist the law. Our authority for this is the Oswego Palladium, which says:

Two weeks ago William P. Dodge, of Prospect, a State game con-

stable appointed under the act of last winter, made a tour of Oneida Lake and destroyed about thirty trap nets which he found set in violation of the game law. He used some boats from Messenger's hotel livery. That night, it is reported, the fishermen, learning of their losses, gathered at the hotel, armed themselves with axes and destroyed all the boats, to the value of about \$400. They have reset their nets, and every night from ten to fifteen fishermen, armed with guns, pairol the beach all along the fishing grounds. They keep a man stationed at Canastota to send out the alarmif any State constable or any other officer starts out for the lake. The fishermen eneply declare that they will kill the next game officer who appears. They are lawless in their habits, and it is not doubted that they will fulfill their threats. One man has thirly of these trap nets, worth \$40 apiece. If the enforcement of the law is insisted on, it is believed that there will be trouble, and at the same time it looks cowardly for the Oneida County Game Association, which started the movement, to back out.

If what this report says is true, then no language is too strong to use in this matter. We hope to learn that the One-ida Game Association has not backed down, but that they will support Mr. Dodge in his laudible undertaking. If not, then we trust that Mr. Dodge has the requisite backbone to call on the State for aid. We have great hopes of the efficiency of the new Game Protectors. The only fault is that there are not enough of them to watch the great markets and Long Island, the home of the poacher, and we will give them our unqualified support in all their lawful undertakings.

There is no use in mincing matters when poachers are as daring and defiant as these Oneida Lake robbers are. They must be put down at all hazards.

Since the above was penned the Rochester Democrat and Chronicle came to hand with an account of an attempted assisiantion of Mr. G. M. Schwartz, the Game Protector of that city. After recounting a splendid raid by Mr. Schwartz on the illegal netters of Cayuga and Seneca Lakes, whereby over 100 gill nets and many fine lake trout were confiscated, it says:

As they reached Two Milo Point several men were seen in boats laying their nets, but upon the approach of the steamer they pulled hastily to the shore and ran away. Ther nets—five in number, each loaded down with magnificant salmon trout—were conficented by the officials, and the steamer renumed its course. It was a bright moonlight night, and Mr. Schwartz and Mr. White were standing on the deck engaged in conversation, when the report of a gum was heard on the shore, and a buildt entered the post against which Mr. Schwartz was leaning, within two inches of his head. The lead knocked off as splinter of wood, which struck the genthman over the eye, but beyond this he was not injured, although the call was exceedingly close. For the remainder of the trip Mr. Sowartz stood guard with a gum in his lands, while Mr. White pulled out the nets, and before they reached Hammondesport they had seized twelve nets and torm up between thirty and forty.

Mr. Saunders, superintendent of the Caynga steamboat line, orfers a reward for the discovery of the man who fired the shot and every effort is being made for his apprehension. It was certainly a dastardly attempt at murder, and shows plainly the character of the men who are engaged in illegal fishing and the means to which they will resort to resist the officers of the law. Mr. Schwattz has done and is doing splendid work in protecting our fishing interests, and he should receive a substantial support.

### FISH EGGS FOR FREE DISTRIBUTION.

PROFESSOR, BAIRD, United States Commissioner of Pish and Fisheries, will have eggs of salmon, land-locked salmon, whitefish and California trout for public distribution during the months of December and January.

The salmon eggs are those of the Atlantic salmon (Salmo salar), from the Penobscot River, and will be sent from Bucksport, Me. The land-locked salmon eggs (S. Scłago) will be delivered at Grand Lake Stream, Me., the eggs of the whitefish ( oregonus albus) at Northville, Mich., and the trout from the United States salmon-breeding ranch on the McCloud River, California.

Now is time for all fish commissioners or fish culture ists to make application for the eggs of such species as they may require to Prof. Baird, Washington, D. C. There will be no charge for the eggs, nor for their packing, the only cost to the receiver being the express charges on the packages from their point of shipment.

Dr. Garlick on the Carp.—The venerable fish culturist, Dr. Theodatus Garlick, now in his seventy-sixth year, has begun the culture of the carp. The Doctor, as some of our latest readers may not know, is the father of fish culture in America and is an invalid of sixteen years' standing, now confined to his house. He writes to us as follows from Bedford, O., Nov. 13: "I received a very nice letter from Prof. Baird a few days ago. He also sent me some German carp and I have placed them in as good a place as can be found most anywhere. Prof. Baird is doing more good for our big human family than any other man living."

STATE Association Prizes,—Last week we published the names of the prize committee. We are informed that many prizes of a most substantial character have been already promised and that the full list, when completed, promises to be exceptionably full and valuable.

A Word to Our Readers.—Every reader of the Forest and Stream is requested to send us the names and addresses of such of his friends as are interested in field sports, but are not among our subscribers.

# The Sportsman Courist.

CHILCAT AND CHILCOOT.

STEAMER FAVORITE, PORTAGE BAY, CHILCOOT INLEY, Chatham Straits, Alaska, August 24, 1880.

DON'T feel at all sure that the above long and apparently comprehensive heading will give you or your readers a very clear idea as to "Piseco's" whereabouts; so I will explain a little more in detail where I am, and for the benefit of such of your readers with adventurous turn of mind, fondness for travel, and who may be bothered every summer with the great question "Where shall I go?" will tell you how and why I got here and what I am doing—the latter first, as it is the shortest story. I am simply waiting, with such patience as I can muster up, the getting sober processnow I hope in operation upon a number of Indian chiefs with whom to-morrow I am to hold converse on affairs of importance: of so great importance, in fact, that there are at this present moment, within thirty miles of this place, at least three thousand Indians, who are more or less advanced in the different stages of intoxication which are incidental to n potalach, which potalach is the commencement ceremony of a war which has been declared between the Chilcat and Chilcoot Indians.

a war which has been declared between the Chileat and Chilcoot Indians.

A self-constituted commission, consisting of Major Wm.
Gouvernour Morris and myself, which is irreverently termed
by the Shauman and hydrographer who accompany it the
"Hyas Joint," has been cruising around among the islands
of the Alexander Archipelago, the leebergs of Cross Sound
and Jey Straits, the "glorious" glaciers (I got that adjective from Prof. Muir himself) of Chatham Straits and Lynn
Canal, and the dangerous rapids and reefs which characterize Perll Straits, visiting the most powerful of the Oranans
or coast tribes, and setting up many troubles and little disputes which have sprung up since the white men have begun
to penetrate the country.

Our trip is being made in a trim and very comfortable little
steamer, the Favorite, which is owned by a company of enterprising men, who have determined, Elliett to the contrary
not with tanding, that the resources of Alaska are well worth
developing, and who, having organized themselves as the
'Northwest Trading Company," are following as far as
they go, and reaching out beyond, when they fall short, the
footsteps of the Hudson's Bay Company, which for years
controlled the trade of southeast Alaska.

The company has established and is establishing trading
posts at various suitable locations, where, comfortably enscented in a neat frame house and store combined, their agent
enumbrellas usually to be found in a country store, receiving in return the skins of seconter, fur and hair seals, sea
lious, heaver, mink, marten, land otter, bears, wolverines,
lynx and others, and the oil of whales, porpoises, and seals
and between intervals of active trade beguites his lonesome
weary hours by learning Chinook from a Clootchnan.

The Favorite is the connecting link between their agents
and the outside world (in which dignified position Sita
stands to them), and, making a monthly trip, distributes and
collects.

Upon this trip the interests of trade were secrificed, and

collects.

Upon this trip the interests of trade were sacrificed, and
the coach-whip which floated from her main gave indications—which were confirmed when the howitzer gave forth its peal
and the gatting, mounted on the apper deek, came into view—

and the gatling, mounted on the apper deek, came into view—that the "fire canoe" was upon a more important mission: and at each village we visited there was a hurried discarding of blankets and scrubbing up and arraugement in gorgeous, although often incongruous costumes, by the Liwsh Tyhees, preparatory to their wan-seen with the "Hyas Clotche J. C." Yesterday we reached this place, and here only the post traders greeted us, and a few women remained to welcome and sell us salmon berries. All the men and boys had gone to the great potalatch which was going on at the Chilecot village, some twenty miles away, and at Chileat also (do be careful of the last sylhables of Chileat and Chilecot, otherwise my letter will be badly mixed) a potalatch was taking place, which was enlivened by a little fighting, in which already some blood had been shed, one life lost, and much more of the same to be expected.

which was enlivened by a little fighting, in which alrendy some blood had been shed, one life lost, and much more of the same to be expected.

I'll try to give you a clearer (I won't say clear) idea of the situation. The Chilcats and Coots occupy each large villages, which are about thirty miles distant from each other, situated well up the rivers, one of which, the Chilcat, flowing southeast, and the other south-west, converge to the head of a narrow peninsula which divides the upper end of Chatham Straits into two bays. There is a trail and portage across this peninsula, and at the lower Chicat village on the west side, and at Portage Bay on the east, the two tribes need to trade or get drunk when in harmony. At Portage Bay the Post Agent is in the confluence of the two.

The Chilcats are the most powerful and warlike of all of the Alaska Indians, and have always been opposed to the coming amongst them of white men, principally because they feared an interference with a right which they have always claimed and maintained to the trade with the interior Indians, the Sticks, and also because, as their chief, Riotz-Klotz, said, "The white men demoralize the Indians by selling or giving them liquor and debauching the women," which, I regret to say, is only too true.

Neuty all of the liquins of Alaska are according to trade.

ret to say, is only too true. Nearly all of the Indians of Alaska are, according to tradi-Nearly all of the Indians of Alaska are, according to tradi-tion, descended from the Chileats, and among these descend-ants are the Chileats, who, living in proximity, have inter-married to such extent that a war between them has all the horrors of a civil war. Such a war we found in progress, sarted a few days ago, as are nearly all the troubles in this country started, by a barried of molasses, which had produced its usual effect upon an Indian who, last summer, had been stabbed at Wrangel by a white rowdy, and who, as a natural consequence, cherished a blood fend, to be allayed only by the "getting even" process of killing a white man. This cremony he attempted to perform on a French trader (from whom in all probability the molasses was procured), but got ecremony he attempted to perform on a French trader (from whom in all probability the molasses was procured), but got whipped in the attempt, as the trader was protected by the chiefs, who thus kept their promises to me, and satisfied himself by settling up a grudge with another Indian, who some time ago had, in a heated discussion, bitten off his right car. This little affair he settled by shooting to death the camibalistic Indian. Unfortunately the man with the broken ear

a Chilcat and the ear-breaking defunct a Chilcoot, hence this

a Chileott and the ear-breaking defunct a Chileoot, hence this row, which blood or blankets alone can settle, and both parties are getting up Dutch courage for the fight.

Our only hope is that the messages we sent to both sides on our arrival yesterday will meet with respect, and that they will, as we request, establish a truce, get sober and come to laft the matter over with us. If they do I have full faith that we will be able to stop the war; but until they do come, or send us word that they refuse, we are reduced to the monotony of expectancy, which is the more trying inasmuch as within easy distance there is a grand placier, whose terminal moraine is accessible, that we would like to visit, a marsh and flat where wild geese and ducks congregate, and stream where Salmo spectabalis are abundant, all of which a marsh and flat where wild geese and ducks congregate, and a stream where Satino spectabalis are abundant, all of which are to us now out of reach, for it would never do to let these Tyhees, if they do come, catch us in the dishabille incident to glacier exploring, shooting or fishing trips. We would be sure to sacrifice prestige, while gaining comfort, by the substitution of slouch hats, flanner shirts and rubber boots for brass buttons, cocked hats and gold lace.

The Major and I have, however, our resources—he up to his cloow in papers which are in course of embodiment in his forthcoming report, and I my note-book, which is crowded with items, among which those for Piseco's FOREST AND STREAM friends are badly mixed with others of dry statistics and other matter better adapted for official papers.

STREAM Friends are budly mixed with others of dry statistics and other matter better adapted for official papers.

I will while waiting employ profitably a portion of the weary hours in getting into shape some of the former, which in due time I will transmit to you as "The Log of the Favorite." I trust that in so doing I may be able to interest first of all myself, for it is hard for me now to withdraw my mind from the properties of the favorite of the favorite of the favorite of the favorite with the favorite of the favorite of the favorite of the favorite of the favorite of the favorite with the favorite of the f myser, for it is mad for the now to windraw by mind-the contemplation of the alternative which is facing me. my message to the Chileat and Chilecot chiefs is recei-with respect, and I find that I have not over-rated my in-ence with the Indians, and if they do get sober, do declar truce and do come to me as I bid them, and when they ce do submit to my counsel and do re-establish peace, I si have senderade great expects to them, and to such whites to summ to my counser and to receasing peace, I sum have rendered a great service to them and to such whites as are now prospecting the country far beyond protection, and the results of this trip will be of more value to the future of Alaska than any which I have been enabled to accom-

plish.

But, on the other hand, if I have overrated and they won't
come, and send me instead a message to clear out; or, if
coming, they refuse my intervention, the prestige I have established will be ruined and my usefulness in this country at

an end.

I have a great deal depending upon the next few hours.

When they are passed and I shall know the result I shall cither finish this letter or commit it to the wastepaper

Pyramid Harror, Aug. 25, p.m.

That you get this letter may be a sign and token to you that success has crowned our efforts. I gave in yesterday afternoon, too resiless to continue my summing up, and in spite of my prudent resolution donned my shooting habiliments and started across the trail for a peep at a little lake where the evening hefore the Major had seen signs that convinced him that when the time was right ducks must flock

About half way over I met in single file, first Pierre Erras About hair way over I met in singie ine, inst. Pierre Errasson, who, with his handsome six feet of figure arrayed in red shirt leggins and well revolvered, would have made a capital robber in Fra Diavolo; and behind him five Indians, the foremost of whom I at once recognized by descriptions I had had as Klotz-Klotz, the chief of the Chilcats, a tall, well-built, dignified old fellow, from whose good looks, however, a wad of cotton, stuffed into a hole in his left cheek, somewhat a wad of cotton, sturred into a note in instet cheek, somewhat detracted. From this hole, caused by a guishot wound, one of his soubriquets, "Hole-in-the-Cheek," has been derived. With him was another veterna, almost equally powerful with himself and much older, Klotz being about sixty and Kak na tay about seventy or more. Both welcomed me most heartily, for in spite of my decidedly unmilitary rig. Errassan, with true shrewdness and French politeness combined, drew himself stiffer us as we awarel asoft other, and making to make self stiffly up as we neared each other, and making to me the most profound obeisance omitted to offer me his hand, thus paying tribute to my greatness, which was his trump card with the Indians, and most gracefully and solemnly introduced

me.
The costume of Klotz and Kat were not so gorgeous as to add

The costume of Klotz and Kat were not so gorgeous as to add to my discomiture, as both they and their attendants were arrayed in blankets and leggins; but in a big box carried by the latter was the wardrobe, in which he had expected to astonish and impress me.

The retainers were in war paint, with cotton or down on their bends, which mdiented determination.

Thus stripped of all external show of power, the old chief and 1 sat down under a great cedar tree and discussed the situation. I think that this meeting was a fortunate one, for I had with une cigars and a breech-loader, the free use of both of which I at once accorded; and the influence of a large meerschoum pipe, which some months ago I sent him as a present, had its weight.

eight. After all, if the true history of wars and diplomacy could written, how many times such little matters have had one weight than elaborate speeches, convincing only their

utterer.

Free from disturbing influences, Klotz-Klotz unbesomed himself, and during that interview he admitted to me that his family was in the wrong, and that he would willingly assist in establishing peace. He claimed that the killed Chilcoot

family was in the wrong, and that he would willingly assist in establishing peace. He claimed that the killed Chilcoot was not worth a hundred blankets, but that he would pay two hundred if no less would heal the breach.

The post trader made Klotz & Co, comfortable for the night, and this morning about ten o'clock several large cances, with flags llying, drums (Indian drums) beating, and propelled by about a dozen painted paddlers, each came around the point of Chilcoot Inlet and were shortly along-side. In the foremost was Danawah, the Chief of the lower village, and a blind old Shaman, who is Chief of the Chilcoots.

They were directed to go ashore to the post trader'. They were directed to go ashore to the post trader's, to wait until the tiring of a gun announced the readiness of the Tyhees to receive them. They refused to go to the trader's, because the Chilcats, their enemies, were there, but instead paddled in to the mouth of a creek, where on the beach they prepared and ate their neal and donned their pow-wow garments. At 11 the sharp bark of the howitzer summoned them to the meeting, and both parries came alongside on different sides of the boat, and avoiding all intercourse with each other. each other.

each other.

When duly scated in the cabin they presented a not undignified appearance. All wore good American clothes, of which the costs were ornamented with more or less insignia of various ranks of American and English officers of both army and navy, white shirts and shoes and stockings.

On our side of the table, epaulets and full dress undoubt-

edly produced good effect.

The interview lasted two hours, and during it the whole dif-The Interview lasted two hours, and during it the whole dufficulty was adjusted, and when we left the stifling atmosphere of the cabin—for Indians even of high rank are odorous—for the upper deck we were a party of friends all under piedges for mutual benefit.

Mine to them was, in answer to the request of both parties, "Ves. I will do my utmost to assist you in this matter."

Mine to them was, in answer to the request of both parties, "Yes; I will do my utnost to assist you in this matter," which matter was this, "When you go to your country please tell them to send teachers to us as well as to the Sticklenes, so that our children may not grow up stupid like their fathers." (The Sticklenes are the Indians at Wrangel, where the Preshyterians have established a mission school which is doing much good.) I believe that they will keep their promises to treat well all white men coming to their country, and I know I will naine, and through you I now ask of any Christians you may have among your readers – and it doubt not that such there are—to send to the Rev. G. Lyon, Missionary at Sitka, such articles as will be useful to the school which Mrs. Dickson, the wife of the post trader, has started on herownhook, and at which half a hundren children are being taught, and which son, the wheet it ne post trader, messcarted one-rowmoods, and at which half a hundren children are being taught, and which is soon to be transferred to a neat frame building, which, designed for a store at Taku, has been, by Capt. Vanderbilt, given to the Indians at Portage Bay, and on each side of which building the Chilcast and Chilcoots, now re-united, promise to build villages so that their children may attend the schools.

The Indians were cuteriated by a few shorts fired from the

build villages so that their children may attend the schools. The Indians were entertained by a few shots fired from the howitzer, and more by several voileys from the gatting which was mounted aft, and which was made to sweep an arc of 180 deg. at good canne distance.

Then they paddled ashore in company, lit a camp fire, and began a friendly potalatch on the beach, and we, satisfied with the day's work, started at 3 P. M. for home, as we have learned to consider Sitka, and are now anchored in a sing harbor for the night, during which I hope to make up in sleep for last night of wakefulness and unrest.

All's well that ends well.

PISECO.

#### ROUGH NOTES FROM THE WOODS.

#### FIETH PAPER.

OUTLET OF FOURTH LAKE, BROWN'S TRACT—AND JONES'
CAMP ON THE STILLWATER—GOING IN AND COMING
OUT—SOME REMARKS ON THE PRESENT STATES OF THE
NORTHERN WILDERSTS—THE "ARNOLD HOUSE"—THE
GENTLE TOURIST—WHAT HE CATCHES—WHAT HE
KILLS, AND HOW HE DOES IT.

Northers Wildersess—The "Arnold Hoyse"—The Gentle Toders—What He Catohes—What He Catohes—What He Kills, and How He Does It.

It is the 2d of September, as sitting in my shanty at the foot of Fourth Lake I lazily scribble a few notes of a two months' paddle in these Northern waters. I have perhaps paddled too much. My unquenchable love for fresh water sens—large or small—has kept me from prospecting the forests as much as in all honesy I ought to have done.

But the Wooddrake was such a duck; it was so delightful od rift about the cool, clear lakes, by day or night in her. The weather during the heated term was so perfect, and the woods from side to side, and from end to end, are so fearfoilly heavy to a footman that I came to spend most of my waking hours afloat. More times that I can tell I flied her with the coarse, soft brakes. (ferns, botanically) pilling them a little more at each end of the canoe than in the middle, then lying down in the easiest position I could get, let myself drift—just where it pleased winds and waves to send me.

The easy, gentle rocking of the canoe was the best incentive to drowsiness I ever found, and by night or day, was have gone to sleep drifting on deep, wide water, to be awakened by the pressing and bumping of the little craft, among the dead balsams and spreves that—Sathanus confound then—make half the shore-lines of all the lakes in the North Woods a nuisance instead of adelight. Government does it. Authority decrees that because a certain ditch on which boats may be floated, taxed, locked, loaded and, let us hope, ultimately sent to the demnition bow-wows—requires more water, the most beaufful and useful water system in the world shall be laid under contribution for the needful liquid to float a bull-head slow. The bright, green shores are to be converted into a dismal nightmare of "drowned lands." The outlet of First Lake has a most powerful and commanding dam which has lowered the first three lakes 41 inches since July 12. A dam is being built at the foot of Sixth, where

acter and status of the Wilderness in a manner that guides and landlords have yet to learn.

Never in the history of the Wilderness was such an influx of vieltors seem as in the summer of 1880. One naturally asks, is this to continue? When "Murray's Fools" rust of the North Woods in 1890, it was thought by many, even the guides, that the thing was overdone.

In 1870 guiding was poor business. It has picked up won-derbilly since then, but to my friends the guides of the North Woods, I want to give a few words of advice. I have made it a point to get my information from the men most able to give it, and these are the guides.

My good fellows, dou't run yourselves into the ground. You know, and I know, that when the guiding season is over, instead of \$3 per day you are ready to "hire out" for the winter at a wage of \$1 per day and board, and few of you ang get that much.

winter at a wage of \$1 per day and board, and few of you can get that much.

More: when you skin a gentleman he pays the swindle and makes a note of it.

For weeks I fished, paddled and hunted about the head-waters of the Moose. My soul was sated with trout and venison. I longed not for the flesh-pots of Egypt, but for the vegetable gardens at home, green peas, so to speak; succotash, as it were: the enry harvest apple; the sweet hould; the summer sweeting: the fresh tomato; the dozensof things unattainable in the woods. All this I said to myself, as at mithight I sat at the outlet of Fourth Lake and hailed and interviewed guides and tourists, who row over these waters at all times of day and night. It was the fourth of September. In a week more my holiday was out. Why should I

stay longer? I had camped on the outlet of Fourth Lake until there was nothing new there. The immense timber of by Goverment to dam the lakes had furnished me chips a by Governmen to dain the latters had turnished me emps and bark, within six rous of my shanty tent. Intelligent, cul-tured men had stopped at my camp daily to see the eighteen-pound canoe and the little pennymite who had paddied her over 500 miles without a guide. I wanted one week on the still water of the Moose River. Why, it was just the time to start. I built a fire that marked my hast chance at Govern-ment chips and could be seen for miles, put my duffle in shape and at daylight struck out for Jones' camp, 18 miles below

I stopped at "Buell's camp" on the 3d to bid the quiet old owner a last good-bye, and I had a last argument with Perrie on the relative merits of our favorite flies. But, having quarrelled him all over the Fulton Chain (because he held me in the rain while he fished his deuced spring holes and I was in his boat and couldn't get away), I will do him the justice to say that he can furnish the best cast of flies for the Moose River waters that I know of; and he can throw them at the end of 60 feet of line in a way that puts me quite in the background. I have no interest in the fly business, but I like a good cast for the particular waters I am fishing on.

From my camp on Fourth Lake to foot of Fulton Chain, 7 miles, 100 rods carry, and 12 miles to Jones' camp—a little over 19 miles. But fields decreases accepta." Not that Jones' camp is accepted at all, but the descent from the Forge House is delightful and fivelis. Coming down I stopped at the old descried house marked on Colton's map as the "Arnold House." For years this was the headquarters of guides. I stopped at " Buell's camp" on the 3d to bid the quiet old

For years this was the headquarters of guides HOUSE." For years this was the neardquarters or games, frappers, hunters, surveyors, tourists and speculators. How many of the present generation who pass by the doors of this old building have the least idea of the tragical events connected with the old house and the large, sandy, weed-grown places in which is the survey of the same property

cd with the old house and the large, sandy, weed-grown clearing about it?

The buck-boards that almost brush its sides as they pass it stop there no longer. The Forge House, two and a half mile above, is the present starting point for the Fulton Chain and the Moose waters. But there is not a house in the State with such a record as the old "Arnold place." Here it was that Joseph Harisoph, after losing a princely fortune in the vain attempt to make a fortune out of the plentful fron or hereabout, shot himself in despair. And here it was that "Old Foster," after his quarref with the "Injun," "skinned out for the Point," as the guides put it.

"The Point," as the guides put it.

"The Point" is on First Lake, nearly two miles from the outlet, and it is four miles from the Arnold place to the outlet by water, with a carry of 80 rods, while by trail it is two and a half miles. The quarrel lad been bitter. Knives were drawn and blood shed, but hunters and guides were there in force and the men were kept apart.

"You never see Christmas," said the Indian, fierely, "You never see to-morrow," said Foster, as he took his rifle and disappeared in the forest.

When the Indian left the Arnold place, with his canoe, two

and disappeared in the forest.
When the Indian left the Arnold place with his canoe, two
friendly whites went with him. They did not really suspect
danger; but, as they were passing Indian Point, single file,
three canoes, the Indian in the middle, old Poster rose up,
with rile at his shoulder. The Indian gave a yell, dropped
his paddle, and only said: "Me dead man!" Even as he said
it Foster's bullet whistled through his lungs and he tumbled
jute the water dead.

It Poster's bullet whistled through his mage into the water dead.

Every man who goes up the Fulton lakes knows "Indian Point" and "Indian Rock." I have passed them more than a score of times this summer, and never without a thought of the through that occurred at this spot. Because it happened a score of the tan summer, and nove wimout a thoughout the traged of that occurred at this spot. Because it happened that Foster, after a tellous tournament in the courts on a trial for Fourier, got clear on a plea of self-defence and came to Tioga County. Pennsylvania, to finish his days, being justly afraid of the Indians who had sworn his death.

atraid of the Indians who had sworn his death.

Lastly, there is the room where the elder Arnold, father of

"Ed," and "Ote" Arnold, "Brown's Tract guides" of the

present, shot and killed the guide, Short, in a foolish quarrel

about a dog chain. It was a brutal deed, and no man here

has one word of excuse or extenuation for it. The family

say that after the shooting Arnold went into the bush, direct
lue a dualther to haure a white cled but of a more relative. say that after the shooting Arnold went into the bush, directing a daughter to hang a white cloth out of an upper window it his victim died before sundown. Short died about 3 r. m., the cloth was duly hung out and Arnold went over to Nick's Lake, weighted himself heavily with stones, and waded out of his depth, coolly drowning himself. There was a coffin buried at Booneville, anyhow, and a funeral attended by the Arnold family as mourners. But the prevailing opinion is, here, that the funeral was a sham and that Arnold, who knew the woods to perfection, calouly walked over to Canada, that being quite as easy and more agreeable than to drown himself. Quite a tragical spot is the "Old Arnold Place." I spent a couple of hour wandering about the sterile clearing, counting and inspecting the rooms, noting the broken furnispen a couple of non-wantering about the sterile clearing, counting and inspecting the rooms, noting the broken furniture and disearded (in or iron ware and the moldy boxes, barrels, etc., that remain as they were left in the large and commodious cellar. The ruins of a dozen castles on the Rhine

modious cellar The ruins of a dozen casues on the James would have less interest for me.

There was a rusty seythe hanging in what was once the drawing-room, and in an upper room was a bunk, well filled with soft, dry grass. An old tin pail, half full of ashes, lad recently been used for making a smudge, and the bunk had been used within two or three days by some sleeper, who had come to the clearing to watch for the deer which feed at early morning or late evening in the lonely fields. Below the been used within two or three days by some sleeper, who had come to the clearing to watch for the deer which feed at early morning or late evening in the lonely fields. Below the house is the landing—not on the main river, but on a small noad with an outlet to the Moose, easily rowed or paddled—and this landing is almost classic. For a time beyond even the oldest Indian tradition, this has been a favorite landing for the red men; but the birch is seen here no more, and even the narrow blue boat of the guide goes up the channel but seldom. Halfway from the Forge House to Jones' is "Little Rapids," and twenty-five rods above the rapids there is, on the left bank, a clear, dry, spruce-covered point. Just here there is a good runway, and as I swung around in sight of the point there he stood! a plump little yearling buck, already beginning to show the short-ble, and within forty yards of me. He let me drift down within five rods of him and then, raising his flag, whistling and snorring his loudest, went off with a succession of high, defiant bounds. My rifle was back at the Forge House and the revolver, which would have done for him, was tucked away in my knapsack. Ah, well! Let him live. I have had my share of venison, bear meat, and trout even if I never taste either again. Only one does not like to miss such a chance. By the time he was out of hearing the rapids claimed my attention, and, shooting swiftly down the narrow channel. I glided into the deep smooth water below for as pleasura as ix-mileraddle as one ould wish. ly down the narrow channel, I glided into the deep, by down the narrow channe, a guided into the deep, smooth water below for as pleasunt a six-mille pacific as one could wish. The weather was perfect, the banks thickly studded with trees, mainly spruce and balsam, and I caught frequent glimpses of beaver meadows, with the light, graceful foliage of the tamaracks showing beautifully as a background to the

dark, sombre evergreens of the river banks. The six miles mark, somore evergreens of the river banks. The six lines was passed too quickly, and I ran the canoe into the thy landing that Eri Jones had prepared for her, let him take her to the boat-house, and laid away the paddle, feeling that my canoeing was over for the season. I have not stepped into

Jones' camp is pretty nearly a forest solitude. A high bill ness camp is pretty nearly a forest solutific. A high his couth, across the river; another to the north and cast deep, heavy woods on all sides. It is emphatically e of rest. The low, constant murmur of the rapids, deed resets below is equilible at all hours of the family.

and deep, heavy woods or all sides. It is emphatically a place of rest. The low, constant numrur of the rapids, a hundredyards below, is audible at all hours of the day and night. To me it is somnotent music. Often, when Jones and his son were off fishing, I dropped asleep over pen and paper, lafled by the low, unvarying monotone of rushing waters, and at night it was better than an opiate.

Here I rested, fished a little, wrote less, and loafed away by last week in the woods. It is worthy of mention that we had brook trout on the table every day of my stay. I got to care very little for them. In common with the majority who come here I much prefer the lake salmon. We made the evenings shorter by exchanging notes. I have been something of a wanderer by sea and land, while Jones is a Portynier, has been a tamer and catcher of wild hores and was in the thickest of the fight at the Pannau riots, when Walker's actions got two steamer-loads of passengers into the hottest kind of water and cost nearly or quite a thousand lives.

He is well posted, 100, on the North Woods and matters He is well posted, 100, on the North Woods and matters pertaining thereunto, and he gave me some interesting and instructive points not laid down in the books. Owning a caup, with boats to let and being on the guide list himself, he could give stories and incidents concerning the guiding business quite anusing and perhaps slightly suggestive to the prospective tourist. For instance take the following, for the

business fuite anusing and perhaps slightly suggestive to the brospective tourist. For instance take the following, for the trust of which T can vouch.

Dick Cragoe is a Brown's Tract guide and a good one. Last season he had a party consisting of a gentleman and his wife, who came to the woods for rest, recreation and amusement, and as usual the gentleman brought a breech-loader, with which he was anxious to kill a deer. But his vacation neared a close and he had been unable to get a shot. The lady, who was his constant companion in boating and fishing excursions, also desired to see how it was done, for once, and thus the gentleman to his guide:

"Dick, I can't go out without shooting a deer. Get me a shot to-morrow and I'll give you five follars.

"Dick, I can't go out without shooting a deer. Get me a shot to-morrow and I'll give you five dollars."

Dick got the dogs out early, while he lay off on the lake with his hoat and party to cut the deer off. The hunt was a pretty fair success all round—even for the deer. The dogs succeeded in driving the deer (a doe, as usual) to water. Dick succeeded by rapid rowing in cutting her off and getting a "tail-holt," which, by the way, is a favorite "holt" with the average guide, and the gentleman empited his six-shot repeater at her head as Dick held on to the tail, and actually nissed with every shot.

Then the woman was aroused. "Cragoc," said she, "it's a shame. Let her go, and I'll give you more than my husband gave for his shots."

Dick knew his little hiz, and he knew her 'word was good as gold. He loosened his grip on the tail and the doe scuttled through the lily pads, climbed the bank and was soon safe in her forest home. The gentleman paid his five dollars like a man, and next day the party went out. On leaving the lady landed Dick a package, saying: "Don't open it until we are away." The package contained a fine silk handkerchief with the name of Dick's wife neatly worked in one corner and also a ten-dollar greenback.

Dick's account of the hunt borders on the humorous. "It was," he says, "one of the most satisfactory hunts I was ever into. The man got six shots at a deer, liftene feet of, at less than a dollar a shot. Anybody would give that much. The lady was satisfied and well pleased, while the dee ought to be dissatisfied if the deer did get away from Use." Dick would feet insulted if anybody should hint at cheek!

Dick would feel insulted if anybody should hint at cheeki-

Dick would feel insulted if anybody should hint at cheekiness or extortion.

Another case of deer hunting came within my own knowledge in August last. "Slim Jim," a muscular guide of the Forge House clau, had a party of one, a Mr. George B.—, of Philadelphia, who was rather profitable, Jim's bill, footing up to about 865. Jim was faithful, took good care of his man, and did not overcharge him. Therefore, when Mr. B.—expressed an earnest desire to shoot one deer before going out, it was Jim's bounden duty to get him the chance. As floating was a failure they went over to the North Branch Lakes, with Jim's old speckled hound for a right bower, to try driving, and there met another party, with Si Helmer for y driving, and there met another party, with Si Helmer for

guide.

Helmer's party had killed deer before, and were auxious for venison rather than the fun of shooting it. Therefore, when Jim explained that his man was very desirous of shooting a deer, and asked. Si to assist, it was agreed that Mr. Bshould have a shot if possible. It turned out quite possible. The doe—a doe again—came to water a long way from the boats and made for the opposite shore. By diltt of his best should have a shot if possible. It turned out quite possible. The doe—a doe again—came to water a long way from the boats and made for the opposite shore. By dint of his best rowing Helmer succeeded in cutting her off at the last instant and turning her out into the lake, where he got the tail hold and waited for Mr. B—to shoot. One would suppose that the uncrest tyro who ever freed a gun might be able to shoot a deer in the head while it was held fast by the tail, but the shooting of the tourist is often fearfully and wonderfully done. Mr. B—put a heavy charge into the doe's hind-quarters, within a foot of Si Helmer's hand, pretty well destroying a hindquarter of venison and drawing some very energetic remark from Si. nark from Si.

ergetic remark from Jim was sto the party Mr. B. of the party Mr. B. remarked, with a satisfied air, "Well, you can score one for me." I should say so.

Small wonder that the guides have, as a rule, little faith in the shooting of their parties, at least until they have been tested by actual trial.

If these rough rule.

testen by actual trial.

If these rough notes find favor, I will at another time give some hints for parties who wish to go, in light boats or canoes, through the wilderness without guides. NESSMUK. ----

A Party for Arkansas.—Mr. H. N. Fuller, general castern agent of the New York, Lake Erie and Western Railroad, left the city Saturday evening to join a party who go on a hunting expedition to the Swan Lake country, thirty niles from Newport, Ark. They will camp out two or three weeks and the Forest and Stream is promised a report on the game found. The party consists of Messrs. H. N. Fuller, Hon. William Brown, Jacksonville, Ill.; Mr. Hempstead, Professor H. C. Hammond, Little Rock, Ark.; William Benson, James T. King, Jacksonville, Ark.; Colonel Hughes, St. Louis, Mo.

GAME AND FISH ABOUT DENVER.

W IIILE glancing over your always interesting pages, I am reminded that it is a long time since 1 contributed even a paragraph to the common fund. And first, yy 1 am reminded that it is a long time since I contributed even a paragraph to the common fund. And first, I desire to compliment you upon the very great improvement in your journal, and especially within the last year. It shows prosperity and the just appreciation in which it is held. Its place in public esteem, or as an authority upon the subjects with which it deals, cannot be questioned while its standing grows stronger with each and every succeeding issue.

while its standing grows stronger with each and every succeeding issue.

This region has been especially favored the present autumn with an abundant supply of water fowl. The ducks came early, have been plentiful and in excellent condition. The "The Great American Desert" would not seem from its name a natural resort for webbed feet; yet, thanks to the system of irrigation we are obliged to practice in order to promote agriculture, this portion of it is fast becoming a favorite spring and fall resting place for the migrating flocks. The irrigating canals iill up and keep full ponds and little lakes all over the country through which they are extended. These soon become filled with aquatic plants which supply food and shelter for the birds and they linger about them for days or weeks.

Just now the markets are also plentifully supplied with greece. Owing to the rapid filling up of the country, the pushing forward of the frontier settlements, and the extension of our mountain system of our railways, large game is growing scarceaud more and more difficult to reach. A fair supply of ventson and an occasional elk, or bear yet find

growing scarce and more and more difficult to reach. A fair supply of venison and an occasional elk, or bear yet find their way to this market, but it is very different from a few years ago. Buffalo meat is hardly ever seen, and even antelope is no longer common. There has been good sport this fall in Middle and North Parks, and west of them, but very little of the meat killed has come to Denver. Lik have

fall in Middle and North Farrs, and west to ment, our very little of the meat killed has come to Denver. Elk have been killed most, mule deer next, and then antelope. A mountain sheep is hardly ever seen any more.

The diminution of fish has been even more rapid and marked than the destruction of game. During the last summer mountain trout have been a rarity in the Denver market, and when found they have generally been sale and unpalatable to those whose taste had been educated to esteem them only when fresh from their native element. The fact is the streams on the eastern slope of the mountains are nearly depleted of their finny denizens, and those of the western slope will soon share the same result. Menutime very little is being done to make good the loss. We have a Fish Commissioner who is zealous to enthusingn, but the

western slope will soon share the same result. Menntime very little is being done to make good the loss. We have a Fish Commissioner who is zealous to enthusiasm, but the last Legislature gave him but \$1,000 for two years' expenses, and of course he can do but little.

He has obtained in the last season a few German carpfrom Prof. Baird, which prospered well under his care until distributed among the various portions of the State a few weeks ago. He has also prosecuted successfully a number of offenders against the State fish law. An important test case transferred from Weld County to this, and fought to the bitter end was concluded only a few days ago, the offender being "sinched" to the full extent of the law. If the commissioner could secure an aburrorniation sufficient to establish e ostendish of control of the sum of the state of the law. If the commissioner could secure an aburrorniation sufficient to establish e ing "sinched" to the full extent of the law. If the commissioner could secure an appropriation sufficient to establish a batching house, and then our fish protective laws could be made a little more effective, it would not be difficut to keep good the fish supply of the State with even the more delicate and valuable varieties. As it is every artificial pond soon teems with the common, coarser kinds which "beat nothing."

We have long had a kind of passive game protective association here open to membership in all parts of the State. It has done something occasionally in securing punishment for violation of the game and fish laws, and has accomplished one other thing which is a gratifying recompense for all list rouble and cost. The quail was not indiginous to this region, and the first thing the association did was to secure a supply from

other thing which is a gratifying recompense norm in troum-and cost. The quali was not indiginous to this region, and the first thing the association did was to secure a supply from both East and West. These were colonized in the farming districts, and stringent laws passed for their protection. It is not yet lawful to kill them at any season of the year, and the consequence is that Bob White is numerous in most, or all of the valleys east of the mountains. At harvest time his notes are heard in every field, and he can be seen on every fence, while he is almost as tame as the domestic fowls. The California variety disappeared—probably migrated South-ward.

This has been a phenominal year in this region; first an This has been a phenominal year in this region; first an excessively severe winter on the western slope of the mountains with an extreme snow fall, while on east it was very mild, with hardly any precipitation; then a remarkably dry spring and early summer all over; succeeded by unusually frequent rains from the middle of July to the present time, (only recently it has been mainly snow). For more than a month past there has been rain or snow, or both every two three or four days, and the streets of Denver have rivalled those of an Illinois town for mid. The "oldest inhabitant "never saw the like before: he'll. an Illinois town saw the like bef of Denyer have rivalled those of an introse town sor moo.
The "oldest inhabitant "never saw the like before; hell
swear to that. For the last week it has been cold, frosty
and icy ahead of time, and I am just wishing I could follow
Al Fresco's chart "away down" along the Southwest coast of
Florida, until the genial springtime comes again.
W. N. B.

Denrey Col., Nov. 14.

THE ST. REGIS RIVER REGION.

HAVE just returned from the woods, where I have been HAVE just returned from the woods, where I have been in camp for the last ten weeks. I camped most of the time on the Sixteen-Mile Level of the middle branch of the St. Regis River, above Bine Mountain, but visited several of the ponds and other streams in that vicinity, while there. With three others I went to Long Pond, three miles west of the Level, where we found some of the best rout fishing I have had in several years. We caught a fine lot of large trout there, from ½ lb. to 1 lb. in weight. We also found good fishing in the outlet, but the fish were not of so large a size as in the pond. I did not find the fishing as good in the Level as I did last season, owing, no doubt, to gill nets being set in the spawning beds hast fail. I was informed by persons who were trapping on the Level last. October that two men from the northern part of the county came there in that month and caught over 200 lbs. of trout with gill nets on the spawning beds. One of the men came up to the Level with boat, tent, etc., and I have no doubt a net among his baggage, just before I left. I would have stopped and kept awatch over him, but could not stay longer, so I arranged with the trappers to keep an eye on him, and if he put a net into the water to let me know it and I would bring him to the District Attorney's notice. Deer are very plenty all over that part of the Adirondacks. I hunted them with dogs, with several others, a week ago last Saturday, and we got three deer among us that day. The dogs were put out across the river directly opposite the Blue Mountain House. The next day, Sunday, one of our party who went down to Spring Cave, three miles below, heard some dogs barking in the woods across the river and went out to see what they were at. He found them around a large buck, who was fighting them. Having his rifle along he sent a ball through him and ended the fight. It was the largest and handsomest deer I ever saw, and would weigh 200 lbs. or over. He had eleven prongs on his horns, five on one and six on the other, and a fine blue coat of hair. It was supposed that the dog, which was a strange one, had driven him over from the East Brauch, some ten miles away, and one of our dogs, coming to his help, had headed him off, and he being tired showed fight. Deer are very plenty all over that part of the Adirondacks

driven him over from the East Branch, some ten miles away, and one of our dogs, coming to his help, had headed him off, and he being tired showed fight.

A party of six Philadelphia gentlemen, with guides and dogs, came on to the level the last week of August, and hunted five dogs and killed five deer, one each day they hunted. Three of them were shot within eighty rods of my camp, near Indian Rock. Two of them were large buses, and the head and horns of one they sent home to be mounted.

There is a tract of country between Middle and West Branch of the St. Regis, and running south to the Great Windfall, some twenty-rive miles long by twelve to fifteen wide or more, which is now about the only part of the Adironalacks where the steamboat and Concord conches have not reached or the whistle of the iocomotive been heard. This is an unbroken wilderness, with not a dwelling-house on it south of Blue Mountain, and within it are many ponds and streams which are as full of trout as they were fifty years ago, and several that don't know a hook cast into their waters from one year's end to another.

One large stream, some three or four miles west of Blue

waters from one years end to another.

One large stream, some three or four miles west of Blue
Mountain, has only been visited by three persons thissummer
and never in the fishing senson by more than half a dozen
different ones. There is no signs of a path or road to it.
One of the party told me he found everything just as nature one or the party told me he found everything just as nature made it there—not a stick cut or any sign of a human being there. He told that in the deep holes where the stream ran through a beaver meadow that the water was alive with trout, and that he had three flies on his leader, and often had a trout on each at one time. He said they were all nearly large brook trout, and some he caught would weigh a nound. There are passwaters streams within that there is no streams within that the streams. had a trout on each at one time. He said they were all nearly large brook trout, and some he caught would weigh a pound. There are many other streams within that tract of country of the same kind. One large stream formed by the outlets of Long and Wolf pouds, has a rough road into it from Blue Mountain, and there is a very good log shanty at Wolf Pond, which is only a short distance from the river. This stream takes its rise from Long Pond, and then Wolf Pond outlet comes in, which makes quite a river. It empties into the west branch of the St. Regis some to welve miles west of Wolf Pond. It is mostly after taking in Wolf Pond outlet still water, with occasional rapids, down whichar boat can run by drawing over the rapids. It russ through a heavy timbered country until near its mouth, where there is a beaver meadow and a rough shanty, where settlers below come to cut the wild grass for fodder. I went over this stream, or part of it, and found the tourishing all one could wish for, and many of large size. They will run from one-quarter to two pounds in weight many of them. Very few visit this stream at any time, owing to the difficulty of getting provisions and camping outfit, etc., into it. It is eight miles from Blue Mountain House to where the trail strikes it at Wolf Pond. A horse with a sled is the best way to get one's traps in, and by walking yourself or going on horseback one could go in very well. I went in that way and had no difficulty in getting along. Mr. Phelps, of the Blue Mountain House, has horses and a suitable sled, wagons, etc., also tents and camping outfit.

There are many other streams similar to those I have de-

that way and had no difficulty in getting along. Mr. Pieips, of the Blue Mountain House, has horses and a suitable sled, wagons, etc., also tents and camping outfit.

There are many other streams similar to those I have described. All this region is but very little frequented—no doubt less than any other portion of the Adirondacks that is anywhere near as extensive. Game of all kinds is found anywhere in this part of the State, and can I believe, by what I have seen myself and learned from others, be found I have seen myself and learned from others, be found there more plenty than in any other locality, and nothing preventing, more than I know of now. I shall with a friend pitch my camp next season in its centre. Partridge or ruffled grouse are plenty all over this county wherever there is one acre of woods, which will be a large share of it. Around Blue Mountain, go in any direction you may, you are s to scare up a flock of them. Addition Ondack

Hatural Distory.

OUR WATERFOWL.

Ш

A NSER ALBIFRONS GAMBELI. White-fronted Goose: Prairie Brant; Speckle-belly, Bill, red; feet. orange, with white claws; general color, grayish brown, darkest above, paler below, especially on forebreast; all the feathers with paler edges; forehead, line at sides of bill and chin, upper and lower tail coverts, white; many black feathers on lower breast and belly; length, about 27 inches.

The white-fronted goose is not especially abundant on the Affantic coast, and seldom comes under the observation of our Eastern gunners. They are not often seen exposed for sale in our markets, and those which are seen there come, for the most part, from the West. In the Western States they are much more abundant, and are found in considerable numbers during their migrations in the Mississippi Valley. are, however, by far the most abundant on the Pacific Coast where they pass the winter, and afford great sport to the gunners of California, Oregon and Washington Territory. A favorite method of hunting them on the coast, as described by Dr. Coues, is by means of a stalking ox. He says: "A bullock is taught to feed quietly along toward a flock, the gunner meanwhile keeping himself screened from the bird's view by the body of the animal until within range. Though I have not myself witnessed this mode of hunting, I should judge the gunners killed a great many geese, since they talk of its 'raining geese' after a double discharge of the tremendous guns they are in the habit of using.

This species is said by Dr. Richardson to breed north of the sixty-seventh parallel in the wooded districts, and from there to the Arctic Ocean. Mr. Dall found it breeding in great abundance on the Yukon River.

The American bird is regarded by ornithologists as a variety of the white-fronted goose of Europe, which, however, it so closely resembles that it could not be distinguished from it by the unpracticed eye. A slightly longer bill in the American form is the only definite character assigned as distinctive

Anser hyperboreus. Snow Goose: White Brant. Bill and feet pink, the toothed border of the former very prominent; color, white, except the primaries of the wing, which are tipped with black; the head and neck often washed with rust color; young said to be "dull bluish or pale lead colored on the head or upper parts of the body;" length, about 30 inches.

Variety albatus differs only in being somewhat smaller, measuring about 25 inches in length.

The snow goose, during its migrations, is generally dis tributed throughout the United States, though less abundant on the Atlantic coast than farther westward. Like the pre ceding species it is most abundant on the Pacific coast, but we have found it in considerable numbers in the Rocky Mountains and on the plains. Many are killed in the Mis sissippi Valley, and a few are sometimes taken on the Lakes. It is a most excellent table bird, far more delicate and juicy than the Canada goose.

The distribution of the lesser snow goose, var. albatus, appears to be much the same with that of the snow goose proper, but it is perhaps less frequently taken on the Atlantic coast than A. hyperboreus. We have in our possession a specimen taken some years ago on Long Island. When killed it was in company with a flock of the common brant (Branta bernicla), and excited much interest among the local gunners, who were disposed to regard it as an albino brant.

Anser rossii. Ross' Goose; Horned Wavy. "Bill studded at the base with numerous elevated papillæ;" exactly like the snow goose in color, but much smaller; less than two feet in length, and weighing little more than a mallard duck.

Very little is known about the habits of this little goose. It is the most boreal in its habits of any of our species, and only enters the United States in small numbers during the winter. It has been taken at San Francisco, and it may enter the Missouri River country, but to the sportsmen of this country it is an unknown bird. Accounts have occasionally appeared in Forest and Stream, from some of our correspondents near Winnipeg, of the shooting of wavies on the little lakes which dot that region. It is said that these birds are quite abundant in that section during the fautumn. and that they afford good sport.

Anser cærulescens. Blue Goose; Bald Brant. Head, neck, upper tail coverts and most of the under parts, white upper plumage, generally ashy or slaty gray, varied with brown; size of the snow goose, which it closely resembles in form

The blue goose, which was for a long time regarded as the young of the snow goose, is now considered a perfectly good species. It has much the same distribution as A. hyperboreus. and, like it, is perhaps most abundant on the Pacific coast. It is not uncommon, however, in the Western States, and we have seen numerous flocks of this species in the Rocky Mountains.

Philacte canajica. Painted Goose; Emperor. "Wavy bluish gray, with lavender or lilac tinting, and sharp, black crescentic marks; head, nape and tail, white, former often washed with amber yellow; throat, black, white speckled; quills varied with black and white;" length, over 25 inches,

This species is peculiar to Alaska and the Northwest coast. We have never seen it, and take the above description from Coues' Key. Little has been written about it, and its habits seem to be comparatively unknown.

The remaining North American geese are all included in the genus Branta, and are not likely to be confounded with any of those which have gone before, even by the least observant, Birds belonging to the genus Anser have the bill and feet pale or bright colored, and the plumage white or much varied in color; while those which fall within the genus Branta have the bill and feet black, and the head and neck black with white spaces, the general color of the body being The common wild goose (Branta canadensis) is a typical example, and one which is known to every reader.

Branta canadensis. Canada Goose; Gray Goose; Common Wild Goose. Tail of 18 feathers; head and neck, black, with a broad white cheek patch on each side; upper parts, smoky brown: tail, black, its upper coverts white, lower parts ashy gray, sometimes almost white, becoming paler on belly; about three feet in length. Variety leucoparcia resembles the above, but where the black of the neck ends there is a broad collar of white. Under parts somewhat darker than in the Canada goose, to which it is about equal in size. Variety hutchinsii-Smaller than either of the above; tail of 16 feathers; about two and one-half feet long.

The Canada goose is found everywhere throughout North America, and breeds in many sections of the United States. There is some reason for believing that within the last ten years pairs of these birds have nested in Connecticut, though these may have been wounded ones which did not have strength to accompany their companions to the North. We have found them breeding in considerable numbers on the Upper Missouri, the North Platte and on other streams in the

During the migrations they are everywhere more or less abundant, and their loud honking as they pass over high in air is a sound familiar to the car of almost every one. habits of the wild goose during the migrations are pretty well known to all sportsmen, and the bird is universally acknowledged to be as wary and cunning as almost any game bird with which we have to do.

The variety leucoparcia appears to be confined to the Northwest coast, while canadensis and hutchinsii are found almost everywhere. The latter is said to be especially abundant on the Pacific coast in winter. On the Atlantic coast we have often heard gunners speak of a goose smaller than the Canada, which appears a little earlier in the fall and a little later in spring than the common form, and which they termed the Southern goose. This is very probably hutchinsii. Audubon speaks of a bird mentioned by Maine gunners and termed by them Winter or Flight Goose, which was probably the same.

Branta leuropsis. Barnacle Goose. Forehead, sides of head, throat and tail coverts, white; wing coverts and interscapulars, bluish gray; under parts, grayish white; elsewhere, black or blackish; length, about 28 inches.

The barnacle goose is a European species, the capture of which in America has only been recorded three or four times. It will readily be distinguished from any others of our geese, and sportsmen would do well to keep a sharp lookout for it, and if they should be fortunate enough to bring one to bag, they should at once record it, and see that the specimen is

Branta bernicla. Brant Goose. Head and neck, black; a few touches on the side of the neck, and the upper tail coverts, white: above, smoky brown: below, paler, whitening toward the tail. Variety nigricans resembles the above but the black of the lower neck extends further backward over the breast. The white neck patches are also larger.

The brant is generally dispersed over the northern part of the United States during the migrations, the common brant being the ordinary form met with in the East, while var. nigricans is much the most abundant on the Pacific coast.

. Dendrocygna fulva, Fulvous Tree Duck; Cornfield Duck "Pale cinnamon or yellowish brown, darker on the crown; the nape with a black line along; bend of wing, chocalate brown; rest of wing, rump and tail, black, its upper and under coverts white; scapulars and foreback dark, with pale rinnamon edgings; bill and feet, blackish;" length about 20 inches.

As already remarked, the birds of this genus are not common except along our Southwestern border. In this genus the bill is longer than the head, and the legs are very long and have the tibia bare for some distance above the tibio-tarsal In other words, the leg is bare above what is commonly but improperly called the knee.

Dendrooggna autumnalis. Autumnal Tree Duck. Blackish brown; crown, most of neck and fore part of breast, middle of back and scapulars; reddish chocolate; a patch on the wing, white; bill and legs, red.

Merely crosses our Southern border into Texas.

TTO BE CONTINUED, |

THE NATIONAL ACADEMY OF SCIENCE.—The fall meeting of the National Academy of Science was held last week in this city, the session lasting from Tuesday to Friday. The meeting, which was largely attended, was presided over by Professor March. Professor W. B. Rogers, the President, being prevented by ill-health from being present.

A number of interesting papers were read, most of them, however, on physical subjects. Prof. Alexander Agassiz, gave a most interesting account of the cruise of the Blake, and the conclusions reached from his dredging operations The following abstract from his remarks appears in the

After giving some details respecting the previous cruises of the Blake and the points intended to be elucidated by the several expeditions, Professor Agassiz said the results obtained had shown that the deep sea fauna extended to a limit considerably higher than was formerly supposed—namely, siderably higher than was formerly supposed—namely, to a depth of about 450 fathoms. At about this depth lay the outernost limit of another belt of animal life which he should style the continental fauna, and which extended from a depth of about 450 feet to one of 150 fathoms. To observe exactly the connection and relation of these fauna to each other was one of the purposes of the cruise of the Blake last summer. The coast of South Carolina to the depth of the purpose and the private to be one of the cruise. indunce to each other was one of the purposes of the cruss of the Blake last summer. The coast of South Carolina was selected as a base of operations, and the region to be examined was laid out in regular sections. The first procedure was to run a line south of Cape Hatteras in an easterly direction, another north of Hatteras, and a third at Cape May. Each of these lines began at a depth of about 150 fathoms, and extended completely across the Gulf Stream. For a distance of 150 miles from the shore a greater depth than 150 fathoms of water did not occur at any point embraced in the survey, and there was very little variation from a general average, thus showing that the Gulf Stream course along an immense plateau, which was probably the original limit of the continent. The breadth of this gigantic submarine plain was from 120 to 150 miles. Off the coast of South Carolina, at a depth of about 100 fathoms, the margin of an abrupt and very rapid declivity was found, and then for some distance a deep submarine valley. After this interval was crossed the ascent was equally abrupt. The exernal margin of the stream has not yet been determined, but its general topographical relations are now pretty well understood.

rof. Agassiz next described the external margin of this Prot. Agassiz next described the external margin of this st submarine plateau and its extreme fertility in anim' e. For a distance of ninety miles off the South Carolina ore our submarine explorers never carried a depth of more than 250 to 275 fathoms: but when the outer edge was once

arrived at the abruptness of the descent was somewhat startling. The ground fell for the first ship's length after the declivity commenced full 150 fathoms, and for three ships'
lengths 450, or 1,350 feet. It was along this margin that principally the zoological interest centered. The elevated plateau itself which adjoined the shore was practically sweep clear of slit
and mud by the ever-restless currents coursing over it; but
upon its extreme margin the deposit was something enormous,
and the expedition found at the outfall of the Gulf Stream a
wealth of marine life larger than at any point in the tropics.
The shot would sometimes shik from eighteen to twenty feet
into this slimy mass, which had been cleaned from the level
plateau by the action of the water, and here dropped in an
enormous drift which was peopled with submarine fanua.
Of course, owing to this freedom from slit, the plateau could
not furnish food for any large development of animal life,
and it was consequently concentrated in a marrow belt at the
margin, which furnished an interesting field for investigation.
The deposit did not appear to embrace any great number of
species, and was mainly remarkshle for immense quantity
rather than for variety or range. In summing up the results of his summer's work in connection with the Blake,
Professor Agnesiz reported that the important point was the
pwoof that the deep-sea fanua of the Atlantic bottom exrended shoreward to a depth very considerably less than had
been heretofore supposed by naturalists. It had been ascernined that it was substantially identified with that of the
Gulf of Mexico, while the fauna of the West Indian track
was of the peouliar type he had styled continental. The
current of the Gulf Stream being extremely strong, its track
was of the peouliar type he had styled continuental.

The current of the Culf Stream being extremely strong, its track
was of the peouliar type he had styled continuental.

The current of the Culf Stream being extremely strong, its track
was of t

Professor Cope read an important paper on "Extinct Vertebrates" and Professor Marsh an interesting one on the "Dimensions of the Brain and Spinal Cord in Some Extinct Reptiles." Some of the Dinosaurians have brains scarcely larger than the spinal cord. In Stegosaurus the brain is not larger than a common sized tumbler, but there is an enlargement of the spinal cord in the region of the sacrum eight times as large as the brain case proper. The Academy will meet again in April, 1891, at Washington.

PERSITENT HOUSE WIESS-Vail, love, Nev. 16,—Editor Persit and Stream: While visiting a friend last summer I noticed an inverted collar-box nailed to the top of the wooden noticed an inverted collar-box nailed to the top of the wooden pump near the door and inquired why it was there? I was told that a pair of house wrens had taken up quarters in the pump and persisted in building their nest there, nor would they abandon their project until the box was furnished them. They then immediately took possession of it, built their nest and soon became so tame as to alight on persons going there for water.

INSTINCT IN EELS.-The fishermen on Shinuecock Bay, INSTEAM IN LEGS.—The Instrument on Shinheeseck Bay, Long Island, say that when the bay closes by the filling up of the inlet and imprisons thousands of cels that the latter can be seen in great numbers where the inlet was, when they wish to go to sea again. The bay is now closed and we are informed that near the point where the cels come in last sum mer they are now gathering in force, searching for the lost

OLD TIME FISHING IN TENNESSEE.

OLD TIME FISHING IN TENNESSEE.

Pranklin, Tenn.

Tennessee, Iam induced to send you a few. My part of the State is nearly as oldas the hills, and almost in the suburbs of the Capital of the State, which is about to celebrate its centennial this year. That shows that we are 100 years old, and yet all appearances indicate that we are quite young still. When Davidson County was laid off and Nashville was located, if was quite a wilderness, and a great breadth of land being embraced in Davidson County. In October, 1799, the Legislature of the State ampointed a set of commissioners to survey and lay off out of Davidson and south of it a new county to be called Williamson County, often one of our Indian fighting grounds. The commissioners proceeded to the discharge of their duties, and by January 1, 1806, laid us off quite a nice county, located the county site, and called it Franklin, on the south side of Big Harpeth River, on a magnificent section of 640 acres of excellent level and; and in February, 1800, the county was established and we have been pegging away ever since. Ten miles south of this town was the Indian boundary, but some of them still claimed Big Harpeth Hiver as the boundary, and were very reluctant to yield up that boundary because the valleys of Little Harpeth, Big Harpeth and West Harpeth Rivers, the powerful streams running across the county, were magnificent hunting grounds. My ancestors had settled in this portion of Davidson County two years before the county of Williamson was laid off, and among the very first who had dared to do so, and of course the descendants have grown up with the country. Guither and were times, of the provisions he was able to lay in General Jackson, and aided in clearing up the wilderness and familiarizing themsolves with the forests and streams. I am familiar with the stories of my fathers and uncles of the bear bunts, Indian fights and fishing frolics of the early times, of the great abundance of game and the wanton destruction of the same from the first settlement

your s supplies were, they asked my uncle how on earth he managed to support so large a family on so little. He replied he never lived better in his life. He said he used bear for meat and wild turkey for bread, and the children and servants subsisted on eggs and grew fat.

Shortly after my grandfather's settlement here he had occasion to cross over Big Harpeth River one day when the water was even, and he discovered an immense quantity of fish in the mouth of a little stream emptying into the river, and when he returned home he informed the boys of his discovery. To have a little fun, and also to get something to eat, they felled a tree and dug them out a cance as quickly as possible, and launched it in the stream about five miles below where the fish had been seen, and paddled up to the place and readily found great numbers of fish. They pitched into the water with their paddles, and in a very short time killed enough fish to load their craft down, leaving just room for one boy to sit and paddle their boat homeward. In the meantime they sent runners across the neighborhood, notifying the neighbors of their catch, and to meet them at a certain place and divide with them. On the arrival of the craft at a point within a mile of their home they met their nothers and sisters, the matrons and maidens of their neighborhood, and they had a general division and scaling of fish and a merry time.

and a merry time.

The streams were so well stocked with fish I have often heard my father say that when they wanted fish they would provide themselves with torches of a dark night, just paddle up or down stream, and the fish would jump into the cance

and a merry time.

The streams were so well stocked with fish I have often heard my father say that when they wanted fish they would provide themselves with torches of a dark hight, just paddle up or down stream, and the fish would jump into the canoe until it was filled and they would be compelled to extinguish their lights to save their canoe from sinking and from heing swamped by fish jumping in. The principal fish then in the streams were what they called "tront," now you call them black lass, striped and speckled bass, red horse, black and red perch, suckers and eat. Great quantities of these fish swam in these waters until the cane was destroyed and they became quite searce, the rivers having filled up to a great extent with gravel from the cleared land. Now we have somewhat of a fish protection law against scines or nets, and the waters are again filling up rapidly, and fine sport is offered to the angler, and it really makes namateur angler sick to read unew the trout stories in your paper, and the dy-fishing and fan the anglers have, while we are confined to what you call bass or peach ishing. Well, there is a little more sport in it than you might inactine. I will tellyou something about it, and maybe something about field sports.

Recoilect I am about sixty summers, but I do not fail to yo with the boys, and I generally count up with, if not ahead, of the best of them. We do not have these twenty-five, fifty and one hundred dollar rods, and such line and expensive tackle as the New York boys can affort, but for our rods we use the best native and Japanese cane. We send to Bates and get the finest hooks, the best gut for snoods, and prefersingle to double snoods. You of course know Bates is rather crabbed, and I was in his store on one occasion and I was anxious to get the longest gut I can find? He replied, crustity, "Yes, do you suppose one worm has a longer gut than mother?" I subsided and took a few bunches, We use the best shift to subject than 1 few far have an advantage of the analysis of the f

ound. In the meantime another of the party came up and pulled

In the meantime another of the party came up and pulled out the fish in the same way three times and gave it up. By this time the third, who was a splendid fisherman, came up, and he dropped in and brought up the fish three times and lost him, and he gave it up. I was lying by watching the operations. I then told the party that I would bet \$100 to a nickel that I could call up a country boy, who was below with my pole, and that he could catch that fish in one minute. They laughed at me.

I called the boy up, told him to lay aside my pole, take hold of the broken pole and take out that trout. He did so and his first effort failed. He dropped back immediately, and in less than a minute dropped the trout in my hand. I took him off the hook myself, and he weighed 2½ hs. and was a male fish. On examination we found that the skin which holds the rim of the mouth had all been pulled off, except about the size of my finger nall, and by the old-fashioned jerk of the boy the look was jerked into the roof of the fish's mouth and he was secured.

After we left the bluff the boy went off and got a net and

mouth and he was secured.

After we left the bluff the boy went off and got a net and caught the first fish which had been hooked. It was a female and weighed 5 lbs. The upshor of all this was that my friend had dropped his minnows within a ring, being watched by the male and female trout. When the female had been

the male and female trout. When the female had been wounded she ran off, but the male fought for the nest to his death.

Now if any man can produce and show a gamer fish than this two and a half pounder I will surrender, I find that I am growing rather longthy, and will stop, promising to tell you something more about our fish and fishing and something about our field sports, quail, pheasants and foxes.

FISHING FOR COUNT.

THE Albany Evening Journal, whose editor in chief, Mr. Geo. Dawson, is a salmon angler of perhaps fifty years standing, takes a text from Forest and Stream, and comments upon it in no uncertain tones, winding up with a personal letter from Mr. Dawson himself. We give the text and sarmon entire

and sermon entire.

We have spoken in no uncertain tone upon several occasions of
the destructive practice of killing small fish for the purpose of
swelling the count. We intend to keep at it until the whole body of
anglers join in the chorus and cry "shame" on the man who is
guilty of it.—Forest and Stream.

This "fish for count," has depopulated half of our trout

This "fish for count" has depopulated half of our trout streams and will soon destroy the best salmon rivers on the Continent. Last year three titled flunkies from England killed six hundred salmon on the Cascapedia. Most of these were taken thirty or forty miles from any habitation where they could be utilized. The result was that most of them had to be buried as offal. But this disgraceful fact did not accompany the published score, which went the rounds of all the sporting papers in the world as the best catch on record and as proof of the great skill of the fellows who perpetrated the slaughter.

the sporting papers in the world as the best catch on record and as proof of the great skill of the fellows who perpetrated the slaughter.

But there was no special skill about it. The river was simply full of fish. Every pool was packed, and the only thing necessary was to cast, strike and kill as unpilly as muscle and gaft could perform their office. The fellows were "fishing to count," and they kept up their slaughter so long as the season lasted.

And what was the result? Of the six hundred salmon killed quite one-half of them were full of spawn. The killing of these three hundred ripe fish was the killing of three hundred thousand embryo fry and a most ruinous draft upon the producing power of the best salmon river in the world. The effect of this disgraceful slaughter was seen the present season, when (we are told) not one-quarter of six hundred were caught by those who visited the river.

Anglers who visit a stream where fish, whether trout or salmon, are abundant, will, unless they are the merest cockney pot-lumters, keep within sportsnen-like limits in their catch. To "fish for count" where the count, hecause of the abundance of the fish, can be made ten times what is reasonable, is to violate every law of the "gentle art."

As a case in point, and to show how an angler should behave under such circumstances, we sulyion a note sent to one of the brotherhood who was never known to "fish to count" unless it was to catch the exact number needful for use or for legitimate distribution:

ALBANY, Nov. 6, 1890.
The talk we had yesterday on the bad habit of "fishing to count" alled to mind an incident of my angling tour in the wilds of

The falk we had yesterday on the bad had "heliaing to count" called to mind an incident of my angling tour in the wilds at Canada lest enmmer.

The salmon not having yet shown themselves in our river, myself and the Judge determined to visit a tront lake we had heard of a mile or two from eamp. We reached the lake in the middle of the afternoon, when the sun was a-glare, and found it an hour's work for both of us to take fish enough for supper. But we took them and reliabed them.

As the shadows began to show themselves upon the surface of them and reliabed them.

As the shadows began to show themselves upon the surface of them and respect to show themselves upon the surface of them and the shadows began to show themselves also in such numbers as I had never dreamed of. The little lake was a linear literally a boiling pool, and as the sun went down I determined to fish thirdy minutes, expecting to be able in that time to kill all we should need (six of us, including cook and guides) for an early breakfast. I east from the shore. At every cast I had a rise and a strike, and at the end of twenty minutes I had landed twenty-fixe half pound treat. Reluctantly believing that that number would be sufficient for breakfast, I recled up, although ten minutes of my also strong, of course; but during my forty vears of angling Low versuember two instances—and those I should like to forget—when I took more fash (either trun or salmon) than we could either consume in camp or distribute, in eatable condition, to those who were glad to get them. Those who do more, and yet claim the honored ittle of 'Hruthers of the angle.

Nor is this spirit of slaughter conduced canglezs. Although no counter of shadows the warm of the name of the name content of the content of the content of the spirit of slaughter conduced canglezs. Although no counter of the angle.

Nor is this spirit of slaughter conduced canglezs. Although no counter of the content of the content of the content of the content of the content of the content of the content o

THE LARGEST TAUTOG .- It is an interesting fact to know the extreme size attained by any fish, and we do not remember to have seen the black fish, or tautog (Tautoga onitis), recorded as a fish of great size. The ordinary specimens are from one to five pounds, with an occasional ten pounder. Last week Mr. Blackford had one which tipped the beam at twenty-one pounds.

RHODE ISLAND-New Bedford .- The wreck of the steamer RHODE ISLAND—Are Bedford.—The wreck of the steamer Rhode Island is furnishing a good fishing ground for most of our dishermen at present. They fish for the sunken cargo which is yielding a rich harvest. Some few boats still catch a few mackerel, others try for cod and blackfish, William Hughes and Bill Brown being high line, catching 800 lbs. of blackfish Trackly. Wh

FISHING NEAR NEW OBLEMS—New Orleans, Oct. 8.—Mr. Thorn, Mr. C. Mehle and myself went on Sunday and caught eighty fine fish, forty sheepheads, balance redish or bass and sea trout. The fish were caught in "back Bay of Bolivians, Just the place for Northern gentlemen wishing nice winter sport. Can reach New Orleans in a short lim of three hours by rail, visiting our French Opera and different theatres. Plenty of ducks and snipe, etc. J. D. S.

—The photographic copy of "Fysshynge Wyth an Angle," by Dame Juliana Berners, A. D., 1406, "is a handsome "plaumfet" in the old "black letter." Our "raders will do well to remember that we have several copies of the delight of old book, edited by Mr. George N. Van Stelen, handsomely bound, and in good plain type with the quaint spelling preserved, which we can supply at \$1.50 per copy. (A few rubbed copies at \$1.25.) Send your orders to this office soon.

Those Rangeley Trout Spawn—Rangeley Lokes, Me., No., 12.— It seems that your correspondent, whose article appeared in a late issue of Forest and Stream, under the head of "Spawn-Fishing in the Rangeley Lakes," has a very head of "Spawn-Fishing in the Rangeley Lakes," has a very wrong idea of the use that the trout are put to that are taken out of season by gentlemen authorized to fish by our Fish Commissioners. These trout, after being caught with an ar-tificial fly and carefully handled, were put in tanks prepared for them, and when ripe the eggs were taken from and do-

posited in the hatching-house and the trout, uninjured, reposited in the hatching-house and the trout, uninjured, returned to their native clement. A large part of the trout taken by those gentlemen before the close season (when they had a perfect right to do what they pleased with them) were returned in the same way. It is too true that many large trout were taken at the Upper Dann this fall (previous to the close time) by useing spawn for bait. The best remedy for this, we think, would be to have our much-tinkered fish law tinkered just once more, and after the first of September (if not before) to have trout taken in no other way than by fair angling with the artificial fly.

Capt. of Stmr. Oquossoe, on Mooseluckmaguatic Lake.

# Mish Gulture.

WHY LOBSTERS ARE SCARCE.

The New Haven (Conn.) Register has been interviewing Mr. Fuller, of the Long Wharf Fish Company, on the subject of fish, lobsters, etc., and Mr. Fuller says, in speak-

WHY LOBSTERS ARE SCARCE.

The New Haven (Com.) Register has been interviewing subject of fish, lobsters, etc., and Mr. Fuller, says, in speaking of the latter.

"Lobsters, which are a favorite article of food in the sumer, are keptalive in cars. They are a peculiar sort of sea-bird, are lobsters, and they are a sort of communists who live very much by themselves and in selected localities only. Ten years ago the Long Wharf Fish Company required a half inflion pounds of lobaters to supply their eutomers, but now 350,000 pounds will fill the bill. Then the lobsters were worth \$2.50 to \$3 a hundred pounds, now they are worth \$2.60 to \$3 a hundred pounds, now they are worth \$2.60 to \$3 a hundred pounds, now they are worth \$2.60 to \$3 a hundred pounds, now they are worth \$2.60 to \$3 a hundred pounds, now they are worth \$2.60 to \$3 a hundred pounds, now they are worth \$2.60 to \$3 a hundred pounds, now they are worth \$2.60 to \$3 a hundred pounds, now they are yet a subject for a goal hearty need for a quarter he has to pay a half-dollar. There are two reasons for the marked increase in price, the demand for the fish and their scarcity. Lobsters have been lunted very closely for the marked increase in price, the demand for the fish and their scarcity. Lobsters have been lunted very closely for the past ten or twelve years, and the result is that they have not been allowed to grow to the necessary age for propogating. A lobster has to be three years of age before it propogates, and until they reach about that age they are not good for much as an article of food. Until recently the laws of mone of the States looked out for the preservation of the lobster. The laws of this State prohibit the catching of lobsters which cannot on market were brought in smacks by fishermen, who bought then from partics owing the post in which they were caught. The lobsters and Maine prohibit not only the catching, but the exposing for sale, of lobsters under 10½ inches in length, and these laws are expected to help preserve the lobster as fo

MAINE SARDINES.—The Sullivan Bulletin publishes an interesting account of the work done at the sardine factory at East Lamoine. The fish used are the smallest herring such as used to be thrown on the ground for fertilizing purposes, and the abor involved in their preparation for market is thus described: First, the boatman goes on a visit to the weirs in Frenchman's Bay and if not successful, around Mt. Desert and through Union River Bay into the rivers and among the small islands where weirs are built, and if possible gets fish into the dories he has in tow; then through log or blow makes the quickest time possible for the works. Oftentimes he returns without any colors being set, that being the sign of "in fish;" when successful he runs in to the track laid down to low water and the dory having the fish is placed on a car and drawn up under a long shed, the fish are washed and sorted, the small ones placed on long tables, and the larger ones packed in barrels. This is called the carding shed: Alongside these tables, having boxes ranged on them, are young boys and girls, armed with small sharp knives, who cut the fish into just the length for the sardine boxes, and when these boxes are full they are passed into another room called the dake room; they are then taken and placed singly on dakes made of wood, and after dripping are passed into the drying room—a close room on the secondition with racks into which the flakes of fish are passed. Below is a "try large stove, burning wood, which soon dries the flakes

of fish. Thence these dry tlakes are passed into the frying room where a large furnace or oven is at fever heat, and the fish are placed in large pans and with great care are fried. Again the carriers take them and pass them to the packing room, where the quick fingers of women and girls place them in boxes and pour pure olive oil and other seasoning preparations over them, and into another room they go called the heading room, where each box receives the heading room, where long tables with portable furnaces and all necessary tools for soldering purposes are found, and young men with soldering from soon prepare the boxes to be passed into the bath room: a large tank, holding more than a hogshead of water, heated to a boiling pitch, receives them, and after remaining in the bath a certain time, the boxes are passed into the examining room, where every box is examined carefully for leaks, and if any are found they are passed back to the scaling and bath rooms. Those that are passed are to the cleaning room, where large box-like tables, filled with dry sawdust, receive and deft little dingers cleanse them of every particle of oil and dirt, and they are then passed to the final examining room, every lox pressed between fingers and thumb to see that they are packed one hundred boxes in each case, branded and ready for shipping.

The boxes in which the sardines are packed are uniform and bear the same marks in all the several factories. Making the tin boxes is a separate business, requiring a large amount of machinery, and as the business increases the several companies will have a manufactory of their own.

This company, and in fact all the companies, pay their work-people every Saturday, by the piece, or, as it may be, by the day.

# Game Bag and Gun.

THE RISKS WE RUN.

A SHORT time before the war the writer, a young lawyer, full of hope and manly ambition, a resident of the heautiful country town of Magnolia, in the southern part of Arkaneas, fond of his gun and the woods, and never missing an opportunity to indulge in his favorite and healthgiving pastime, was, on a sulry day about the middle of September, sitting in the coolest part of the office poring over some knotty law quession, when a little darkey entered, having a pair of saddle bags across his shoulder. Fumbling in his pocket be produced a bundle of newspapers, which being unwrapped disclosed a modest little billet down which headed over. It proved to be short, pointed, but to me full of meaning, it read thus:

\*\*Profraeded naceling at Chaire, Changland, 1997.

us: "Protracted acceling at Christy Chapel next Friday, Saturday GEORGIE."

thus:

"Protected acceling at Christy Chapel next Priday, Saturday and Sanday,

"Protected acceling at Christy Chapel next Priday, Saturday and Sanday,

"Now, there was nothing apparently in this notice calculated to stir a man up, but short that it was, and only referring to a church meeting, yet it whispered to me of a penceful home, a future of love and bliss, shared by a pure, noble, warmhearted girl who was then thinking of the poor, ambitious young attorney, and the knowledge of this fact sent the warm blood tingling to my singer tips.

I gathered up the text books and State reports scattered about my chairs, placed them on the shelves, consulted the office docket, and found one case hefer Squire Nelson set for Friday. That put a quietus on starting at once. So next day, after being granted a continuance, I hurried through my preparations ordered my bingay for one o'clock sharp; and dressed in a light summer suit, part of which was white pants and close fitting cloth gaiters. One o'clock found my rig at my office door.

It would be supposed that a person dressed as I was would have no use for a gun; I thought different. I knew that the father of the young lady who had sent me notice of the meeting at Christy Chapel was a great huntsman, a splendid shot, kept a pack of hounds and was in the saidle half of his time behind them, and I thought it best to be prepared for either clurch or the chase. I took my gun, a six and a bull pound, thirty inch, fourteen gauge, highly finished double German, with a supply of Ely's wire cartridges. Also pulled out my high waterproof boots from their corner, but after refection put them back, for really I had no thought of hunting.

pulled out my high waterproof boots from their corner, but after reflection put them back, for really I had no thought of hunting.

I started on my journey of twelve miles to the large, high-ly-cultivated plantation of J. T. Furlow, Esq., situated on the south side of Horschead Creek, in the southern part of the county. My horse was fresh, I made good time and in due time reached my destination, and found that the gentlemen of the house were out on a fox chase.

That evening when the tired huntsmen returned, a new and extended hunt was planned for the morrow, in h nor of my—total save one—nuexpected visit. This did not suit me, but I could say nothing. Had I not told the old gentleman the object of my coming was a hunt, and he knew I loved the sport, so I held my peace.

Saturday morning saw five of us mount. Mr. P., turning his horse toward me, stopped suddenly, looked at my linen rants and cloth gaiters and queried. Where are your boots, man? You cannot go into the bottom with those shoes. Forgot your boots? That is unfortunate. However, you can take the stand in the overflow, there is no underlives there. So each one took their way to their allotted places, Mr. F. taking the dogs down the bottom, intending to drive up the creek. My stand was in the centre of the bottom in a dense, unbroken forest, at a point where the last spring overflow had swept the ground clean of all rulbids, leaving a space of about two acres as clean as a threshing door, with spreading tops, that shut out the sunlight. After securing my horse in the edge of the thicket, I selected the stranded log for my stand, but after remaining there a short time I moved forward and stood behind a large spreading oak, some twenty steps from the log.

The forenoon had passed in silent watching and waiting to

stood behind a large spreading oak, some twenty steps from the log.

The forenoon had passed in silent watching and waiting to hear from the dogs, which seemed to be playing from side to side of the bottom, far down the creek, but coming no nearer. Past experience had taught me to stick to my post in silence. When thesun had reached the meridian I had intended to eat my lunch; but I deferred it on account of a strange chilly sensation that crept over me. This feeling returned at short intervals for about half an hour. I paid but little attention to it, but as time passed the feeling grew more intense. Sharp, trenulous thrills would run up my back, leaving a twitching sensation that made me very unfomfortable. This continued for about an hour, and actiled into a deadly fear.

I trembled from head to foot. I glanced furtively from side to side, but all was clear and still. I strove to brace up against it, tried to shake it off, to no purpose. The more I tried to master it, the more intense the feeling grew. At length I thought of a partler, for they were no strangers in the bottom. Perhaps there was enecrotching in the branches overhead ready to spring, on when the large tried in the branches overthead ready to spring on me. I held my gun firmly, on full cock, searched every limb and branch overhead on each side and beind. I could see nothing. I held my guots, rigid as a statue. It was a perfect calm; all was silent; the stillness was oppressive. That suffocating sense of danger grew upon me; I was afraid to move, yet could hear, could see nothing to cause it.

side and beisind. I could see nothing. I heid my post, rigid as a statue. It was a perfect calm; all was silent; the stillness was oppressive. That suffocating sense of danger grew upon me; I was afraid to move, yet could hear, could see nothing to cause it.

Calling up all my fortitude, I determined to shake off the terror that had seized me, and I had partially succeeded, when a sharp sound, quick as the stroke of a battery, went through my ears, adding intensity to my high-strung nerves. Not knowing where the strange, and to me new, sound came from, my eyes searched the ground, first on my right, then in frout, next on my left, all in quick succession, when the same infernal, blood-freezing sound was repeated—nearer, clearer, deadlier than before. Quickly peering over my left shoulder I saw, coiled up, within three feet of where I strong, a monster rattlesmake, its head flattened out, swaying from side to side, drawing back, preparing for a spring, its fail erect, and for the third time sending forth that blood-curdling white-rar-r. All this took place and was seen in a second of time, and while my eyes were fixed on those of the reptile its Jawa were opened to their full extent; then the bight barvers of my gureane in line with my sight—how it came there I know in t—I had made no effort in that direction, but therethey were. I pressed the trigger, then a flash, report, and a heavy blow on the call of my right log. I had missed and was struck. Miles from a house, no help near; death stared me in the face. My first thought was to spring from the tree and ligature my limb. I pulled out my handkerchief and tied it round my limb, using my knife as a twister. The smoke was slowly lifting and I saw the repulsive monster writhing in its death agonies, headless, at my feet. I then examined my limb. My fine white linen pants, from the knee down, including my dainty gatiers, were succared with the blood of the smake. It struck, and that hard, but headless. My powder was too quick for it and had blown the head to atoms

this day.

I measured the reptile, which, without the head, was a fraction shorter than two lengths of my gun barrels. I cut off the rattles, which were nearly eight inches in length and eighteen in number, with some buttons. This ended my

eighteen in humber, with some buttons. This ended my limit that day.

When I returned to the plantation with my trophy I found the other hunters there before me and two large bucks hung beneath the stoop of the smoke-house. After recounting my adventure and exhibiting my pants and gaiter, the old gentleman remarked: "I thought you ought to have your boots on; you will bring them next time. I think."

I was easily persunded to stay over the next day. The wide-spreading grove that surrounded the cool porches of the dwelling of my generous host was so inviting that we concluded nat to attend Christy Chapel after all. It is but fair to state that the failful little gan that saved my life was a short time afterwards forcibly taken from me, while returning from a squirrel hunt, by a squad of Texas troops then on their way to—as they stated—Chicago.

Cape Girardeau, Mc.

We invite the special attention of the readers of this column to our Proposition to Gentlemen Sportsmen, to be found on an-

#### NORTH CAROLINA QUAIL SHOOTING.

NORTH CAROLINA QUAIL SHOOTING.

I HAVE just returned home from a thoroughly enjoyable shooting trip to North Carolina, and as you have requested you readers, for the benefit of the rest of their species, to give the result of such expeditions, I send you this account in the hope that some forlorn, dishoetnedly rither of the craft "seeing, may take heart again," and follow in my footsteps, for I can assure him that it he will take the point I will mention as a center he can go in any direction and flud all the quail shooting he could, would, or should desire.

For nearly a year past Fred and I had talked of a trip South to see if the shooting was really what it was "cracked up to be," and after having consulted guide books and wearled our friends with inquiries, it suddenly occurred to me that the likeliest person to tell not where to go would be the man who cultivated my inherent love of the field, and who taught me the first principles of "holding my pipe straight," mow a resident of North Carolina, so to him I wrote. His answer came at once—"Come down here," and although we had rather settled on Virginia as a temporary abiding place, we altered our plans.

Saturday afternoon, October 30, found us on the deck of the steanship Old Dominion, bound for Richmond, for, although we could have gone by rail all the way, we found it easier on the dogs and less faitiguing for us to travel part way by steamer. The fare to Salishury, North Carolina, by rail or steamer is the same (\$22.80). The company makes no charge for dogs, and the bagging master took care of them and saw that they were fed and watered, and was apparently satisfied with the grantity of a dobar for each dog that I gave him.

Now we are fairly off and run down the bay in a cold

satisfied with the gratuity of a dollar for each dog that I gave him.

Now we are fairly off and run down the bay in a cold northeaster, with its miscrable, penetrating drizzle, until off Sandy Hook Fred suddenly realizes that all is vanity, and "seeks the seclusion that the cabin grants." I, after vainly essaying to cat my supper, follow suit, but after lying in my berth a while, feel quite chipper, and actually bave the malignity to chaff him on his unhappy coanness and remind

him of the old but very excellent description of sea-sickness, i.e., that "during the first hour a man is afraid he will die, and during the second he is equally afraid he won't." However, by morning we are all right, and make up for lost time. Sunday evening we arrive after a rough passage, which had no other effect on me than to develop an inordinate appetition of the property tite; and going ashore we give the dogs a good run and p

in other effect on me than to develop an inordinate appetite; and going ashore we give the dogs a good run and go to bed.

Monday morning when we awake we find it a lovely day, and that we are quietly sailing up the placid, mud-colored James. We spend the day sitting in the sun, which feels very comfortable in the crisp air, reading, watching the flocks of ducks that the steamer flushes and seeing how near we can come to hitting with our revolvers those that tempt Providence by remaining in the water within twenty-five or thirty yards of us. The seenery of the James is low, flat and uninteresting for the most part, but you have this one advantage not often enjoyed in other localities, that you see both sides of any rises there may be, for the river winds three-quarters of the way round each of them.

At City Point there is time to run the dogs again, and then we arrive at Richmond at about five o'clock.

Taking a hack we drive to the Richmond and Danville Ratiroad depot (fare 81.50 for the party), and having checked our trunk and left the dogs in the baggage-room, we wander round the city till 10 o'clock, when we return, seeme borths in the sleeping-car (82 each), and have time to get confortably asleep before the train starts at 10.80. This road has adopted the very sensible rule of having a tariff on dogs, which is fifty cents per 100 miles, thus making the cost of each dog \$1.25 from Richmond to Salisbury, and the employees do not expect, but actually refuse the bonus 1 offer hiem. We are roused in time for breakfast at 7:30 at Danville; forty-live minutes are allowed for the meal—so using half an hour for ourselves, we give the dogs the benefit of the rest. We reach Salisbury at 11:50 A. M., and here is the point I have been reaching all this while.

Here, at the Mount Vennon Hotel (terms \$2 per day), you will find good bedis, an excellent table, a genial, painstaking handlord—MacNeal by un mine, called "Mac" to save time—and more invitations to go shooting with parties who are happy to share their plenty w

ceast; and if you are a sportsuan you won't wish for more. 
"The Western Railmad of North Carolina starts within a hundred yards of the hotel and runs two trains a day, so that at any tine, you can step on the morning train and by running ten or fifteen miles visit 'rresh fields and pastures new,' and at any place find as much shooting as any one can desire and return to your hotel on the evening train.

Our objective point being Cool Spring, twenty-one miles from Salisbury, we take a curriage and drive over a very had road (fare 85 for the party), arriving about 7:30 r. s. We are hospitably received by my friend Ed. and his wife; and are unshered to our roon, where the huge wood fire that burns in the open five-place looks very comfortable after our chilly ride. They tell me they have had no rain since August 4, our the strength of which I guarantee them a sufficiency, for I am exceedingly lucky (?) in that respect on my shooting expeditions. Surely enough—the next day when we awake the sky looks very dubious. However, we take a brace of fresh dogs and sally forth, and less than a quarter of a mile from the house find in the corn stubble. The bey rises: Ed does not shoot, so as not to disconcert us in the least; I miss heartfully with both barrels; but what is the matter with Fred? Without raising his gun from his hip he has fired both burrels into space and is looking round in a dezel manner. 'What is the matter with you, Fred?' say I. "Heavens! I don't know," he answers: "but the air scenned full of them, so I cut loose. It did not seen as if I rould miss all." After a laugh at him and considerable chaff for me, we go on to pick up the scattered birds, which have dropped into the bushes that fringe a narrow "branch," and in less than an hour we have twelve birds, when down comes the rain and we start home, contented with everything but the weather, and hoping and planning for the morrow: but "the morrow" rains all day hard and does not clear until the night.

The next dway we go out, but find comparatively f

into the heavy timber. We spend a little while trying to head them off, but do not see them again, and resume our quait shooting.

Lest I should be considered vain-glorious, I will hereafter not mention the number of birds bagged, but will content myself with a report of the number of shells camplied at quait seach day. To begin with this one, we find when we return home that we have fired about thirty shells apiece.

The next day, fired by the sight of the "turks" the day before, we determine to hunt them, and after considerable crawling and creeping find a flock of fourteen. We get within 200 yards of them twice, but each time they feed from us and we do not get a shot, and conclude that when one's time is limited he had better stick to quail.

So followed one day after another, except that we did not again have two successive days' rain, but only had about every other day, which kept the birds from running out into the stubble as freely as they would have done otherwise. Still, we always had a bunch of birds, rabbits, gray squirrels, etc., hanging, and used regularly to eat about twenty each day. We never got less than thirty good shots apiece during the day's shooting, from 10 till 4 o'clock, and we generally had nearer fitly. The last day we were out we found fourteen bevies, containing from iffteen to thirty birds each. We invariably found in the rag weed or corn stubble, and the birds, when flushed, would drop either in the "broom grass," the blackberry bushes that lined the fences, or the woods, but as the last are free from undergrowth, they do not bother one nucch.

So our three weeks' vacation slipped away, and we had to

much.

So our three weeks' vacation slipped away, and we had to turn our steps reluctantly homeward. We spent some time in Richmond, Worfolk, Fortress Monroe, etc., on the way up, and so increased our expenses somewhat. We paid everyone the price asked and did not economize in any particular, and yet we found on reaching home that our expenses had been less than \$90 each, including cost of ammunition. Altogether I look on it as a most satisfactory and pleasant trip, and I sincerely trust that before long the same hills will again re-echo the report of the trusty Scott of

LONG ISLAND TRAPPED BIRDS AGAIN.

NEW YORK, November 20, 1880.

Editor Forest and Stream Editor Forest and Stream:
In answer to your most politic invitation to me to come forward and prove by sworn testimony the contents of my letter to you of November 6, I would say that, with most due respect to your invitation, I must and will decline for the respect to your in following reasons.

respect to your invitation, I must and will decline for the following reasons. In writing you said letter, I wrote and gave you my knowledge and impressions as a shooter, and not as a detective and a spy. I have shot game for the last twenty years, from the largest to the smallest, from a deer to a Messina qualit and, therefore, as a shooter, I can form an opinion whether a bird is a shot one or a trapped one, especially after holding it in my hands. On the occasion I have reference to, and what gives more strength to my opinion, I was in company with another game shot of a good many years standing. We both examined the birds and both came to the same conclusion. Mind, we did not but any birds, nor did we pluck any, and, therefore, my opinion could not beturned into sworn testimony.

When I wrote you my letter I was not thinking about the past. I was thinking of the future, of the birds that might be saved, and about what might be and ought to be done to save them. I date say a good many more men than I have put their heads together to solve that problem. Not one man, nor one hundred men can do it at once—it will take years of labor and study. I might even say education. Legally a man might be wrong, morally he might be inmoveni uniforming upon a law of which he does not know anything, which he cannot comprehend because it has never been explained to him. For the last ten years our game have here so changed and amended that it is no wonder that our country consins do not know them, or care to know our country cousins do not know them, nor care to know

them.

What then are and ought to be the duties of our game associations? First of all to teach the people the game laws. The laws ought to be sent broadcast all over the country: there is more to be done by moral influence than by coercion. Everybody knows that there is a game law; but how many know its contents? Print the game laws by the thousands, seatter them over the country, offer rewards, but by all means do not let the game associations fall into the error of expecting the community to be their dectives and their spies. Each man to his trade.

Now a few words in answer to this letter, written by order

do not let the game associations fail into the error of expecting the community to be their dectives and their spies. Each man to his trade.

Now a few words in answer to this letter, written by order of the standing Game Law Committee of the L. I. S. A. Those gentlemen accuses mee of being a coward, and of writing to you letters more for the sake of notoriety than of being of any assistance to them. They say that they cannot play the part of detectives, but of course they expect, me to be one. If I wanted the notoriety that these gentlemen say I court, I would certainly answer them in a different style. I would answer their letter in the same spirit that they answered mine. Unfortunately, one altereation might bring on another and before I would get through with them their own answers might show to the public that they are not quite the Ximrois that they appear to be. But, as you say in your editorial note, they are a young organization which wants to be, and ought to be, encouraged; and therefore I shall refrain from any further remarks, which by some people might be turned into reprocables. Those gentlemen projest against prefrain from any further many of our forenous and most gentlement that of the chan that of many of our forenous and most gentlement the "Gillettes," the "Mules," the "Steles," the "Gillettes," the "Williams," and hosts of others. I have not. But I have read about them. After all, what is there in a name?

A Thus Loven or run Score, the same freud informs me that here are early length of them, at the same market, by asking for them and by paying for suared brids, one dollar per dozen extra.

#### PHILADELPHIA LETTER.

AST week a half-grown prairie chicken was brought to bird having been sent from lower Delaware or Maryland with a lot of quail to a game dealer of our city. It will be remembered that some years ago Dr. Purnell, of Berlin, or Snow Hill, Md., liberated several pairs of pinnated grouse or prairie chicken. It is known that they had bred and hatched, Snow Hill, Md., liberated several pairs of pinnated grouse or prairie chicken. It is known that they had bred and hatched, as broods were seen on several occasions, and their nests were even located. The writer, while shooting on Sinnepuxent Sound, in the section of the country referred to, made inquiries as to the success of Dr. Purnell's experiment, and satisfied himself that the "flocks of strange birds" seen by the natives were veritable pinnated grouse. Why do not those of your readers who were interested "in planting" prairie chickens in the State of New Jersey inform you of the result of their landable undertaking? Such matter is always interesting to the true sportsman. We have learned that hawks and other like birds of prey are unusually plentiful this year. Taxidermists are securing quantities of them. This does not argue favorably for the quall, as poor Bob White suffers much more from the depredations of the winged pirate than from the sportsman. The calculations of the consequence of the summer of the summer of the summer of the summer of the planting than the summer of the production of the consequence of the summer of

We were handed a letter to read from Maine, dated Nov. 5.

We were handed a letter to read from Maine, dated Nov. 5. last week. At the time of writing the correspondent stated that snipe and woodcock were still in his State, and that little or no frost or cold weather had been experienced. Ruffed grouse were very plentiful with them, bringing but twenty-five cents per pair.

We wish to make mention of some remarkable rifle shooting done by our fellow townsman, Mr. Lancaster Thomas, a short time since. Mr. Thomas, wanting a little practice, took with him twenty-five cartridges only to the Stockton range, and without a sighting shot made twenty-five bullesyes at 500 yards, the last six shots being freed late in the afternoon quite near dusk. This certainly deserves to be recorded, and we request Mr. Thomas to score as well in the next tournament.

The Easterly storms of last week brought a few brant to the New Jersey bays. Not many have been killed however,

and there are only a small number of young fowl among them. For fine shooting we always look for a good proportion of young birds in the flocks, as they stool much better, the old brant coming along with them. The peculiar honk of a "this year's bird" is readily distinguishable from that of an elderly one, and always delights the ear of the fowler. Your correspondent could relate of many a day of glorious sport in Little Egg Harbor, at the Bunches, East Sedge, Goose Bar or Little Island, when the brant were on, and the wind and the inst suited but will recover the account for a Goose har of little Island, when the brain were on, and the wind and tide just suited, but will reserve the account for a future letter. Let me say now, however, it is a sport that requires a sturdy constitution, a willinguess to endure hard-ship and the patience and cuming of a cut. "The more dirty the weather the better brant by "is an expression of all ry the weather the better brant by "is an expression of the patients." bay men.

Our mutual friend Dr. Twaddell, and his brother George, are off at present on a shoot. George and a friend are paying their attention to quali and woodcock only, while the Doctor has with him his merry little beagles and will devote his time to the cotton tail, and enjoy the musical voices of his hounds. We stopped at the Doctor's house during his absence and had the pleasure of looking at his Dachshunds. Unser Pritz, Sankerile and Fraulein a very beautiful beagle blitch, and a black-white-and-tan Southern beagle, the two latter new additions to his kennels.

Your correspondent has just received a letter from Mr. C. H. Whitman, of Leavenworth, Kansus, enclosing two beautiful photos of the Laverack setter Pedigree now dead. Mr. Whitman has just returned from Europe, baving had a fluo poportunity of visiting the noted kennels of Great Britain. He tells me he has a son of Pedigree the image of his sire but larger in every way.

Now that Mr. Whitman is with us we shall expect to hear an account of this promising dog. Our mutual friend Dr. Twaddell, and his brother George, are

The man who thinks that he can afford to pay the farmer's boy more for quait than the boy is paid by the baygaye-mosters is invited to send his uddress to this office.

#### STRAY NOTES FROM PHILADELPHIA.

Philadelphia, Pa., Nov. 18.

Philadelphia, Pa., Nov. 18.

Philadelphia, Pa., Nov. 18.

The biting air which last night began to make our earstingle has served to precipitate the movements of phose leisurely sportsmen who have for many weeks been plauning chlorente expeditions to Pike, Wayne, Monroe and other interior counties of this State, and has caused a few individuals of the alleged feather-bed sort to postpone indefinitely expeditions, which were as yet too embryotic to deserve the name of "expeditions," Whether or not George Keman's "Dog 'Stedge Journeys' in Siberta' precipitated things cannot now be determined, but several sequainismes who on last evening listened to this excellent lecturer's portrayal of the hardships and privations incident to a life in a well nigh sunless part of the construction of the more such winter temperature as 60 deg., 64 deg., and 68 deg. below zero are not unusual, exhibited this morning indisputable signs of baving the "Florida Tever" and during the day at the gun stores and other places where sportsmen most do congregate, I have heard of more than a dozen who propose soon to start to that State for the winter, some of them persons of leisure and means.

Curious coundy, Bayport, Fla., was on every tongue, several men declarine that Willis's letter telling of Mrs. Garrison, who'd furnish good board in a game district for \$4 per week," was all they wished: that they meant to start at once and "head off the crowd," etc. Those who spoke of going "at once" were not of the moneyed class, two of them being trappers from northern Michigan, or somewhere up there, claiming to have in all an assortment of seventy-three steel traps. There is no doubt that but for the rather still rates of passage thither, and comparatively high rates for board in Florida, the coolus from the North this winter would prove a most astonishing one. As it is it will be great: and it is interesting to note the almost instantaneous effect produced by the publication in Fonzar and Startaed enough sportsmen to

provides one orange for each guest, possibly she'll have to "draw" upon Dummitt's Grove, in the Indian River country, for the golden spheres.

A continual joy alike to citizen and sojourner are the gunstores of our goodly city in which may often be found squads of sportsmen of very various degrees of knowledge and skill, eagerly and in the most friendly manner discussing "the latest' wrinkle in sportsmanship and its myrhad appliances. So greatly do "the brethen" congregate at "Uncle John" Krider's that it is difficult to get many extended personal chats with Sciner, his superintendent—always called "John" by his customers and friends—but they seem to covet these "chats" greatly and scarcely give him time to eat hisdimer, Mr. Sciner's opinion is valued for the simple reason that he is known to be a conscientious man. The old gentleman "Uncle John" K., kas for twenty-six years served as treasurer of the Order of Mechanics. Taxidermy is now his pet and all engrossing theme. The Grubb Honse (J. C. G. & C., 712 Market street) is one of the vast gun houses of the land, and after a sojourn in the far West exchanging "field motes" with the keen and companionable dealers of St. Paul, Cheyenne and 'Frisco, it is no small treat to be able to inspect in this establishment cums of almost every sort under the sun from the cheapest Belgian, to the "gens"—turned out for princely purses only—by such buildiers as Pape, Lang, Douzall and Furdey. Weapons of the latter class seem to be the "best holt" of the house, some of the aristocratic "Purdey's "being so artisite that it scens almost sacrifice to soil them with villainous gunpowder. The storm-tossed sports-man from prairie or sierra in quest of gun bore could scarcely

dey's 'being so artistic that it seems almost sacrilege to soil them with villatinous gunpowder. The storm-tossed sportsman from prairie or sterra in quest of gun bore could scarcely fall into the hands of a more genial gentleman than Col. Jno. McLoughlin of the above named firm.

The wonderfully entensive establishment of Tryon & Co. is doing a fine business. Maj. Comstock—the genial 'Harry' so long with the Remingtons—was in town the other day. He now represents L. C. Smith, the 'Baker gun 'man, and seems resolved to go at once to Florida. With him this is the 'law and the prophets:' 'Buy a 'three-barrel.' Then everything—humming-bird or bison— is 'your neat.'

W. McK. H.

Iowa---Vail, Nov. 16.-- Quail have been more plentiful creabout this fall than for many years previously.

#### SOUTHAMPTON SPORTSMEN'S CLUB

THE well timed and highly interesting article which recently appeared in your valuable journal calling attention to the practice of snaring birds by farmers on Long Island, which threatens the destruction of the favorite sport of shoot which threatens the destruction of the favorite sport of shooting, and pointing out the uncessity of some new club with young blood who will not pursue pigeon shooting as if this was the only sport left, does not, I beg leave to assure you, apply to one club, at least.

Situated at the cast end of Long Island is an association of

Situated at the east end of Long Island is an association of twenty gentlemen who during the short time of their existence as a club have done much toward the protecting of game and promoting the interest of shooting generally. I refer to the Southampton Sportsmer's Club, charlered under the laws of the Stata in 1878. They have acquired preserve lands to the extent of 8,000 acres. By a resolution the membership is restricted to the number of twenty members; one-quarter being shining lights of the New York bar, the legal rights of the club are therefore fully protected.

shining lights of the New York har, the legal rights of the club are therefore fully protected.

At a recent meeting it was decided to employ counsel to prosecute persons detected shooting or smering game in violation of law. Judge Thomas Bisgood was assigned to this important work, and a man was employed to detect persons guilty of trespass. Within a few days two persons were detected in the act, one being a wealthy farmer of the vicinity. It is determined to prosecute these parties to the full extent of the law.

Let other associations follow this example and there will soon he a stop put to the destruction of a sport—which in the past made Long Island famous.

At the meeting mentioned it was resolved to stock the ponds on the lands of the club with bass.

RAMBLEE.

#### KENTUCKY NOTES

MILL SPRINGS, Ky., Nov. 1.

MILL SPRINGS, Ky., Nov. 1.

What your summer. No good reason assigned. I was out a few hours Friday and put up but two half-grown bevies. As they were not out of the "peeps" I returned homeward delighted with the performance of my young pointer, which evinced a wholesone recollection of a dose of No. 10's, soon followed by one I was startled to find 3's, administered last season at forty yards. It cures him of his uncontrollable propensity to flush and chase, which had been developed by the boys stealing him out to trail squirrels before he had been worked on quall. Tail and head in line, the ears protect the cyes, and I have in every instance found a charge of 8 to 10's the most soothingly persuasive argument at forty to fifty yards I ever submitted to a refractory worker in the field. A broadside is never to be risked, nor should a timid youth be shot. But my wilful gent always catches the peppering, which I esteem infinitely more humane and know to be won-derfully more cofficient than the ear-pulling, side-thumping whills-raising punishments administered by many hunters. I have almost exhausted myself with whip for chasing to enjuy(2) the whooping up of a rabbit, who had been an eye-winces of the punishment, and seemed to hie away, as matter of solace to the sufferer.

What sportsman has not had similar experience and found little comfort in thinking "d—— it!" loud enough for his companion to shrewdly gness the curent of his feelings? I would not be understood as an advocate of indiscriminate use of shot, but experience has created within me a a weakness for the remedy in malignant cases, having always found it a specific. But mallards and bluewings are appearing in small bunches. Phensants plentiful in mountains, turkeys scarce. No pigeons. Squirrels migrated last fail and have but just began to return. No parties have been deer-hunting syet. Beans are represented as pleutiful on our favorite lanting or our favorite lanting or our favorite in the vicinity of a summer resort or tw

#### MORE ABOUT WILD RICE.

Thortice an article in your last issue on wild rice, over the signature of "Lutron." He remarks: "There seems to be a desire among sportsmen to introduce this most attractive water-fowl food where it is not natural to grow. Articles in FOREST AND STREAM, seems to me, will lead those who are getting seed to plant to failure. Some time ago the FOREST AND STREAM recommended planting in six feet of water. I have never seen a spear reach the top and head out at that depth." at that depth.

at that depth."

Now, not having the slighest reason to doubt the correctness of your correspondent's observation (I have never been in Michigan), yet in this locality my experience and observations differ very widely from his. For instance, in Rice Lake, a body of water twenty-eight miles in length, with an average width of three miles, the wild rice is frequently found growing in water from six to eight feet deep, and this is no exceptional case, but the rice is found from one end of the lake to the other growing at that depth and producing an abundant crop of plump, well-filled grains, upon which not do the various kinds of ducks and other water-fowls feed with avidity, but also the Indians (who have an exclusive right to it from the Government) collect it in large quantities, both as an article of food and for planting purposes. They prepare it for eating by parching, or roastine, until the hull separates from the grain, and then fanning off the chaff. Being prepared in this manner and boiled, it forms a thick, mucilaginous paste, which is very palatable and highly nutritious. exceptional case, but the rice is found from one end of

ous. In 1876 I sent iwenty-five bushels of rice to Campbell's Bay, Ottan feet deep. grain crop a In 1876 I sent twenty-live busness of rice to Campbell's Bay, Ortawa, where it was sown in water from two to five feet deep. It grew well, and in the fall produced a good grain crop and extended rapidly. The person trying this experiment and his neighbors, being so well pleased with the result, have nearly all their waters stocked with rice this present year from me. They have also obtained eighty bushels of seed to be planted in the adjacent waters.

els of seed to be planted in the adjacent waters.

As regards the sowing of this rice, I consider the full the best time; but with care, and having it kept thoroughly dried, it may be sown very successfully in the spring.

One correspondent asks: "Will any one tell me whether or not thoroughly dried rice will grow?" I can verify that it will, having dried if for two months before sowing. In fact, this is the only proper manner to send it any distance, as, if damp, it is liable to heat and turn moldy, which would destroy the germinating principle and render it worthless.

Your correspondent also states that the rice that he evam-Your correspondent also states that the rice that he examined was sprouted as early as March 20 to 25, which is much earlier than it does here. As soon as the ice disappears from Rice Lake, which is from the 15th to 20th of April, the ducks appear in great numbers and feed on rice by diving for it on the old rice beds in water from ten to twelve feet deep, the water being higher in the spring than it is in autumn. I have watched those birds feeding and shot them, and on examining their stomachs found them gorged with rice; but none of the grains had shown any signs of sprouting at this time.

ne. A year ago this fall I sowed a peck of rice which had been ra well dried. This was planted in water four feet deep, mud and gravel bottom. It made its appearance about the didle of June and ripened the first of September, product a fair crop.

C. GILCHEST. ing a fair crop, ----

How it is Elsewhere. -The game grounds of New York, are not the only ones which are being depleted of their game birds by the trappers. Commenting on the Forest and STREAM's remarks about the opening of the quail season the Evansville, Ind., Argus says

In this part of the country the birds are nearly all fully In this part of the country the birds are nearly all fully grown, though we have seen since November I two coveys of birds that were only half grown. Quall are becoming very scarce in this section of the country. A few years ago an average shot could get from forly to sixty birds in a half day's shooting, without much trouble. Cold weather of two winters ago & killed a vast number, but on an average the weather does not have one-tenth the bad effect on quall that netters do. There is a haw in this State regarding the offering for sale of netted and trapped quality get never was a law more entirely disregarded. Merchants constantly offer them, hung up boldly outside of their doors, and never a word is more entirely disregarded. Merchants constantly offer the hung up boldly outside of their doors, and never a word more entirely disregarded. Merchants constantly offer them, hung up boldly outside of their doors, and never a word is said to them, though there is, or is supposed to be, a Sportsman's Club in this city. Various devices are resorted to by the pot-hunters to deceive buyers. The most general way is to pick the netted birds, hang them up and then blow shot at them from an air gun. The shot make blue spots on the naked birds, which look very much like real shot marks. As it now is, there is no good shooting in this neighborhood. This vicinity is overrum with boys and reckless hunters, who think it is a good joke to shoot hogs and cattle and even horses. Is it any wonder that farmers make no distinction between good and bad hunters, and order all off their ground? What shall be done? We put this question very respectfully to the Sportsman's Club, hoping that they will take some steps to see that the game law, which is a just one, be enforced. If things continue as they have been, a day's good quail shooting will be a thing of the half-forgotten past. We hope to receive some communications on this subject. True, many of us do not hunt, but for the benefit of those to whom hunting is their only relaxation from business, for Heaven's sake let's do something, or sell our guns for old iron.

Extensinxation of Quant—Manson, O., Nor. 20.—Your

handing is their only relaxation from business, for Heaven's sake let's do something, or sell our guns for old iron.

Extensination or Quatit—Wausean, O., Nor. 20.—Your correspondent, "A. S. P.," speaks of quali treeing, and says "of course" the quali renained treed "but an instant." I have shot a number of quali this season and I notice whole flocks very often scatter and take to the trees, and when they tree they stay treed until the hunter gets almost close enough to shoot. One treed this week while I was shooting in the flock. My dog pointed two on the ground within 200 yards of the treed bird. I shot the birds my dog pointed and the bird in the tree remained there antil I went toward him. He must have remained treed in minutes at least and was not disturbed by my shooting. As to ruffed grouse, I know that some market hunters in the north part of our county (Fulton) use a cur for hunting them altogether. The cur barks when the grouse take to wing, and they alight in the trees and the market shooters pick them off. Quali-shooting here, I lear, will soon be used up. The pot-hunters take cold days and evenings for their work, find the birds huddled to keep warm, and then they villainously dostroy a whole bevy at a slagle shot. I have heard of many such instances and have seen the marks of their work myself. The sportsmen here are agitating a law against marketing quali, and for one, I am in favor of it. I don't believe in paying a premium to pot-hunters and quali trappers. I saw 200 quali and 100 grouse in one wagon to-day, and probably not twenty-five of them were shot on the wing. Let us stop this slaughter. W. H. H.

The sportsmen hereabout will soon find quali coming into

W. H. H.

The sportsmen hereabout will soon find quail coming into market which bear no signs of having been shot. These are 'trapped' birds, and the legitimate sportsmen should see hat parties offering them for sale should be arrested and punshed.—Harrisburg (Pa.) Patriot.

We invite an expression of opinion respecting the scheme to secure the protection of game, an outline of which will be found on our editorial pages.

Game Laws in Maine—Machius, Me., Nuc. 12.—The article in Forest and Stream signed "Bangor," and its answer, by Everett Smith, Esq., Commissioner Pisheries and Game for Maine, show that sportsmen residents of Maine have something to do the coming winter. Let us be eathn and maselfish and make our plans. I will state as near as I am able the wish of the sportsmen in this part of the State. We would like the season for deer to open Sept. 1, and close the same as at present for this reason. Temptation is strong to break the law when by accident a deer is seen while shooting ducks, grouse, etc., besides it is impossible for wardens to prevent gumers killing them when the woods are full of hunters, nor does it seem reasonable they should not, as they are in good condition at this season, and, moreover, the number killed would be small. Yet, if "no tinkering" is the wish, we yield and go in for what we have, only plan for the future enforcement of what we now have. We are decided that the dog clause is proper and needs no change, that pot-hunting is a nuisance and an injury not only to the community, but to the hunters themselves, as the money that would be paid for guides, transportation and supplies would much more than balance that received for the game now killed. "Game'itself is a luxury, but its pursuit a still greater one to a large portion of our hard-worked business men, besides its importance is growing rapidly in the opinion of our heat medical men, who are now giving their attention to the diseases of the brain, its treatment both preventive and curative, and as a general rule this class who need the rest and change, that Maine forests and lakes can give, are abundantly able and willing to pay liberally for the same-examples, Raugeley and Mossehead. We believe nothing short of pain vardens can stop this mischief—viz., three special warders. "De be paid by the State and under the direc-

tion of Commissioners, also detective service for special work when Commissioners deem proper, with an appropria-

tion of Commissioners, also detecuve service which work when Commissioners deem proper, with an appropriation to cover expense.

I am over fifty years of age, but still enjoy the woods. Never killed a deer in my life, but expect I shall every time I shoulder my rife. I spent the first week in October with a small partly at the Mopang. I need not tell you that we all decided to spend two next year.

Old Tug.

Game in Pennsylvania.—The Harrisburg, Pa., Patriot has this to say about the game in that vicinity:—George Keller, a well-known Hummelstown successful wing-shot, is stathering the qualit at a lively rate down the Lebanon valley. The pheasant tribe is beginning to be thinned out pretty well on the chestnut ridge, between Hummelstown and the ridge back of Campbellstown. Mr. William F. Lewis, of Readwell on the chestnut ridge, between Hummelstown and the ridge back of Camphellstown. Mr. William F. Lewis, of Reading, a famous sportsman, is playing havoe with the ducks and other game in the vicinity of Millersburg. He is the guest of Mr. Roland Freck, the postmaster at that place, and initends to remain in the valley a full week. An up-town crack shot got into a covey of birds out the Jonestown road yesterday with a young setter dog and succeeded in bagging five out of a flock of eight old and very plump birds. A party of hunters from Hurrisburg, among whom was our old friend W. B. Meetch, Esq., Register of Wills, we learn, sliot fourteen wild turkeys in one day on a trip to Clark's valley recently, "and it was a poor day at that for wild turkeys shooting,"—Lakens Register. The Nimrods residing along the base of fobert's, Kitatinny and Peter's mountains, and in Powell's, Robert's, Stony Creek and other valleys, report quail, grouse and wild turkeys scarcer than in former years. The old foresters along the several mountains north of the city attribute the scarcity of game to the destructive fires on the mountains and hillsides late last spring, when, they aver, all kinds of game were driven off and their hunts destroyed, and that the young of grouse, woodcock and other species of game were killed to a considerable extent.

Teapping in Airansa.—West Point, White County, Now., 18.—As the fur season approaches the enthusiastic trapper naturally thinks of his traps, and if possible selects a field of operation, then is soon off for a winter's sport. His feelings are often so eager to get into the woods that he would not mind sparing a few weeks from the record of time. But to the point. My campaigning the present season will be confined to the western portion of the White River swamp, wherein, owing to its natural features, mink, coon, skunk, opossum and a limited number of otter abound. The good advantages these animals enjoy here are sufficient to secure them from the molestation of intruders, unless a little steel trap warfare is waged, as the overflow does not admit settlers and the country is comprised of almost impenetrable cypress brakes and heavily timbered ridge lands. These brakes afford them splendid fielilities for daming and safe retreats in time of danger. Coon and mink seem quite abundant, and by good work one could make it very profitable in taking them alone. An occasional otter could be captured if the waters of the small lakes, creeks and sloughs were deep and free of logs enough to allow of boating thereon. It must not be understood that there are no beavers here, for in the eastern part—across the river—of these bottoms large faultiles can be found, but this probably includes the valuable part of the furrier's fauna. Fur staken in this locality before the middle of November seldon show prime, so the trapper must contine himself to nature's prescribed limit of allows four months. The success that has errowed the efforts of the writer as an amateur trapper so far is extremely favorable, and no doubt an expert, in the see woods could fare profitably. Should any of the trapping fracterily lawe inclinations towards these haunts we are willing to furnish them any information in our power and extend to them a hand of welcome should they venture.

\*\*WATER D. CHILDRESS.\*\*\* TRAPPING IN ARKANSAS - West Point, White County, Nov.,

WATER D. CHILDRESS.

Defroit—Voc. 19. A merry party of hunters consisting of Messrs. Murray and Pierce, of Niagara Fulls; Poole, of Buffalo; Hill, of New York; Moore, of Toledo, and E. H. Gillman and John E. Long of Detroit made this a glorious day in the way of sport. The snow was in good order for a fox chase, and about 9 o'clock this morning the party crossed the river into Canada for the purpose of a day's English enjoyment. At Windsor they were joined by a party of Canadian Ninnods, took hacks for the real starting point—Chaffell's—about 6 miles down the river. Arrived there deer tracks were discovered, and there was much rejoicing at the unexpected doubling of the promised sport. The day was simply magnificent. Chaffell's dog Harkaway was the first to give tongue. All the remainder of the pack took it up and away went everybody in hot and eager chase. Within an hour a deer was brought to bay and shot by the jolly Murray, when Poole and Pierce rushed in and captured the head as a trophy. At 11 o'clock, and as I writer in sound of their voices and the clinking lemonade glasses. I hear many an enthuistic fragment of recital of the day's doings. While in Windsor to-day seeing the hunters off in behalf of Forners And Stream I noticed a quartete of unimpeachably nureblooded Daudy Dinmonts, the property of Alex. Crawford a well-known annateur fancier. The little fellows were captivatingly cutte and drew a big audience wherever they went prancing along after their proud any happy owner.

A New Game Protective Society—New Yorke, November,

A New Game Protective Society—New York Newmber, 1880.—We hope you will give the following communication your favorable consideration, and we earnestly invite you to join us in our endeavors to put down poaching. The "Game Protective Society for New York and Viciotity" is organized for the protection of game (including game fish) and insectivorous birds, and to put down poaching of every description in the vicinity of New York. During the months of September and Cortober particularly, the country is overrum with gunners killing everything in the shape of a bird, and the trains running out of the city are full of poachers. We propose to have cards printed giving a list of game in season and the fines also, offering a reward of at least 825, payable on conviction of the offender, provided the penalty exceeds the reward. These cards to be posted in all the different stations, stores, post offices, etc., and in the baggage and smeking cars of the roads running out of New York, L. I. City, Jersey City, etc. We also shall endeavor to stop the sending of sanred and trapped gameto the city, and do everything we can—with the aid of the proper authorities—to are rest and punish poachers. Not only sportsmen but farmers

and others living in the country near New York should join us. The expense will be only \$5 a year. We hope you will send your name and address to any of the following gentlemen: H. H. Thompson, Treas, oilice X, Y, L. E. & W. R. R. H. W. Faller, N. Y. L. E. & W. R. R. W. Holberton, with Conroy, Bisselt & Malleson, 65 Fulton st., N. Y. Gustave Walter, 47 March, N. Y. Gespectfully, G. P. S, X, Y, V.

Respectfully, G. P. S. N. Y. V.

Manke Game Notes-Lamoine, Hancock Co., Noc. 47.—
For the most part game has not been more plenty for years than it is now. Yesterday two deer were shot some three miles from here, and within a few days I have heard of several deer taken in this vicinity. I have it on the most trustwort authority that dogs are feely used. Here seems to be another task for Messrs. Stillwell and Smith, and if they are "prosecuting with their utmost zeal and energy" something may be done. Ruffed groute (partridge) are quitte plenty and tame. What "Bell Muzzle" says about their not treeing in his vicinity is not true here, though nearer so in the western part of this State. They tree very readily with dogs, and even without dogs, as part of each beyy will light in plain sight of the hunter. The trees and busies as so thick as to preclude the idea of wing-shooting for the most part. Sea-fowl are plenty in Frenchman's Bay, but are wary and lard to shoot. Two ways of shooting are practiced one is by taking a sail-boat, and, after getting to windward, sailing down upon them; the other is by sculling float, which is moderately successful, but there does not seem to be a good model in use for a float. Cannot some of your readers suggest a good plan that is not expensive? Rabbits are very unarerous, but seldom hunted. Black ducks are not plenty syet.

THE MARKEIMEN are now receiving large quantities of game of all kinds, as the following list will show. Bears from Plorida, Texas, Ohio, Pennsylvania, Missouri and Michigan; deer and ruffed grouse from Florida, Texas, Ohio, New York, Pennsylvania, Missouri, Illinois and Michigan; qualt from Florida, Texas, Ohio, New York, Pennsylvania, Missouri, West Virginia, Wirginia, North and South Carolina, Illinois; ducks from Plorida, New York, West Virginia and Illinois; woodcock and squirrels from New York, and ribbits from Illinois. Balard, Branch & Co. have on exhibition at No. 113 Broad street, a white opossum which was sent to them from Quincy, Florida, It is quite young and perfectly white. They are very rare, this being the only one that has been seen in a long while. They also received from Toular, Ill., a ruffed grouse which weighed three pounds, which is the largest we ever suw. we ever saw.

Snow Snors—Telluride, Ourny County, Colorado, Nor. 7.

—Out in this boreal country, 9,600 feet above the ocean, we have lots of snow for six or seven months of the year, and a good snow shoe is a desideratum that can hardly be overvalued. The common long straight stick of light seasoned spruce, three to four inches wide and ten to twelve feet long, is about the most tedious thing imaginable to climb a mountain with. There are two or three models of snow shoes that are highly spoken of by those who have used them, but I never saw any of them, having only others' word for it, but avent to avail myself of the experience and ingenuity of those who have given the matter carnest study. I have heard the "Alaska" much praised, also the "St. Regis" and the "Canadian Club Shoe."

G. M. L.

Pennsylvania—Pittsburg, Nov. 16.—Game around this vicinity is pretty plenty just now, though some distance from the city squirrels are plenty, but very wild, even seampering off when they see you at 100 yards distance. Rabbits are also very wild, but at the same time thick in numbers and if the hunter is quick, as every hunter should be, he will be rewarded by a large bag. Bob Whites and pheasants are on the increase (thanks to the sportsmen's clubs) and are in a fair way to remain so, if the coming winter is not too severe. You shall hear from here again.

Reffed Groese Shooting—Bradford, Pa., Nov. 15.—
In my note on ruffed grouse, perhaps I had better modify it to
read, or should have done so, "six out of eighteen," or one-third
of the shots, instead of "six out of twenty." We usually
find more good shots on paper than out. I have shot in company with as good as the country affords, and they don't bag
one-half of their shots. I have myself, when everything was
favorable, killed five and six straight, but the following day
perhaps would fire six or eight shots and not bug a bird, and
so it is with the best of them.

Bell Myzzle.

A DUCKING Scone—Cleveland, O., Nov. 18.—Our season closed the day before yesterday. The club killed 7,600 ducks, a few over, quite a number of cauvas-backs being of the number. I have shot during the season sixteen days and have bagged 600 ducks—an average of 43½ per day. Pretty good for a ground so easy of access. Our clubs owns or leases about 10,000 acres of marsh, including land and water. We protect it, as you will see by reading the by-laws. Our shooting has increased steadily since we have protected the marsh. R. W.

INDIANA.—Vincennes, Nov. 18.—Quail are not plenty this season throughout the State, nor in fact in either Illinois nor Missouri, north of the snow line. Winter before last the snows destroyed the bevies on the prairies and in the bottoms, those only escaping that wintered in the corn-cribs and outhouses. Wild turkeys are more abundant than usual. Snipe have been shot in large numbers, and the wet weather has brought a few woodcock, which are found on the islands, in the marshes, or in wet cornfields.

in the marshes, or in wet comments.

Louisland—N. O., Nor. 11.—Wild geese and duck abound in and around Ship Island, Cat Island and Dorg Keys. Last week a hunter killed fourteen wild geese at Cat Island on a single shot. This may seem Mannchausen, but it is a fact. The quantity of wild geese at Cat Island night have been measured by the acre. The promise of game this season is musually good. These islands are ten miles out in Mississippi Sound, are easy to reach and Afford excellent shooting ing the winter. There are also fine oysters and fish at all seasons.

EVERGLADE.

Where He Was From.—A disgusted looking man with a double-barrelled shotgun came wearily up Woodward avenue. "Well Jones," said a friend, "just in from the Flats?" "Yes," said Jones, dropping the butt of the gun heavily on the pavement. "I'm in from the Flats. Six of us have been

sitting in the rain in a wet boat for two days looking for ducks. Not seeing any sport in this Lieft. The other five are there yet and I'm of your opinion that they'r flats. Yes sir," shouldering the gun again, "I'm just in from the flats."—Detroit Free Press.

ANOTHER ONE.—They are all having their hits at the unfortunate annateurs. Here is one from the Cincinnati Gazette: "A good story is told of a certain well-known gentleman of this city, a clerk in the office of M. E. Ingalls, president of the Indianapolis Railroad. He obtained a short leave of absence to spend on a hunting excursion in southern Indiana. His success as a sportsman was about equal to that of the average annateur, and he returned to the city without even so much as a chipmunk. After getting back to the city he worte Mr. Ingails a polite note, thanking him for his courtesy and begging his acceptance of the accompanying package of game as the result of his efforts. Handing the note to the porter and giving him at the same time a \$5 note, he requested the latter to purchase a couple of dozen quail or prairie chickens and present them to Mr. Ingails, with his compliments. The porter, who is a zealous fellow in whatever he undertakes, not succeeding in finding either quail or ever he undertakes, not succeeding in finding either quail or prairie chickeus and present them to Mr. Ingaus, with ms compliments. The porter, who is a zealous fellow in whatever he undertakes, not succeeding in finding either quail or prairie chickeus, invested the money in two cans of oysters and a dressed turkey, all of which he faithfully delivered, with the note. Mr. Ingalls' astonishment at receiving this novel present from a city 'blood' fresh from the hunting fields of Indiana may well be imagined. The turkey was all right; even the dressing might be accounted for, but the ovsters——!"

Who Cax March This?—The following comes to us from Nashville, Tenn. The story is told by a Grundy County gentleman: "About ten days since Mr. T. S. Pattie, of Cowan, and some friends were bunting a few miles from Tracy City, when a deer ran by Mr. Patrie and he fired at it. It fell and he walked up to it and cut its throat. After an examination Mr. Pattie found that not a single shot had touched the deer. In making the turn when he fired, it fell, and was so stunned by the fall that it was unable to get up."

Missoviii—Cape Girardian, Nov. 11.—Duck and quail shooting is now in full blast in this section. A few days ago Mr. Penn, of this city, killed twenty-three ducks with twenty-three shots, all mallards. Quail are plenty, but 50 per cent, of them are but half grown. I have been getting fine bags. To day I killed five out of a gang of six without missing a shot, permitting the last one to go from sheer want of bag room to carry it home. They are very fat and hug the corn fields closely.

A Good Rest Pherentive. The best rust preventive that I have ever tried, and I have about tried them all, is obtained by carefully trying out the fat of wild ducks. I don't know but that donestic ducks or geese would be equally as good, but have not tried it. Chicken and turkey oil is good, but not as good as duck.

Omo Norus - Franklin, Nov. 19.—A few ducks grace the waters of the Great Miami—mallard and teal. Qualibre reported plenty in the western part of this county. Two pot-lunters made a bag yesterday of 200 qual in eight hours. There are plenty of rebbits. Six inches of snow, 10 degrees below zero last night. More anon.

Connectivity—New Haven, Nov. 19.—Superintendent Charles S. Davidson, of the Consolidated Road, and George W. Dory, of Hartford, hunted on Anson O. Williams' farm in Andover, on Wednesday, and brought home thirty-three gray squirrels. 19.-Superintendent

Weights of Ruffed Grouse—Bath, Me., Avr. 19.—Please record among the weights of ruffed grouse that Nov. 15 I shot one weighing one pound eleven and one-eighth ounces. He was in fine feather and I have him stuffed.—C. H. G.

#### SHOOTING MATCHES.

#### SIX DAYS TOURNAMENT.

The three day's pigeon tournament given by the New York Gun Club will begin on Thanksgiving Day, on the ground of the Club at Bergen Point. The competitious will be participated in by the members of the Long Branch, Maryland, Philadelphia, Riverton, Narragansett, Orange, Staten Island and New York Gun Clubs and the Westminister Kennel Club. The programme for the the three days is as follows:

THURSDAY-Match, 10 birds each, 5 ground traps, handicap rise, 80 yards boundary.

FRIDAY—The Barron Cup, open to members of the New York Gun Club only; 10 birds each; other conditions as above noted, Saturday—The championship match, limited to 18 entries; 25 birds each, 30 yards rise; other conditions as before noted.

On Thursday and Friday matches at glass balls, 10 balls each, 3 traps, 21 yards rise, will take place. The shooting will begin at 10 A. M. on Thursday, half-past nine A. M. on Friday and quarter to eleven A. M. on Saturday.

FOUNTAIN GUN CLUB-Brooklyn, L. I., Nov. 16.—The second practice shoot, under New York State rules, will be held at the club grounds November 25 (Thanksgiving Day), commencing at nine o'clock A. M. and closing at 5 P. M. Three valuable prizes will be competed for, all of them donated by subscription from members of the club. The object of the shoot is to add to the sinking fund to aid in defraying expenses for the next State Tournament, which will be held at Coney Island, on or about June, 1831. The shooting will be at seven birds each, and the members will be handicapped, being placed in three classes according to their shooting record. Members may purchase one or more tickets, and those not desiring to shoot may transfer their tickets to other members

-Hop Bitters give good digestion, rich blood and healthy action of all the organs.

One of Many Letters.—Canden, Y. J., 1880.—Your elegant weekly is ever a joy to me, for in my busy life I only get two weeks or so to breathe the country air, and try the "angle worm."

#### GENERAL HANCOCK'S "TURK."

TURK has a very interesting history. He is owned by General Hancock, to whom he was given by General "Baldy" Smith. He is a genuine St. Bernard mastiff, and was born at the famous Monastery of St. Bernard in the Alps mountains, on the line between Italy and Switzerland. When a mere puppy he was brought to America and sold to General "Baldy" Smith, who, after keeping him several years, gave him to General Hancock. The dog is now about seven years old, and is mudoubtedly the largest specimen of the canine race in America. He weighs 125 pounds. He is a great pet with General Hancock, and the General says that he would not sell the dog for any money. Recently Senator Pinckney, of North Carolina, saw the animal and wanted to purchase him.

"I will give you \$500 for that dog," said the Senator to the General.

"I will give you \$500 for that dog," said the Senator to the General.
"Turk is not for sale. I would not trade him for your North Carolina plantation," was the General's reply.
"Wh-lew" exclaimed the Senator, "my plantation is worth more than \$50,000" size Turk first took up his residence on Governor's Island he has made himself very useful in many respects. No human sentined is so vigilant as is this intelligent member of the canine race. Turk is a model watch dog. In the daytime he is as nidla as a kitten, but at night he becomes almost as ferocious as a tiger. Wee be to the trespasser who steps upon the island under the cover of darkness. The dog's keen sight, scent and hearing will detect the intruder in a trice.

keen sight, scent and hearing will detect the intruder in a trice.

A little over a year ago two men rowed over to the Island from Brooklyn in a small boat for the purpose of stealing a quantity of old iron and brass that was piled up near the dock. They had just commenced to load their boat with plunder, when Turk discovered their presence, and made such a vigorous onslaught upon them that they were glad to jump into their boat and row away. The dog swam after them, and they were obliged to beat him on the head with their oars to prevent him climbing into the boat. A sentined who heard the barking of the dog ran to the shore. He fired his musket, which attracted the attention of a policeman on the Brooklyn shore opposite, and the men were taken into custody as they landed near Martin's Stores. Poor Turk was so terribly beatten by the rascals that his head was swollen to almost twice its natural size.

On another occasion a soldier, belonging on the Island, having obtained a leave of absence, remained in Brooklyn until late at night. Then he hired a boy to take him over to the Island in a boat. It was his intention, as he had been away longer than the prescribed time, to slip past the guard and get into his quarters without being observed. He would have succeeded admirably in carrying out his plan had it not been for Tulk. The truant soldier had evaded the guard and was at the door of his quarters when the dog rushed upon him, and catching lim by the throat, threw him to the ground and held him there until the corporat came and took him in charge.

The dog has a great dislike for cats. He will not tolerate

him, and eatching him by the throat threw him to the ground and held him there until the corporal came and took him in charge.

The dog has a great dislike for cats. He will not tolerate a member of the feline tribe in his domains. Neveral of the oliters' families who reside on Governor's Island have attempted to keep cats as pets, but Turk would cither kill or drive the Toms and Tabbies away. This is the only ignoble trait in Turk's character.

The reporter was informed that Turk was fond of music. There is an excellent military brass band attached to the post. Whenever this band plays the dog will take his place near the musicians, so as to get the full benefit of the music. Turk knows the old members of the band so well that whenever a new musician comes among them the animal notices the fact at once. The dog manifests his displeasure at the presence of the new comer by giving voice to a series of terrible howls that can be heard above the music of the band. There is a news stand at the ferry landing on Governor's Island, where an enterprising young man does a thriving business in selling the Star and other papers. Every morning Terk will come to the news stand after the papers in his mouth, and so they are tied in a little bundle about his neck, and then he trots off to the General's house. If the Gueral has left the house and gone to the headquarters building, Rastus, the old colored man at the door, will say: "Turk, your musiter is at the office." The dog does not need to be told a second time. He trots off to the Gibb because he can be of service.

During the political campaign which has just closed,

service.

During the political campaign which has just closed, thousands of people bave visited General Hanook, and, as Turk was always at the dock when the boat landed, there were very few of the visitors who did not observe and admire the noble animal. Thus the dog has a wide circle of friends resilient a new power very few.

Turk was always at the dock when the boat landed, there were very few of the visitors who did not observe and admire the noble animal. Thus the dog has a wide circle of friends residing in many parts of the United States.

This chapter about General Hancock's dog would be incomplete without some account of Turk's ancestry. Turk belongs to a royal family of canines. The St. Bernard dogs have been world-renowned for the past 250 years. Away up in the Alps Mountains is the famous Monastery of St. Bernard. Here a band of pious monks have lived since the beginning of the fifteenth century. These faithful disciples of Christianity believe in doing all the good they can. In the winter the roads over the Alps are frequently rendered almost impassable by ice and snow. Frequently travelers, while crossing the Alps, are overcome by cold and would perish in the snow we'e it not for the thoughtfulness of the good monks of St. Bernard. These monks keep a large number of dogs that are trained to go out and search for travelers who have fallen in the road. To each animal's neck is tied a casket containing food and a flask of winc. Many a life bas been saved by the dogs of St. Bernard, of which General Hancock's Turk is a noble representative.—

Star.

Mr. Foller's "Rex"—Springfield, Mass., Nov. 20,—Editor Forest and Stream: In your issue of Nov. 11 "Ruffed Grouse" makes a very queer statement concerning the pup

"Rex," owned by Mr. F. H. Fuller, and which he, "Ruffed Grouse," is breaking, when he states that "Rex" is a pure Laverack by Lathrop's "Dick," out of Lathrop's "Luna." 'Ruffed Grouse' onght to know that there is not a drop of Laverack blood in "Rex" or any of his ancestors. "Rex" is by my "Dick" out of my "Luna," and is a wonderfully promising pup, but dog men who know "Dick" and his pedigree will smile indeed to hear him called a Laverack. Every one well posted knows that the number of "pure Laveracks" in this country can almost be counted on the fingers. "Dick" and "Luna" are pure natives, and I hope "Ruffed Grouse" or any one else writing about my dogs, will never hereafter mudertake, either through incorance or perversion, to "turn undertake, either through ignorance or perversion, to "tu away the current of their blood." E. H. LATTROP.

#### EASTERN FIELD TRIALS.

THE second annual field trials given by the Eastern Field Trials Club will begin at Robins' Island next Monday morning. The ground, as we have already stated, has been well streked with birds, and there is little reason to apprehend any trouble on that score. The list of entries is a large one, including many of the crack dogs of the country, and should the weather be propitious there is every prospect of a good week's work.

Several extra prizes have been secured by the club, and to

Several extra prizes have been secured by the cub, and to the first prize already assigned in each stake the following are added: Nursery, 2,000 Winchester shells; puppy, English gun case; all-aged, a Fox gun; brace, an armichair. A silver cup will be given for the best pointer.

The entries for each stake will remain open until the evening previous to the day upon which it is advertised to be run; and the stake will be run in the order named but week.

ing previous to the day upon which it is advertised to be run; and the stakes will be run in the order named last week. Paymaster L. H. Billings having been, by reason of his official duties, compelled to decline to act as one of the judges, his place will be filled by another, elected by the competitors in the several stakes. Mr. F. N. Hall will serve as official scorer. The club will take a special train from Plathush arenue, Brooklyn, at 3 o'clock on the day previous to the opening of the trials. The route to Robin's Island is via Long Island Railroad to Cutchogue.

Trains leave Hunter's Point for Cutchogue daily at 8 a. M. four hours' ride; and 3:30 r. w., a ride of three hours; fare, round trip \$4:25. Stage and ferry from Cutchogue.

The Cocker Cleb-Not 21.—Editor Forest and Stram: In last week's issue your correspondent, "Learn," asks me to accept the secretaryship of the embryo Cocker Club, to which request I ghadly accede. My friends know me well enough to know that I am willing to do anything in my power to forward the interests of my favorite breed, and it is with great pleasure that I note the intended formation of this club. Our friend "Learn," myself and two or three others, have long thought such a step necessary, and I hope that overy person interested in this breed—whether owning specimens or not—will join us in our attempts to forward its interests. A membership of upwards of fifty is anticipated, but I hope that our auticipations will fall far short of the reality. "Learn" has put the objects and purposes of the club so plantly before your readers that there is nothing for me to add now. Intended members will oblige by communicating with me, when I will furnish them with full particulars.

(Bio. D. Macdottgall.

The Dog Puryn.—The dog pound were collected.

The Dos Pound.—The dog pound was officially closed Saturday. During the season there were received in that institution \$,655 cambes, of which 8,513 were drowned and 143 redeemed, or released by order of the Mayor. The amount received for the redemption of dogs was \$252. The amount received from the granting of dog licenses from the 1st of January to November 1 of this year is \$9,415. The total amount paid to the city for dog licenses since 1877, when the ordinance first went into force, is \$42,290.

#### THE SETTER.

[Reprinted with the express permission of the Author and through the courtesy of his publishers, Messys, Cassell, Petter, Galpin & Co., New York, from Yero Shaw's "Book of the Dog."]

E are decidedly of the opinion that field trials have E are decidedly of the opinion that field trials have done much toward improving sporting dogs, and hope to see their more extensively held all over the country. They have in some degree, if not perfectly, the merit of combining the element of public competition with those practical tests so desirable in judging of sporting dogs. In these field trials the setters have hitherto managed to hold their own ancommonly well, and up to the year 1880 no pointer has succeeded in winning the Grand Challenge Cup which is given by the Kennel Club to be run for annually by dogs belonging to its members. Any member may run any dog he chooses, either pointer or setter, and it was decided when the cup was first offered that it should become the property of any member who should be fortunate enough to win it three times, but not necessarily in succession, or with the same dog. To the astonishment of the sporting world Mr. G. De Landre Macdona has accomplished the feat with Ranger, a black-and-white setter. This grand dog, though

not himself a perfect model of beauty, has by carrying off the Challenge Cup upon three occasions stamped himself as the setter of the day, and has moreover shown what is behind him in the matter of pedigree by begetting many first-class specimens of the breed.

With reference to Ranger's marvellous behavior in the field, we extract the following from a report of the field trials which appeared in the Line Stock Journal, April 25th, 1879. In alluding to Ranger the writer says:

"He made what is so much to the public taste at these trials—a sensation point. When running down a large grass meadow with Darkie he rushed with marvellous speed to the bottom, against which appeared a large embankment. The dog suddenly found himself huried by the impetus of his going into the midst of a twelve-foot river that ran between the embankment and the grass field in which he warming. The impetus with which he went threw him to the opposite side. Crawling up the bank lanf dazed with the shock, he scented some birds, and immediately coming to life again, dropped. The hirds them rising be plunged back into the river, swam across, and shook himself in the face of the judges and speciators. Anything more unique or sensational in the matter of field trials has not been witnessed before, except when he won the all-aged stake at the Kennel Club field trials, when, rushing down the bill, he suddenly winded birds, and stopped, and the impetus of his going caused him to make a somersult in the air, when he landed on his back, and as stiff as starch. His four legs were seen in the air, and his neck and head turned round in the office of the field trines has even the face on the air, and his neck and head turned round in the firm him hear. When

were seen in the air, and his neek and head turned round in the direction where the birds were soon put up about a foot from his nose."

Ranger, in addition to his Challenge Cup triumplas has won the following stakes: Reynold Stakes, Shrewsbury, 1874: Champion Cup, Shrewsbury, 1874: Champion Cup, Shrewsbury, 1874: Champion Cup, Shrewsbury, 1873; State of England Stakes, Ispawich, 1873; Trehill Stakes, Devon and Cornwall, 1875. Such performances, even unaccompanied by the fact that he has won the Challenge Cup outright, stamp Ranger as undoubtedly the best dog of his breed which has hitherto appeared.

To recommend the setter as a companion dog to the unsporting philo-know may be to invite a sneer from many a knight of the trigger, but nevertheless there is much to be said in favor of these dogs in the character of mere companions. There is no more cleared dog than the setter: the outlines of a well-formed specimen are caninently beautiful, and his every movement most graceful. The coat is beautifully soft and rich, the featherings especially being of a fine siky texture, and the colors and distribution of them generally striking and picturesque, as they are soft, refined and lovely. In intelligence the setter has few equals, so that he soon accommodates himself to circumstances, and is a ceasy of corrord that for his intelligence is a companion that can theroughly be trust of for his intelligence is a companion that can theroughly be trust of for his intelligence as they are soft, refined and lovely. In intelligence the setter has few equals, so that he soon accommodates himself to circumstances, and is so easy of control that he readily becomes a companion that can thoroughly be trusted, for his intelligence is great, and he seems to think for himself, and make the pleasing of his owner his sole delight. In temper they are almost invariably reliable, and their affections become deep and lasting. And added to all these qualities there is an air of refinement and superiority about him, inherited from a long line of blue-blooded ancestors, that commends him to all.

Those who keep but few setters to shoot over themselves should never full to make friends and constant companious of them; the mutual understanding and trust arising from this doubles the pleasure of the sportsman in the possession of his does, and adds greatly to his success in the field.

We had Mr. Maedona's Rameer with us while Mr. Barber was sketching him, and although we met as strangers we were soon friends, and parted we firmly believe with mutual regret. Never have we seen a dog who so readily accommodated himself to circumstances—he seemed at once to be as much at home in London as he is in the stabble or the heather, and took his seat in a hanson cab as a naturally as though

and took his seat in a hansom cab as naturally as though to the manner horn.

and the thinself to circumstances—he scened at once to be as much at home in London as he is in the stubble or the heather, and took his seat in a hansom cab as n.turally as though to the manner horn.

One word of caution only in respect to keeping setters as companions. We should always advise having them broken to game, although there may be no prospect of using them; because it unbroken does were bred from an unbroken line, while their beauty and general intelligence might be sustained, they would lose the aptitude for their natural work.

As stated at the commencement of this article, it is an unquestionable fact that, whatever the source was from which the modern English setter sprung, there are several distinct families of the breed at present in existence. But even these are themseives offshoots of older types, which in their turn originated from the setting due, either by breeding and selection, or to the judicious admixture of foreign blood. It may therefore be as well to draw attention to some of the most fannous of the old breeds, as well as make allusion to the most fannous of the old breeds, as well as make allusion to the most fannous of the old breeds, as well as make allusion to the most fannous of the old breeds, as well as make allusion to the most fannous of the old breeds, as well as make allusion to the most fannous of the breed altonous of the old breeds, as well as most earlies on the most fannous of the breed breeds, as well as most earlies of the fore all hopes of doing so are valu. Mr. William Lort, of Fron Goth Ifall, Montgomeryshire, who has before heed quoted in this chapter, has kindly given us some valuable information concerning this variety of setter, which is in purport as follows: The coat of the Welsh or Lauidloes setter, or at all'events of pure-bred ones, is as curly as the jacket of a Colswold sheep, and not only is it curly, but it is hard in texture, and as unlike that of a modern fashionable discorned hing like an otter's. This bread or only is it curly, but it is hard

\*The pedigrees of Ranger III, and of Ranger are given at length by Mr. Shaw.

well known in the north of England, especially in the Carlisle district. Though this dog was coarse and humbering, it has been argued, and as often denied, that the famous Laverack blood is tinged with that of this variety. However, this will be more fully referred to almost immediately, when the Laveracks are touched upon.

Another famous strain of jet-black Welsh setters is now lost and gone forever. It was a blood that was to be found in many parts of the Principality, and as a strain was second to none. Unfortunately, though jealously guarded by its owners, their interest in it gradually lessened, and it finally has disappeared entirely.

lost and gone forever. It was a blood that was to be found in many parts of the Principality, and as a strain was second to none. Unfortunately, though jealously guarded by its owners, their interest in it gradually lessened, and it finally has disappeared entirely.

The Anglesen setter, as it was once called, did not spring, as might be supposed, from the island of that name, but from Beaudesert, the residence of the Marquis of Anglesea, where it was carefully treasured. They were in character a light, active, very narrow breed of dog, with no chest, though deep in ribs. They were rather leggy and possessed the habit of standing with their fore-legs and feet close together. This breed of dog was constitutionally delicate, but as log as they stayed, showed great pace in the field. In color they were mostly black-white-and-tan, and in coat, though not so smooth and flat as a modern setter, the Angleseas were not nearly so cuty as the Welshmen described above.

To arrive more rapidly at the leading strains in 1880, we now come to the magic name of Edward Laverack, a gentleman who has done more to bring this setter in all his glery before the public than any other has ever done or is likely to do. Mr. Laverack, who was an ardent sportsman, for half a century was engaged in improving the English setter, and with most flattering results. The corner-stone of his breeding-stud was a pair he first obtained from a clergyman named Harrison, who resided in the neighborhood of Carlisle. That he conscientiously followed the principles of strict in-breeding is amply proved by a reference to the pedigree table of Ranger, where it will be observed that all Mr. Laverack's best blood is represented on the one side; and the success of his system is cleanly demonstrated by the position his strain occupies in the estimation of modern setter breeders. In short, most of the leading strains are either pure Laveracks, or eise they partake largely of the Laverack blood. The formation of the Eaverack setter, to quote his own words, is as

the Laverack setter. The letter referred to runs as follows: [Copy.]

"Beacomall. Cottage,]

"Dear Rothwell: I am glad to hear your bitch has given birth: save me a Blue. All five are true bred, and all take after the sire, Blue Prince. The liver-and-white will be quite as handsome and good as any. He strains to Prince's sire, viz., Pride of the border, a liver-and-white, he strains back for thirty years to a change of blood I once introduced—the pure old Edward Castle bred—County Cumberland liver-and-white, quite as pure and as good as the Blues. You may have heard Withington speak of the hundsomest setter he ever saw, viz., Pride ; he was this colour, and a clipper. Fride's dam was my old blue-and-white, with tan cheeks and eyelrows. Why I reserved Pride was to breed back with him and my Blues. He is invalvable, as by him I can carry on the breed. .... I have a demand from America for more than I can sell, but they are the best, and I guarantee all Send bred by the May 23, 1874."

May 23, 1874."

sell, but they are the best, and I guarantee all I send bred by me. May 23, 1874." Yours truly. E. LAVERACE.

May 23, 1874." Yours truly. E. LAVERACE.

There is a possibility that Mr. Laverack, knowingly or otherwise, had introduced some of the blood of the liver-colored setters we have alluded to as being in the neighborhood of Carlisle. This breed was not a popular one, we understand, and therefore it might not have been worth his while to make a special reference to it. But be this as it may, one thing is very evident from the letter, and that is that Mr. Rothwell, who bred many dogs for Mr. Laverack himself, was unaware of any such taint, or this letter would not have been written. Its present publication may be a consolation to breeders of this kind of dog, as the appearance of a liver-colored whelp will convince an owner who has read these lines that it is not necessarily a bar-sinister in the pureness of its pedigree as a Laverack. There could in fact be a great deal said upon this subject of the liver color, which Mr. Laverack him pure-bred dogs of his strain. A tendency to throw back is of course inevitable in every breed of a minal, and it is greatly to be regretted that in his work Mr. Laverack threw no light upon the origin of his breed. In fact, in his description of the setter, he only alludes, in referring to his sown strain, to black, or blue, and lemon-ticked ones. This reticence on the part of Mr. Laverack would seem to imply that, though he did not attempt to deny the fact that there was liver blood somewhere in his strain, he was not particularly anxious that this should be generally known, and consequently kept even his Faths schales, Mr. Rothwell, in the dark about it until some puppies of the color appeared in his breeding operations, when he hastened to assure the latter gentleman that such an event was by no means impossible.

It would appear, further, not only from the above letter, but from others which passed between Messrs. Laverack and Rothwell, and which subsequently came into our

Mr. Laverack puppies as the latter required them; and also that the great breeder himself was kind enough to sell Miss Rothwell's whelps for her. We do not consider ourselves that there is any harm in such a thing being done; but the

practice is unfortunate, inasmuch as it opens the door to illnatured remarks on the pedigrees of dogs, and is a practical illustration of the dangers to which breeders are liable. What we particularly allude to is the chance that is run of the authenticity of pedigrees being disputed afterwards, if it could be proved that certain dogs were actually bred by Mr. Rothwell and not by Mr. Lacracks. We do not impute any deception to either of these gentlemen, but it is possible that persons who purchased pure-bred Laveracks from binself night describe them as bred by him, when in reality Mr. Rothwell describe them as bred by him, when in reality Mr. Rothwell describe them as bred by him, when in reality Mr. Rothwell describe them as bred by him, when in reality Mr. Rothwell describe them as bred by him, when in reality Mr. Rothwell describe them as bred by him, when in reality Mr. Rothwell and the second of the content of the second of the content of the second of the content of the second of the content of the second of the content of the second of the content of the second of the content of the second of the content of the second of the second of the content of the second of th

read with interest:

"Broughall, Cottage, your "Whitehurch, Salop, you be puppies. When old clough to fake from mamma, place in a hamper, and send as directed above, and advise me prior in coder I may send to station for them. Keep them till you were sold. I shall be able to sell your daughter as many as you can spare; and when sold will send either you or Mass Rothwell the money.

"Yours truly.

"BROUGHAL A. COTTAGE, Whitehurch, Salop,
"DEAR MR. ROTHWAL: I regret very much to inform you the
three puppies you sent died a week ago in distamper, after rearing
them all straight, and they really became beautiful, and showed a
deal of quality. They were all three bespoke by an American at
15 guine as, b lee sent in Machalla and Salomen as
lost straight and they allow the sent of the sent and the sent model at lifty guineas prices, and four more young dogs, all
they off in distamper and file. All were the handsonest I were bred
even. Indeed, I am quite broken in spirits to think after all my
rouble and expresses in Rie's). I fear I have or shall beet the bred,
as I have only one old broad hitch left, I fear too old to breed. The
only dog I have left except her as Prince. Yours very truly,
"E. LAYELANG."

"E. LAVELIANG."

There is no date to the above letter, but the post-mark on the envelope is November 13, 1874.

"Dear Rothwell.: " " "Broughll, Whitelength, Salop.

"Dear Rothwell.: " " " I am quite dishertened with the loss I have eastained—nine. Sis were such as I never saw for beauty, and the three that came from you had greatly improved. I have only two old dogs left—viz., Frince and a letuon blich, Con. I have been here three years uncerthing. I could wish, and built and the property of the property

6 March 24, 1875."

eut our seems a tatanty, as no exponse is spared....I will bring over several letters from America relative to dogs, and I think if I sporovo of your young ones I may perbaps get you a customer.

"March 23, 1875"

Sneh letters clearly show the difficulties under which Mr. Laverack labored at the close of his career, and have no doubt been instrumental in earning the pure-brord Laverack Setter, a reputation in certain quarters for being delicate and hard to rear. On the other hand the success of crossing the Laverack blood with other strains is proved by the success of Rameer; and in our opinion there is a great probability of the English setter deteriorating if modern breeders stick too closely to their own blood.

Amongst the number of great setter breeders may be mentioned those of theory Jones of Oscott, who was a great light at the first institution of dog shows, and showed Rap. Mr. Jones glorified in the Laverack blood, which be grafted on his own stock, and cheerfully acknowledged the benefits he received from it. The Brothers Withington, too, were great setter non, and good friends to Mr. Laverack. They are said to have given the latter £100 frour unbroken puppies, which was then a very long price to give for dogs of such a tender age. Nor must the names of G. R. Rogerson and the Rev. Frames Ade by the forgotten by lovers of the setter. Mr. Statter, too, will always be remembered in connection with this breed. I list great kennel is very near the top of the tree in setter circles, and though its members are not all pure Laveracks, believe owner sensibly admits that the more of this blood he gets the better pleased he is. Mr. R. Li Parcell-Liewellin, of Lincolnshire, is one of the greatest Laverack breeders of the day, and spares no trouble or expense in perfecting his strain. In consequence he has many grand specimens, though many breeders say that his bitches are better than his dogs. Lord Waterpark's handsome, heavily-flecked setters, which appeared at a very early Glasgow dog show, were, and have been

winners. Nor can the name of Mr. George Lowe's Tam o' Shanter be omitted from any list of the leading setters and sires of the day.

ITO BE CONTINUED.

FIELD TRIAL RULES.

THE RULES OF THE ENGLISH KENNEL CLUE, AS GIVEN IN VERO

1. Management of a Meeting.—The management of a meeting shall be entracted to a countition in conjunction with Field Stewards, the latter of whom shall be appointed by the committee before the time of running. The stewards shall decide any disputed question by a majority of those present, subject to an appeal to the countitiete. No steward shall vote during a meeting in any case relating to his own dogs.

2. Election of Judges, —The judge, or judges, shall be elected by the committee, and their manes shall be announced as soon as possible after their election. When a judge, from ill-health or any other unexpected cause, is prevented aftending a meeting or fuishing if, the committee shall have the power of deciding what is to be done.

3. Description of Entry. Every subscriber to a slake must name s dog at or before the draw, giving the manes of the sire and most the dog entered, and also, in puppy stakes, the name of the un's owner. The Secretary shall publish on the card the name of the times who are embersibers, but do not comply with these conditions. These nominations shall not be drawn, but must be paid

of those who are subscribers, but do not comply with these conditions. These nominations shall not be drawn, but must be paid
for.

4. Disqualification. For Puppy Stakes, the names, pedigrees,
agics, colors, and distinguishing marks of the puppies shall be detailed in writing to the secretary of a meeting at the time of entry.
Any puppy whose age, markings, and pedigree shall be proved not
to correspond with the curry given shall be disqualited, and the
whole of its stakes or winnings for feizhd.

Any puppy whose age, markings, and pedigree shall be proved not
to correspond with the curry given shall be disqualited, and the
whole of its stakes or winnings for feizhd.

As well-ple the last of January of the year preceding that
of its competing.

6. Payment of Stakes. All money due for moniunitions taken
must be paid on or before the draw, whether the stake fill or
not, and allbungh from insumeient description or any other cause
the dogs named may be disqualified. No curry shall be wall dunless the amount due for it has been paid in rull. For all produce
and other stakes where a fort it is payable no declaration is necessary; the noneyament of the remander of the curry money at the
time lixed for that purpose is to be considered a declaration of forfeit. The secretary is responsible for the entry money of all dogs
whose mame appear on the excit.

7. Alternation of Name-Piff angle it shall have not been known
in public be shall give notice of the oliveration to the secretary
at the time of entry, and the secretary shall where on the eard boff
the late and the present name of the day. If notice of the alteration be not given the dog shall be disappathied.

8. Preix of "NS."—Any subscriber skung an entry in a stake, and
not preliking the word "names" to a dog which is not his own
property, shall forfeit that dog chance- of the stake. He shall
likewise, if requested, deliver in writing to the secretary of the
needing the name of the bount file owner of the dog named by him,
and this communication is to be

likewise, if requested, deliver "in writing to the secretary of the meeting the name of the bone niebe by hing, and this communication is to be produced should any dispute arise in the matter.

9. Death of Subscribers.—The death of a subscriber shall only afrech his nomination if it occur before the draw, in which case, subject to the overptions stated below. It shall be void, whether forfeits or stakes shall be returned. If he has properly are entered, paid for, and drawn in ignorance of his being no longer dive, such entries shall not subsequently be disturbed. When dogs who have been entered in produce stakes change owners with their engagements and with their forfeits paid, the new conner, if otherwise cutilited to run them in these stakes, thank not be prevented from doing so by reason of the death of the former owner.

10. Power to liches Britnes.—The committee or networks of any more distributed in the subscribed of any control of the statistic or of the consultation of the committee of the Kennel Club to have misconducted himself in any way in connection with dogs, dog shows, or dog trials, will be allowed to compete in any trials that may be held under the Kennel Club Rules.

11. The Draw.—Immediately before the dogs are drawn at any meeting, and before nine o'clock on every subsequent evening during the continuance of such meeting, the time and place of putting down the first brace of dogs on the following morning shall be declared. A card or contine bearing a corresponding number shall then be placed together and drawn indiscriminately. This classification, once made, shall not be disturbed tirrugiont the meeting, except for the purpose of guarding, or on second of byes, Dogs whose position on the earth has been altered in consequence of guarding, or on second of the skewnick bearing a content of byes, Dogs whose position on the earth has been altered in consequence of guarding, or on second of the skewnick the morner of the form of the consent of the Skewnick that the declared. According the work of

programs same shall see that the count duty as a struct surperson of the structure of the

19. Control of Dogs Competing.—The control of all matters con ected with the dogs under trial shall rest with the judge or judges of the meeting, assisted in cases of peculiar difficulties by the ste-

wards.

20. Wearing Collars.—All dogs, when necessary, shall wear collars—the red for the highest dog on the card, whose place shall be on the left, the white for the lowest dog, whose place shall be on the sight did.

on the left, the white for the lowest deg, whose place shall be on the right side.

21. The Judge or Judges.—The judge or judges shall be saliject to the geteral rules which may be established by the Kennel Chal for his or their guidance. At the termination of each trial, he or they shall immediately protain his or their decision, either by word of mouth, or by the exhibition of a color corresponding with that worn by the winning dog. No recalling or reversing of that decision shall be afterward given on any prefex whatever.

22. Length of Trials.—The length of a trial shall be determined by the judge or judges. When he or they are satisfied that decided supernority has been exhibited by one of the contending dogs the trial should end.

23. Injuring a Dog.—If any subscriber or his servant shall, will—

that worn by the winning dog. No recalling or reversing of that decision shall be afterward given on any pretext whatever.

22. Longth of Trials.—The length of a trial shall be determined by the judge or judges. When he or they are satisfied that decided supernority has been exhibited by one of the contending dogs the trial should end.

23. Injuring a Dog.—If any subscriber or his servant shall, will-fully or by carlessneets, injure, or cause to be injured, an opportunity of the property of the other dog to remain and run out the stake, and in such case shall be entitled to half its winnings, if my.

24. "No Trials" and "Undecideds."—A "no-trial" is when, by accident or some other unfortsect cause, the dogs are not tired together. An "undecided" trial is where the judge or judges consider the next of the dogs equal. If either is then drawn the overners must at the time deciance which dog remains in. A "no-trial" or an "undecided" trial is where the judge or judges consider the next of the dogs equal. If either is then drawn the overners must at the time deciance which dog remains in. A "no-trial" or an "undecided" may be run equit bomediately, or at 1. "Index of the dogs equal. If either is then drawn the overners must at the time deciance which dog remains in. A "no-trial" or an "undecided" may be run equit be mediately, or at 1. "Index of the dogs equal. If either is the dogs to the or the field, its owner, or some one having bisauthority, must at one give make to the server or slewards. -It is impossible to remain long sick or out of health where Hop Bitters are used.

BULLETS FOR HUNTING.

NEWPORT BARRACKS, Ky., Nov. 13, 1880.

IN your publication of the 11th inst. I notice an article entitled "Bullets for Hunting;" and while I admire the spirit of the communication, still I cannot understand why such stress should be laid on patches and patched bullets for more game-killing pur-

For my part I object to patched bullets for hunting for a good For my part I object to patched bullets for hunting for a good many reasons, and cannot see that they possess any advantage over their naked brothers. In the first place they have to be carried with great cure, and, if in a belt, which is the most convenient way, the paper soon becomes worn off or crumpled up, thereby preventing the introduction of the shell into the breach. Again, should these metables become view over a found that they are the state of t Again, should these patches become wet, or even damp, they are rendered unserviceable—the bullet has to be taken out and repatched before it can be used.

The point in question is, What is the use of a patched ball for hunting purposes? How is it that some of the very best hunters se Winchester and other repeating rifles never use patched What is the reason that a man who is a good shot can kill who use Joads of game with a Springfield ride and service ammunition?

How is it that at the regulation rifle matches such good scores are made with naked, but well lubricated bullets? In fact, what is the use of multiplying intricacies? Why not use the ammunition that will stand the most rough usage both for bunting and for army purposes? In other words, why make mountains out of mole-hills? I have killed hundreds of head of game over this entire continent—from the frontiers of Patagonia where ostrich and deer abound; at the foot of the Cordileras where llama, puma, tigers and nutria are found : in the south of Brazil I have hunted and killed the greatant-cater, wild boar, etc., and in Montana, Nebraska and Dakota, elk, Juffalo, antelope, deer, etc.—and have never yet been able to appreciate the advantage of a patched bullet for off-hand sporting work, and so far have only been able to discover its disadvantages, just because it will jam, because it won't keep a gun as clean as a lubricated ball, and, enfin, because it is not the thing for rough-and-ready work.

I wish it, however, to be distinctly understood that I am dealing only in a sporting sense, and not for accurate target shooting, where a rifle is or may be cleaned after each discharge, where every cartridge is handled as carefully as an egg, and where the least imperfect one is rejected. For this kind of work a patched bullet is as superior to a naked one as it is inferior to it for frontier service. as superior to a naked one as it is inferior to it for frontier service at game. The patch protects the bullet and provents throm being furrowed by the grooves, thereby rendering its flight more accurate and uniform, especially at long ranges. It also insures a more elastic and perfect fit, and in a muzzle-loader, where both are out of danger of being touched, it is a decided improvement. In this connection I have nothing to say; but for a hunting rifle, where this jamming is likely to cause some inconvenience (for instance, when the grizzly referred to is "still coming on"), I claim they are no actual use, and may prove very detrimental.

Now then what is a good killius, beneguablishe fullet? Why,

Now, then, what is a good killing, bone-crushing bullet? Why, simply one that will fly accurately up to, say, 300 yards, as game is foldom bagged over that distance, and generally between 75 and 150 yards. A bullet that has a rounded front and large striking surface, say a calibre .45 or .50, weighing about 350 grains, hollow pointed, with good deep canelures, and well lubricated with tallow and beeswax. An introduction of tin with the lead seems to be an improvement in the minds of some hunters. This, in my opinion, depends upon the kind of game it is used on, and is really and

practically of no vital importance.

I know of no better shape than the Regulation (cal. 45) Spring-I know of no occurs mape than the regulation (vol. 20) panny-field rifle bullet. It seems to combine more advantages in point of density and form than any other. The weight is 405 grains when solid, and when cast in a hollow-pointed bullet weighs about 370 grains. This of course depends upon the size and depth of plug inserted in bullet.

Such a missile driven by 100 grains of good strong rifle powder, of medium coarse grain, will prove a deadly dose to any animal on this continent if it hits him squarely and fairly, and will be found to do as little glancing as a round ball, and will "mushroom" to perfection

I will conclude with saying that I like a bullet to be deeply sunken into the shell, as then the lubricant is well protected; and Lontend that a well-grooved rifle can be shot 100 times with such a bullet, well lubricated, and need not be cleaned, and yet will early with sufficient accuracy to kill an antelope at 300 yards, if the rifle be properly held and sighted for that distance.

Thance. ride be properly held and sighted for that distance.

P. S .- Fancy in an Indian country a man being pursued by the themy and having to ford a stream with nothing but patched bullets in his belt! How would he keep the patches dry? And, if wet, what could he do with them? Besides, it is well known that if you are to have a torn or crumpled patch in a thousand it will be sure to come when you are in a tight fix; ergo, don't use patches for hunting.

HROUGH the medium of your valuable journal, I should like to ask your exceedingly clever correspondent "P," in your

issue of Nov. 11, a few questsons.

I have a short-range, .40 cal. Sharps rifle. I discarded the patched bullet, as I found the lubricator apt to make the patch retaain on the bullet, particularly in warm weather and if long loaded.

I then used the Lowell naked bullet, but this gave uneven results. The least push would put the bullet through the barrel, and then there were no marks of the rifling on the bullet. Was not the bullet too small? There was, in my opinion, a great loss of power by too much windage, and I doubt if the bullet gets sufficient spin. at spin. I tried the Remington No. 40. Pushing it through the barrel the rifling was marked beautifully, but it won't chamber in the Sharps rifle,

What is a hollow pointed bullet? Should not the bullet, when pushed through the gun, show the marks of the rifling? Does it make any difference if the naked bullet is deep seated in the shell, up to, say, the last canclure toward the point.

Should naked bullets be lubricated, except in the swedges? I used 50 grains of powder and 1% shells. I wish to use Curtis & Parroy's 45 grains. The bullet will seat even deeper then. Should

a wad be put between the powder and the bullet? I would not trouble "P.," but that I tried to satisfy myself with experiments last summer, but could not; and if he will be so kind as to give a tyro the benefit of his large experience I will be ever so much

Without anticipating "P.'s" reply to our correspondent's in-Without anneiparing "F.s reply to our correspondents in quiries, we may give him a point or two. A hollow-pointed builtet seems to be described in the naming of it. A hole is sunk from the point directly toward the base of the bullet. About .22 of an inch for a .44 callbre builtet is the size of the hole generally left. A bullet may fall entirely through a rifle, making a snug fit over the riding, and yet be a very accurate shooter. This is particularly the case with bolt or elongated bullets. That a bullet should be the case with bott or elongated bunders. That a bunder shound be driven into a weapon in order to shoot well from it is an idea which has been exploded by actual experience. Generally, the less a bullet is seated in a case the better, though this will depend on the chambering of the rifle. Too much lubrication is a common on the chambering of the vine. Too much numeration is accombine fault, and if other conditions are proper, the slightest uniform distribution of lubricant will be sufficient. Of the choice between a deep-scated bullet and the use of a wad, the latter would, in the majority of cases, be preferable. The gun should, however, be so chambered as to avoid both disadvantages.

#### RANGE AND GALLERY.

THANKSGIVING DAY will be generally observed by the lovers of HANNENING DAY Will be generally observed by the observa-range sports by a series of matches. Creedmoor will have its curi-ous Charlotte Russe Match where there is to be a great deal of shooting, a good share of eating and considerable of a lottery in the distribution of prizes. At Walnut Hill the shooters will display their pink-of-perfection style before proceeding to their home dinners. With the prospects of a fine day there is every chance that some good sport will be had, and the traditions of the day are sustained in the announcement of a number of real old style turkey shoots wherein Mr. Gobler is given the limited option of dodging leaders for a time

Gov. Perkins has presented a very handsome medal to the Cali-GOV. PERKINS has presented a very handsome medal to the Cal-fornia Rifle Association, to be contended for annually at the Fall Tournament in one of the matches where the National Guard and rounnament in the or the Army and Navy will compete, in order to stimulate an interest in rifle shooting, and to bring out the best stimulate an interest in rine amounts, and to liming our the test skill with the military rifle, "Governor Perkin's Medal," as the trophy will be called, will be eagerly contended for, as the wearer will be distinctly designated as the Champion Marksman with the weapon in use by the troops of the Army and the National Guard

MAMMOTH RIFLE GALLERY—Boston, Nov. 19.—The third week in the Excelsior rifle match at the Mammoth Gallery has shown good work and better scores than any week this month. The galgood work and better secret than any week tims month. In gar-lory has been well filled with riflemen and their friends during the week. Among others Mr. Ira A. Paine, the well-known rifle and pistol shot, visited the gallery and did some excellent shooting with both arms, and the crack of the Ballard, Maynard, Stevenis, Wesson's and Remington rifles have been incessant. Mr. R. S. Gray, of the Massachusetts Rifle Association, heads the list with 161 out of a possible 200, and his five scores of four thirty-eights and one thirty-nine will be hard to excel. Mr. U. A. Pollard is second on the list with 183. Mr. H. Appleton, of the Walpole Rifle second on the list with 188. AR. H. Appeton, of the wapone sine Club, is third with 186. Mr. Charles B. Robinson is fourth with 182. Mr. Frank Hollis, of the Medford Rifle Association, is fifth with 182, but is outranked by Mr. Robinson. Mr. A. L. Locke is next in order with 180. Mr. Jocke is a member of the Rod and Gun Club of Springfield.

The subjoined summary will show the standing of the leading

competitors to date: 50 yards, rounds 8, possible 40, five scores win or possible 200:

R. S. Gray	88 89		39-191
U. A. Pollard37	37 35		38 - 158
	87 37		38-156

Willowerook, Comm., Nov. 17.—A clear day delighted a great many marksmen in the contest for the Steele Cup on the range here to-day. The elegant trophy was first offered by T. Steele & Son, the Hartford jewelers, in the year 1876, to be contested for annually by teams of four each from the various towns in the State at 500, 800 and 1,000 yards ranges, and by the conditions was to become the property of the team first winning it three times. It was first won in 1876 by the Middletown team; in 1877 by the Hartford four, and in 1878, 1879 and 1880 by the New Britain team, who will hereafter keep it in their possession. The cup was among the first of the prizes offered to marksmen in Connectiont, and was known as the State prize of the Connecticut Rifle Association, and known as the State prize of the Connecticut Rife Association, and by it ride shooting has been stimulated ever since. In addition to the honor of winning the cup, Messrs. T. Steele & Son have presented to each member of the successful teams, at the respective contests each year, a personal badge, and during the rive years twenty of these have been distributed. The cup has frequently been described. It is elegant in design and costly in workmanship. The individual badge is very neat and pretty. It is a pencil of gold in the form of a rifle cartridge, suspended by a maroon ribbon from a handsome bar pin. Each badge is suitably engraved, It is a pencil and will be preserved by the winners as souvenirs of T. Steele & Son's generosity. The day was clear with very little wind to annoy the marksmen.

The remarkable score made by the Middletown teams two weeks since, of 198 out of a possible 200 points at the 500 yards range, was not allowed to-day, but they were again obliged to shoot over the same range, but with only a difference of three points. cenclusion of the match Mr. T. Sedgwick Steele presented the winning team with the badges and cup, and after three rousing cheers for the donor the crowd disperse The full scores of the shooting stood :

STRING STOOTING .- Squarries, Nov. 13. - Match for an ox valued at \$100. Second-class target, 100 yards, string measurement, 5 shots per ticket: James Pixley, 14% inches; K. Post, 20% in.; George Valen, 22½ in.; L. Morehouse, 23½ in.; H. Wade, 23½ in.; B. McGregg, 26 in.; R. Hause,  $29^{1}_{\odot}$  in.; D. Haven, 34in.; O. Grant, 38% in.; J. Hoyt, 47 in. Shot from a rest: no telescope sights

Warren, Ohio, Nov. 13.—The 200-yards tournament commenced last Wednesday with a limited number of shooters. The weather nast woonesmy with a immed number of shooters. The weather was unfavorable throughout the day, strong head and fishtail winds prevailing that made close shooting an impossibility. The shooting was at a two-inch bulkseye counting five, a four-inch circle counting four, a six-inch circle three, etc., making a possible 25; muzzle rest, with butt of gun held at the shoulder. Seven strings were shot with the following result:

The weather throughout the shooting was unfavorable, but in spite of the wind, which at times diverged the bullets from six to eight inches from their true line of flight, the skill of the marks-men overcame it in a great degree, and the scores made are the best over recorded. A year ago the highest average was eighteen, the honors going to Mr. Bacon, of Jamestown, New York. It will be seen that there is a marked improvement in the scores made last week. The following is the summary of the scores of the marksmen who shot out the matches in which they entered without withdrawing after several bad shots, as was the case in a numher of instances :

	Shots.	Score.	Average.
N. B. Tyler			
R. C. Rice			IJ 5-6
Wm. Bronson			39 1-3
W. A. Bitchard			1 > 16 - 21
J. L. Bacon			10 2-5
H. V. Perry	15		18 3-5
H. Warner	15		15 14-15
E. Rawdon		194	
S, Clutz	4	66	16 1-2

Pet Barber shot in nineteen matches, three of which were drawn His average on the balance was 20 1-16, which would have been reduced had his full score been shot out. The honors of the tonnument belong to Mr Tyler, who won the special prize on Thurs day, besides making the highest aggregate count and average shooting in all the matches. His competitors were among the most noted experts in this section of the country, who did their level Lest to change the result without avail, and a number drew out of the tournament at the end of the second day, thus virtually confessing that the gait was too fast to be agreeable.

Hamilton, Onturio, Nov. 13 .- The annual matches of the Vicoria Ride Club took place to-day on the club ranges. The weather was more favorable than might have been anticipated, although at was more invortance man might mave been sametpaced, arthrogen at titues the light was dilicult for accurate sighting. The attendance of competitors was very fair. Next year it is intended to try and secure ranges on the line of the street railway, where four targets at 500, 900 and 1,000 yards can be had. This would cable the club not only to hold first-class matches, open to the province or Dominion, but would also make it possible to hold the return international match with the Amateur Ritle Club of New York, a most desirable end to have in view.

As usual the matches were divided into the Snider and smallbore series, the former at 200, 500 and 600 yards, and the latter at 900 and 1,000 yards. In the former, A. Miller, of the Thirteenth Battalion, came out easily first with the excellent score of 89, winning the Snider rifle presented by Lieut. Col. Gibson, and the Snider gold medal for the year, which last year was won by Col. Gibson with a score of 92.

In the small-bore match the competition was keen and the score very fine. Mr. F. Schwarz made 96 out of a possible 100, being a slightly better score than Col. Gibson's 99 out of a possible 105 last year. Mr. Schwarz put together in his ten shots at 1,000 yards one inner and nine consecutive bullseyes, making 49 out of a possi-ble 50. He was warmly congratulated by his old fellow shots on being announced as the winner of the small-bore medal for the year. Of the nine small-bore scores given below, all but two were made with the Remington Creeomoor rifle, and both the medals were awarded to shooters with the Remington arm.

The Dominion Rifle Association and Outario Rifle Association medals, which the club usually award to the highest grand aggregates of the whole day's shooting, were taken respectively by Mr. James Adam and Mr. Schwarz. The prizes were partly in kind and partly in each.
The list of prize nippers is as tollows

THE ANTHRACITE FIASCO.

THERE is no longer the slightest probability that any one in America will build a Perkins' boiler, much less the peculiarly clumsy contrivance with an extra cylinder introduced to do away with a glead, known as the Perkins' engine. It would therefore be merely wasting words over a dead issue to deal with the matter before the bar of public opinion.

American waters it was given out that her consumption of fine was one pound of coal per horse power per hour. It was upon the strength of this statement that the Perkins system obtained a vast deal of free advertising from the unprofessional press, and among those journals which ought to have known better than repeat the brazen prevarieations of the Anthracite people Fonest ANN STREAM was the only one which had the independence and courage to stamp the statements and concerning her economy as a common flows just the statement of the Anthracite without the statement of the Anthracite people Fonest ANN STREAM was the only one which had the independence and courage to stamp the statements made concerning her economy as a common and took several contemporaries of the Anthracite, without facts of data to justify them in their sensational accounts of her economy, and the wonderful "revolution" she was going to create in marite engineering—and that after the "invention" had been on the market for years, and had been thrown out of every vossed it was ever put into in England. The Athracite's snocessfully crawling across the ocean and tack proves nothing for her engines or boiler, it goes to show shuply that a lumdred-ton vessel need not have been equally as well procured from the nearest plumber and gastiter. The sole object for which the Anthracite was sent out was to convince the engineering world-not greenborns—that then 500 pounds to the square inch, information which could have been equally as well procured from the nearest plumber and gastiter. The sole object for which the Anthracite was sent out was to convince the engineering world-not greenborns—that the Perkins b

#### MINIATURE YACHTING.

MINIATURE YAGITING.

Editor Forest and Stream:

The healthful and delightful sport of miniature yachting is stast growing in popularity in this country, and assuming proportions which already compel the members of the Metropolitan Miniature Y. G. to go lot fide-water in order to sail in the neces and regultar, as the small lake kindly granted to the short of the small lake kindly granted to the short can only be known by those who participate in it. There are, however, a great many who never go to fide-water to sail, which is greatly on account of the inferior size of their boats, and in some cases owing to the shallow models, which are wholly unsuited to tide-water sailing. Speaking of shallow models reminds me of the innumerable trials Have made with them, the multiplicity of models! I have made, and the time and money expended in these fruitless exforts, until at lace the appriments, found the following dimensions about as near right for sea-going vessels as my varied experiences has proven: birded the keel into four parts to true bean, and half the beam for depth of hold. When I speak of keel I mean that portion which would be the keel of a large vessel, and not the "false keel" which we add to our small craff, giving the model an easy blige, with from 32 to 35 deg, dead-rise, a long idnor and an easy run; width of deck line 5 to 50 per cent, at bow, and at stern 60 per cun, of greatest beam. Ourard against any flat curfaces, and make all lines atood that the above are the only dimensions upon which a seasoning vessel can be modeled. Limited departures from these can be modeled, Limited departures from these can be maded, Limited departures from these can be made additional to the course of the measurements, which, of course, depends upon the uses to which the vessel is to be put and the waters in which she is to sail. My experiments have, however, proven to me one matter more important than the mere building of these small craft for the purpose of reading and building them for the purpose of consequenting

correct position of mast or spars, the cut of the sails, or anything else about them, either above the water-line or below it, until after she has been launched and sailed, and so, after repeated trials, has been found not to be the fast boat which the owner anticipated, size has been launched and salied, and so, after repeated trials, she has been launched and salied, and so, after repeated trials, she has been launched to the fast beat which he owner auticipated dwares and builder to the fast beat which he owner auticipated dwares and builder to the fast beat which he owner auticipated dwares and builder to the severimental alterations begin—probably with beneficial results in the end—whereupon others follow, and so on, until at last all the speed which can be got out of here has been attained. The builder, of course, is not the loser by this, either in pocket or reputation, as he is a man who understands his business so far as he has learned it; so he is happy. But the owner, out he other hand, feels quite different about the matter, as he hinds that the boat has cost him from \$15,000 to \$20,000 more than he calculated, and is therefore not in the best of humor, and in many cases is ready to soil her for less than she cost him, more particularly if, atter all the experiments, she has not yet come up to his expectations. Now, I predict that if some better method of constructing vessels than the present one is not adopted inside of fifty years, yachting will be a thing of the past. I have then trying her in twenty winds and seas—not alone, but by comparison with others which are the exact models of known fast boots, reparred and weighted the same, is the best way of scouling an estimate of the large yacht's probable performances. When the time comes that this will be done, then you will have fast and seaworthy boats at less cost than through the present system. Experiments with small or miniature craft cost a mere trille when compared with those executed on large vossels. At present it is no wonder that yachtsmen become tired in mind as well as pures, sell their boats, and abandon the whole sport in disgust, in a future article I will treat the matter more fully, as well as give some hintist in regard to rigging large craft, which will seve a great deal of labor in sailing.

T

deductions in model cited, and for the proposition to make use of the miniature yacht as a subject of experiment before risking beavy sums in their reproduction on a large scale. The observations on model must be accepted as of the atmost value, and we are inclined to lay much store upon the conclusions Mr. Grahn has come to. His experience is at once more extended and his deductions more accurate than those any builder or owner of large yachts can offer, for the reason that he builds a score of vachts to their one and sails comparative matches in much score or yacons to their one and asias comparative matches in most quester number under all possible variations of wind and weather, trim, rig and ballasting. Granting for the moment that miniature, or, as we should prefer to call them, model yachts, can be taken as accurate exponents of large ones in their performances, no one can logically rate lightly the conclusions arrived at from extensive experience with the models. Mr. Grahu started out, as nine yachtsmen out of ten in America, strongly prepossessed in favor of the prevailing flat-iron type of sloop. By varying the proportions of length, depth and beam he soon found that the light draft and wide boat by no means exhibited the highest speed attrinable and was certainly not to be considered a satisfactory performer in rough water. By experiment he was induced to modify prevailing forms more and more, until finally led into the proportions mentioned in his letter. Those so closely coincide with the observations we have made ourselves during years of sailing and study of vessels of all types, and they so thoroughly corroborate the deductions of naval science that we place Mr. Grahn's experiments before the public as further proof in favor of a moderate form. We believe, with him, that considerably less beam and more depth than the custom with is, is not only permissible, but would lead to more satisfaction for the money invested than now obtained from our smooth water sailing machines with their lack of accommodation, hard qualities, saming machines with their race of accommodation, mart quanties, big rigs and capsizing prodivities. It will be interesting to ob-serve in the future to what extent the model craft will be relied up-on as an index to the qualities of the full size yealt. The impor-tant scientific and practical results obtained by the late Mr. Fronde from his experiments upon models of naval vessels lead us to think favorably of the claims Mr. Grahn advances concerning small scale prototypes of yachts about to be built,

#### ARROW TO WINDWARD.

Althow To Windward.

Eillor Forest and Stream:

In all the recorded races of the Arrow she did not in any one of them have the wind talled more than one-third of the course. During some of her races she found scarcely any head-wind at all, as was the case in the regards of the New York Yach Club, June 9, 1570. As her greatest superiority in sailong quelifiers is in working the same of the course of the co

#### AMERICAN CANOE ASSOCIATION.

REPRESENTATIVES of canocists in the United States and Canon ada, assembled in camp at Lake George, Warren Co., N. Y., on the 3d day of Angust, 1880, and organized the American Canon Association, elected officers and adopted the following Constitution and by-laws:

Commodore—W. L. Alden, of the New York Canoe Club. Vice-Commodore—Nicholas Lougworth, of the Cincinnati Canoe Club.

Rear-Commodore—Robt. D. Wynkoop, of the Jersey City Canoe

Claib.

Rear-Commodore—Robt, D. Wynkoop, of the Jersey City Canoe Clab.

Rear-Commodore—Robt, D. Wynkoop, of the Jersey City Canoe Clab.

Secretary—Nathaniel H. Bishop, Lake George, Warrau Co., N.Y. Treasurer—J. Morris Meredith, Boston, Mass.

constructions of the America Canoe Association.

Article 1—Name and Object.—This association shall be called The American Canoe Association, and its object shall be the promotion of canoeing.

Article 2—Canoes.—A canoe, in order to be placed on the association list and to be entered for faces, must be a boat sharp at both ends and not more than thirty-six inches in width on deck. Nhe may be propelled by sails or paddle, or both; but she must be expalse of being efficiently propelled by a doubte-bladed paddle.

Article 3—Membership.—A condense when the she must be expalse of the propelled by a flare-fifths vote of the Directors, or has become a member of a Branch Club, and who has thereupon paid his initiation fee and annual dues for the entities of the discipling tear; but only canoe owners shall vote at association meet—Nation of the American Canoe Association and meeter of the establishment of the American Canoe Association, and may adopt any rules not in conflict with those of the association. All members of the association shall have the right to temporarily has the boat-houses of Branch clubs.

Article 3—Officers.—The office, a Rear-Commodore, a Secretary of a Transacter. They shall be elected by ballot at the annual meeting of each year, and shall hold office until their successors are elected. They shall constitute the Board of Directory, and as such shall have the power to elect members.

Article 6—Honorary Members—Honorary members of Branch clubs at the first of the power to elect members.

Article 6—Honorary Members—Honorary members of Branch clubs at the first of the constitution shall be one doult may association of the constitution of the constitution of the sacondation of the power to elect members.

Situation sami to thereby limite choosely includes a subscitcion of the control o

members of each parent. However, and other matters of interest to canonists of cruises of canoes, and other matters of interest to canonists.

Artice, fire of Club Signal.—The Association Signal shall be a pointed Artice, firene inches long and ten wide, of red, with longitudinal strips of white two inches wide, on which shall be displayed, in red, the letters A. C. A.

Article 10—Officers' Signal.—The fleet officer's signal shall be a Droad pennant, swallow-silled, fifteen inches long by ten wide, with two crossed paddles with four stars between the blades thereof. The Commodore's signal shall be of blue, with the device in white; the Vice-Commodore's signal shall be of red, with the device in white, and the Rear-Commodore's signal shall be of red, with the device in white, and the Rear-Commodore's signal shall be or wide, a Article 11—Private Signals.—Each canoe shall have a private signal, rectangular in shape, lifteen inches long by ten wide, a drawing of which must be filed with the Secretary. The Association signal must be carried at the mainmast-head; this private signal and the main-peak, or the leach of the good of the mainmast, and then officers and private signals on a staff in the step of the mainmast, and then officers and private signals on a staff of the dandy-mast.

Article 12—Rank.—The fleet officers of the mainmast, and then officers and private signals on a staff of the dandy-mast.

Article 12—Rank.—The fleet officers of the mainmast, and the fleet officers of the Branch clubs shall rank necording to seniority.

Article 13—Amendments—The constitution, by-laws and salling regulations may be a mended, on the recommendation of the Directors, by a majorage of the association shall be led in August.

1. The anymal meeting of the association shall be led in August.

BY-LAWS.

1. The annual meeting of the association shall be held in August cach year, at such time and place as the Directors may design

of each year, at such time and place as the Directors may designate.

2. The Commodore, immediately after his election, shall appoint a Regatta Committee of three members, who shall have full charge of all association regattas during the ensuing year.

3. The uniform of the club shall consist of a blue shirt, blue tronsers, white belt and straw hat. The Commodore shall wear three rows of gold lace on each sleeve, the Vice Commodore shall wear three rows of gold lace on each sleeve, the Vice Commodore to, and the Rear-Commodore one.

4. The Trensurer shall pay out money only on the draft of the Secretary indersoil by the Commodore.

5. Members are expected to furnish the Secretary, prior to the 15th of October in each year, for publication in the Came Pilot.

THE CANCE ISLANDS.

The cavanization is now perfected and ready for work, the clubs

THE CANDE ISLANDS.

This organization is now perfected and ready for work, the clubs previously in existence being enrolled as branches of the association. The Secretary has received most cheering promises of support from all parts of the country. Several new Branch clubs are being formed to attend the next annual meeting, which will be held during August, 1881, on the Cano Islands, known as the "Three Sisters," which are located on Lake George, five miles north of Caldwell, and are owned by members who have reserved them for this special purpose.

MEMBERSHIP.

#### MEMBERSHIP.

MEMBERSHE.

All persons of respectable character, of any age, who possess a true love of nature, and are in earnest sympaths with the brother-hood of cruising canocists, whether owners at cames or not, are invited to send their names, with the sum of two dollars (initiation lee and first animal due), for membership, to the Secretary.

THE LARE GEORGE REMATA OF 1881.

THE CARE GEORGE REMATA OF 1881.

THE ALE GEORGE REMATA OF 1881.

All mands and the individual of the containing the rules, classification of canocs, etc., which will govern the races of August, 1891. These races will be innocent competitions between members for prizes contributed by friends and members of the association. All mands being strictly anateurs, professionals will not be admitted to membership, as the association is not a sporting club and does not countenance betting or genebling at lis laces.

CORLESPONEES: LINTED.

In order to facilitate the compilation of the Association Book,

In order to facilitate the compilation of the Association Book, with its list of branches, members, etc., an early response to this circular is respectfully requested. Members will please furnish the Secretary with a list of cruisse ande by them.

National Hermon, Secretary.

Lake George, Worner Co. N. Y., Noe. 1, 1880.

CENTRE-BOARD FOR CANOES.—We have received from Mr. Gardiner Skinuer, of Clayton, N. Y., the Atsood patented centreboard for canoes, a diagram and description of which will soon be published.

#### YACHTING NWES.

NETTIE,—Mr. E. M. Padelford arrived at Baltimore, Sept. 19, in this topsail schooner, the only yacht of that rig in America. On the passage south she is reported as having made 13½ knots watch on and watch off. The Nettie draws 10ft. on a length of 80ft, water-line, and is one of the ablest yachts we have built. Mr. Padelford is bound on a cruise to the West Indies in her and has shipped twelve hands for his crew. Captain Du Verge, formerly of the French Navy, is in command.

Anormen Hom Sperd.—The Herrcshoffs are turning out a lot f work, and the growing popularity of their specialties insures mem a brillant future. They are the Thornecrofts of America, by J. G. Holland is to receive from them an elegant and fast team yacht to ball from Alexandra 139 on the St. Lawrence.

steam yacht to hall from Alexandria Eay on the St. Lawrence.

SINGLE-HANDID GRUSHNO.—This is what the N. Y. Herold says in reviewing "An Experimental Cruise in the Procyon," already noticed in this journal:

"All of this trip was over open sea and rough water, and only about half the mights were passed in harbors. The rig and equipment of the vessel are minutely described, and so are most of the master's maneuvres. Although the trip was not as long as some made by some small boats starting from this side for Europe, the weather was worse for a single sailor to force his way against. This story is one that should put most of America's yachid-men to shame and show then how little they really know of the possibilities of small boats, tout arms and quick wils. The volume is from the press of Edward Stanford, Claring Cross, London."

The Herold takes the right view of matters, and in these remarks his not allowed localism or pot-house patriolism to obscure its horizon. We can now add one more contemporary which has found out that we have much to learn yet in yacht and boat solling in America.

New Yacurt.—Mr. Clauban of Parker V.

New Yacht,—Mr. Clapham, of Roslyn, L. I, has in hand a 40ft. Nonparcil, to be yawl-rigged. Sportsmen navigating the shool waters of Southern bayous will find the Nonparcil type just the

New Cutter.—Mr. J. C. Reddie, Wemyss Bay, N. R., has sent an order to Fife & Son, of Pairlie, Scotland, for a 20-ton entier. She is to be 50ft. 4in. stem to stern, and 9ft. Sin. extreme beam, and will be sailed across the Atlantic to her destination.

A Robary Yacur,—Lust year we designed a cruising cutter Canada owners. She was only 24ft, on water-line, Stt. 6in, bear and had 5ft, 6in, head room in her cabin. This summer, during two weeks 'cruise, a crew of six were berthed in her, and no meal was taken our shore, nor did any one quitt hey acht for a slee

ROYAL CANADIAN.—The club has purchased the steam yacht. It E-peranza, 15 tons, 6 horse-power, from Mr. David Bell, of Butlafo. She is to ply between the new club house on the island and the main land. The new quarters of the R. C. Y. C. are to be hundsome and complete. They will cost nearly \$4000. A wharf and landing accommodations are also under construction.

aming accommodations are also under construction.

ASTHRACITE.—The following extract is the most important portion of the report of the Board of Engineers appointed to carry out experiments with the Anthracite while at the Brooklyn Navy Yard during Reptember:

The Anthracite is an iron vessel, built especially for even voyages. She is schooner-regged, with fore and art sell only. Her principal dimensions are: Hill, length, 86 feet inches the resulting of first cylinder, 7% inches, single acting; diameter of second cyclinder, 161-161 inches, single acting; diameter of second cyclinder, 161-161 inches, single acting; diameter of third cylinder, 21 linder acting; stoke of piston, 15 inches; diameter of piston rods, 2% inches; diameter of crank shaft, 51% inches; therefore the pump, 11% inches; duameter of inches; diameter, 2 inches; diameter of crank shaft, 51% inches; diameter of pumps (two in number), 2 inches; structure of the pumps, 40% in number, 2 inches; structure of the pumps, 40% in number, 2 inches; structure of the pumps, 40% in number, 2 inches; structure of the pumps (two in number), 2 inches; structure of the pumps, 40% inches; toucher, structure, 422 square (e.f., 70 al weight of machinery, engines, both, serve, Mart, propeller and all fittings is 25 tons.

at all fittings is 25 tons.

The test was for the purpose of ascertaining the cost of the borswer in water and fuel solely, to which end all the water evapord by the boiler was carefully measured by tanks especially conracted for the purpose, and all the coal was securately weighed,
gg by bug, as it was brought on board for immediate consumpon.

The results of this rigid trial are as follows :

Total quantity of coal consumed	4,400 ibs.	
Total quantity of feed water pumped into boiler	35,114 fbs.	
Average steam pressure in boiler	3461/7 lbs.	
Average vacuum in the condenser, in inches	26%	
Average pounds of coal consumed per hour	1831	
Average pounds of coal consumed per hour per square		
foot of grate	11.98	
Average indicated horse power	67.7081	
Pounds of coal consumed per hour per indicated horse		
p.ower	2.7113	
Pounds of feed water consumed per hour per indicated		
h ese power	21.63574	

h use power.

21.63871

The Larre,—Says the Toronto Mail: What to our mind is the truest, noblest form of yachting—genuine cruising—ins been cartied on with great energy, and, as a consequence, the smoont of enjoyment has been very great. The Oriolo made one of her splendid "voyages over many sens" to Chicago and back, fruitiesly, we regret to say; and of the smaller try, almost, in fact every one, went away on some tip or other. It is one of the last and nost harling signs of waking when such a general love for cruming helds swarp, Around our own port it was abnost nit. The redeement of my Canadian name and interests was the City of Hamilton, and as we recorded at the tree, the regard held there was eminently successful in every particular, and we here take the opportunity of acknowledging the vote of thanks passed by the committee, and to assume them that they are most cortally vedecome to any assistance or advice we can give. We suppose that now, as a matter of course, the re-establishment of the Burlington Yacht Club will follow.

A Torick Too Tims.—Here is the latest Enelish ten tonner designs.

A TRIFLE Too THIN.—Here is the latest English ten fonner designed by Mr. A. E. Long, and thinner than one of here. A THILE Too THILE—Here is the latest English ten former designed by Mr. A. D. Long, and Uninner than any of her predecessors: Lengthon load line, 45 feet; beans, 7 feet and depth nearly the same. Her displacement is 22 tons and she carries 31 tons of be laist, 11 tons of which is on the keel. It is hard to saylo what extremely the peculiar measurement rule in force across the water will eventually drive the designer. We suppose British yachts will go on becoming thinner and thinner until they at 1 sat will have no "insides" at all! How many years will elapse before the English after their rule and make its third factor independent of beam would be interesting to know. But it cannot be long before "tyested interests" have to give way to common sense.

The Procyon.—Mr. McMullin writes that since the publication of his "Experimental Cruiss," he has been to sea in the Procyon for forty-two days on a stretch, passing only two days and two nights in port. More than a month was spent cruwing off and on between the South Foreland, French Consl and Digition. The weather at the time was so had that with the exception of a couple of nights the hille 27th, pacht was made refed cause;

of mgats the little 27th, years was under reac claims.

The Katry.—The following description of the little Kate in which
Mr. Middleron saided around the British Isless will be of interest to
single-hundled sailors; Keel, 21ft; deek, 23ft; beam, 7ft; draf,
atl, 3ft, 9, and forward, 2ft. She has 700lbs. of iron on her keel,
and iron keelcou weighing 450lbs. and 1,200lbs. cast to fit the beats
inside; a total of 2,350lbs. She was yawi-rigged. Host of mainsail, 13ft, with 11ft on foot, and high peak and long yaff. The
sail has three reefs and a balance reef, there being 2ft, 6in, between each ruw of points. The jibis 6ft, on the foot and 15 on
the leech, with a engle reef 2ft, up. The omness was a lug sail,
about 7ft. hoisi with one reef hand 2ft. from the foot.

BRITISH WINNINGS.—The famous steel cutter Vanduars, 90 tons, heads the list for 1890 with \$5,000 to her credit for the year. Her rival, Sunocoma, counts in her winnings at \$4,800. The yawl Latons, 160 tons, is fourth with \$4,000. Schooner Mirands, 192 tons, is fifth with \$4,000. Yawl Florinds, 134 tons, sixth with \$3,825. The new Freds, 29 tons, follows with \$4,100. Then the beautiful Maggie, 15 tons, with \$1,830. Then the beautiful Maggie, 16 tons, with \$1,616, or nearly half her original cost! Ninth on the list is the 10-ton Madge, pocketing \$1,500, also nearly half her first cost. Coryphee, 40-ton cutter, wins the same amount, and then the rest of the racing fleet follow with sums to their credit ranging from \$25 up.

Speed of Yacuts.—The cruising schooner Asteroid, 92 tons, ogged 12% knots, or 15 miles, "with little fuss," of the west oast of Ireland. She is 76.5ft, between perpendiculars, 17tt, beam, and 11ft, extreme draft,

Carin Locker.—Area of sails for fast sailing canoe: mainsail, 20 suff., and nizzen, 21 suff.... For sparring cat-boats, large rig, jouist equal length on water line or a little over; foot equal cate and a quarter the water line: gaff equal to seventy-five per cent. of vater line. For cruising, out down to three-quarters the area.

#### Answers to Correspondents.

72" No Notice taken of Anonymous Communications.

A. G. B., Emlenton, Pa,-We should be happy to explain why your article does not appear if we had your name and could write

H. K., Danbury, Conn.-1. Are bitches worth as much as dogs? Are nine pups too many for a bitch to rear? Ans. 1. Not ordinarily. 2. A bitch cannot do justice to more than eight at most.

J. N.-1. We have heard the gun highly recommended, and beeve it to be well made and safe. 2. Black powder does not lose its strength with ago if kept dry, but sometimes rather improves

W. J. C., Providence, B. L.-1. You can procure the dog collar of the dealers in sportsmen's goods advertised in our columns. Chas. A. Dana, editor of the New York Sun, has some fine deerhounds.

S. C., Marshall, Texas.—Please inform me where I can obtain photographs of bird dogs? Ans. You can get photographs of some celebrated pointers by writing to Messrs. Schuyler a Duane, 189 Broadway, New York.

HEMATITE, Lakeville, Conn.-You will probably have to take your dog with you and put him in the baggage car. It will cost you something in fees to the baggage master, but will be cheaper than sending by express. You cannot take your dog in the with you.

H. W. G., Philadelphia. - Are there any double-barrelled breechloading rittes made in this country? Would it weaken a cylinder bore, double-barrelled breech-loading gun, 715 lbs., to have it Ans. We do not know of any. No, if the barrels choke-bored 2

F. H. K., Montpelier, Vt.-1. Where can I obtain beagles? What would be their probable cost? Ans. 1. We refer you to the advertisement of Geo. Pownall, Christiana, Lancaster County, Pa., whose advertisement appeared in our issue of Nov. 11. 2. Price will depend on age, whether broken or not, etc.

J. C., Norwich, Conn.—I have a double breech-loader, Parker 30-inch barrels, cylinder bore, 12-gauge. Would it injure the shooting to cut it off one or two inches? Ans. It might very likely make it scatter a little more, but we have known of a 30-inch cut down to 26 inches without altering the shooting materially.

B. F. New York .- I. Do all choke, 10-borg guns require the same of powder and shot? 2. What quantity of each is most ve? Ans. Almost every gun has its own idiosyncracies, and the proper charge for it can only be determined by experiment.

2. That depends on the weight of the gun and what you with to shoot

Times.—You will find a full exposition of the dangerous nature of the Dittnar sporting powder, in our issue of Sept. 23d. You should read that paper and then you will be able to decide for your-self whether the powder is a fit stuff to use in your valuable gun, The issues of Sept. 30 and Oct. 7 also contained some ver teresting and instructive reading respecting that nitro-cellulose detonating compound.

H. W., Baltimore, Md.—I have a fine Scott gun which scatter, hot badly. Do you think it advisable to have it full choked?—I H. W. Intumore, then I have a me soon good more should ally be you think it advisable to have it full choked? It is a modified choke now. I use the gun for general shooting—duchs, birds, squirrels and rabbits. Ans. We would not have the gun rebored unless you find after very full and careful experiments that it always scatters badly. We judge from your account that the fault is perhaps with the loading. Try different charges.

R. L. H.-My Penn Pocahontas pup, about one year old, has a nervous twitching of the muscles of the left side of nose and lip. He had an attack of distemper when eight months old, and this twitching was noticed soon after. It is thought it resulted from distemper. Is there any remedy? Ans. Your dog has cherca. A complete cure is improbable, but the following treatment may help him : Give him la grain nux vonica, with two grains quinine three times a day for a few weeks.

N. O. W., Charlottesville, Va.-1. Will you be kind enough to give me your own opinion of the lake Istokpoga (Florida) region as a game country? 2. I have seen the various communications in the Forest and Stream about it, but I presume the writers generally have an "aze to grind" and govern themselves accordingly.

Is it not so? 3. Also the best time for a "camping out" trip to the Is it not so? 3. Jan in over time to a "company of the part above named region. Ans. I. We have never been there and personally know nothing of the region. It is raid to be a good game country. 2. The witters generally have not "an axe to grind," "Al Freece," to whose article we referred you, has been writing for the Pomer and Stream for many years and his information has been proved reliable by many of our readers who have sveiled themselves of it, and have subsequently acknowledged their indebtedness. 3. December, January, February and March.

CONSTANT READER, Portland, Me.-What is a weakfish? Ans The fish so-called in New York market and its vicinity is Cynoscyon regalis. It is the "salt water trout" of the southern Cynoseyon regums. It is the "sate wat route of more content coast, and is called chequit or chickwit to the eastward of Long Island Sound, squeteague or squitt in parts of Now England, and bluefish about Cepe May. The name weakfish is said to be a cor-

ruption of wheatfish, which in its turn is said to be a translation of name. You probably know the fish by one of the We try to use the popular name for all fishes which ome Indian name. names given. has the sanction of the greatest number of people, irrespective of locality or what we were taught to call it in boyhood. We have little doubt but what the New York marketmen will, in the next century, force their names for fish upon all the fishermen with whom they deal, and they are extending their range all the time. They have done so in many cases already. Hence our preference for the name given by the old Dutch settlers to the fish in onestion, as we think it is the one which will eventually be the name from Maine to Florida, or wherever New York market men buy,

Brown Coot, Lamoine, Me.—My gun is a choke bore, 10 gauge, of nine and a quarter pounds weight. 1. How much powder, how much shot, and what size shot shall I use in shooting ducks and coots? 2. What is the proper charge and size of shot in shooting ruffed grouse? 3. With several choke-bores I have found that

aper shells give a much better pattern than metallic shells this the case with most choke-bores? 4. Are Eley's concentrator good for such a gun as mine? A limited experience has impre good for suce a gun as mine? A limited experience has impressed me favorably. 5. How shall I prevent in ygun from leading? 6. Would wire cartridges of No. 3 or 4 shot make my gun effective at any greater distance? 7. In using coarse shot is it not necessary that they make perfect layers in order to do the best shooting? 8. Is Laffin & Rands Orange Lightning powder among the best for my gnn? And what size shall I get? I want a clean powder if I can get it. 9. Is not 70 to 75 yards as far as most good guns are sure of a bird? 10 What can I do to keep the rust off my are sure or a bird? 10 what can 1 do to keep the rust off my gun? Ans. 1. 4 drs, powder and 1½ ozs. No. 4 shot. 2. 3½ drs. powder and 1½ ozs. No. 9 sh.t. 3. Yery likely the wads have shaken up in the metallic shells. We have found that the latter give good resuits in choke-bores. 4. Yes. 5. You cannot prevent what is commonly called "leading," but it can easily be removed with a wire brush 6. Yes if they will assily most the checks. what is commonly cannot reading, but it can easily be removed with a wire brush. 6. Yes, if they will easily pass the choke. 7. Yes, if practicable. 8. Yes; a coarse powder for sea shooting. 9.

Yes, 10, Use some rust preventer. Half a dozen are advertised in our columns.

-Any subscriber or reader of Forest and Stream in want of any kind of carpetings, oil cloths, rugs, etc., etc., can be sure of fair treatment at the hands of John II. Pray, Sons & Co., Boston. Call or correspond with them, and get their prices before buying. It will pay you to try them. -[Adv.

# Spanish Silk Worm Gut.

THE GREAT REDUCTION in the quality of this article, and the increasing admixture of rough strands, has forced us to go into the manufacture of it for our own account. Our Mr. Imbrie has recently established in Murcia, Spain, where all the high quality gut is made, the most extensive and perfect factory of this article in the world. The grades named below will run at least 25 per cent. better than those the most extensive and perfect factory of this article in the world.

#### FOREST AND STREAM.

NEW YORK, THURSDAY, DECEMBER 2, 1880.

\* The Forest and Stream goes to press Wednesdays, Correspondents are requested to mail their communications that they may reach us before that day.

It is our conviction that any man who will shoot on Sunday in New Jersey will break any and every other provision of the game laws.

THINGS have come to a pretty pass when the 25c. and 50c. pools on the dogs at field trials are telegraphed over the land. This boys'-play gambling is ridiculous, but if we are to turn the field into a race track, with all the accessories, we might hetter stop now.

THERE is at least one game protective society in this country which has succeeded in doing what it started out to do. Some of its methods are explained elsewhere. We commend a study of them and of their results.

ADIRONDACE FIRES.—Many destructive forest conflagrations have resulted from the carclessness of Adirondack visitors who, upon abandoning camp, have left their fires burning. There is at present no provision of the statute which touches this point, and we hope that those who are now amending the game laws will see to it that a clause is introduced, which shall oblige all parties to carefully extinguish their fires before leaving camp. It should also be forbidden under severe penaltics to leave any offal near a spring or brook, this practice inevitably driving away the game.

As the parties who commit these abuses are generally known, it would not be a difficult matter to apprehend then were there something in the law to cover the case.

The Complete Angler.—We have received a copy of a new addition of "The Complete Angler: or, The Contemplative Man's Recreation," by Izaak Walton, and "Instructions How to Angle for a Trout or Grayling in a Clear Stream," by Charles Cotlon—with copious notes, for the most part original, a bibliographical preface and a notice of Cotton and his writings by the American editor Geo. W. Bethune, D. D. New edition, with some additions and corrections from the Two volumes in one, published by John editor's own CODY. Wiley & Sons, New York. A large octavo of 662 pages printed on good paper in clear type and beautifully illustrated. We will review this important addition to American angling literature in a future article.

#### A GIGANTIC FISH TRAP.

WE have seen a circular headed "The Long Island Fish Company," which is now being circulated. It states that the company has been organized under the laws of the State of New York "for the purpose of leasing and owning suitable locations for the crection of weirs, and creeting weirs or pounds (sometimes called traps) at such locations, and catching and selling all kinds of fish, and rendering fish for the oil and for fertilizers."

We also learn that the company has become the owner of a tract of land at Napeague beach, near the eastern end of Long Island and a few miles west of Montauk Point. Here they propose to put out a monster trap; and as one built in the ordinary manner with poles would not stand a week on this straight line of the Atlantic beach which is so frequently stormswept they propose to put down iron piles after the manner of the ocean piers at Long Branch and Coney Island. They have chosen a place where the island is only half a mile wide; Napcague Bay, an indentation in Gardiner's Bay, being on the other side, where their vessels can load for Sag Harbor and where their factories and ice houses can be built. There is no question about the millions of fish to be captured there, as all the fish which traverse the beach coming from the East seeking the inlets of Shinnecock Bay and Fire Island, as well as those moving to the eastward to round Montauk and enter Gardiner's and Peconic bays, or to enter Long Island Sound. traverse this route, and the fishermen often make enormous hauls there when the weather permits. Here, too, they come nearer the shore than at any other point, for there are no sand bars outside the beach to force them out for deeper water.

This monstrous affair will fish night and day the year round, and take fish which should be allowed to fill their mis-sion of spawning. They say "a weir is fishing night and day and not only catches the schools of fish accidentally seen from the shore or from the deck of a fishing smack, but catches everything that comes along, and schools of fish not apparent from the surface."

The weir is to run 600 to 700 feet into the ocean, into thirty feet of water, and with this they suggest that persons taking stock may receive a great return, say \$1,000 per annum for every \$100 invested, and assert that " with the iron weight more menhaden can be caught than the whole fleet of boats can catch. We have no opinion to offer as to these statements, being content, for the present, to present the facts as they ap-We do not hesitate to say, in this connection, that all fish seeking our shores to spawn should be allowed to do so, and that the Menhaden Association are killing their goose by allowing the fish to be taken for manure when they come to spawn and are worthless for oil.

An article in the New York World describes the trap as

follows: "The weir will be an iron pier ten feet wide, with bents or sections twenty feet long. It will run out 700 feet, with thirty feet of water. At the outer end will be the heartshaped pound, the large end of the heart in-shore. This heart is about seventy feet across and outside of it is a box of iron piles and netting about seventy-five feet square. The fish striking the pier netting will run out seaward to the heart and, passing out at the lower end, will find themselves in the outer receptacle. In the sections of the iron weir storage for thousands of tous of fish can be provided, where they will keep alive in their native element for a mouth or longer, and need not be brought to market when the price is low.'

The office of this company is 71 Broadway, New York. Mr. Herbert M. Rogers appears as president and Mr. Herbert C. Plass as secretary and treasurer.

EASTERN FIELD TRIAL GOSSIP.—We shall now have a chance to see the Eastern and Western dogs work together. Mr. S. T. Hammond, of Springfield, Mass., has a lot of good ones in hand, and Mr. C. B. Whitford is at the Eastern Field Trials Meeting with Gladstone and Peep o' Day.

Mr. A. H. Moore's kennel is at New Suffolk in charge of Mr. E. S. Wannamaker as handler, Mr. S. T. Hammond is there with Afton, Sensation, Rattler and Bob; Mr. John C. Higgins, of Delaware City, Del., is on hand with some of his fine dogs. Dr. S. Fleet Speir's kennel is in charge of Jefferson Cooper. Mr. Godeffroy's entries for the trials, among them Croxteth, are in charge of J. E. I. Granger. Bassford, of Weschester County, is also there with good dogs.

#### PRESERVED GAME GROUNDS.

OUR proposal last week, that those of our readers who would be willing to make a fair remuneration to farmers for the privilege of shooting over their lands should send their names to us, has met with the response it deserved, and we are encouraged to again bring the matter before the gentlemen sportsmen who read the Forest and Stream. As the general plan of the work which we have undertaken was fully set forth in our last issue we may here repeat

The FOREST AND STREAM does not stop with a reiteration of the general recommendations here given.

We propose the fair trial of a carefully matured scheme of which the general purposes are:

- 1. The protection of game birds by farmer and landowner for the benefit of the gentleman sportsman.
- 2. A fair remuneration of the farmer by the sportsman for privileges granted.
- 3. Putting the two interested parties into direct communication with each other.
- 4. A discrimination between gentlemen and rowdies, and the protection of the farmer and the gentleman sportsman alike from the direct and indirect injury of lawless gunners.
- 5. The uncompromising enforcement of the law against netting and snaring-not in the interest of the sportsman as against that of the farmer; but for the mutual benefit of
- 6. The united efforts of farmers and sportsmen to duly pro tect and replenish the supply of game.

To put into taugible shape such a scheme as this, we must at the outset receive the endorsement and co-operation of the sportsmen who are interested. If we have not mistaken, we shall receive this; and without further preliminaries, we now call upon such of our readers as approve of the plan, and are willing to join us in it, to send their names and addresses to this office. We invite correspondence on the subject.

We publish elsewhere some correspondence on the subject, and have received other letters, which will appear next week.

#### HOW HE IS MISTAKEN.

A N old time friend and correspondent of the Forest and

A. Stream sends us some articles with this remark: If you think as I do you will see the necessity of having fine articles on the closing of the year so as to induce old subscribers to renew and new ones to subscribe.

We know that our friend means well, but he is mistaken. We do want fine articles at the closing of the year; but we want equally fine letters and sketches at all other seasons. The current numbers of the Forest and Stream are such as ought to induce old subscribers to renew and new ones to subscribe, but casual readers may rest assured that these numbers are not exceptionable in merit. We mean to make a good paper for twelve months, and fifty-two weeks in the We hold out no inducements to subscribers at this time that we do not also strive to hold out all the year We are trying to conduct the Forest and Stream in such a way that it may be depended upon every week for a supply of the best sportsman's literature published in the world. This effort is not sporadic nor confined to occasions.

#### OUR FIELD TRIAL REPORTS.

OUR reports of the National American Field Trials Meeting, which gave full telegraphic accounts of the running up to the day of going to press, were a step in advance of any similar work done by any weekly paper in this country. It is certainly a new thing for the readers of a "sporting" paper to have the news of current events furnished to them o fresh as was the case in this instance, and as it is done to day in our reports of the Eastern Field Trials Meeting.

Great credit is due to our representative in the field for the careful and accurate account which he gives of the running, and we have no doubt that our readers in all sections of the country will appreciate the efforts that we are making to give them the very fullest and latest news on all current

The full news of the runnings of the National Trials was published at least eight days in advance of any other paper in the United States, and came to the readers of Fonesr AND STREAM so much shead of the general public.

# The Sportsman Conrist.

A WEST VIRGINIA FOX-CHASE

THE snow had been falling all the day—great, soft, feathery flakes that changed the leafless shrubbery into fairy bowers and powdered pine and cedar with gems and jewels. My friend Hal was with ne—his farm lies next my own and we have hunted together many a year. Out packs are small, but of the choicest strain of blood; and I had only a little while before added to mine Ringwood, a beautiful black-and tan from one of the most celebrated packs in the Old Domini-

ion.
"What say you to a chase to-morrow, Xil?" said Hal, look.
"What say you to a chase to-morrow, Xil?" said Hal, look. ing out upon the falling snow. "If the nightkeeps warm it will be a splendid day, with the snow deep and soft; then we will see what Ringwood can do, and I will wager you my hunting horn against your spurs that he is not so fleet as my dog Ash-

by."
"Done," said I; "be ready early. We can soon have up a red in the old beech woods, and then we will see whose dog

is theetest."

By break of day next morning Hal blew his horn at the mendow gate and I soon joined him with my pack, having fed them well the night before, but giving them to breakfast. It was still quite warm, with the snow melting rapidly. We rode at a lively pace to the river bank in the great beech woods and cast off the dogs, who were impatient of restraint. woods and east off the dogs, who were impatient of restraint and full of fire. In a few moments we heard a solitary dog giving tongue over the fill among the laurel, and in an instant another Joined him. "It's Ashby," said Ha!. "Yes, and Hingwood," said 1. "Did you ever hear the the voice of hound so clear and musical?" Just back of the laurel thicket is a neadow a third of a mile in width and smooth and level as any Texas prairie. Dog after dog joined in the cry until the whole pack were giving tongue in wide excitement. We galloped to the edge of the meadow just in time to see the fox break cover and away across the meadow the cliffs and stream beyond, the pack not three hundred yards behind and racing by sight, Ringwood and Ashby running side by side and the others close behind. "He will never reach shelter," cried Hal, dashing spurs to his thoroughbred and riding well up to the pack. "We must have alarmed him and turned him back, or he would never have risked it." It was a mad, wild chase, the gap widening every moment between the lecaling dogs and the pack and closing between ther mand the fox.

het ween the leading dogs and the pack and "closing between them and the fox." Don't you see, Hal," I cried, "that Ringwood is pulling away from Ashiy? He is now half his length ahead and gaining; now there is a good yard of daylight between them, and that Texas horn is mine?" Reynard was flying like the wind, but still Ringwood was closing up the gap and was now not fifty yards behind him and gaining at every bound, Ashiy ten paces off, and the rest of the pack running well together in the rear. Two-thirds of the distance had been passed when Ringwood pressed him so closely that Reynard turned and offered battle and was torn to pieces before he had time to feel the panes of death. and was torn to pieces before he had death. XIL YORRIS. time to feel the pangs of death.

Bridgeport, W. Vo.

#### IN THE CANADIAN WILDS.

MATAWIN R

MATAWIN R AUGUST, 1880.

RAIN, wind and cold; salt pork, misery and desolation, and all the et eeterus that help to make life in a seven-toot tent unconfortable. However, rainy days are good for something, for then we mend our ragged corduroys, clean our guns, look over and repair our fishing tackle, and plan future excursions. Hainy days are also days of letter-writing and as I want to ask Forness AND STREAM a few questions I will at the same try and give those who have not "been there" an otion of tombine it is reasonable to the property of the same try and give those who have not "been there" an otion of tombine it is reasonable.

inture excursions. Aminy any are also days of letter-writing and as I want to ask Forkers and better and there's anotion of toughing it in the Canadian backwoods. He this is not backwoods, where is it? Looking out of the tent door this same rainy day, one see a small lake with very black water, weeds and a few pike and dore. The surrounding country is brille-forests of dead and blackened spruces and windfall and second growth, hills and valleys of sand, the valleys usually occupied by lakes, with here and there a mountain of the old Laurentian gneisses showing his head up through the remains of a forest that partly clothes him, as though he were not ashamed of his ugliness. When a cold wind is blowing, sky clouded, and heavy rain falling, such a "bit" does not send a matter-of-fact individual into exatasy over the beauty of the country. But to the courty's credit be it said that it is not all like this. There are some beautiful lakes among these old hills, and they are the more clarming to the sportsman who, as he begins to put his rod in order, sees many a large trout break the surface into ripples.

rights. What to call this "blawsted country" I have not decided — Land of Rocks and Lakes," "Paddle and Portage," or "Jand of the Mosquito and Blackfly." A mixture or combination would suit it best I think, for all the above are in strong force, and the two last will not allow themselves to be

strong force, and the two last will not allow themselves to be left out of the programme.

Here I sit in my dreary tent, and the musical mosquito takes his dinner while I wait for my mine. The blackfly contributes his quota to the general amusement, and though he will vanish at sunset his place will be ably supplied by the briflot or midge. I don't know who first originated the yarr, but yarn there is, that the blackfly goes to his long home in the middle of July, and that when their feet are white they are going to leave. I say I don't know who was the inventor of this bit of matural history, but if I had him here, provided he were a small man, I would inflict severe corporal punishment, and then, "injun" fashion, tie him to a tree in its hare nett and let the files at him. Why, the blackfly

of this bit of matural instory, but if I had him here, provided he were a small man, I would inflict severe corporal punishment, and then, "injum" fashion, the him to a tree in his bure pett and let the flies at him. Why, the blackfly bites until the frosts come. I have seen them, yea, and felt them in October and three days after winter set in. Very like a fish story, but true, nevertheless.

But to the country. Around us stretches for miles a rust wilderness—it is liftle better—of lake, rock, forest and brulb; lakes abounding in trout or pike and dord, supporting broods of ducks and, so naturalists say, producing all kinds of blood-thirsty flies; river-valleys well stocked with grouse, ruffed and Canada, hares, beaver, otter, mink and loup cervier, or lynx, for small game; and moose, caribou and black bear for large. But I have forgotten the muskrat, or musquash, an unpardonable fault, for many a meal of savory bouillon of that same "rat" have I caten by the camp fire, and though of course one would prefer deer, bear, or beaver, rat is not to be despised when there is nothing but "cookoosh" (salt pork) in camp.

In spite of these numerous attractions in the way of game

we are not likely to be overrun by sportsmen from the cities for a few years, as there are grounds more accessible and, I hope, better stocked. However, the country will keep, and will not spoil by keeping either, as far as settlement is concerned. It offers no attraction to the farmer, as none of that class with the average amount of sense would come in here. There have been found as yet no minerals of importance, so that mining is not likely to be an enterprise, and to the classeur and trapper does it belong. Lumbermen had a share in it, but as most of the best timber has been cut out and burnt out mot nouch is done in but like.

of, but as most of the best tumber has been cut out and norm out, not much is done in that line.

Of course in such a country things are done in a different style from on the Western plains, where it was a saying that a horse and buckboard could go anywhere.

Here roads do not exist in summer, and to travel with a horse in these mountains would be as absurt to attempt as impossible to accomplish. Canceing and portaging are the only means of transport in summer, and every pound of outfit that comes into camp comes on a man's back a great part of the way; so little is taken on a long trip save necessities that no fellow can do without.

can do without.

This portaging or carrying is done by means of a long strap, broad in the middle, which middle passes over the top of the head, and the load rests across the packer's lnck—no, it doesn't rest, it hangs, and nearly all the "hang" is on a fellow's neck. Most sportsmen of the North know a "col-like" hat a like it with the properties of the sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a properties a like sensetion of the North know a "col-like" hat a like sensetion of the North know a "col-like" hat a like sensetion of the North know a "col-like" hat a like sensetion of the North know a like sens

of the head, and the fold rests across the piecker's mack—no, it doesn't rest, it hangs, and nearly all the "hang" is on a fellow's neck. Most sportsmen of the North know a "colliner," but to all it is not given to experience the sensation of walking along a log with 100 or 150 pounds on one's back and having the bark come off, so that a gentle drop of a few feet shortens your neck with a jerk on reaching bottom. I think I should have been a six-footer if I had not taken to the collier, and firmly believe that several of the vertebra of my spine are welded together simply by that infernal strap.

This carrying on the head has its advantages, however, for in case of a slip an old hand will throw off the load and come to grass with only his own weight, and had the strap been over his chest he must have gone down with it and perhaps have been kurt; indeed, I knew of a case where a man, walking on a log over a creek, slipped and fell with the collier on his chest; with the usual perversity of loads in such cases, the pack fell one side of the log and the man on the other—strap slipped up across his throat, he hadn't his knife handy, and was tolerably well choked and black in the face, when another chap, who was fortunately behind on the trail, path an appearance and set him on his feet again. Tremendous loads snother chap, who was fortunately beaund on the trait, put it an appearance and set him on his feet again. Tremendous loads are carried by these voyageurs—200 or 250 pounds is not called a heavy load for a good portage, and should I say what weights I believe have been carried, people would probably set me down as a Munchausen.

The primitive bark cance is the only means of conveyance.

by water. Here the many patent canoes of the United States are unknown, and should any one advise their use to a bushman he would most likely remark that "his old bark was better than any bloody new-fangled concern," as one said to me when I praised a "Lakidfeld." These are not apparently oetter than any moody new-tangene content, as one sam to me when I praised a "Lakefield." These are not apparently the same vessels that novelists write about, for the latter are generally described as "frail as an egg-shell," and even Baliantyne, whom I worshipped in my youth, falls into the error. Now, our cances will stand a blow from a round stome that would make an ordinary boat leak at a good many scams; and if they do leak—well, a birch-bank torch, a little gun, and a piece of rag, and we are O K again.

Only twice have I smashed my cance and both times it was the fault of the crew. Crossing from the Gatineau River to the Lievres one fall, I could get no men, as the scasson was near its close; so after much deliberation my chum and myself decided on going alone. I was a poor cance-man and he

the Lievres one tail, I could get no lines, as the season was near its close; so after much deliberation my chum and my-self decided on going alone. I was a poor canoe-man and he was, if anything, worse, and neither knew anything about the country. However, off we started, and all went well as long as we had the stream to paddle against and not to run down. We only got lost once, but found ourselves after a couple of hours' search, and had no accident until we reached the water-shed of the two rivers. Now we couldn't get lost, but we could get smashed: and this was our fear. One rainy morning, having ron several small rapid-safely, we were congratulating ourselves on progress made, when we reached the head of a small rapid-steep, swift water, and in the middle, at the foot, one luge boulder. "T.," said 1—he was in the bow—'how goes it?" "We can easily reach the foot by holding back, but there the only water is close to that rock." "Well, well go to the left of it—and mind and don't reach forward"—he had an abominable habit of reaching forward and putting his paddle on a rock, instead of giving a lift to one side. "All right," says T., "you mind your end, I'll take care." "I'll run her at the rock; it's the only water," say I. "All right." Down we go, "backing" here and one side. "All right," says T., "you mind your end, I take care." "I'll run her all the rock; it's the only water say I. "All right." Down we go, "backing" here a giving a stroke there, and not a touch until we near of friend the rock, gathering speed every instant. "Now Left!" I shout. Swifter is the pace. "Left! left! I how as T, reaches forward, and there is a hideous crash—then you have been supported by the strong strong the strong st as T. reaches forward, and there is a hideous crash—then we are in the eddy, and then in shallow water, as she sinks under us. Fortunately T was kneeling on the tent and that cauthed her a little. There is a hole you could put your lead into in the bow, and we almost weep as we think of the sugar, etc.—a mass of "mush." No use crying over split milk, so we turn her over, light bark, heal gun, tear out the back of my vest and stick it over the hole, and paddle 140 miles of river with that primitive patch on the canoe. What Lakelield could be mended thus?

Avoider meet, I but that nearly cost me my gun and

or inversible that primitive patch on the canoe. What Lake-field could be mended thus?

Another upset I had that nearly cost me my gun and rods and other "etcetera" may warn other fellows if they ever sojourn in the same districts. Camped on a river, which a day's rain would flood, and two days of wet weather make into a nice little torrent, my cook one morning woke me with "Six o'clock, sir, and breakfast nearly ready." So throwing off the blankets I turned out and looked out of the old lumber shanty we had appropriated. A gloony morning, with heavy steady rain, and as the same weather had hed good for two days before, we had our torrent ready, the river being nearly three feet over the ordinary level. We could not afford to lose time, and, going on the principle of "the better the day, etc."—it was Sunday—I resolved to start. For some reason, Some weather the ordinary level. We could not afford to lose time, and, going on the principle of "the better the day, etc."—it was Sunday—I resolved to go it as we best could. Now "Jim," so good at fish-balls and plum-duff, etc., was no canoemau. Arthur was but a youth, and I was decidedly average with a paddle. Of course the bow was the delicate part, but I took that at once, and Jim, steering—or, rather, not steering—nam me down a rapid broadside on and we "fluked" through it by having the cance light. So we take our usual places, Jim in the bow, Arthur in the middle and myself in the stern; and with three inches of the gunwale above water we embark. Two rapids are run with a little water shipped; and we come to the head of a nice short little one—nice and steen and rough, too. We had run it before. move water we empark. I wo rapids are the wind a little water shipped; and we come to the head of a nice short little one—nice and steep and rough, too. We had run it before, and though I had sundry qualmas as I saw how low we were in the water, I gave a word to the boys and in we ran. Bet-

ter had we gone ashore. She goes down the slope like a flash in spite of our holding back; through the first swell goes her sharp bow and she is half full. I dare not yell "Out." for the boys wouldn't know how to take the water and not upset her. No use locating back now, we must keep her going. Down we go, her nose goes under, and she gets lower and lower, till, when having escaped the rocks, we reach the eddy at the foot, she is nearly out of sight. "Out." I how, and out I go. Arthur slips over the side, and Jim, who thinks shore the driest place, makes a dive for it: over goes the canoe, and down go my rods and gun into fifteen feet of water. I come to the top, shake the water out of my eyes, and could the driest place, makes a dive for it; over goes the canoe, and down go my rods and gun into fifteen feet of water. I come to the top, shake the water out of my eyes, and could laugh, if I didn't feel more like swearing. Jim is trying to get away from a box that evidently wants to get on his back; Arthur has the canoe by a bar and a grip of a branch; the impedimenta are running a race round the eddy, and I am off down stream. I grab a bundle, get hold of a rock-and climb ashore, but would prefer not to have fishing boots on. The others, who are better swimmers, are on dry land. We ressue the floating "kit," bundle the traps into the canoe, and paddle down to the cache of the day before. Here tents are pitched, a fire lighted, clothes changed, and we are once more confortable. When the riverfalls to its usual level we go up and by a few lucky dives recover my traps, not much the worse for their dip. But the chaff I get, makes me vow never to try it on again alone and with a heavy load, until, in a fit of laziness this summer, I run a rapid, or rather run a little of it, break the canoe, go down a hundred yards of the swift water, hanging on to the stern to keep her upright, and when I do get ashore, portage and reach camp, am told by my man that "no fellow" ever runs that rapid. Such is life.

Pshaw! here am I spinning yarns without a moral. I had intended to go into outif thinking that we who camp all and every summer, and frequently in the winter, might give a wrinkle to those who have not been "out;" but as I have wasted several sheets of paper and probably "it will all end in smoke," I will subside.

NA COUNTRY HOUSE LIBRARY

IN A COUNTRY HOUSE LIBRARY.

THERE are times when one wearies of the continuous glare of bright sunshiny days that ever invite from serious occupation with the irresistible influence which pervades the sunit smile of beautiful nature. The aid afforded to meditation and the increased gladness and sympathy felt in

the sunit smite of beautiful nature. The and afforded to meditation and the increased gladness and sympathy felt in company with one's books opens a new and increased appreciation of the charms of rural beauty when the blurred veil of rain is upheld. So thought I one wet November afternoon succeeding a previous day's good shooting, as I was gazing abstractedly from the window of what my young host termed his den-en half library, half gun and smoking room.

Between the scantily clothed lawn trees could be seen, beyond the faded green of sloping hillside, the dark waters of the valley-lying lakelet sizzing between two wooded hills, which rose precipitously from the flood that lapped the rocky shore where the frems lay yellow and dend in the cold, damp gloom of cavernous recesses. And along the farther shore where the brown hillocks of a bog meadlow were seen in the narrow vale of the hillsides' spurs, the reeds and cat-tails were sere and brown back of the withered lily pads. And one turns from the window wondering if this was the scene that was so enchanting yesterday, when ranging the coverts "all in the golden weather."

The oil-covered laminations of the guns upon the rack glinted in the rays of the brighty-illumining fire, while above

The oil-covered laminations of the guns upon the rack glinted in the rays of the brightly-libuning fire, while above the long, low book-case covering the lower quarter of the farther wall, where curious shadows lay behind the vanes and fantastic curios that adorned the top piece, the fly-rots have rested since the base ceased to strike and the trouting season closed. The stuffed game birds, slient mementoes of sporting scenes and sometimes of comrades past and gone, adorned the bracketed corners, the English sporting prints upon the walls—all indicated the healthful tastes of the sport-loving owner.

loving owner. Notwithstanding the great interest taken in sport and

upon the walls—all indicated the healthful taates of the sport-loving owner.

Notwithstanding the great interest taken in sport and sporting accessories, we yet have to look to the mother country for the means wherewith to fittingly and economically decorate our walls and libraries with illustrations of the most fascinating of all field recreation—shooting. No other shooting in the world affords such a diversity of picturesquely rural views, bordering at times upon primeval wildness, as does America, and with such backgrounds, and with natural delineation of the statuesque grace of the panting dog, and the human figures expressive of the geatle and absorbing exhibitation of the moment, this viciant branch of American art is worthy of the nost stristic filling.

But an engraving akin to the "Sportsman at Home," though English, is entirely applicable with us now, as the habiliments and sporting adjuncts of our two countries are identical; and we experience alike the same congenial thoughts and sympathies upon our return from field and cover, while the amber twilight houge over the russet hill top, and come into the blaze of the firelight with ruddy visage and muddly gaiters, while a privileged setter drops upon the hearth rug. And nothing have we in our illustrated literature comparing with the felicious reproductions of sporting and tural life and hunting stories in colors, as is embraced by a standard London weekly.

Alike dearth of sporting cognizance there seems to me in the annals of American fiction. The delineation of American farm and manor life and rural sports has been, as yet, the almost exclusive property of our sporting writers, and advocates more extenuation in graphic potratiture of their varied allurements and protean charms, they could not have; and, with but few and anomalous exceptions, has the higher order of country life, its idyls, common places and diverse exhiberative sports, been interwover in the thread of an essentially American novel.

And to this one cannot but attribute the popularit background and settings of some gentle, chaste love story pervaded with the hearty essence of the moor and the breeze from the loch, the report of the gun drowning the whirr of many wings, or the clicking of the rapidly-mawind ing trout reel: the roar of the stream before it is engulfed by the silent ram, dark under the shade of the purple hill; all antilhetically contrasted with heat, dust and glare of the London senson, as, for instance, the delightful works of Wil liam Black and Miss Grant's "My Heart's in the Highlands examplicate.

examplicate.

It was Malcolm himself who interrupted my reverie appearing upon the threshold, saying that the occupants in the

library had done me the honor of wondering at my hermit-like absence. He, however, was talked out and had come to his haven of retuge for a pipe.

It was while lighting his violetwood that he pointed across the lake with "Look, Warwick, are those not ducks in the west end?" "Teal? Your'e right. Rig up, old fellow, and we'll take the skiff after them." Then drawing out an oil-tauned leather jacket from a cupboard, he opened a cabinet whose interior did service for an ammunition box, and I left him swabbing out the oil from the barrels of a tenbore as I hastened 1) my room for my Scott, Mackintosh cost and Glengarry bonnet.

Frank Warmick.

# Matural Distory.

OUR WATERFOWL.

and from the Fullguline, or sea-ducks, on the other, by having the hind toe simple. In other words, the tarsus, which is the naked portion of the bird's leg between the origin of the toes and the next joint above, is covered in front by broad, overlapping scales, instead of being, as in the geese, "reticulate," or covered with small, approximately six-sided scales, which merely meet and do not noticeably overlap. The hind toe is short, elevated, and has no lobe of

skin depending from it.

The Anating have been termed by different writers Fresh. water, River, Shoal-water and Inland Ducks. As a group, they may be said to be confined to fresh waters, although they are often found on the sea shore, and some species occur during the migrations more abundantly on salt water than on inland lakes and streams. They feed to a very great extent on vegetable matter, and as a result of this diet their flesh is excellent eating. The legs of the Anatina are placed well forward, and hence they are quite at home on dry land, where they walk and run with case. Unlike the geese and swans, in which the two sexes resemble each other in color, the males of the Anatina are, as a rule, more brightly plumaged than the females, while the young of both sexes resemble the latter.

The female alone performs the duty of rearing the young.

the males descriing her as soon as the eggs are laid.

Anas boschas. Mallard; Greenhead (male); Gray Duck
(female). Male, head and neck, brilliant glossy green, bounded below by a collar of white; breast, deep chestnut fading on the back into brownish gray; lower part, gray, transversely waved with black; wings, black tipped; speculum, or wing spots," violet, with a black border; tail feathers, white; bill, greenish yellow; feet, orange. female has wing as in the male; everywhere else, yellowish brown, marked with streakings and specklings Length, about two feet; weight, about three pounds.

The mallard is perhaps the best known of all our ducks, and as the progenitor of the common domestic duck, its appearance is familiar to every one It is found almost every there throughout the United States, being least abundant in New England. We have occasionally found them in Connecticut associated with the next species, but they are unusual even there, and occur still more sparingly in Massachusetts and to the eastward. In our Western and Southern States, however, it is extremely abundant during the migrations, and probably in these sections more ducks of this species are killed each season than of any other. They are shot in the killed each season than of any other. grain fields, in the sloughs and in the rice swamps, and come

The mallard breeds in considerable numbers within our borders, and on the plains and in the Rocky Mountain region may fairly be considered a resident. We have seen them in the dead of winter, when the thermometer stood 12 degrees below zero, on open spots on the Lodge Pole Creek in Nebraska and Wyoming, and know of their having been taken on warm spring holes in the Elk Mountain Range when it was much colder. In fact, from favorable feeding-grounds they are only driven by the absolute closing of the waters. In California, during the winter, they are very abundant, and form a large proportion of the ducks that then abound there.

Anns obscura. Black Duck; Dusky Duck; Black Mallard. The black duck closely resembles the mallard in form, and in color is like the female of that species, but the general tone of the plumage is much darker. The bill is yellowish green, and the feet orange, with dusky webs, or wholly dusky. It is about the same size as the preceding species. The female is somewhat duller in color than the male, and is

In New England and along the Northern Atlantic coast, this species almost wholly replaces the mallard. It is found in less abundance in the West, and is not common beyond the Mississippi River. We have seen occasional specimens, however, in Nebraska, and Dr. Yarrow has reported the bird from Rush Lake, Utah. On the Northern Atlantic coast it is the only one of the Anatines that occurs in sufficient numbers to furnish good sport.

Where black ducks have been much shot at they feed only at night, and in some localities we have known them to be so suspicious that they would not leave the open water for their feeding-ground before midnight, and would be off again before daylight. In some localities the species comes well to decoys, and is shot from blinds built on the feeding-grounds, or from batteries; but most of those taken on the Atlantic coast are killed as they fly from the open water to places where they pass the night. In very severe weather, when the feeding-grounds are covered with ice, the black ducks suffer severely. They are then obliged to resort for food to such warm springs as may be still open, and the gunners, taking advantage of this, kill great numbers of them

The black duck sometimes breeds with the domestic duck, and the offspring of this intermixture makes an excellent table bird. It has also been domesticated, and after a few generations reared in captivity would, no doubt, make a valuable addition to the poultry yard. Being usually kept with other ducks, hewever, they soon lose their characteristic color, and cannot be distinguished from the ordinary domestic bird. Such of the offspring of the black duck and the tame mallard as take after the wild parent make excellent black duck decoys, and can without much difficulty be trained so as to be of great service to the gunner.

A smaller variety of the black duck, denominated by Mr. Ridgway Anas obscura fulrigula, is resident in Florida.

Dafila acuta. Pintail Duck; Sprigtail; Pheasant. Male head and upper neck, brown; stripe on side of neck, breast and lower parts, white; sides and back gray, waved with black; dorsal line of neck and tertiary wing feathers, black; scapulars, black, bordered with silver gray; speculum, green; tail, long, 4 to 9 inches, the black middle feathers extending far beyond the others; bill, black; feet, gray blue. colored much like the female mallard, but paler; always to be distinguished from that bird by the narrower, differently colored bill, different feet and more pointed tail.

The pintail is an extremely abundant and widely distributed species. It occurs in greater or less abundance everywhere from New England to California. During the migrations it affords much sport to gunners in the Western and Southern States. Up to within a short time it had been supposed that this species always retired to the far North to breed, but Dr. Coues has shown that some breed in Montana, on the tributaries of the Milk River. During the month of July he found in this region young birds scarcely able to fly. In Alaska, according to Mr. Dall, they breed in considerable numbers.

The pintail is one of the most graceful of our ducks, and appears to equal advantage whether seen in flight, on the water, or on dry land. They associate freely with mallards, teal, and other fresh-water ducks.

Chaulelasmus streperus. Gadwall: Grav Duck. Male with the pale gray plumage, somewhat barred with black; shoulder, chestnut; greater wing coverts, black; speculum, white. Female smaller, with little or no chestnut, but with the other wing marks. Bill, black; feet, dull orange; length, about twenty inches; weight, about two pounds.

Although the gadwall is said to be distributed through North America at large, we have never found it very abundant on the North Atlantic coast. In the interior it is much more plenty, and furnishes good sport, decoying readily. the Rocky Mountain region it is abundant during the migrations, and some remain through the summer to breed Dr. Coues found their nests in Montana, and we have taken them in the mountains of Wyoming, not far from the line of the Union Pacific R. R. In California it is rather abundant.

Mareca penelope. European Widgeon. Head and neck, grayish brown, speckled with black, the top white or brown ish white; faint traces of glossy green on its sides; breast, brownish red; belly, white; under tail coverts, black; a white patch on the wing; speculum, green, bordered with black back, gray, waved with black; bill and feet, blue gray. The European widgeon is merely an accidental visitor to our shores, and occurs so rarely that any specimens of it which may be killed should be recorded, and their skins preserved. It can readily be distinguished from the succeeding species by the brownish, instead of gray, head and neck, and by the mere trace of green instead of the broad patch seen on the American bird.

Mareca americana. American Widgeon; Baldpate; White-Head and neck, grayish, speckled with black, the top white; a broad patch of glossy green on the side; otherwise like the preceding, which it about equals in size: weight about one pound fourteen ounces.

The widgeon is found almost everywhere throughout the United States, being equally abundant on the seahoard and inland. They are found in great numbers on the brackish waters at the mouths of many of our rivers and bays, and many are shot on our inland waters. We have found this species breeding abundantly in Montana and Dakota, near little sloughs and narrow streams.

[TO BE CONTINUED.] - --

PROCEEDINGS OF THE PHILADELPHIA ACADEMY.—Part II. of the Proceedings of the Philadelphia Academy of Natural Sciences, covering April to September, has just reached us, and for it we desire to express our acknowledgements. It is replete with interesting matter, and contains contributions from the pens of Dr. Leidy, Mr. Kingsley, Dr. Chapman, Capt. Vogdes, Mr. Theo. D. Rand, Dr. Harrison Allen, Dr. Hartman, Mr. Barbeck, Mr. Lockington and others.

AU SABLE in another column gives some new testimony on the beaver question.

SOMETHING ABOUT SQUIRRELS.

SQUIRRELS are wonderfully mixed up with childhood reminiscences. Solitary indeed would have been the grand old woods without those ever-present and active little

QUIRRELS are wonderfully mixed up with childhood reminiscences. Solitary indeed would have been the grand old woods without those ever-present and active little nur-crackers.

The striped or ground squirrel is a sprightly and industrious little body. He is not fastidious in his diet, but his favorite food seems to be beech nuts, of which he frequently stores away large quantities for winter use. It is quite amusing to see the amount of nuts which he will gather and cram into his mouth until his checks are distended seemingly to bursting. His deposits are invariably underground, where he abides during the winter and seldom comes out while cold weather lasts. In the spring when his supplies are short he is sometimes driven to the necessity of digging up young corn which has been lately planted near the woods, which brings him into bad repute among the farmers' boys, who often wage an exterminating war against the whole race.

The red squirrel or chickarce is a hardy specimen of the race, and is bound to live whether nuts are plenty or scarce. They are out in all kinds of weather, and we frequently find them in midwinter in deep pine forests, where they subsist chiefly on pine cones, or rather the small seeds which are found in the cone. He is the most lively and active of all squirrels; his every move, look or action denotes mischief. His favorie home is near settlements and among butternut groves, from the nuts of which he has such an ingenious and workunstile manner of extracting the meats. He will sometimes lay up large stores of these nuts in hollow stubs and trees for future use. The red squirrel is found stitting upright on a limb with his back turned to the body of the tree and tail curled over his head, while he keeps up an incessant chattering and sputtering which no other species could imitate. Regardless of the boy who is tilling his pockets with small rocks, determined to pelt the life out of him, and who, forgets the fact that he generally came out second best in all his former attempts to stone a re

devoted head.

The nature and habits of the black and gray squirrels are The nature and habits of the black and gray squirrels are nearly allike, the only difference seems to be in color and locality. I believe the former is seldom found except in the Northern and Middle States, while the latter is found in nearly all the Western and Southern States as well as in some localities in the Middle and Eastern States. I have never found the black and gray both occupying the same ground. I have found the flock and gray both occupying the same ground. I have found the for squirrel among the gray both West and South. They differ in size but not much in habits.

The natural home of the black squirrel is in heavy beach, maple, henhock and pine forcests where they are able to travel at a fast rate on the tree tops, leaping from branch to branch with surprising agility. They rarely if ever lay up food for winter, as they seem to be well adapted for foraging in all kinds of weather. However deep the snow may be they have a natural instinct for finding nuts or other food which may be lying under the snow.

The flying squirrel is perhaps scattered over more territory than any other variety, and is not often seen even in localities where they are plenty, as they are greated even more territory than any other variety, and is not often seen even in localities where they are plenty, as they are decidedly noccurnal in their

The thing squirrel is perhaps scattered over more territory than any other variety, and is not often seen even in localities where they are plenty, as they are decidedly nocturnal in their habits, seldom moving in daylight unless when disturbed. They are socially disposed, and it is rare that one is found alone. They seem to keep together in families of a half dozen or more high up in the hollow trunk of some old tree. Their power of rlying, or rather salling, is attained by their extending the legs at right angles with the body, which also distends the skin and flattens the squirrel to the dimensions of about five by seven inches. The tail is thickly furred, wide and flat, and doubtless aids them in their flight. Their mode of travel is to run up a tree nearly or quite to the top, and sail off on a descent of about forty degrees until near the ground, when with a sort of swoop they shoot upward ten or twelve feet striking another tree, thence, running up to the top, repeat the manœuvre, and in this way some distance is gained in a short time.

gamed in a snort time.

I have frequently while being camped out on dark nights heard those little night ramblers come spatting along from tree to tree, one after another, until a whole family had

Piney Falls, Tenn., Nov. 23, 1880.

A Stox Orans.—The orang which is at present at the Westminster Aquarium has had a severe attack of sickness from which, however, it is now happily recovered. The London correspondent of the Liverpool Poot says: "The missing link who parts his hair down the middle, and has been for some time past on exhibition at the Westminster Aquarium—namely, the orang-outang—has not escaped falling a victim to the malady which has proved fatal to so many of his kind in our climate. The stranger caught cold, which quickly developed into a severe attack of bronchitis, and on Friday night last his medical attendant held out little or no hope of the patient being able to survive the night. However, Mr. John E. Carrington, F. R. S., the naturalist of the aquarium, was determined, if possible, to save the creature's life. He sat up all night with him steaming and doctoring him, and by morning the symptoms were so favorable that the orang-outang was declared to be out of immediate danger. Since then, by dint of careful nursing, the animal has

<sup>&</sup>quot; Many of the descriptions of waterfowl given in these articles are taken, almost without change, from Dr. Coues' "Key to North American Birds." Since that author's descriptions are models of conciseness, and, at the same tune, call attention to the salient features of each species, it has been thought better in many cases to follow him rather than to attempt to better what is already so

been brought around, and is now happily convalescent. His patience under his sufferings was, I believe, above all praise, and he took Mr. Carrington's hot baths with all the complacency of a Major Pendeunis."

GOVERNMENT PUBLICATIONS.—The Natural History Editor GOVERNMENT PUBLICATIONS.—The Natural History Editor desirestonachrowledge with thanks the receipt of the following works: From the Interior Department, Professor J. A. Al-leut's "Monograph of North American Pinnepeds," from the War Department, Part II. of Professor E. D. Cope's "Re-port on Extinct Vertebrates Discovered in New Mexico dur-ing 1874, by the U. S. Geological Surveys West of the 100th Meridian."

FISHING ON THE ST. LAWRENCE

BROCKVILLE, Ont., Nov. 13, 1880.

FEW words about fishing, for "recreation," in the St.
Lawrence may not be out of the way, now that fishing
that respect may be considered as a thing of the past for

FEW words about ishing, for "recreation," in the St. Lawrence may not be out of the way, now that fishing in that respect may be considered as a thing of the past for this season.

In general, it will be conceded by all who frequent our beautiful water that the quantity of fish has greatly increased since our fishery laws have been enacted, especially black bass and maskenonge have augmented since 1875 wonderfully in numbers and also in size. It is natural that now and then an unfucky sportsman will say everything to the contrary, but a steady observer will agree with me. Certain localities are always "fished out," but that is even local and detracts little from the immense extent of fishing grounds which are composed of the innumerable bays, chamels, shoals and inlets of the river between Kingston and Brockville. I have observed that since 1875 black bass are caught on grounds where, in 1872, not one could be found. I ascribe this not merely to the direct effect of the law preventing netting and unlawful fishing, protecting fish in spawning season, etc., but also to the fact that the public mind has been educated to a more civilized view of these matters. I have frequently seen, and as late as 1874, bustleds of small black bass, rock bass and sunfish lying in heaps on the rocky shore of an island, blackened and decaying in the sun; only one case of this kind has come to my knowledge since. Thus it was that the peacher emptied his nets and took not even the little trouble to throw the small fry back into the water.

The "Brock group" of islands, in the immediate vicinity of Brockville, are divided by the navigable channel of the river, and offer, in shoals and small channels, favorite feeding grounds for black bass, maskenonge and the unavoidable pike. At the head of this group, where the river is three miles wide and suddenly forced into small channels, though the parties from offer in shoals and small channels, favorite feeding thank the subject of the scale and the received with the subject of the scale and

area of rocky shoals and weed beds around the Amherst Islands.

In the first part of the season and up to end of July bass fishing is always good in all sheltered places, in bogs and sround islands and where weed beds are neur. After the disappearance of shad-flies the rocky shoals near the steep channels afford better sport. But the black bass of largest size I have always found near the places where food and shelter for minnows collect in July and August and large numbers of small fish. On the rocky, open shoals it is very rare to land a bass of three pounds or more, whereas I have caught them of five and more pounds near sheltered weed beds, in bogs and on the mouth of creeks. A larly last July landed one small-mouthed black bass could reach. Its extreme length was twenty-six inches, depth of body over seven inches, and weight seven pounds and two ounces. A week later the same skillful hand landed a black bass of over five pounds and a pickered (pike perch) of eight pounds. They were hooked with a phantom minnow of the smallest size, single gut leader and light ifly-rod. These fish were killed in the last week of July, in a sheltered bay inside of the islands, on the Canadian side of Crossover Light-house. A look on the maps of the river will show that at the Amherst group the river is extremely wide; on the south side Chippewa Bay and on the north side a large bay-like cut, making it about five miles wide, but divided by numerous

islands. This part, from the Amherst group to the Alexandria Bay, is more known to sportsmen in general and will form the subject of my next letter.

SPAWN FISHING AT RANGELEY ONCE MORE.

BOSTON, NOV. 26.

Boston, Nov. 26.

WILL you allow the writer of the article in your issue of
say a few words called out by two letters referring to his
article which have since appeared in your paper?

His position is, that spawn fishing in September or in Octoher out of season, by "sportsnen" who do not prinarily
fish for propagating purposes should not be permitted. And
he fully agrees with his old friend "Captain Fred" in his
recommendation in your issue of the 25th inst., that nothing
but thy fishing should be allowed after September 1. And
he further asserts that the case which he referred to in his
previous letter was an outrageous action on the part of the
holders of a permit from the Commissioners in that the fishing was not solely for propagating purposes, that fish were
killed under the license held from the Commissioners and
that only a small proportion of the trout so taken by the par-

killed under the kiense held from the Commissioner and that only a small proportion of the trout so taken by the parties referred to ever contributed to the stock of eggs which were saved, that the object of the licensed persons was to make a big score after the season closed and that they accomplished their object.

He further asserts that he can prove what he has stated, and that Mr. Commissioner Smith, in his letter in your issue of the 28th inst., did not state all the facts, because, as the writer believes, he was ignorant of them, and that when Mr. Smith said the only permits were held by Messrs. Kimball and Stanley he either did not know or forgot to state that other parties sished uninterruptedly in his presence during the first five days in October, and it is to their conduct only that the undersigned referred in his previous letter, well knowing that neither Mr. Stanley nor Mr. Kimball would abuse their privileges.

knowing that neturer out, braining and abuse their privileges.

Having attained his object in calling public attention to the subject the undersioned will continue to discuss the question privately when he receives a reply to a letter lately written to Mr. Smith personally, in which all the facts are stated for his information.

#### FISHES, NAMES GET MIXED

MONTHEAL, Canada.

DURING several seasons in different parts of Quebec I have taken generally with a spoon what I consider as three different varieties of lake trout. First is a trout nearly black in color and called traite noise by the "habitants" running to large sizes, not so thick and clauky as the gray trout, and not so pretty a fish. Although I had not the two fish to compare I think the eyes of the "black trout" larger than those of the gray. The spots and markings very indistinct and the lateral line not marked; fins black, with red edges: belly nearly black; irides yellowish brown; flesh for all I got) white, and I am told by the "habitants" this is always the case.

edges: belly nearly black; irides yenowish moon, mean all I got) white, and I an told by the "habitants" this is always the case.

Then there is the gray tront, lake trout, or salmon trout of the Ottawa waters, and the "Tuhadi" of Lake Metapediac and Metis lakes and vicinity. Are these latter the same fish? I look up Hallock's "Gazetteer" and find that they are "mixed." I have asked Mr. Whiteaves, mentioned in the "Gazetteer," and he can give no more information on the subject than ordinary mortals, so I turn to you. What are those fish?

Again, I find in the "Gazetteer" "pondpickerel, dorce (Canada), Esox reticulatus." The writer first insults our (Canada), Essar retirelatus," The writer first insults on dore by putting him into the pike family, and then says "the is so small and bony that he is hardly worth cooking when caught." Now I want the author to "take it all back,"

when caught." Now I want the author to "take it all back," for the following reasons:

First, the dore is not a pike at all, but a perch, and only second to the black bass in that family. Again, he is not small and bony. Thave taken them myself of five pounds weight, and know of one being killed in Lake Rosseau in Muskoka that turned the scale at ten pounds. Doubtless I could collect more instances of even larger fish being taken. His flesh is delicious. The openers fish the "Grantlere" is

Musikoka that turned the scale at ten pounds. Doubtless I could collect more instances of even larger fish being taken. His flesh is delicious. The nearest fish in the "Gazettere" is the "Pike perch, glass-eyed pike, white salmon, etc., and Stizostellon americana, Girard;" but one fish is much darker above and a bright yellow below, as his name implies—rgilded."

That skilled fisherman, the ex-secretary of the F. and G. P. C. of P. Q., at the last "blow out" given by the club called him \*Lucioperca canadessis\*, and some of the members were down on him for so doing.

Thirdly, let me ask what the difference between a pike and muskinonge is? I have asked Mr. W., and he said the first was dark with light markings and the latter had the reverse. The habitants say a maskinonge is striped: "Gazetteer" says, "The northern pike, first described by Agassiz, is sometimes confounded with this fish, but may be easily detected, as it has the lower jaw flougest) to the easily detected, as it has the lower jaw flougest) to the lead of a pike that weighed twelve pounds, a pike such as the author goes on to describe. The head is nine inches long from the lower jaw (longest) to the sail, from the end of the lower jaw flougest) to the sail, from the end of the lower jaw for a distance of one and three-quarter inches the teeth are, even dry as it is now, but one-twentieth of an inch long, and from this point back on each side are six or seven teeth from one-quarter to nearly one-half an inch long. The upper jaw has three terrible banks of teeth in the roof of the hounds. I have taken a good many pike in a good many waters, and all identical with this, and have to confess, to my shame, that I never saw a maskinonge. Perhaps you can tell me what difference there is between it and the despised pike that has so often appeared at my table or substitute for such in camp? Wasar.

Only four "trouts" are now recognized by naturalists as between store appeared at my table or substitute for such in camp?

Only four "trouts" are now recognized by naturalists as being east of the Mississippi River. These are brook trout, Salmo fontinalis; blue-back trout, S. oquassa; the lake, or salmon-trout, S. namayeush; and the siscowet, S. siscowet. The tuladi, S. tomo, is now included in the third.

The color is not enough to found species upon in ichthyology, and this is the great mistake of anglers in general. It for very little because it is not constant. There is a possibility that you have both fontinalis and namuyeush, but the former is subject to great variation in color, from white, through amber and pink, with green back, to almost black and in the case of the large ones going to salt water the spots often become invisible

The "dore" is not of the pike (Esox) family, but is the pike perch (pickerel in parts of Canada,) Stizostethion of Rafinesque, whose name has been restored to replace that of Lucioperca of Cuvier for the same fish. As the Esox reticulatus is a "pickerel" in New York it was a natural error to give this name to another fish called "pickerel" in Canada.

Often the body of the maskinonge is plain olive. In some cases it has large dark oval spots, and in others it assumes the appearance of faint lines. Color, as we have said, is nearly nothing in fishes. The best way to distinguish the maskinonge, E. nobilior, from the great pike, E. lurius, is that the former has the lower half of the cheek and opercle bare, while the latter has the cheek scaly and opercle bare. The smaller, E. reticulatus, has, in addition to the net-work on its sides, from which it is named, both check and opercle

#### THE CATFISH.

Bedford, O., Nov. 15, 1880.

Editor Forest and Stream:

D.R. E. STERLING is quite right in what he says about the edible qualities of our northern cattlsh. It is really one product.

served up.

The late Prof. J. P. Kirtland, whom nobody knew but to love and respect, gave me a sound lecturing because I did not say more good words shout this fish in the first edition of my book. He also gave me the following method of preparing and cooking this fish: "Never take off the skin, but scrape it with a knife, pouring over it hot water, repeating the operation until the skin is as white as a piece of bleached linen; then remove the gills and intesthes, leaving the head on, and stuff it as you would a goose or duck, adding to the stuffing, for a ten or twelve pound fish, a little garlic (no. Garlick), in quantity about as much as one-fourth of the size of a unting, chopping the clove of garlic fine, and distributing it through the stuffing, fine new up the fish tightly and hold in bulling water by the tail for ten seconds, no longer: then lay it on its belly in a baking pau, and bake it slowly for four hours if you are not too hungry to wait so long, but if you are three hours will answer. But do not forget the garlic, and you will ever after hanker for baked cattlist. Try it, and if you cannot get a cattlish take some other large fish and serve it up in the same manner. Care should be taken not to put in too much garlie in the stuffing, not enough to give it a distinct odor of it."

In a late number of Forest ASD STEEAM, Dr. E. Sterfing states that he has canght the black bass at the Sault Ste Marie, which was a great surprise to me. I have fished at that place at different times for as much as six months. rved up. The late Prof. J. P. Kirtland, whom nobody knew b

states that he has caught the black bass at the Sault Ste Marie, which was a great surprise to me. I have fished at that place at different times for as much as six months altogether, with minnows and flies, for large trout. I have fished there in the months of June, July, August and September, and on two occasions I fished there for four weeks, and on two or more times that prince of anglers, Judge B. D. Potter, of Toledo, fished with me, and neither of us ever caught or heard of a black bass being caught or seen there. I do not make this statement as doubting what Dr. Sterling says in his communication, but it is strange that I never caught any there, nor did I ever before hear of any being taken there.

T. Garlick.

AU SAME also has something to say about this subject in a letter on another page, in which he establishes the valuable fact that the eatfish is more northern in its range than it has usually been credited.

The Mascalonge—Cleveland, Q.—I will send you a photograph of a female maskalonge (Essa: nobilior, Guvier), that weighed lifty-four pounds and was taken in the Manmee River, near Toleto, Q., by Judge Emory D. Potter, of the Ohio Fish Commission. The cast of this fish is now in the Kirtland Society of Natural Sciences here. I speared a fish of this kind in the spring of 1842 near the Hones Point clublouse, on Sandusky River, which weighed eighty pounds. I gave it to a "swamp Frenchman," and he took it to Sandusky and was satisfied with a silver half-dollar for it. This fish I considered also a "Daniel Lambert" among his kind. The waters of Sandusky Bay teemed with this noble fish in those days, now none are found there except now and then a fingerling (comparatively speaking), which is to be seen in the market. I have a present the mould of a mule and female of this fish, which are perfect. The former weighed thirty pounds and the latter fifty pounds. The fish from which these moulds were taken were sent to me from Bay City, Mich, twelve years ago, and cost me §15. I very much doubt if the like are to be found in that vicinity now.

A Fish Parastre—Nor Fork, Nor. 20.—While fishing in Westchester creek on the 2d of this month I caught a tomcod to which was attached a peculiar parasite, three of which I send you in alcohol with this. They were fastened to various parts of the fish by the root, which you will notice at one end, being firmly attached to the flesh, and the sucker passing through the skin, allowing them to wave around with the action of the water. When removed from the fish the sucker, or duct, or whatever it may be, was filled with blood, as also the pouch to which it conducted, which seemed to form the body, but the feelers were white. The skin immediately around where the blood duct entered the fish was red and inflamed. The fish itself was in good condition and remarkably gamy for a tomany when caught. The parasite seemed to be very tough, so much so that it resisted without injury a sufficient strain to detach the root from the lesh. They have been inspected by several old tomcoders who "never see the like afore," at the same time you may be perfectly familiar with them. Please inform me through your columns what they are. Will you at the same time tell me whether it is lawful to set pound nots in the Westchester creek, as I saw one running out from the shore of Pierre Lorillard's estate. The net had a very small mesh, small enough to entrap a quarter pound bass. This may in part account for the scarcity of bass in the laftere fitter and the Big and Little Gate.

The parasite is Lerneonema radiata, Steenstrun and Luci-

The parasite is Lerneonemu radiata, Steenstrup and Luetken. It is figured in Rep. U. S. Fish Commission, 1871-2, Pl. VII., fig. 30, and recorded by Prof. E. A. Verrill in same, page 578, as found in Vineyard Sound. The net is

## Mish Qulture.

ANOTHER ATTACK ON A GAME PROTECTOR.

AST week we chronicled the attempt on the life of Game Protecter G. M. Schwartz, of Rochester, N. Y., by a rifle shot from the shore while he was in the discharge of his duty, and we now learn from the Syracuse Courier that

of his duty, and we now learn from the Syracuse Conrier that John S. Collett, one of the game protectors recently appointed by the Governor under an act passed by the Legislature last winter, left Albany for a trip to Oisego county, having heard that fishermen on the Susquebanna were killing fish in great quantities and in violation of law. He secured the assistance of the Deputy Sheriff of the county, Mr. Mead, and meeting that functionary at Unadilla, the pair proceeded to the little village of Wells Bridge, near which it was understood the illegal operations were going on. While in the discharge of their duty the officers were stoned by the fishermen and narrowly escaped with their lives.

In composition unough to promet which we conside from

In commenting upon the remark which we quoted from an Oswego paper, last week, the Utica Herald says:

"The Oucida County Game Presection Association is no more deeply interested in this work than any other association of its kind only as far as the enforcement of the law is concerned. The secret of the whole trouble is that county, town and village officials and local game constables around Oncida Lake, with but few exceptions, are as deeply interested in lilegal fishing as the poachers, and for years have willfully neglected their duties and winked at the open violation of the law. The people of the State are spending money to feed and support the outlaws and moonshiners who threaten to shoot the State officers. It is probable that they will have an opportunity of testing their bravery, and possibly they may discover that shooting is a game that can be played at by others. It would be a just judgment on the sharks to withhold all supplies of young fish and allow them to secon out all the fish within the lake and then starve out the remainder of their days upon its banks. When the next raid is made by State Gitme Agent Dolge and his men there will be few nets left to work with." The Oncida County Game Protection Association is

#### THE CENTRAL FISHCULTURAL SOCIETY

The following circular has been issued:
DEAR SIR: The second annual meeting of the Central Fishcultural Society will take place at the Grand Pacific Hotel, Chicago, on Wednesday, Dec. 15, and your attendance is respectfully requested. It is expected that the meeting will be of great interest, as many papers are expected to be read and discussed during the day or two which the society may remain in session.

list of the papers to be read has been received, but it is No list of the papers to be read has been received, but it is usual, for such members as may choose, to prepare a paper on some branch of the subject with which they may be familiar, and all members are invited to do so without further invitation: or, should you be unable to a thend, the secretary will read your communication.

Arrangements have been made for reduced rates at the Grand Pacific Hotel, and it would be well for those who propose attending the meeting to engage rooms in advance.

Correspondence previous to the meeting may be addressed to the President, Mr. N. K. Fairbank, 59 Wabash av., Chicago, Ill., or to the Corresponding Secretary, office of Forest and Stream, New York City.

By order of the President.

F. MATHER, Cor. Sec.

#### ----PISCATORIAL PIRATES.

Under this head the Syracuse, N. Y., Daily Courier gives an account of the lawless fishermen of Keuka and Seneca lakes, to which we referred last week and from which we extract the following:

tract the following:

It is a lamentable fact that the lakes of Central New York are raided by lawless gangs of pirates who care baught for the laws or legitimate sport. This is the spawning season, but the piscatorial pirates seem to be intent on depleting the waters and leaving them barren of their finny populations. These baccancers snap their fingers at the statutes and bid defiance to the officers. In not a few instances they pursue their vocations armed to the teeth and threaten to empty a charge of lead into any one who interferes with them.

charge of lead into any one who interferes with them.

Thanks to the efforts of the Onondaga Fishing Club, the

charge of lead into any one who interferes with them. Thanks to the efforts of the Omondapa Fishing Club, the illegal fisheronen have learned that they can draw their seines and set their gill nets only at their peril. Game Constable Travis has a sharp eye for the malefactors, and it is seldom that one escapes him. The waters are rapidly becoming stocked, and it will not be long before as fine sport can be obtained on the Omondaga as on any lake or river. Last summer the fishing was finer than for ten years.

The Seneca river suffers from the predatory operations of the robbers, but it is hoped that before long they will be made to answer for their transgression of the law.

On Skancateles Lake the pirates earry on their unlawful work in open defiance of the law. In the vicinity of Glen Haven the water is lighted up at night by a large number of jack lights. The fishermen are rapidly depleting the waters of the fine trout for which the lake is noted. The robbers threaten vengeance on any one who interferes with them or makes complaint against them. The people living on the lake hardly dare say their souls are their own owing to the reckless acts of these nocturnal fishermen. This is a splendid field for some daring officer.

reckless acts of these nocturnal fishermen. This is a splendid field for some daring officer.

The people living in and about the adjoining towns have endeavored to stock Owasco Lake but the pirates have resisted their efforts by robbing the lake, inlet and outlet. If the robbers are allowed to continue their work Owasco Lake will never be known as a fishing ground.

On Oneida lake it is well known the poachers are up in

On Oneida lake it is well known the poachers are up in arms and defy the law. A short time ago their nets were raided by State Game Constable Dodge. This aroused their ire, and they now patrol the beach along the rishing grounds with loaded gams and swear they will kill any one who approaches. There is little reason to doubt their threats, as they are lawless in their habits and a bold set of rascals.

Whiterish Culibre on the Detroit River,—Very good performs has been made in stocking the lakes with the white-fish, Coregonous allows, by depositing the fry at the great natural spawning grounds in the Detroit River. The Esser Record, of Windsor, Ostatio, recently said:

"Every day we hear of fresh evidences of the great good affected by the establishment of the fish hatchery at Sandwich. The main bulk of the white lish taken this season are of an average weight of a pound and a half each. There are hardly any old ones taken, showing beyond a doubt that the hatchery has provided the catch, and that but for its having been put into operation white-fishing on the Detroit River and connecting lakesand rivers would by this time practically have become a thing of the past. So long as the catch was made up largely of old fish it was difficult to convince skeptics that the fry turned into the river each spring survived the dangers of young fish-life and returned to the place where they first took water; but none now can find a reason for dishelic. Not only is the existence of the fish unquestionably due to the hatchery, but their numbers are immense—just what we and others favorable to the enterprise at the outset predicted they would in a few years become. Even in parts of Lake St. Chair where a white fish had not been taken for a long period, they are now quite abundant. All that is necessary to bring back the old-time big fish-harvests here and consequent cheapness of price to consumers all over the continent, is to work up the fish hatcheries to their highest canned in the distribution." "Every day we hear of fresh evidences of the great good af-

the authorities."

CHINESE AND OTHER POACHERS IN CALIFORNIA.—The Sonora Union-Removerat says: "Quantities of dead fish are frequently seen on the Stanislaus River at or near Reynolds' Ferry. The belief is that giant powder causes their destruction. If such be the fact the parties engaged in the nefarious business should be hunted out and punished as the law contemplates." The Tuolunno Independent says: "Reports reach us from various sources that at different points on the Stanislaus River, above Knight's Ferry, Chinamen are killing and taking fish in violation of the law by the introduction of medicated bait and blassing with giant powder: and furthermore, are obstructing the passage of fish to the upper waters of the river above named by constructing daus in the operation of mining their claims. White men are also taking fish in these waters by unlawful means. We are informed that the salmon are quite pleniful in the upper waters that have passed the fishways at Knight's Ferry dam: therefore it is to be seen of what vast importance to this part of Tuolumne County the construction of a fish ladder at that place has proved."

A DONATION TO THE CAPE CLEAR FISHERMEN. A DONATION TO THE CAPE CLEAR PISHERMEN,—The Baroness Burdette-Couts has taken a great interest in the fishermen of Great Britain and Ireland and has made them several charitable bequests, as well as having built a large fish market in London, which, however, was nover occupied, as the dealers would not leave old, cramped and uncomfortable Billingsgate. This truly good hady has just granted (that is the word used for her gifts) the Cape Clear fishermen the sum of \$14,250 to help them start again in business after the disastrous season just closed. This swells her bounties to the fishermen alone to the princely sum of half a million of dollars.

Unlawful Bass-New Vork, Nov. 25,-I saw in a fish UNLAWFUL BASS—Act Fork, Nov. 25.—I saw in a fish store in Harlem a few days ago a string of striped bass, not one of which would weigh over a quarter pound, and have seen small bass for sale in many other places down town. What can I do to prevent their sale without appearing personally in the matter? What is the price of the "U.S. Tide Tables," of which you speak in the Forest AND STREAM?

You may complain to the nearest Game Protector, who must prosecute. Apply to Thomas Manning, 53 Beaver street, New York, for the tide tables.

CARP FOR TENNESSEE AND ARKANSAS.—Mr. J. F. Ellis, of the United States Fish Commission, recently delivered one thousand carp to Judge W. W. McDowell, Memphis, for distribution in Western Tennessee and Arkansas.

# Game Bag and Gun.

OUR PHILADELPHIA LETTER

OUR PHILADELPHIA LETTER.

In the Southern portion of New Jersey there is an extent of country, especially in the counties of Atlantic and Burlington, covered with extensive growth of scrub oak and dwarf pines, which has long furnished an excellent harbor and range for deer, and although they do not exist there in any great numbers it is of very common occurrence for parties going out properly equipped in quest of them to bring in one, two or three as trophies of the hunt.

We have been on a Jersey deer hunt, and must confess it is a very tedious, if not unsportsmallike affair. A party of this kind is composed of anywhere from five to fifteen men, all armed with double-barrel shot,guns loaded with buck shot. Every point where the deer is expected to pass (it is all guess work) is guanted by a grun, while one or two of the party make the drive with the dogs. Purely-bred hounds are seldon used, and I have seen pointers, half-pointer and hound terriers, beagles and the thoroughbreds making up a pack in one of these Jersey deer hunts. The drive is generally a short one, and one section being "drawn blank," a second and even a fluird and fourth is tried. When a deer is killed the carcase is divided, and as the party is generally a large one, a small portion only falls to the share of each. Your correspondent has made a vow never to go deer hunting in New Jersey again, for it has always been my luck never to have either back, doe or fawn come my way or spass my post. In fact, but two deer were ever killed in the numerous hunts I have been fortunate or. I sheuld say, unfortunate enough to have attended. There is too much "medle in the haystack" chance in them for me.

Very many deer from our own State are coming into market and a plentiful crop of mast is reported; in fact there has been a great growth of beech trees allover through our forest counties, which accounts for the number of fifteen miles, passing through a very wild section of the State and winding its way along the course of the Lackawaxen River the entire

the engine whistled, when the deer would toss their heads defiantly; but in spite of the efforts of the engineer heads defiantly; but in spite of the efforts of the engineer he was unable to overtake the animals. The race continued for over three miles, when a man who was walking up the track frightened the deer from the rails, and they leaped down the embankment to the Lackawaxaen River, which they crossed, and disappeared into the mountains. The engineer fired several shots at them from his revolver as they ran down the

eral shots at them from his revolver as they ran down the track, but they apparently escaped untouched.

We met Dr. Twaddell at Krider's this morning and learned of the great sport he had in Maryland with his beagles, Blun-der and Melody, eighty hares having been killed during the trip. It is not generally known that the marsh or black-fouted hare of the Middle and Southern States makes a much batter my they aromany arising of 's contact will,' which is footed hare of the Middle and Southern States makes a much better run than the common variety of "cotton tail" which is found nearer timber and frequents the upland more. It was the little black-footed fellow that afforded the Doctor and his party so much amusement, and the runs made, he stated, were astonishingly long and quick; few hares escaping excepting those that "block". The portion of the company that devoted their time to the quail found the birds abundant and the covers full.

that devoted their time to the quail found the birds abundant and the coveys full.

As I wrote you would be the case, now that we are having a real tonch of cold weather, the ruffed grouse shooting through our State has become better. The birds are seeking the valleys along water courses for shelter, and are being found there. More canvas-back ducks have been killed this the valeys along water courses for sucher, and are being found there. More canvas-back ducks have been killed this week at Havre de Grace than since the opening day of the season, but they are not by any means plentiful. From parties that have returned from the New Jersey coast we learn that the brant do not stool well, and many Canada geese pass "right along high" without stopping or paying the least attention to the decoys. We imagine that the numerous immense hotels that have been built on the narrow strip of beach which separates these inland bays from the ocean, has the effect of frightening the fowl. We have frequently seen flocks of both geese and brant, when coming in sight of these barns of buildings, to" (limb" right up into the air and continue their journey southward without touching, when it was evident they would have alighted to the stools had they not been driven from their course by the buildings. Homo.

EFFICIENT METHODS OF GAME PROTECTION

THE WEST IEPSEY GAME PROTECTIVE SOCIETY

I HAVE been reading with considerable interest in the late numbers of your paper the articles written by your-self and others in regard to the protection of game and the formation of game societies, and I should like to add a few lines of my experience for the last six years, both as one of the committee on the purchase of game and the committee on policing and prosecuting violations of the game laws of the West Jersey (tame Protective Society. I contend in order to protect the gamesuccessfully the proper laws must first be passed: and, secondly, there must be pluck and nerve enough to enforce them, otherwise they are a dead letter.

Londend in order to protect the gamesuccessfully the proper laws must first be passed: and, secondly, there must be plack and nerve enough to enforce them, otherwise they are a dead letter.

We see in your columns the formation of numerous game societies throughout the country, but fail, except in rare instances, to see that they ever achieve anything, and in the course of six months they either go out of existence or dwindle into a pigeon-shooting club, the very reverse of what they were formed for.

This arises from various reasons. A want of funds is no doubt often a stumbling block, and when such is the case it is to be deplored. But too often it arises from an apathy and selfishness upon the part of the members, who are unwilling to give the time and trouble necessary in seeing that the laws are properly carried out. It is surprising to me to see how many intelligent men who shoot who will not even take the time to inform themselves upon the objects, letter and spirit of the game laws, but rush madly into print and condemn the very laws as unconstitutional which two weeks before they considered right and proper.

There is no doubt that the people of this country have to be educated up to a knowledge of and a proper respect for the game laws. This, however, is being done rapidly by the sporting papers of the country, and I know of no one who deserves more credit in this respect than the Game Protective Society of New York. With plenty of money, integrity of standing and purpose, backed up with nerve and most ablecounsel, they pushed their cases to the courts of the last resort and the community were thus given a line of decisions which not only placed the standing of the game laws upon a proper footing, but also put to flight the curbstone lawyers and the unconstitutional letter writers.

The first duty of a some protective society is to emplay a lawyer of good standing. Who will examine the game haws of the Satie and post himself upon the haws and the decisions of the different States. Let him then, under

the insufficiency of the law, is the very worst thin that could happen.

The next step should be, after appointing a police committee, is to get an intelligent, soher and industrious officer. This individual is a most important person, as upon his intelligence and ability will depend the successful termination of all suits. The officershould be supplied with an official paper setting forth his appointment, and should also be supplied with blanks drafted by the counsel of the society. Most of the justices of the peace before whom the offender first comes are so ignorant as to be unable to draft the papers properly, and in the event of an appeal to a higher tribunal the cause will fail in consequence of this want of knowledge.

Then let the laws be printed in book and card form, and rrinted in the papers, so that people may have every opportunity of reading them, and be distributed wherever they can. Solicit the aid of the railroad companies, and get their permission to post your cards in their depots. Show them they are liable as common carriers in violating the game laws. When you suspect persons of shipping game out of season, use your search warrant freely, and go through the depots, freight cars, hoats, or any other place that you have good reason to suppose harbors game out of season. Of course this must be done in the proper legal way, and with good reason (which is supported by affidavit), that you have cause to suspect the person of violating the laws. The railroad companies are always ready to help you, and you can get 1 them to issue an order to their employes that any one know-

ingly violating the laws in shipping or receiving game out of season will be dismissed from their employ.

Let it also be known that upon any person giving any information of any violation of the law by letter to the secretary of the society that the case will be prosecuted without dragging in the informant in any way. It will soon be found that a vast amount of information will be obtained which otherwise never would be heard of. In this way your detective can go quietly to the spot where the violation has been committed and work up the case, and the society as a body becomes the prosecutor and the salaricio officer the informer. I say salaried, because if he is so it can make but little difference to him whether the reward is paid or not, and it puts him before the community in a better position than a mere informer trying to convict a person for a reward.

By thus adhering strictly to the law, and using good judgment when a case should or should not be prosecuted, it will not be long before the violations of the law will be few and far between, and the countrymen generally respect you for your good efforts.

Your good efforts.

I contend that no society has done more for the protection I contend that no society has done more for the protection and propagation of game, and certainly no society ever had in the beginning greater enemies than the West Jersey Game Protective Society. But by persistently adhering to its rights and enforcing the law without fear or favor, I think I can truly say that it now stands for integrity and ability beyond reproach

truly say that it now stands for integrity and ability beyond reproach.

There are still some grumblers who find they cannot shoot out of season, who stick to the old stale argument that the law is unconstitutional. As I wrote a long article in Norember of 1875, which your paper kindly printed, I do not intend going over the ground again, but should any of your readers wish to inform themselves they can either write to you for the information or read the case of McClerg vs. The State of Virginia, 4 Otto Reports, where the subject is discussed by the Supreme Court of the United States. I would also recommend your correspondent, Mr. J. H. Griffith, to read the above case and the decisions printed in your paper in 1875 and 1876, and given by the New York courts, upon the right of State passing game laws, and the property of the game at large belonging to the State. The prosecutions by the society have been too numerous to mention, but they have always been successful, except in a few cases.

I \*eleve we now have, since the law is understood by the farmers, their support. The arrests for trapping and suaring have been numerous, but in every case successful. The trapping is now in a great measure stopped, and I hope in next week to make some four arrests which will completely break it up in that particular section of contry.

If the officer employed will make a stay of a week in that particular section of the country where the trapping is and make all his arrest at once he would completely break up the practice there. To attempt to arrest the game sellers for handling trapped game is impossible, as it can never be proved that the birds were trapped except by picking them, which of course no game seller will allow. Let all sportsen adhere strictly to the law. Let them inform secretaries of the different clubs of the persons who are violating the laws and their residences, and if they will not appear on the witness stand themselves let the secretary send his officer to the place and work up the case.

A farmer who vio There are still some grumblers who find they cannot shoot

out permission, and it will not be long order they can wherever they please, unless he be a very ugly character. I have written this article with the hope that it may be some benefit to gentlemen who propose enforcing the glaws, and I can only add my hope that they will be as ecessful as we have been. the gan A MEMBER.

WE want the name of every sportsman in New York City and in other cities, who thinks that he can afford to pay the farmer's boy something for preserving the quail for him to shoot.

#### ROUGHING IT AMONG THE DUCKS.

#### BY A VETERAN.

BEFORE the terrible storm was well cleared away, my BEFORE the terrible storm was well cleared away, my brother and I started Thursday evening. That night cleared away cold, with a gale from the northwest that blew great guns all that night and the next day. When we got up in the morning we found the ice had formed rapidly in the pond and seemed to make faster after sunrise, spite of the high wind. One of our company thought no boat could live in the pond, and said no one but an Esquimaux would attempt to launch in it. But my brother and I saw about 200 fowl in the middle and made up our minds to try it. The thermometer was nearly zero, and after getting our little skills clear of the ice, a task of about half an hour, we found every wave put a coat of ice over boat and rower; still we started for those ducks, and meant to have a "whack" at them any way. Heading our skills off before the wind we went down upon them like arrows, about a good gun shot apart.

Sinot apart.

Coming near enough we gave them two barrels each in the water and as they rose, loading quickly, gave them right and left as they passed. Ficked up dead birds from the first volley, seventeen. This was better than we expected, for the wind tossed us so our aims we expected to be very unsteady. Then too, the wind would not let us stop where the birds rose from, but away we went to the leeward side of the pond, where we were soon in difficulties among the cakes of ice rapidly solidfying. Besides the birds we picked up others came down among the little cakes to the edge of the pack ice, and the pack made around them so fast we could not reach them, as our skiffs could not penetrate it. Nor was it strong enough to bear us. Then came a fight of one-balf or three-cuarters of an hour getting clear of this the pack ice, and the pack made around them so fast we could not reach them, as our skiffs could not penetrate it. Nor was it strong enough to bear us. Then came a fight of one-half or three-quarters of an hour getting clear of this pack and back to the windward side of the pond. Our boats and our bodies were sheets of ice, and, as I found gloves in the way and went bare-handed, my hands were nearly frozen. After a little rest we paddled to a point to windward of the ducks for a second rally. Although many went out of the pond into the ocean and did not come back, others did come, for it was so rough outside. Again we came down upon the birds. This time they did not wait for sign and we had to shoot them fiving. Result of second rally, nlosteen ducks. Again we worked up to the windward shore. This time I found so much fee in my boat and on her that she had to be pulled out and cleared of it. Also, toward

the latter end of the rally, there was so much ice on my coat—fully half an inch I should think—I could hardly get my gun to my shoulder, and when I did the but t slipped up or down on the ice of my coat, so as to be very unsteady. The ice on my mustache, too, was very unconfortable, and on my cyclashes almost closing my eyes. But I had to have one more crack at them. So my friends broke the ice over the buttons of my coat until we got that clear. Then I was going to try them in my shirt-sleeves, but my friends insisted upon my domning an oilskin coat, so with that we started a lithird time.

My brother got two. I snapped six times at capital shots, but the ice was so thick over the firing pins of my gun that the cartridges would not explode. Opening the gun to fix them, I could not get it shut. Then, coming into the drift ice, I came so near not getting clear this time that I thought when a man's gnn was frozen up he had better not try to shoot any more. After a desperate effort we get ashore again and then we quit. Result of the three rallies, eighteen broadbills, a bluebill and a widgeon for my brother, eighteen broadbills for me. You see we shoot very nearly alike, and there is much generous rivalry between us. My brother then took the guns in the house and cleaned them. I dismounted the hoats, got them, the cars, the game, etc., safely housed and packed, and then we changed our clothes, had a capital dinner, and home we came. I never had better fun or more excitement in my life.

Our heavily-laden wagon broke a spring coming home, so My brother got two. I snapped six times at capital shots

Our heavily-laden wagon broke a spring coming home Our heavily-laden wagon broke a spring coming home, so we came but slowly, otherwise no calamity befel us. I find myself suffering ever since with my hands, because of my indiscretion in leaving off gloves. The ends of my fingers are numb yet, five days after the event; the skin has broken in three places on my left thumb, and the whole top of my right little finger has risen in a water bilster. But I would go through the same experience again for the sake of another such day. The exhibitation was such, as I fought the waves, I found 'myself shouting with exultation at every stroke, and no one could hear me for the roar of the wind. I was a boy again, and know I shall be a better business man for the year to come, until I can get another such day of recreation.

Next day a boy went out on the ice which had formed, got eight frozen in, dead as we left them, and I think the sanc number of cripples he shot out of an air-hole. Considering the weather our score was good.

sone number of cripples he shot out of an air-hole. Considering the weather our score was good.

It was our last chance; the fowl are all'gone. If it had not been for a misunderstanding we should have been there Wednesday—my friend was there we found afterward, the day appointed. There were more than 1,000 birds there that day. It was an flat, calm and lowering and I believe we could have bagged 150 fowl. It was a pity, for the larger part went out before the storm of Thursday, but we had great sport as it was, and better than all, I shot as I used to, a thing I have failed to do heretofore this fall. I used to discount my brother. Up to this last excursion he has beaten me shamefully this fall. This day the quality of the shooting was a little in my favor again considering the miss-frees of my gun. Once or twice I took a bird from one flock passing to right with one barrel; one from a flock passing to fift with the other. As these birds fly faster than any swallow or quali it is not an easy feat.

Our boats are especially constructed for this purpose. My

with one barrel; one from a flock passing to left with the other. As these birds by faster than any swallow or qualitis not an easy feat.

Our boats are especially constructed for this purpose. My brother built them. His is ten feet long, three foct wide and one foot deep. Mine his feet nine inchest long, two feet nine inches wite and ten inchest deep, otherwise they are just alike. By this arrangement of sizes hissists in the wagon body, mine fits inside his. We put a seat across mine, load in our equipment, hitch up the horse, and away we go to any pond where we heart there are birds. The boats weigh about sixty pounds each, and another gentleman who sometimes goes with us has one just large enough to hold my brother's so when he goes along his boat sits in the wagon and ours are placed in his. I will describe my boat, which description will answer for all, though the internal arrangement of each is made to suit the owner and user:

The sides being sprung—they are made of \$in. white pine—and secured to the stem and stern board, and the braces in place, the bottom was put on. The first covering was of \$in. cedar, carefully put on and copper tacked to the braces. This was well conted with lead paint, and while wet, heavy, close woven drilling was stretched over it. The drilling was then well painted on the outside Before this was quite dry, another was put on, filling all the spaces in the threads of the cloth with paint. Over this painted drilling was then put another was put on, filling all the spaces in the threads of the cloth with paint. Over this painted drilling was then put another bottom of one-quarter inch cedar, and the bottom, that, after four year's service, never leaks a drop. The sportsman sits in the bottom, and so is very low in the water. The boat is fitted with patent bow facing oars, so one can watch his game as he rows up to it; and with his cocked gun lying between his legs, the muzzle elevated by lying over a bulkhead, B, so arranged that he can paddle almost up to his game, approaching t loaded cartriages, which can be shoved under the thwart if it is very rough, or there is rain. The builkhead serves a double purpose of keeping the muzzle of the gan elevated, and making a space in the bow of the boat to throw the game to keep them out of the way and keep the boat clean. It is movable, so as to slip out in packing the boats. My brother has note in his, his gim lies in the bottom, and clean. It is movaule, so as to ship off in packing the loads. My brother has none in his, his gim lies in the bottom, and last year an accidental discharge sent 1\(\frac{1}{2}\) oz. No. 2 shot through the bow of his boat, and he came near having a swim ashore. As it is always coid when we go for broadbills it is very uncomfortable taking them out of the icy water with the hands after they are shot. So beside the right leg of the gunner lies a short-handled landing-net to lift them. At the time of our last frolic the water froze on our nets each time we dipped them, so that they become solid ice, were so heavy we could not use them, and after the first rally, bare hands had to take their place. That day I used a Remington 12-bore 9\(\frac{1}{2}\)lb. gun, loaded four drams powder, and an ounce of No. six shot. It is a cheap gun (\$50 new), but is the best shooting, best balanced gun I ever shot, with the beastliest, most aggravating breech-opening mechanism. There are so many pieces it is constantly out of order, and so much of it on the outside, the old thing froze up soild. That pair of barrels on a good stock would beat the world. I think there is nothing further to say, except that I have since been told that the dead birds and crippies picked up the day after our battle were twenty-two instead of fifteen, making the total score sixty.

Seacoast of Uonn., New, 1879.

#### GAME AND FISH CHAT.

FEW items of Quebec news I can give you of the past A fell. Most of our game has for some unexplained reason been unusually scarce; there have been but few snipe or cock, and bags have been small in consequence, and in the markets high priced ruffed grouse are scarce; but this state of things is easily accounted for, they are snared almost to extinction under the vile law that allows of hare snaring,

reason been unusually scarce; there have been but few suipe or cock, and bags have been small in consequence, and in the markets high priced ruffed grouse are scarce; but this state of things is easily accounted for, they are snared almost to extinction under the vile law that allows of hare snaring, and this state of things here is no remedy for unless it is the repeal of the law. But few large ducks have come in, and most of the kinds in market are green and blue winged teal, buffle heads and blue bills. Geese have not been so scarce for many years, and but few have been shot. Hares, I am happy to see, are getting scarce, and if there were none at all our ruffed grouse would benefit by the loss. We have had a mild and pleasant season, no snow of any account until within the last week. Some vessels in the harbor loading yet. Caribou hunting will very soon be in order; it only requires about eighteen inches of good snow with a good hard frest, and everything is ready. Everything promises well for the sport. So much for sporting notes.

I see in a copy of the Forest axp Etreax of Nov. 11 that Dr. Sterling in an article on the cattles says: "The extreme morthern range of the cattlesh is, you may be certain, Lake Eric." In this I beg most politely to differ with him. During the summer of this year (1880) while on a trip to the Northwest I caught over twenty of these fish, varying from ten to twenty-five pounds, in the mouth of a small river running into the Red River of the North, near the village of Hallock, in Minnesota; while in Lake Winnipeg they are one of the unost common fish in those waters. They seem to be of two varieties, one a black, unpleasant looking fish with a body small in proportion to the size of the lead, the other longer, better shaped, with smaller head and mouth, and yellow in color. I am not sufficiently versed in fish lore to know if they really are different varieties, or whether they are only male and female of the same kind. One thing I do know, that as a table fish they are second to n

#### A PROPOSED CLUB.

NEW YORK, Nov. 27.

Editor Forest and Stream Editor Forest and Stream: The HAVE just read your "Proposition to Gentlemen Sportsmen" with much interest, and I must confess to considerable satisfaction, although of a rather inverse order, besiderable satisfaction, although of a rather inverse order, because several years ago I foresaw what is now patent to every one, and tried to inaugurate an experiment, which, had it met the success it warranted and been generally adopted, would, I think, have done much toward saving the game of the East, and would certainly have put the farmers and "genthenen sportsmen" on a pleasanter footing.

Some years since I saw that unless a man fond of rod and

tlemen sportsmen" on a pleasanter footing.

Some years since I saw that unless a man fond of rod and gun had a full purse and, as is more unfrequently the case, abundant time at his disposal, his chances for having anything like a reasonable return for his outlay of time and money in pursuit of his favorite pastine were of the "slimest" order, and having found from a little experience of a rather expensive kind that colossal preserves after the nature of the Blooming Grove Park Association were impracticable. I conceived the idea of forming a club of "gentlemen sportsmen," who, like myself, were so situated that they could not leave their business for a month at a time, and who would be willing to subscribe toward hiring from the farmers the shooting privilege over their farms.

It seemed to me entirely possible to form a club of twenty gentlemen, to subscribe to gult to be able to obtain the shooting over enough land to secure a couple of dozen birds in a day's shoot if properly stocked and preserved, and this within easy access of home. They would in the first place have to stock and post the land, the farmers to see that no trapping or shooting was done over it. The farmers would certainly make more out of the rent paid them than they could get for a few illegally trapped birds, and if, as is likely would be the case, the child would beare the case the case the count was more associated and preserved and this would beare were the cell would be not were the could get for a few illegally trapped birds, and if, as is likely would be the

make more out of the rent paid them than they could get for a few illegally trapped birds, and if, as is likely would be the case, the club would board with them when down, they ought to do decidedly better, besides being free from the annoyance of having their land overrun by Tom, Dick and Harry. Long Island, for instance, combining as it does what were once good trout streams, facilities for occan and bay fishing, good woodcock, quail and grouse cover and points for ducks and bay birds, could be made available to New York sportsmen. !

thought, and I was, and still am, willing to try the experi-

ment.

So I wrote to Forest and Strema and detailed my plan, which you kindly published and gave a little "puff," in response to which I received quite a number of letters from gentlemen who would be perfectly willing to contribute toward my project, thought it perfectly willing to contribute toward my project, thought it perfectly feasible and were anxious that I should at once search for, select and stock the grounds, make all arrangements and have them ready to shoot over when they saw fit. Others assured me that my iden was old and had been tried numberless times; that the farmers would trap and sell the birds; that they would take your money and make no effort to preserve; and so, as no one seemed willing to affort me any practical assistance, and as I am not enough of a philanthropist to do all the work myself, I concluded to let the matter drop for the time being, but fully intending to "put it through" some time, even if I had to "go it alone," for I do not feel that I can afford to waste one of my two weeks' vacation in transit to and from some "happy hunting-grounds."

Now, as you have re-opened the subject and invited correspondence, and as I think my plan more feasible than the one you suggest, I will reiterate what I said before—that I would be glad to be one of such a club and would do all in my power in make it a success, and should any others take sufficient interest in the matter to wish to investigate it further, I would be happy to bear from them, either through the columns of the Fourser Ann Septeknow the weldersing my reasonable. So I wrote to Forest and Stream and detailed my plan,

be happy to hear from them, either through the columns the Forber AND STREAM or by addressing me personally this office; and more particularly, if among them there shot be any who have seen the experiment tried, they will come a favor by giving the result of their observation to SAUK.

#### GROUSE, QUAIL AND DEER.

Wellesulle, N. Y. Nov. 22.

The my letter of November 81 stated that for several years back i had not seen a partridge "tree" upon being flushed. The next day I was hunting with my pointer and flushed a bird that flew up into a maple tree; rested there a moment and then left for parts unknown. I imagined the bird said, just as he started off, "fall, tut, tut! Don't tell 'Bell Muzzle' again that grouse don't tree in your country." On the same day I bagged a gray-tailed partridge—the only one this year—whose weight was 23 ounces.

The altitude of our village is upward of 1,500 feet above the lavel of the sea, and the hills around us are from 1,700 to 2,000 feet, so cold weather sets in early. Our winters are so severe that quail do not thrive here. Not one of our residents in a hundred ever saw one of these beautiful hirds shot. No quail have been killed this year. I knew of a covey within a couple of inlies of our village a short time before the open season. Since the first of November our sportsmen have called at their old quarters, and each time the answer has been, "Not at home." Onery: Do the quail know when the open season begins? If they do they must consult the New York statutes oftener than most of us.

One of our citizens has ordered sent from Nevada half a dozen pairs of California quail, with the intention of liberating them and ascertaining if they will thrive here. He tells me that he has seen them on the mountains in California and Nevada, where it must be colder than our country, and that these qualis breed like ruffeed grouse. If so, I do not know

Nevada, where it must be colder than our country, and that these quails breed like ruffed grouse. If so, I do not know

Nevada, where it must be colder than our country, and that these qualis breed like ruffed grouse. If so, I do not know why they should not do well here.

When I last wrote you I anticipated having fine sport hunting deer in Potter County. Penn., but neuralgia has struck me in the back with such force that I can hardly walk. I hope some of your readers will tell us through your columns what success they met with in Potter County. F. -----

The Waste of Waterrow,—City, Nov. 24.—In your last number you spoke of the great waste of food flah that ran unappreciated and consequently not made use of. Another class of provender that the poor could afford to buy and that might be furnished in great abundance in our markets is wasted in an almost wicked manner. I refer to the sea ducks. All along the Connecticut coast the duck-shooters kill immense quantities of ducks from the middle of September until the first of May. Some of these ducks are eaten, others are simply picked for their feathers, and a large proportion are thrown away without any further use being made of them than to furnish the sport of shooting. A friend of mine visting Braniord last week counted over two hundred dead ducks strewn along the beach that had been killed by the swell shooters who did not care to use the birds because they were of an inferior sort; and I myself have seen a man sit in a boat "in line" and shoot for hours, never troubling himself to pick up a single duck. These decks—coots, as they are called—are very much better eating than a large part of the food that the poor of this city are in the habit of using, although of course they are somewhat inferior, still no one could question the fact that they are worthy of being recknond as a valuable food supply. Any man who will go to Milford, Merwin's Poliat, Branford and a dozen other places on the Connecticut coast can buy barrels of these ducks at the rate of ten cents or less per pair of ducks, and it seems as though it would pay some one to try the experiment, retailing the brits in this city at a lowprice, but making enough to pay for expressage and time with a moderate profit. At Branford, the place I am most familiar with, the gunners shoot every day that the weather will permit, and often kill hundreds of ducks in a day, almost all of which might be bought all the way from ten cents per pair down to nothing.

Heavy Bieds—Franklin, N. F., Nov. 23.—I notice in last issue of Forest and Stueam Chas. F. Kent reports the killing of ruffed grouse weighing 30 oz. each; also one weighing 284 oz. Also, notice "Ruffed Grouse," of Ashield, Mass., having killed one weighing 11 b. 13 oz. Now, as I am the one that asked for the reports upon the weight of this noble game bird, upon which I have had such an extended experience, and the heaviest one I ever killed weighing 1 b. 12 oz., or 13 lbs., the ruff of which was sent to the office of the Rod and the Rod and of the Rod and of the Rod and the Rod and with the same amount of pride as I have been enabled to. Now, having lost my ruffed grouse plume, I shall hug still tighter my heaviest woodcock plume of 11½ oz. As none have reported, I believe, to have excelled it, and as that old bey in New Jersey is dead, I hope to be able to wear it still longer.

M. P. Mokoon.

PLYMOUTH COUNTY, Mass.—Game scarce up to Friday night, Nov. 19. At Silver Lake, a sheet of water three miles long and about a mile wide, there are seven stands, each ono having from ten to twenty-five live geose decoys. They have made the following scores: Geose –11, 7, 6, 6, 4, 3, 0; total, 34. No ducks. At some of the small ponds, where black ducks have always been plenty in former years, the score is very small, viaz: ducks, 112; Teal, 41. November 11 and 12 there was a good flight, but they did not stop. Never before have there been so few seen in this section. The small ponds are now freezing over and ducking for the season is about closed. Quail about Duxbury, Kingston and Plymouth scarce. Partridges few and far between, and not more than half grown. In Marshfield I hear from my sporting friends that quail are plenty. In Plymouth Woods, as far down as Sandwick and Falmouth, there have been quite a number of deer. Killed one, a fine buck, weighing 250 pounds—all the others small. PLYMOUTH COUNTY, MASS .- Game scarce up to Friday

Massachusetts—Charlton, Nov. 21.—I wish to express my sentiments on game in Massachusetts. Ever since I was old enough to carry a gun I have handled one, but since I have have hunted I never saw game birds so scarce as now. There are plenty of rabbits, but those I do not hunt. I for one wish that there could be a law passed and enforced to prevent any shooting for the next three years, excepting birds of prey, foxes, skunks, etc., and would have a heavy fine on partridge, woodcock, quali, duck and all game birds, also on rabbits and squirrels. I think that then birds would be plenty and every one would enjoy a day's shooting. I would like to hear through the columns of your valuable paper from others interested in sporting in Massachusetts.

Pennsylvania—Brickerville, Pa., Nov. 22.—This country PENSSYLVANIA—Brickerville, Pa., Nov. 22.—This country is full of ruffed grouse and considerable quail or partridge, while the common red rabbit is as plenty as bad weeds. Quite a number of Philadelphia sportsmen frequent this section. Shooting matches are of frequent occurrence. Foxes are as numerous here as in any part of the State, and within a few miles of here are some of the best packs of hounds and old fox hunters in Pennsylvania. Opossum and "coons" are getting pretty well hunted out, though one party I know of has caught innety-five skins this past winter, seventy-nine and eighty with one good night dog.

and eighty with one good night dog.

CORTLAND, N. Y., Nov. 21.—I was somewhat interested in the statement of Mr. Kent published in last issue of Forrst and Streement of Mr. Kent published in last issue of Forrst and Streement in regard to weight of ruffed grouse. I once shot what I supposed to bean extraordinarily large bird that weighed, after carrying in the game bag all day, twenty-eight ounces. I would like to know if the thirty ounce bird he mentions was a hen or cock partridge. I understand from observation that the hen attains the largest size. In connection with this I would like to speak of a tame partridge once owned by a friend of mine, a capitain of a schooner on Cayuga Lake. The bird was brought down and found to have a broken wing. Mr. C., wishing to try the experiment 'of taming a partridge carried him home alive. By care and attention the bird grew so tame that after a time he would remain upon Mr. C.'s shoulder while he played the violin. Until the bird died he accompanied Mr. C. on his trips up and down the lake. nd down the lake.

and down the bake.

Notes proof Virgitia—Noc. 22.—Game of all sorts is in fair quantity. The partridge, or quall—our favorite for sport—is in fine condition, but I am sorry to say that the game law was largely violated, and the boom of the pot-hunter's muzzle-loader was heard far and wide in the land before the close season expired. Wild turkeys and deer are quite abundant in some sections, and the "old hares," though apparently exterminated every winter, are as plentiful as ever. November is our best month for catching large pond bass (Mycropterus pullidas), here usually called "chib," The cool nights drive them from the brush and logs near store out into the open, deep water, where they afford good sport. But the early "cold snap" now upon us has been too severe, and prevented them from biting at all. They do not exactly "his bernate," but in cold weather they lie almost dormant in the deepers water, and will not move three fect for the most entideepest water, and will not move three feet for the most enticing bait. They will then only take small minnows, as if conscious of a slow digestion. But after the water has reached the ice point they make a dish almost as delicate as the trout.

West Virginia—Berkeley Springs, Nov. 27.—A large flock of wild geese were seen on the Potoniae about three miles from here yesterday. A fine young bear weighing 145 lbs. was also brought into town a few days ago, having been killed on Cacapon Mountain. On Thanksgiving Day E. Gray Pendleton, of this place, brought in a wild Turkey which weighed 28 lbs., being the largest I ever saw. I have two fine fawns that are so tame they will cat out of our hands, and it is all we can do to keep them out of the house, but as we are going to the city very soon I will be obliged to sell them. I will take \$25 for the two, as I do not want them parted If you hear of any one that wants them I shall be much obliged if you will let me know. you hear of any one that wa obliged if you will let me know.

Florida-St. Augustine, Noc. 23.-FIGHDA—St. Augustine, Noc. 23.—Our sportsmen have but little opportunity for hunting or fishing nowadays. We have often remarked, when riding over the bridge over the Sebastian River, the moley crowd assembled there fishing. Soldiers, white men, colored men ladies, negro women and children; the two latter classes generally in an assortment of ragged clothes, and they haul out the fish too. Mr. de faureal, an old French gentleman who is a resident here and a great sportsman, countries that the search of the product of the constraint of the constra tleman who is a resident here and a great sportsman, complains that this year the quail are all trapped and he can shoot none. He said that one day returning from a long hunt as he was crossing the Sobastian Bridge a lady friend asked him "What success?" "None at all," "Then I have done better than you, for while I have been standing here fishing I have bought fourteen live quail for fifty cents." Collins.

MONTREAL, Canada, Nov. 20.—Mr. C. C. Beatty, of H. R. M. Postal Service, and the writer have spent the past two weeks duck shooting in the marshes near Missisquoi Bay on Lake Champhain, where we have had good sport and made fair bags of whistlers, butter-balls, black ducks, red. heads, blue-bills, etc. The cold weather and the snow that has fallen during the past few days been derived to be a super-ball way to be a super-ball with the later ways a basic ways. during the past few days have driven the last named ducks away to warmer regions, but large flocks of Canada geese have taken their place, and will give good sport for some time yet. We are enjoying fine sleighting here in this northern metropolis. The snow is fully twelve or fifteen inches STANSTRAD.

THE GULL ISLAND CLUB. - Several of the members of the recently formed Gull Island Club are now at their club house, and others are to follow shortly. Messrs. R. C. Johnson, Al. Heritage, Thos. Hall, A. E. Nash and Ben Payne went down last Saturday with a luge store of ammunition and provisions. Next Saturday Messrs. Geo. B. Eaton, Frank Harrison, J. B. Burdette and R. Heinich join the party; and with Sheriff J. J. Toffey and Messrs. E. Z. Wright and Frank Thompson, the list will be complete. We know that the score of birds brought to bag will be a large one; but without anticipating, we wait for the report promised by ' Jacobstaff '

"Jacobstan."

Deer in Sullivan County—Eldred, N. Y., Nov. 22.—
Samuel Hutts killed six deer in the last ten days. Daniel Hallock killed one last Monday, and Tucsday he killed one other, and a hunter by the name of Runels, hunting with D. Hallock, killed a large buck Tucsday. Hallock's two deer was the state of the same of the sa Hallock killed one last Monday, and Tuesday he killed another, and a bunter by the name of Runels, hunting with D. Hallock, killed a large buck Tuesday. Hallock's two deer fetched him in market \$35 cash. Deer are unusually plenty. The writer was hunting but not in luck; had two shots at different deer, but they were too far off for buckshot. A rifle is best on open ground, and the deer are about all in the burnt districts where the brush is thin.

Eldred, Sullivan County, N. Y.—I have taken great pleasure in reading your Dittmar Powder exposure, as well as everything else in the paper. I can kill three partridges out of every five over my setter. David Halleck killed thirteen straight over his on the 10th and 11th of November. Partridges here weigh from nineteen to twenty-four ounces.

Colorado Mars—Denver, Col., Nov. 18.—I take pleasure in mailing to-day copies of the new maps just prepared for the Denver and Rio Graude Railway. They are typographically correct and show the principal points of interest to tourists and sportsmen, and I hope will aid you in your labors, which prove so sincere a source of delight to us sportmen. Game is exceedingly abundant throughout the entire State, and particularly through the San Luis Park. C. M. H.

An Amateur Gun-Maker.—Many of our Pennsylvania readers will sympathize with Prof. W. B. Hall, of Lancaster, Pa., the loss of whose valuable gun appeared in our columns last week. Professor Hall is perhaps the most skillful amahas wees. Floriesof Hari is perhaps the most skinful affiliate for grammaker in this country, and his work is wonderfully good. His engraving, done by Mr. Stephen Summerville, of Philadelphia, is very beautiful, and the completed gun worthy of the very best workman. We hope that Professor Hall may recover his gun.

A FLORIDA PARTY—*Fitchburg, Mass.*, Nos. 22.—We have organized the past summer, with the aid of your columns, and from among your readers in different parts of the country, a Florida party for the coming winter. Our route is down the Kissimmee River to Okeechobee, then to the southwest coast via Caloosahatchie River. If in the course of our trip we should meet with anything of interest to your readers we will communicate it to you.

Loso Island Port Jefferson, Nov. 26.—Quail are plenty. Chas. M. Ivines killed twelve quail and two rabbits yesterday. Ducks plenty; on Wednesday they were here by the acre. Men go off and get twenty to thirty ducks. Ducks shot from blinds with decoys. Bay is sixty rods from P. J. House. In one corner of the bay is marsh, where black ducks and geese are found. The Marrows are always open, and in severe weather ducks are plenty; and in season, black duck, shelldrakes, whistlers, coots and old squaws, the latter too very plenty.

Deer Slauguerer—Canton, St. Lawrence County, N. Y., Nov. 26.—I am told that Richard Allen and a party of gentlemen (?) from Redwood, Jefferson County, have during the past month killed between twenty and thirty deer in the south part of this county with dogs. Here is, or ought to be, work for the State Association. Hounding deer must be stopped, or good-bye deer in this part of the world. X.

THE GAMEIN market is the same as last week with the addition of woodcock from Morristown, N. J., and deer, quail and ruffed grouse from Tennesee and Kansas.

Iowx—Washington.—Weather cold and game scarce with the exception of rabbits. W. J. G.

#### SHOOTING MATCHES.

#### NEW YORK GEN CLUB TOURNAMENT

THE tournament held under the auspices of the New York Gun Club, on Thursday, Friday and Saturday, November 25, 26 and 27, in which also members of the Long Branch, Maryland, Narragansett, Orange. Philadelphia, Riverton, Staten Islandjand New York gun elubs and the Westminster Kennel Club competed, was opened on Thursday with the visitors' match; entrance fee, \$10:10 birds, handicap rise, use of both barrels; 21 entries:

Mr. Bailey's ninth bird dropped dead just out of bounds. Mr Stroud, who is a member of the Riverton Club of Philadelphia wan the first prize, a Relly double Express rille in case, with im-plements complete, valued at \$350. The ties on nine for second prize scored as follows:

Dunlevy... 27 yards... 1 1 0-2 Edmunds... 29 yards... 1 ° w Col Butler.. 29 ... 0 w Baldwin ... 25 ... 0 w Arnold... 29 ... 1 1 1-3

Mr. Arnold, who is also a member of the Riverton Club, won the good wize, \$100.

Ties on eight.

Arthur, ...25 yards, ...0 w Martin, ...26 yards, ...1 ! ! t t
Tr. vis ...75 ...1 1 1 0 -3 Godfrey, ...29 ...1 ! 0 w

Col. Armstrong, of the New York Club, won third prize, \$50.
The day was almost as isid as could be imagined for shooting,

a sucweltern prevailed during the shoot, and, as the birds were all of light color, it made it almost impossible to see them. After the above match was finished the gentlemen present shot optional

Fri lay was cold and clear, but the sun on the snow made a glare which was very trying to the eyes. The first event for the day was the match for the Barron Cup, open to members of the New York Gun Cub only. The cup was presented to the club by Dr. John C. Barron, to be contested for under the following conditions Entrance fee, \$1: ten birds, handicap rise, to be wo by the same person before becoming his property. The preceding winners are as follows: March 20, G. B. Greer: April 3, R. Knowles: April 17, H. Reblin: May 1, Col. Armstrong (second time); May 22, J. Hoey. There were thirteen entries for this match Friday. The scores are given below:

thisting all the first prizes except in the glass ball match. The birds were furnished by the veteran, Milles Johnson, and a better lot are seldom seen. Mr. Arnold's shooting was excellent, as in the three days he only missed ten birds. The tournament was a perfact success, and the gentlemen parted expressing themselves well satisfied with the way the arrangements had been carried out.

Foundant Gun Club—Brooklyn Driving Park, Nov. 25.—The second practice shoot, under New York State rules, for three valuable prizes, donated by subscription from members of this club—object, to add to the sinking fund to add in defraying expenses for the next State tournament, which will be beld at Ceney

Island, on or about June, 1891—was held at the club grounds on Thanksgiving Day. The shooting was at seven birds each, and members handicapped in three clases, 1st, 2d and 3d; the prizes equal in value, and members placed in their respective class according to their shooting record. The club house was warm and the snow cleaned from the plank walk to the scoring points, and the show ceased from the plant wais to the scoring points, and every convenience well arranged for the confort of the shooters and spectators. The birds, provided by Mr. Harry Miller, were good flyers, and the snow on the ground made shooting difficult, but good work was done for all that. There were 1,000 birds can, our good work was done or an inst. There were flow brus on the ground, and shooting was kept upuntil dark, during which time 38 men shot 411 birds, notwithstanding a blinding snow storm in the afternoon, which did not at all disconcert the members. The match was not shot off, and will be resumed on the first Wednesday in December, when a number of new entries will be made. As far as it has gone the chances for prizes stand as follows, viz.: 1st class-Dr. Talbot, seven straight in each of four entries: Mr. C. W. Wingert, seven straight on one entry; Mr. Baylis, also seven on one entry, and Mr. Benson, seven on same, 2d class—Mr. Geo. Chappell had five entries, and a clean score was made on each; Mr. Cherry had two entries and made his seven on each; Mr. Schuorer made his seven on one entry. 3d class-Mr. Abel Crook was left alone with seven straight. The total results will be given after the ties are shot off. The club had a jolly day of it with plenty to eat, etc., and adjourned to the club rooms in

Essex Gus Club-Newark, N. J., Nov. 23, -Inclosed please The state of the few members who were not in the field at our last competition. We usually turn out from eighteen to twenty-five men at our shoots, but many of them are off worrying the quail and grouse. Regular match, 25 yards, Nov. 17:

THE EASTERN FIELD TRIALS.

SPECIALS TO FOREST AND STREAM

NEW SUFFOLK, L. I., Nov. 29, 1880.

THE second annual meeting of the Eastern Field Trials Club was commenced to-day under the most favorable circumstances. Following closely on the heels of the two unfortunate meetings at Lancaster, Penn., and Vincennes, Ind., it was with many misgivings that the philo-kuons started for this place. The stormy weather that spread started for this place. throughout the country last week no doubt had the effect of deterring many from putring in an appearance, but those that were plucky enough to bring their dogs here will find that the grounds on Robins' Island are wonderfully well fitted for the purpose of running dogs, and that there are enough native and imported birds on the range to enable the speedy running off of the heats.

native and imported birds on the range to enable the speedy running off of the heats.

An advance guard of many of the handlers of crack dogs came this way several days ago. This was a wise move on their part, for it is necessary to acclimate stock in this section if good work is to be expected from it. We know this to be so from personal experience, often having moved our dogs during the summer months from the mountainous region of New York State to the clifts of Montauk. The strong salt air and change of water does certainly affect the secretary of the control of the control of the clifts of Montauk. The strong salt air and change of water does certainly affect the secretary of the control of the con

Summary of The Drawing or The Braces.

Benkard's Hebe II. against Gregory's Belle.

Benkard's Hebs II. against Gregory's Belle. Raymond's Rover against Tallman's Jennie II. Hecksher's Queen a bye.

Monday, November 29, First Day.

As agreed upon the start was made punctually at half-past eight o'clock from the hotel, and as the rain had stopped falleight o'clock from the hotel, and as the rain had stopped fall-ing carly in the previous evening, and the clouds had opened a little the party that boarded the little steam yacht which had been chartered to convey those interested in the trials to Robin's Island threw away dull care, and seemed as jolly a lot as ever niet together. Sharply did the boat's whistle pipe away to hurry down the laggards to the landing place, and soon the ropes were cast oil and the little propeller went steaming toward the Mecca for Eastern Field Trial Meetings. Passing through a small fleet of scallop-boats and occasionally moving small beds of "coots" and "old wives" the boat reached the island shortly after nine o'clock after a mile and a half sail. half sail.

Robin's Island, where the running of the trials had been decided to be held, is the property of Mr. Ira B. Tuttle, of New Suffolk, L. I. It divides Great Peconic Bay from the little Peconic Bay and lies in the middle of the entrance to the former. The island lies nearly north by west and south by east and is a mile and three-quarters long, but a large portion of this lengh is due to the marrow sand spits which extend to the northward and southward from the main body of the island.

It is of moderate height and grassy, being destitute of trees, but stunted scrub oak thickets cover the crowns of the hills that rise from the centre of the island and extend to the southward. From the water the Island shows steep faces from ten to twenty feet high on all sides save to the northward. The soil is sandy as a general thing, but there are several clay plits toward the northwestern shore. The extent is said to be about 500 acres, seventy-five of which are under cultivation. The vegetation is rank, and the rolling hills to the north remind one of those near Reedy Pond on Montank Point. Sail water grass and bay-berry bushes, with a deal of nasty briars, form the principal cover and make it a hard place for youngsters to run, indeed, a strong, lusty dog finds his work cut out for him to make any kind of speed. But there is a large portion of the island to the westward where dogs can be speeded on the rolling hills and where they can

there is a large portion of the island to the westward where dogs can be speeded on the rolling hills and where they can be seen at all times.

The day opened cloudy and raw, with the wind in the S. W., but later on the wind shifted to the northward, and the sun peeped out from time to time, and when it sank behind the Shinncock Hills the sky was as clear as a bell. Having left our rubber coats and wraps at the house near the landing a move was made for the most likely find. Before reaching the fields to be drawn a large bevy of birds were discovered near the barn, and from every nook and corner the calling note of quail was borne down upon the wind. This argued well for good sport and if the trials do not terminate in a grand success it will not be caused from a scarcity of birds, or lack of a proper place for the running of the trials.

Belle against Hebe II.

Belle against Hebe II.

Belle against Hebe II.

Mr. Gregory's Belle, was handled by Mr. Elias B. Haight, and Mr. Benkard's Hebe II. by Mr. W. Tallman. The former is a beautiful all-over little bitch, the latter seemingly out of condition, with size in favor of Belle. The handlers were sent.down to the leeward side of an old stubble field grown up with rag weed. Toward one side a long strip of buckwheat ran across the field. Before this could be reached a cow that was pastured there flushed along a fence a very large bevy of over fifty strong and unusually large birds. They whirred up with such a noise as to even startle the weary Vincenmes travelers. The birds topped a knoll and pitched in the bay-berry bushes covering the tract of ground

beyond, which lay on the north shore of the island. Belle, on approaching the spot where the birds had moved from had a remaining brace of birds flushed, and she dropped to wing. In proceeding to where the birds had been marked down Belle straightened herself out and pointed hesitalingly on a small fresh roost which some birds had just left, but she was uncertain and roaded on. Hebe was sent to the fore, but the cover was too thick to work the dogs in, and some grassy patches were tried. Tallman altead of his puppy flushed a single bird, and Hebe-dropped to order. Belle then, having the wind, pointed staunchly stern well up and straightened herself out. At order she drew on grandly reminding one of the old sort, and after roading about twenty yards the bird which had been running flushed of itself. Belle was given the point, which she deserved thoroughly. Warming to her work she showed form and grand styfe. Further on a hery was moved by Tallman, and at the sound of its taking wing another bevy flushed where Belle had first taken up the trail of the single bird. All of these birds were proclaimed to be natives, as the three hundred imported birds from Illinois had been planted in another section of the island. As the second heey scattered in a narrow strip of scrub oaks near the beach, both bitches were swang around to the leeward of the patch. On the outer edge Hebe pointed and the birds were flushed and shot at by Tallman. One bird started for the main land, but tired on tand fell in the water a quarter of a mile from shore. Belle a moment later pointed, and the brace was ordered up at 9.55 a. M., after being down just half an hour. Belle was awarded the the heat, provision being made to have her bark later on. Certainly over 150 birds had been moved on the range.

Mr. Raymond's Rover was put down, a large, leggy

Rover against Jennie II.

Certainly over 150 birds had been moved on the range.

Rover against Jennie II.

Mr. Raymond's Rover was put down, a large, leggy pointer, with good head, being handled by Mr. G. H. Newton and Jennie II. by her owner, the latter being a tiny setter infant. In same part of ground the start was made. Both dogs at once pointed on separate birds, being somewhat apart. The handlers were ordered to flush and kill, but both birds escaped. Jennie dropped to order, but Rover held his point, and latter a bird was flushed in front of him. Under the circumstances this performance was worthy of high rating. The brace was then given a spin in the old stubble field, the little bitch moving quite sharply, while Rover measured off the ground with a slow rolling lope. Back to the bay-bushes the brace were sent, and in the serub-oaks Rover made a rattling point, head well up and turned to one side. He was staunchness itself, and stopped where he was until Tallman, in catand-mouse-like-manner, could convey his little bitch in sight for her to back. She was allowed this, we think mistakenly. Jennie was then put on some birds and Rover was given a chance to back her, which he failed to do. The judges then requested the handlers to establish a point to cnable Belle, winner of first heat, an opportunity to back, the brace, for the time, being relieved from penalty should flushes occur. Rover found and remained staunch on point and beyr was moved. Jennie, upon reaching place where beyr pitched, pointed excellently, and Rover, who was ascending the hill-side beyond, caught sight of her and backed grandly, thirty yards away. Belle was brought up and allowed a back. The brace was then ordered up at 11 A. M., after being down forty-five minutes. Jennie was awarded the heat, which, we think, should have gone to the pointer. He had shown a good nose, unusual stanuchness and his backing above described was first-class.

Queen updined Belle.

Oueen, who had a bye, handled by Mr. Tallman, and Belle,

Queen against Belle.

Queen against Belle.

Queen, who had a bye, handled by Mr. Tallman, and Belle, winner of first heat, handled by Mr. Haight, were put down for the second series in a thick lot of scrub-asks on the hill. Belle at once pointed, drew on and stopped, readed for some thirty yards and pinned the bevy, which had been running. The birds were flushed by handler. Belle continued to road on carefully, and when birds were reached Tallman flushed the hevy. Queen up to this time had shown no disposition to work, and at 11:20 A. M., after brace had been down ten minutes, the dogs were ordered up, Belle winning the heat. A breeze began to freshen up, and the sun coming out made it a perfect day for working dogs, and really the sport was most enjoyable. most enjoyable.

Jennie II. against Belle.

At 11:30 Jennie II. and Belle came together in the same patch of scrub-oaks. Jennie almost immediately pointed in grand form and Belle backed her. The bird was moved. In feaving the brush a grand view lay before us. We had reached that part of the island, before spoken of, as resembling Montauk. The rolling hills, cut between with gulches, spread out from our feet as we stood on the highest point of the Island. In the hazy background stretched forth the larger bay, hemmed in with blue hills and steep, sandy slopes, while above us the white clouds caused the autumnal sun to light up only a broad strip of the bay and the marsh land. The hills were drawn blank, and at 11:45 x. x. the brace was ordered up, the heat going to Belle, making her first-prize winner and leaving Jennie II. second. Belle, the winner, is the first of the Sensation strain ever run in this country.

\*\*An adjournment was now had for huncheon and the field was not taken until an hour later.\*\*

\*\*Hebo against Breece.\*\*

Hebe against Rover.

Hebe and Rover, same handlers, were put down on the rolling ground west of the house. Hebe at once warmed up and showed good style and clipping pace in the open, outrunging her large companion. The hills were drawn blank, the imported birds having moved their location. It was not until three-quarters of an hour had been consumed that a feather was seen. The beat had been consumed that a feather was seen. The beat had been directed to the south part of the island, and at last the judges flushed a strong-dying beey out of a brush heap. They scaled the scrub-oaks and pitched several hundred yards away along the high slopes on the east shore. In some longist grass there they were found and both dogs flushed. Rover made a careful point on some dry leaves and the birds were flushed by the handler. In a washed gully he tripped over a brace, which were somewhat viild, and Hebe followed suit with two flushes. The dogs were then ordered up and the heat given to Rover, after being down as hour and twenty minutes.

\*\*Rover against Queen.\*\*

Rover against Queen

The finishing heat lay between Rover and Queen, but as the latter again showed no push, Rover was awarded the third money.

The boat was soon reached, and 3:20 P. V. saw the party

The boat was soon reached, and of so P. M. saw the party back at New Suffolk.

The first day's sport passed off smoothly. The weather was fine, and the running of the youngsters fair.

In the evening a meeting was held at the New Suffolk Hotel, and President Aten, as chairman, congratulated the club so the successful termination of the first day's running. Mr.

Washington A. Coster, of Flatbush, L. I., was appointed Steward in place of Mr. Hecksher, who was obliged to return to New York. The entries then closed in the Puppy Stakes, with the nominations noted below.

PTPY STAKES.—Open to all pointers and setters under 18 months of age. Limited to 25 entries. First prize, \$100; second prize, \$30; third prize, \$25; fourth prize, \$15. Entrance fee, \$15; forfet, \$10. Closed November 29, 1880, with eight nominations, out of which there were six starters and two withdrawals. and two withdrawals.

W. Buckingham, Norwich, Conn., unnamed pointer.

Withdrawn.

SUMMARY OF THE DEAVING OF THE BRACES. Tallman's Jennie II. ogainst Livingston's Baronet. Gregory's Belle against Godeffroy's Daisy. Donner's Jersey Queen against Wenzel's Chiet. [By Telegraph.]

SECOND DAY-Nov. 30.

SR OND DAY—NOV, 30.

MATTHTUCK, LOSA I SLAND, Dec. I.

The morning broke bright and clear, and throughout the day the weather was perfection. A rather fresh breeze was blowing from the northwest, and at 8:30 the party of yesterday, increased by many new arrivals, took the little steam yacht Psyche and Started for Robins' Island.

Jennie 11. against Baronet.

day the weather was perfection. A rather fresh breeze was blowing from the northwest, and at 8:30 the party of yesterday, increased by many new arrivals, took the little steam yacht Psyche and Started for Robins' Island.

Arriving half an hour later, the first brace were east off at \$10--Jennie II., handled by her owner, and Baronet, a fine little pointer, handled by Wer owner, and Baronet, a fine little pointer, handled by William W. Titus, Circleville, L. I. A cornfield was drawn blank. Baronet showing himself to be a good ranging and fast-going puppy. On approaching the bayberry-bush field the judges finshed a beyy and Baronet dropped to wing and Jennie to order. Jennie then pinned a beyy and pointed stannelly, but as the judges were intent on following the first bevy, the point was not scored in her favor. On following the bery, the point was not scored in her favor. On following the bery, the point was not scored in her favor. On following the bery, both dogs fushed it in a hollow, but Baronet, who had been showing much greater working powers, at last found and pointed a single bird. Titus, knowing his dog, claimed a point too quickly, as we thought, for Baronet was unsteady at the time. A bird, however, was subsequently flushed, and the little pointer was allowed the point, Jennie having all this time been sticking closely to the heels of her handler. A nove was then made for the second bevy, and Jennie was penalized with a fulse point, although birds were in the briars, and Baronet refused to back. Baronet found a single bird along a path in the briars, and pointed grantly and Jennie backed. Titus flushed and falled to kili. Jennie winded and stopped cautionsty, and Baronet backed, both dogs roaded on, and Jennie got to the birds and pointed. Tallman flushed and falled to kili. Jennie winded and stopped, and Jennie failed to back, and Titus flushed a single bird, and on moving on walked into the bevy, and, shooting twice, got one down, the little pointer dropping quickly to wing. On being sent to retriev

Jersey Queen against Chief.

At 11:30 Mr. Donner's fine little setter bitch Jersey Queen, handled by John Bunnell, of Forked River, N. J., and Chief, a large, good-looking red Irish dog, by James Miller, Sloatesburg, N. Y., were put down on the hills. Queen showed superior ranging and style and Chief at first seemed rather dull, but, warning to his work, ren much better. The brace was

taken to the extreme south end of the island, where birds were moved last evening. Jersey Queen, upon passing out of the scrub oak thicket, pointed a bevy which, when flushed, was not followed. A hundred yards further on a bevy was flushed by the judges. Jersey Queen then cut her fongue hadly by a briar, but not seriously enough to prevent her running. At the extreme south end of the island Chief made an excellent point on a bevy in a bunch of briars. Jersey Queen being ordered to back practically refused, but it was allowed her. She went in and shared point. Miller flushed and killed, and Queen moved in, not dropping. Chief perterved very nicely after pointing dead. Proceeding to where hevy lit Chief pointed the bevy, and Queen being ordered up to back shared the point. Miller killed and Queen retrieved, but indifferently. The brace ordered up after being down an hour and a quarter, Chief winning the heat, Queen had shown that she was under poor control and Chief that he was a steady and level-headed dog.

An adjournment was made to the Rouse for hunchcon.

Bulle against Hatrant.

On resuning at 2:10, the second series was commenced

Thelle against Intronct.

On resuming at 2:10, the second scries was commenced with Belle and Baronet each one heat winners. Running down wind in the old grass field Baronet flushed a bird and chased. Upon being sent into the scrub oaks on the crest of a hill, Baronet pointed a bird and Belle winding it, refused to back. Working to the wind in the bay-bask field, Belle threw up her nose and drew handsomely on for a long distance, into a briar patch, where birds were seen running but could not be moved, the cover being so very thick. The crowd of spectators, which numbered about fifty, stirred my another bery, and both dogs pointed the scattered birds simultaneously and cach handler killed. Baronet held his point although three gms had been discharged, and a single bird which had remained was fushed in front of him. This was certainly a grand exhibition of steadiness for so his point although 'three guns had been discharged, and a single bird which had remained was inshed in front of him. This was certainly a grand exhibition of steadhess for so young a dog, and he was awarded a second point. Each dog retrieved. After being down a half hour the brace was taken up, Baronet winning the heat, Justly according to the rules. Chief and Baronet ten came to zerher in same place. Chief found a brace and Baronet failed to back. Chief had his own way and pointed, and Baronet failing to back moved on past him and located birds. Miller killed and Chief retrieved. The heat and first prize was then awarded to Chief at three o'clock after running ten minutes. Five minutes later the third series commenced with Jersey Queen and Baronet running for second place. Queen flushed a single bird and then a brace, pointed a bird in the briars and flushed again on the hill in some brush. Baronet seemed tired out and needed much urging. Further on Queen pointed in hollow by a scrub oak bush: Baronet came up and the bird flushed between them. The judges ordered brace up, awarding Jersey Queen the second prize, and, as they were empowered to do so by the rules, gave Baronet third and Belle fourth. The judges adhered strictly to the laws of running, and in consequence the dogs were not placed according to their apparent merits. We consider that Belle was out and out the best dog in the stakes, although we like Chief's work very much indeed. He is not as stylish a dog as Belle, but one of the sure and steady sort. indeed. He is not as styren a wey as a line, sure and steady sort.
Following is list of winners Monday and Tuesday:

Winners of Mussers Stakes,
D. S. Gregory's, Jr., Belle (Sensation Grace), lemon and white

Snow and rain are falling, and the trials are postponed for the day. Our next issue will contain full particulars of the the day. Our n further running.

JUDGES AT THE EASTERN FIELD TRIALS .- Col. James Gordon, Pontotoc County, Miss.; Dr. Rawlings Youngs, Corinth, Miss.; J. Von Lengerke, West Holoken, N. J.; J. C. Mon-roe, Broodyn, N. Y. Besides these gentlemen, L. H. Billings, U. S. N., and R. T. Hewitt, South Wethersfield, Conn., were chosen by the committee, the former, however, resigned from serving and the latter was prevented from putting in an appearance from illness.

#### NATIONAL FIELD TRIALS.

VINCENNES, Ind., November 17.

THE snow which commenced to fall hast evening has conground. It was therefore deemed expedient to call a meeting this evening to determine on some course of action. The expression of those present was to call the Derby stakes off, and the judges were requested to make their awards based on the heats that had been already run. Sanborn's Count Noble was declared first, Snellenburg's Daisy Laverack second, and the third money was divided equally between Bryson's Peep of Day, Snellenburg's May Laverack, Mountview Kennel Club's Count Naller and McDonald's Bruce. As the total amount of stakes amounted to \$\$70, Count Noble won \$435, Daisy Laverack \$290, and each share of the four third money winners was \$36.25. Great satisfaction was expressed by every one at the decision of the judges, and we thoroughly endorse their awards. We greatly regret, however, that the trials have to be ended in this way, as we should have liked to have seen Mr. Snellenburg's socket edition Daisy run against the famous Count. When she was down on Monday she showed herself to be a rattling good one; and the ground was much more difficult and the day nothing like as good a one as fell to the fortune of Mr. Sanborn's crack. Under equal conditions Daisy would make it hot for him. Besides this the little bitch was down several hours while Noble was swarded his heat in something like twenty minutes.

VINCENNES, Ind., November 18.

VINCENNES, Ind., November 18.

A meeting was held at eleven this morning, which was largely attended by members of the National American Kennel Cinh, owners of contesting dogs and handlers. The club with great liberality voted to divide equally the \$500 stakes among the thirteen confirmed entries in the Free-for-All.

Mr. Rumsey's Belle having been withdrawn, each nomination received \$38.46. It was then decided that as the judges were of the opinion there was no possible chance of continuing the trials on account of the storm, that the meeting be brought to an end. The late afternoon trains carried away those interested, and the trials were a thing of the past.

Ew an unfortunate combination—Thanksgiving and the

[By an unfortunate combination—Thanksgiving and the Western snow storms—last week, the report above did not reach us in time for our last issue, which was sent to press earlier than usual]

#### "COUPLES" ON FIELD TRIAL RULES.

Editor Forest and Stream

Edilor Forest and Stream:

Some time ago I ventured to send your screed suggesting in the most humble manner, and with a due sense of my own ignorance, that the Field Trial Rules as elaborated by the National Field Trials Association and the Eastern Field Trials Club were in some particulars defective. I made my suggestions—for be it from me to call them criticisms—with fear and trembline. I am not a member of any kennel club or association for the impovement of dogs, and am therefore presumably less qualified to speak intelligently on such a topic than the gentlemen who give more time and attention to such matters than I can. I am simply one of the great army of sportsmen: I own and breed dogs that I consider good, and having hunted and shot in many of the States and Territories I have formed opinions of my own on matters connected with dogs and their working, to which, although they may be open to criticism. I cling with a certain degree of tenacity.

In my letter of August 30, I complained that the Field Trial Rules as laid down by the organizations above mentioned were obscure and in many respects unintelligible, and endeavored to point out that the blind language employed by the framers of the rules might give great opportunity for cavil and wrangle on the part of disappointed owners. In an able editorial which appeared in the same issue of Forusar Ann Strusza which contained my letter you still further emplastized these points, and urged clearness of wording in the framing of rules as a protection to judge as well as to exhibitors.

hibitors.

I had hoped that your carnest words might have called forth a reply from some one in authority explanatory of the

wretchedly muddled language of the rules, or, better still. wretchedly muddled language of the rules, or, better still, that they might have been revised by some one who was familiar with the handling of dogs, and at the same time had some faint idea of how to write an intelligible sentence in English. Having been disappointed in both these hopes I cannot refrain from once more referring to the harm that may result from the adoption of rules and directions to judges so

cannot refrain from once more referring to the harm that may result from the adoption of rules and directions to judges so hopelessly inadequate to the necessities of the case.

The Pennsylvania Trials were run under rules essentially the same as those adopted by the N. A. F. T. C. and the E. F. T. C., and with what result? So far as can be judged from the published reports and from the accounts of those who were present at Lancaster the neeting came very near breaking up in a row. The judging was more than once reversed, and general dissatisfaction was the result. The system of marking dogs as practiced in the past and to be practiced at coming trials this month is radically wrong, and until changed will cause dissatisfaction and give rise to quarrels and bad feeling to the end of the chapter.

Field trials are young as yet in this country, and we are still groping in the dark after a plain and common-sense method of carrying them out. It is clear that up to the present time we kave not hit upon any such nethod, and until we do so we cannot hope to have the contests successful. I believe the present system to be a wrong one. I do not think that judges should be fettered by being compelled to make use of any system of marks, and the rules governing them should be general rather than specific. It is reasonable to suppose that men chosen as judges will know their business and will be fully qualified to decide as to whether a dog does his work in good shape or not. Such men will not require to be told what they must or must not do. Of course, if judges are to be chosen who have no experience, who need instruction as to what constitutes pointing, backing or retrieving, you must have very exact rules, but do you want such men for judges in field trials? It is surely possible to select each year for these important and onerous positions men who shall command the confidence of the sportsum of the country at large, and in the hands of such men the judging may be left, with as determined and one one positions men who sh

men who shall command the confidence of the sportsmen of the country at large, and in the hands of such men the judg-ing may be left with safety. In view of the number of gunshy dogs that cumber the kennels of our breeders, one amendment to the rules govern-ing trials suggests itself to me as important. Every puppy should have at least one gun fired over him or her during the running. At present, in the course of the heats, guns are fired over perhaps half the puppies run; they should be

running. At present, in the course of the dover perhaps half the puppies run; they should be fired over every one.

It is a matter of very great regret to me, and no doubt to all sportsmen, that the field trials run this season have all been failures. No birds in Nebraska; no birds, bad weather and dissatisfaction at the judging in Pennsylvania, and bad weather at the National Trials, make up so far the sorry record of this autumn's running. Will the Eastern Trials prove a brilliant success, or, like the others, a hopeless failure? The former I sincerely trust.

No matter what the result, however, it is clear to my mind that If these contests are to be successful in America, the rules which govern them must be altered in many particulars. Great latitude of judgment should be given to the judges, and the fow rules by which they are to be governed must be so clear and simple that there cannot be two constructions put upon them; they must be adapted to the feeliest comprehension.

Before advancing my own views further on this point I prefer to wait to see if the matter will not be taken in hand by some sportsman of greater experience than Courles.

some sportsman of greater experience than New York, New. 26, 1880.

#### THE ENGLISH SETTER.

[From Vero Shaw's "Book of the Dog." Republished by the express permission of the Author.]

(From Vero Shaw's "Book of the Dog." Republished by the express permission of the Author.]

Amongst the most prominent setters of recent years the name of Rap will always be conspicuous. We believe that this dog was beaten in his day by Mr. Laverack's Prince, but he is generally credited with having been the best dog of his breed ever seen in public. A gentleman who knew him well when in his prime has kindly given us the following description of this great English setter:—"Rap was a black-white-and-tan dog, with a most refined head, and very intelligent eves. His curs were beautifully placed, and his long neck was well set into his back. His ribs were deep, his feet were good, and his legs as straight as gun-barrels; his hind-quarters were powerful; and last, but not least by any means, he had a well-carried, well-proprotioned stern. His single fault, if fault there could be found in Rap, was that he was a trilled-just a trilled-high on his leg."

Mr. William Lort's Shot (1865) was another famous pure Laverack, lowever, who never saw either Shot or Sal, said Walter was the best setter he had ever seen; they were by Withington's Frank, out of Flash. Nor must the merits of Quince II., Ranger's father, he overlooked, unlucky as this grand dog was in his owners, for he never seemed to be properly appreciated by those who had him in their possession. Quince II. was sold for a few shillings when worn out, at Aldridge's Repository in 1878, for the public never seemed to realize that very much of Ranger's excellence was inherited from his brave old sire. Count Winden, Countess Mol), and Countess Bear are the bright particular stars of Mr. Lewellin's kennel, and the first-ansued is a great, big, useful looking dog. Mr. James Fletcher's blue-ticked dog Rock, late Mr. S. E. Shirley's, has done a lot of winning, and Mr. Shorthose's Novel has kept his name well before the public. Another English setter who is, in our opinion, a very grand but unlucky dog, is Mr. J. Robinson's Emperor Fred; his chief fault is a want of sprin

or the pointer. For our own part we should prefer the setter, but a good dog, like a good borse, is good under any circumstances. Mr. William Lort in answer to a question, has written us as follows: "I am often asked which is the better dog—the pointer or the setter. It is difficult to say." I keep and use both, and the only disadvantage I see in the pointer is that on high storm-swept hills he does sometimes, after a protracted lunch, silver and shut up; but this is only on exceptionally wet and cold days. The setter is undoubtedly the best dog we have for grouse shooting, and this is beyond a doubt the poetry of all shooting.

"Now, as to the points of the English setter, it is really difficult to give them in an understandable form—general appearance, or both ensemble, goes for so much. The head ought to be long, and the eyes, which should match or be in keeping with the color or complexion of the dog, should not be too wide apart, or placed in too deep a stop, or be separated by too much of a groove—all or any of these defects spoil the expression, a most important point in a setter. The ears should not be set on too high or be carried too far from the head. The front of the ear should not be spanic-like and large. The neck should be long and well set back into the shoulders. The chest should be deep and the ribs cerried well back toward the hips. N. B. Some losse-loined, badly ribbed-up setters go a great pace, but they are usually bad feeders and not very-day workers. The stern should not be too long; it should be carried in a line with the back, and be straight and be ornamented with a little pendant fringe. Nothing indicates mongrel blood in a setter more than a defective stern. The forelegs should be straight, strong and not too long; the hind ones should be muscular and well bent. The feet should be round, and well supplied with hir between toes, not too far apart. The coat is affected by climate; the most approved is devoid of curl. The best colors are black and white, ticked, or blue Beltons, lemona

Having thus given the ideas of the leading living authority upon setters it only remains for us to give a short description of the principal points of the variety. They are as fol-

lows:—
The head moderately long and not too heavy; rather inclined to be narrow between the ears; a dip below the eyes,
and with the muzzle rather uprising at the nose,
The nose should be large and the nostriis spreading; the
color black or dark liver, dependent upon the color of the

dog himself.

The ears not too heavy, set on low, and lying close to the head, not pricked up, and covered with a silky fringe.

The eyes large, bright and intelligent; nothing is so bad as a "pig-eyed" setter.

The neck long, curved, sloping, and well set on the shoulder.

The shoulders very muscular and sloped.

The neck long, curved, sloping, and well set on the shoulders.

The shoulders very muscular and sloped.

The cluest deep.

The body.—Ribs rather round, wide at the shoulders, well ribbed up and muscular; loins a little arched.

The legs and feet.—Legs not too long, quite straight and feathered down to the ground; feet well supplied with hair, In hind legs the stilles must be well bent, and the hocks and pasterns unusually strong.

The stern or flag not too long and free from curl, and carried in a slight curve; it should be well feathered.

The coat is soft, silky and free from all curl.

The color—Lemon-and-white, black, and liver-and-white, black-and-white, black-and-white, orange-and-white, black-and-white, orange-and-white, black-and-white, there are other colors, but they are seldom met with. In general appearance the setter is a handsome, though delicate-looking dog, in many instances increasing this appearance by a tendency to crouch and seem afraid. He, however, ought to give evidences of stamina, and should have a cut-and-come-again appearance in spite of seeming delicate.

The dog selected for illustration in our colored plate is Mr. Macdona's Ranger III., a grandson of Old Ranger. This dog's pedigree has already been given, and, as he has been expatriated to Germany, it would be unfair to criticise his reformances upon the bench.

The engravings of Ranger and Novel are, we consider, two excellent likenesses of the animals they represent. Ranger, also Mr. Macdona's, has already been done justice to above, and we can only add that he is as affectionate and obedient in virtue life as he is feared and formidable in the field. Mr. Sinorthows's Novel was bred by Mr. T. B. Cockerton in 1877, and is by Blue Prince out of Plame, by Rail out of Countess, Blue Prince out of Cora. Since has won Brimingham second prize, 1879: first Crystal Palace, first Darlington, 1880.

#### INSTINCT OR REASON?

LET me add one to the number of your "Current Dog Stories."

Almost every old sportsman of fifty years' experience has owned in his time one or more dogs whose mental and moral qualities were so great and distinct as to justify a doubt whether the nons of the animal does not differ from the soul of man more in degree than in kind. Certainly I have had several such, who have rewarded my affectionate and painstaking teaching by an active intelligence which was a neverfailing source of wonder and delight. One incident in the life of my last canine friend is recalled to mind by reading your last number, and it may be worth the telling. Eight years ago I picked up in Wisconsiin a brown half-bred retriever (setter and pointer) whose great strength and ambition seemed to fit him for my heavy work of duck and goose shooting in California, where, to swim its rapid and igor rivers with a goose in the mouth, more than ordinary courage and muscle are required. During a service of four bright seasons, this dog saved me thousands of geese and

ducks, which I should have at but for his extraordinary nose, pluck, perseverame, and that good sense which passes by the name of Sagacity. The dog so often showed that he knew more than his master that I ended by giving him generally his own way, and rarely presumed upon more than a deferential suggestion of his duty. How greatly his intelligence and moral character were worthy of respect the following anecdote may show.

It was a breezy day at the end of January, and my last day's shooting at the Alamitos ranch. This is a sheep range of thirty-live square miles, half moral, half moral, lying between mountain and sea, twenty miles from Los Angelos. I had sent my man and horses to town for supplies, and, being alone, concluded to take my boat (a Bond) and try the ducks, leaving the dog behind me. A dog is seldom desirable in a boat when the birds mostly fall on open water or mud. So I chained him up, preferring to lose a few ducks to the alternative loss of my temper. Half an hour later I was doing good work on a favorite stand sat the confluence of two streams, when I noticed that the dog had slipped his collar, and was hovering at a distance, intently watching my every motion, but carefully keeping bayond shot.

Probably the remembrance of former discipline admonished him just then that discretion was his better part. Not wishing to encourage disobedience I did not call him in but wishing to encourage disobedience I did not call him in but

Probably the remembrance of former discipline authorished him just then that discretion was his better part. Not wishing to encourage disobedience I did not call him in, but continued to retrieve my own ducks for an hour or more, when, a wounded mallard slanting down far off in his direction, the dog started after it, and I forgot for the next busy half how his work avisines. They entilling in hunch of

wishing to encourage disobedience I did not call him in, but continued to retrieve my own ducks for an hour or more, when, a wounded mallard shanting down far off in his direction, the dog started after it, and I fopt for the next busy half hour his very existence. Then a rustling in a bunch of reeds behind me caused me to turn, and behold I there was the dog again, sheepishly approaching with a mallard in his mouth. He stopped, hesistated a moment, and then creeping up slowly upon his belly to my feet he lay down, head between paws, blinking and begging forgiveness. There was something so pentient and beseeching in his look and manner that of course I was conquered. I accepted his peace-offering and his joyful service for the rest of the afternoon.

But the incident of that day which I intended to relate its this: I had chanced a shot with No. 4 at a white-fronted goose (A. albifrons) which fell dead a hundred yards off directly across the river. There had been a sudden thawing of snow in the mountains, so the water came dashing along icy, swift and strong. But the dog plunged in, and was swept by the current some hundred and fifty yards down the river before he made a landing on the farther bank, when, after one violent shake, he tore back along the ooze, grabbed the goose and stood before me with it on the opposite shore, happy but reflective. Evidently he felt his responsibility and the difficulty of the situation. He had a goose to convey safely to his master, but how? He looked down the river, he looked up the river, he looked across the river; then, with the decision of a philosopher, sure of the right path and not to be diverted from it, he trotted right away from me, heedless of my call and whistle, about 200 yards along the bank up river, sild into the water and swam, easily borne, goose and all, by the down-rushing current directly to my feet.

Can a thinking current directly to my feet.

Can a thinking current directly to my feet.

Can a thinking man be satisfied to explain this by the customary for

adise,
His faithful dog shall bear him company."
T. D. L.

#### WHAT IS A COCKER?

What I breed for is a small-sized, eager, active spaniel; high-couraged, so that no obstacles in the shape of thorn-bushes or brambles will daunt him when hunted in cover, and low and strong on his legs to enable him to work out small runways. He must be well-muscled and strong in the couplings, and not too long in the back. His coat must not he of fine and silky in texture, but bright nut glossy, slightly wavy and not too heavy. His head should be of medium size, and good length, fair width between the ears, not so flat as a setter's, and having the eyes set well apart. I like to see the face of good length from nose to stop (say three inches) with muzzle truncated or square-cut like a setter's, but without any looseness of lip which should be clean cut. The teets should be even and regular, white and sound, neither under nor over-shot. The eyes of medium size should be dark, bright and full of honesty and intelligence, an expression in them continually asking their master, "Only tell me what you want me to do and give me a chance to please you." While the color of coat most pleasing to my laste is black or dark liver it is sometimes undoubtedly an advantage to have them pied as being more easily seen in the bush. Black, black and tan, liver, liver and white, liver and should influence a judge very little in choosing a prize-winner. While heavy feathering on ears and legs adds to a spaniel's attractive appearance it is of less value in the cocker han in the King Charles where ornament is the paramount consideration, and indeed it may impair his usefulness by randering him Absalom-like, liable to be caught in the thicket. The leather of the ear should be fine and soft, and in shape should be long and lobe-shaped, set neither too high nor too low. The feather thereon should be flat and silky, not inclined to run into cords or ringlets. The general appearance of the cocker is eminently symmetrical, and any clumsiness or sloveniness of action or want of energy and activity should be heavily penalized in judging. T

I have received a letter from Mr. E. Tinsley, of Hamilton, anent the Standard. Mr. Tinsley's dog Dash is well known as a thorough worker, and is one of the most perfect cockers I have ever seen. He is bred from stock imported from the Earl of Wilton's kennel, and Husy (1st Toronto, 1880, where Dash was 2d and should have been 1st) is a daughter of Dash. While Busy Is, to my mind, a little bit too chanky, she is about the best bitch, all around, that I know of. She might be five or six pounds heavier, or, to put it more plainly, a little larger, without hurt, but I would never penalize a cocker for that fault, if it can be called such, for thee are too many that run to the opposite extreme. While on the subject of size, I may as well say that "Leam" must be division a little too low, as there are too few cocker bitches under 25 lbs. to make that the lie; 30 lbs. for d ', 28 lbs. for bitches would make it a more equal division; but there is plenty of tine yet to settle that point. I also hand you to-day a letter from Mr. J. F. Kirk, of Toronto. He is a better all-around judge than most dog-men, has always a few of the very best dogs obtainable, and owns a grand old black cocker bitch, Queen, who was formerly owned by L. Willey, of Baltimore, and took several prizes when in his possession.

[Gro. D. Macdouggall.

1,182 Chestnut St., Elizabeth, N. J.

Dear Sir: Yours of Oct. 30 to hand and contents duly noted. You request me to send you the measurements and weights of Dash and Busy, with which request I willingly comply. As you are aware, they are a dark, rich liver-and-

ocmply. As you are aware, they are a dark, rich inver-anutan color.

Busy—Height at shoulder, 14 inches; length from nose to stern, 28 inches; weight, 20 lbs; length of head, 7 inches; ears, from tip to tip, 15 inches.

Dash—Height, 16 inches; length, 32 inches; weight, 26 lbs; length of head, 7½ inches; ears, 18 inches.

Isaw the letter in Forest and Str. Aufrom your Kansas correspondent, who, I think, is somewhat astray on the cockerspaniel question. While it may be very convenient for the show business to have dogs that will take prizes either as cockers or King Charles spaniels, for my part, I do not want any of that kind. I saw more than enough of them at the late show in Toronto. I would respectfully call your attention to the respective plates of cockers and King Charles spaniels in Stonchenge's last edition of "Dogs of the British Islands." I am at a loss to understand how any man having the least knowledge of the two breeds should confound them

with each other.

By referring to Forsky and Strram of Oct. 2, 1879, you will find, over the signature of "Ranger," my opinion of what a cocker spaniel should be.

E. Tinsley.

with each other.

By referring to Forsest and Stream of Oct. 2, 1870, you will find, over the signature of "Ranger," my opinion of what a cocker spaniel should be.

E Tinsley.

I must say a word to "Lean" on "What is a Cocker?" in last issue of your paper. As he states, they are floundering about without a rudder. I should say that I think he is, and most of the judges at our dog shows have also been floundering about, or badly mixed up at least, because they have not taken due pains to post themselves on modern cockers. For this breed of dogs has been an established breed for hetween fifteen and twenty years, and but few have taken the trouble to become well posted on them is what's the matter.

Modern cockers from ten pounds to twenty pounds, and of the modern cockers from ten pounds to twenty pounds, and of the modern cockers from ten pounds to twenty pounds, and of the modern cockers the twenty-pound ones, but those from twenty-five to thirty pounds if it most localities better, and all except the toy cockers are almost equally good. Would it not be absurd to restrict a cocker to a certain weight when they are better to vary in size as they do at present? If "Leam" will refer to my article in September 9 issue over signature of "Spaniel," he will get therein a few other points of the breed. Now, again, "Leam" proposes to get up an "American Cocker Club" and put in Geo. D. Macdougall as Secretary, and says "will induce my friends to join whether they are cocker men or not, for it is not necessary for a man to own and breed cockers to procure admission to such a club as I propose." Yes, exactly; would it not be better to have men compose the club that never saw a cocker and don't know one from a mongrel bull-dog? We don't care to go into any such deteriorating enterprise, and guess you will find the other cocker men of about the same opinion. Mr. Geo. Macdougall, is a highly respected and enthusiasite young mun, but his experience is very limited in relation to cockers and he has only bred a few spanies in a

breeders in the United States, I am certain; but we want no boy's play about it, nor to work for any one man's dog's interest, and then all will put a shoulder to the wheel.

"M. B.," in Nov. Il issue of above paper on "What is a Cocker?" says cockers are "mongrels, which no one can deny." I most certainly shall disagree with him, but shall not stop to argue it now, as I disagree with him on so many other points, and I at present have not the time to give them the requisite reply, but at some future time I will endeavor todo so, as I intend at first opportunity to give you a few lines on the breeding, rearing and breaking of cockers, for the pleasure and benealt of those interested in this most valuable breed.

Franklin, N. F., Nev. 22.

The article from "Leam," in your issue of Nov. 16, seems to me in most respects a very sensible one. That cockers in this country are a made breed, or mongrels, I think no breeder will deny. We see them of all shapes, colors and sizes; some on long legs, some on short: some fifteen pounds' weight, others thirty to forty. Parties owning such dogs claim them, without reference to size, form or color, to be pure-bred cockers, insisting that those which differ from them are not the right sort. Stonehenge's standard does not suit many of the nost prominent breeders, and in the principal works on the dog there is no satisfactory description by which one can be governed. In the different kennels with which I am acquainted there is not that uniformity which stamps them as a breed that would be recognized as being from any particular kennel, as is the case with the Llewellen or Laverack setter. It is that point which we-desire to reach. How shall it be done? "Leam's" suggestion that an American Cocker Club be formed is a good one. Let the different breeders all exhibit their best specimens at the first bench show given in any of our prominent Eastern or Western cities, that the relative merits of those shown may be combreeders all exhibit their best Specimens at the first bench show given in any of our prominent Eastern or Western cities, that the relative merits of those shown may be compared, and of those exhibited let the club agree upon the standard dog and bitch by which future exhibitions shall be governed. If necessary to please all, make two classes, one for those dogs under twenty-eight pounds and bitches under twenty-five pounds, and one for dogs or bitches over that weight up to forty pounds, but not over. This will cover the question of weight—the form will have to be agreed on, as well as cost, etc., etc. Let a special effort be made to have the best dogs in the country, whether belonging to a breeder's kennel, or private individual's who keeps but one, exhibited.

To bring this about I would suggest that a prize of say \$50, or even more if thought desirable, be offered in addition to the regular prize offered by the association giving the show for the best dog or bitch exhibited which comes the nearest to our present standard ("Stonehenge's"). This prize to be raised by subscription among those who take an interest in the breed. I will head the subscription with \$10, and have no doubt a very good prize can be raised sufficient to induce those who claim to have the best to exhibit. There can be no more attractive feature of a Bench Show than this and managers will find it a winning card to offer a liberal prize for this class. The prizes offered in former shows has been entirely too small to bring out valuable specimens. This breed is bound to take the front rank with those who desire a useful as well as a handsome dog. As pets, companions or hunters for many classes of game there is none superior or equally handsome. I am quite anxions to hear from principal breeders on the subject. Now that it is fair-ly agitated I would be glad to have some good result from it. Don't claim it is a farree for your brother breeder to call his specimens cockers because they differ from yours, and have won prizes where yours were exhibited, but strive to arrive at some definite standard which all may closely follow, and in time bring about a uniformity of breed, so that whenever one may be seen he will at once be known as a cocker spaniel up to the standard.

Chicago, RI.

I am well pleased with the general tone of the article in

isi up to the standard.

Chicago, II.

I am well pleased with the general tone of the article in your paper of the 18th inst, by "Leam," entitled "What is a Cocker?" etc. While it is a matter of a great deal of moment to lave some standard prepared by which the cocker is to be judged and bred to, I am opposed to "Leam's" method of reaching the solution of this question. I would suggest in lieu of appointing a Secretary by the one man's nonlination, which will not meet the co-operation of a large number of breeders, that a circular be gotten up for those breeders who feel an interest in having a standard established for judging their cockers. This circular can be sent not only to the breeder but to such persons as are known to take an active interest in the raising and breeding of this intelligent and beautiful dog, who will vote for a committee of three. The three obtaining the largest number of votes shall be declared the committee for the purposes set forth in "Leam's" article. Let the editor of the Forest And Stream prepare those circulars and have them sent out in his paper, addressed "To those who are breeders and raisers of the cocker." On each circular will be written three names, which shall be forwarded to the said editor. The three gentlemen receiving the largest number of votes shall constitute "the committee" who will proceed to a proper organization, and draw up as soon as possible a cocker standard, and the rules and requirements governing the same. This is a fairer and better way to reach this conclusion, that all of us who are lovers of the cocker desire to have settled. I am even indisposed to prejudge this matter in the least possible manner, either by mention of color, size, weight or any other condition, but will leave all to the wisdom and judgment of the committee appointed to make a standard. To defray the expense of such circulars and their distribution, and for the purposes set forth in this article, I hereby agree to donate one dollar whenever the editor of this paper shall enter upon Ann Arbor, Nov. 21.

I think "Leam" is right, and second his motion that Geo. I think "Leam" is right, and second his motion that Geo. D. Maedougall accept the office of Secretary pro tem. of the American Cooker Club. That gentleman has been tyring for some time to have a standard made by which to judge the American cocker, and I think he will surely accept the office. It is certain we must have two classes, for now any spaniel from eighteen to fifty pounds is called a cocker. Let those over thirty pounds go where they belong, in the field spaniel or large class. A dog above that weight is better fitted for open or field work than he is for thick cover. For my part I do not believe in a dog for woodcock or grousemuch over or under twenty-eight pounds. Over that weight they are too large for me, and much under it they cannot stand the hard work that is sometimes required of them.

Let the work go on, my dues are ready any time they are called for.

J. Orrs Fellows.

J. Orrs Fellows.

J. Orrs Fellows.

J. O. T.

Hornellsvide, N. Y., Nov. 4.

ented for.

P. S.—The distemper is epidemic here at present.

\*\*Hornellsvi.le\*, N. Y., Nov. 4.

I am truly glad to see that my short note has set the dogmen actinishing, as I see that "Leam" has just hit on the right way to solve the difficulty. Let the cocker club be formed at once, and from the members of it form a committee, who could draft a standard! also make by-laws for governing the club. The cocker spaniel is well worth the trouble, as not only very many who do not use a dog for field purposes like to have a good dog as a companion for their walks, house and office, and no dog extant is better fitted for this purpose than the cocker spaniel.

He is not too large, nor is he quarrelsome, besides being most faithful and easily taught tricks: he is a very beautiful dog, and, from the character of his hair and skin, he is in nowless an offensive dog in the parlor. The cocker has all these good qualities as a companion, and many more, too numerous to mention.

A few days ago I received a letter from a gentleman who has devoted a great deal of care and time to the subject of cockers and cocker spaniels, and as I think they are really so good, and I know they are not written at random, I would be doing an injustice to many if I kept it to myself. With your permission I will give part of his letter verbatina, as what he wants to impress could not be given better, nor could it be shortened. He writes thus:

"The cocker was a dog of the olden time, of from fourteen to eighteen pounds in weight. His head was round, with the forcheal raised, nose somewhat pointed, ears of good length, but rather light, and covered with soft, wavy hair. His eyes were not prominent and were of medium size. The body of medium length, with the shape of the setter. Cockers were dark liver, liver-and-white, black-and-white, and emon-and-white. The rounder the head the greater the proportion of the solve blood; the more prominent and were of medium size. The body of medium length, with the shape of the setter. Cockers were dark liver, liv

judiciously crossing their get to have established the black rocker.

"Lemon-and-white and orange-and-white cocker spaniels are produced by inbreeding the liver-and-whites.

"For the bench I would suggest that if the old cocker still exists in his purity that he should be awarded a class in the show, and that he should have a round head, with the fore-land raised; weight, fourteen to twenty-one pounds. That the cocker spaniels should be divided into three classes—large, small and dark. Large from twenty-eight pounds, small not to exceed twenty-eight pounds; color, liver, liver-and-white, chestnut, classtant-and-white, orange-and-white and lenon-and-white.

"The fark division to be made up of the black, black-and-tan, and black-and-white; weight not specified."

This is what he says about cockers in general, and I think in many things he is very right, specially in his division into three classes, as there is a fear that because the black spaniel is so very fashionable at present that the other colors will be neglected and indiscriminate crossings will be made between the blacks and the livers, which will not be productive of any good to the cocker spaniel.

Trusting I have not trespassed uselessly on your valuable space, I remain, etc., M. B. London, Cam., Xio. 23.

Having taken a great fancy to the breed of does called.

Having taken a great fancy to the breed of dogs called cocker spaniels I have derived a great deal of pleasure from the articles which have appeared in the late issues of your

the articles which have appeared in the late issues of your valuable paper.

The original suggestion of Mr. Geo. D. Macdougall, to have each breeder and lover of the handsome cocker write his view for publication in your journal is, I think, a very good one, but your correspondent "Leam," of the 18th inst., is in too great a hurry, let him wait until all have been heard. There is plenty of time to have a meeting such as he speaks of, as the Bench Shows will not take place until the latter part of next summer. I say, let us carry out Mr. Macdougall's idea, and get the opinions of each cocker spanie he needer on this important subject. I would suggest that the originator of the idea should set the x anuple and give the public his views as to the proper size, weight and color of this class of on this important subject. I would suggest that the originator of the idea should set the \*\*\_x xample and give the public his views as to the proper size, weight and color of this class of dogs, then Mr. Burr Hollis, Mr. Fellows, Mr. Robt. Walker, Mr. McKoon and others of note should supplement it with theirs. To call a meeting now as suggested by your correspondent of the 18th would, I am afraid, turn out to be in the interest of a fow in the vicinity of New York City, while if we had the views of all the noted breeders published in your widely circulated paper the public would not only be instructed on a mutter about which at present they are somewhat in the dark, but these same ideas of the different breeders could be discussed at the meeting when it is held.

I do not profess to be a thorough judge, but my opinion of about which a cocker should be is something like this: Color, dark liver; weight, from twenty-eight to thirty pounds: height at shoulder, from fourteen to fifteen inches; this, of course, for a sporting dog. If wanted for a lady's pet the little fellows would be preferable. Black looks very pretty, but I can't shoot over that color. I have found by experience that I can do better with the dark liver, having tried it repeatedly against black, liver and white and black and white. Hoping that you will be able to find space for this in the FOREST AND STREAM, J remain yours truly, COCKER.

Norses.—While at Vincennes we had the pleasure of seeing Dr. Jarvis' new importation. Noreen, one of the most beautiful dark red Irish setter bitches we have ever seen in America. She is certainly a grand bench dog, and we make room for her famous pedigree below:
Norsen was bred by James J. Giltrap, Whitehall House, Dargan Terrace, Dublin, Ireland. She is out of Mr. Giltrap's Cora by his prize dog Garryown. Cora is little sister to Captain Annerly A. Knox's (Rappa Castle, Co. Mayo)

Ben, winner of first prize at Dublin, 1879 and 1880. Garry Ben, winner of first prize at Dublin, 1879 and 1880. Garry-owen is out of champion Belle by champion Palmerston. Capt. Knox has possessed the strain of which Ben is the representative for years, and shot over them, but never exhibiting mutil he exhibited Ben. Noreen was shown at Dublin, May, 1880, in a large class of twenty-five puppies, dogs and bitches, and won first prize. She was whelped June 18, 1870. Capt. Knox has kept his dogs for field work and not exhibition, but from the success of Rex, one of his strain, upon the show bench in Ireland and England he was first induced to exhibit to

A Remedy for Mange,—A number of my friends during the past spring and summer have had excellent results from a new mange remedly, the formula of which I give you for publication: One quart of coal-oil, J. oz. carbolia caid, 2 drs. tincture cantharides, and 1 oz. of flour of sulphur, thoroughly mixed together and well rubbed into the affected parts of the skin three times a day; the diet of the dog entirely changed and green vegetables put into his mess. We all know how difficult it is to eradicate this malady from a kennel where it has once found its way among a collection of dogs. It is next to impossible to get rid of it. Season after season it will crop out, in spite of disinfectants, and canker not unfrequently follows a continued presence of this contagious canine disease.

Dog Lost—\$25 Reward.—During last August Mr. Chas. Heath, of Newark, N. J., lost his black pointer dog—all black excepting his fore-paws and white spot on breast. The dog strayed away from the kennels of Mr. Thos. E. Smith, Stockholm. N. J., and a reward of \$25 will be paid for his roturn to Mr. Smith. The dog is well known by us, and the party now keeping him will save himself trouble by returning him at once.

DEFID STAR WHELPS.—Mr. W. B. Wells, Jr., of Chat-liam, Out., writes us that his beautiful setter bitch, Star, whelped on November 13 eleven pupples by Mr. Burgest famous Draid. The litter is an exceptionally fine one. Twee of the bitches are nicely marked black, white and tan, and promise to equal their splendid sister Dido in point of beauty.

Pittsrurg Benen Show.—We take pleasure in announcing that Mr. Charles Lincoln has been appointed the superintendent of the bench show which is to take place at Pittsburg in January next. We understand that the committee auticipate making it a first-claes exhibition.

Gladstones-Lincolx.—One of the many disappointments of the National Field Trials meeting was that Gladstone and Lincoln did not get a clanace to be down together. The Free-for-all Stakes would have been a feature long to remember head it been van thearden.

had it been run throughout

In the Corn.—When Count Nailer and Nimrod were down together, the following was the position during one part of the race: Mr. Drew and Mr. Short even first, judges second, reporters third, and the dogs a good fourth.

Peesonal.—Dr. W. Jarvis and B. F. Clark attended the trials at Vincennes last week, and at their wind up left for several weeks shooting in Tennessee.

Mr. J. M. Tracy, the famous artist, was present at Vincennes making sketches of the winners and other crack dogs. He had with him a very excellent study of Leicester.

#### KENNEL NOTES.

NAMES CLAIMED.

NAMES CLAIMED.

Blue Belle—Mr. L. E. Ribbett, Caledonia, II., claims the name of Blue Belle for setter bitch puppy out of Mr. W. H. Mille Belle by Mr. E. B. Earthworth, of Washington, D. C., claims the name of Lord Elgin for Llewellin setter dog puppy by imported Penn out of imported Livy.

Kale Loceistor—Mr. F. B. Farnsworth claims the name of Kate Loceister for Llewellin setter bitch puppy by Champion Leceister out of Mills' Belle.

Countess Elgin—Mr. F. B. Farnsworth claims the name of Countess Elgin—Mr. F. B. Farnsworth claims the name of Countess Elgin for Llewellin setter bitch puppy by Zanzihar out of Lady Elgin. Zanzibar is by Champion Ghabtone out of Mersey, and Lady Elgin by Carlowiz out of Queen Bess.

Lavy II.—Mr. H. Countenay, Milwanke, Wis claims the name of Lary II. for red Irish puppy, whelped Oct. 1, 1880, bought of Mr. W. B. Stafford, Mankato, Minn., by Larry out of Faith.

Blue Belle II.—Mr. A. S. Smith, Rockford, Ill., claims the name of Blue Belle II. for Laverske, bitch puppy out of Mr. W. H. Mills' Belle by Mr. J. H. Wilthman's Bine Dash. Anapolis Junction, Md., claims the name of Dell. If for red Irish bitch puppy, whelped Sept. 11, 1880, purchased from Dr. Jennelle, by his Elcho II. out Dell (Gab-Duck).

King Dash—Mr. J. R. Hendrichs changes the name of his setter dog, formerly the property of J. Palmer O'Neal, from Dash of Pittsburgh to King Dash.

Tom Clark—Mr. Thos. D. Sheppard, claims the name of Tom Clark for Irish Gildersleeve dog puppy, whelped Aug. 1, 1880, by Tr. T. O. Maddwa's Irish setter Suipe out of Mr. C. B. Diffenderfer's Annic.

Grace Mr. Scholler and Scholler and Scholler and Clark the name of Tom Clark for Irish Gildersleeve dog to puppy. Whelped Aug. 1, 1880, by Tr. T. O. Maddwa's Irish setter Suipe out of Mr. C. B. Diffenderfer's Annic.

Grace Mr. Scholler And Thos. D. Sheppard claims the name of Darler for Mr. Thos. D. Sheppard claims the name of Tom Clark for Irish Gildersleeve dog to puppy.

er's Annie.

Grace Ducting—Mr. Thos. D. Sheppard claims the name of race Darling for pointer pupy, whelhed May 16, 1880, by Mr. C. Coffnis Barge (Morris Guy II May) out of Kate Sensation-orge's Dolty.

Fegotly—Capt. A. E. Wondson, et al.

's Dolly."

Stolly. Capt. A. E. Woodson, of Fort Laramie, Wyoming, the name of Pegotty for his setter bitch puppy (Rakes) recently purchased from Mr. D. C. Burgenthal, of Indian-

Flydlish recoulty purchased from Mr. D. C. Burgenthal, of Indianapolis, Ind.

Moj.—Capit, A. E. Woodson claims the name Roy tor his smooth-coated black retriver out of Mr. L. C. Hunt's Nelly by Mr. Jno. Gosling's Nero, both imported.

Bran, Oscar, Lufra, Kiblas —Capt. A. E. Woodson claims the name Stay to Near, Oscar, Lufra, Kiblas —Capt. A. E. Woodson claims the names Bran, Oscar, Lufra, Kiblas — Gont deerhound pupples out of his Maida by Mr. N. R. Davis' imported Forrum,

Det II—Mr. Philip Lumbreyer claims the name of Dell II. for his liver colored pointer bitch out of Lumbreyer's Queen, sired by Culber's Duke, whelped April 2, 1889.

Maud II—I see by your last issue that the name Maud II, is claimed by Mr. W. B. Barlow, for a greybound bitch, whelp from my bitch Maud II. The Maud II. I owned, the mother of the whelp for which this name is chained, isnow (also my dog Spring) the property of Mr. L. C. F. Lotz, of this city (Chicago).

Spigot—Mr. James Page Stinson, of Leavenworth, Kan, claims be name Spigot for imported fox terrier dog by frouce out of Barnaid. Spigot won second prize at the Boston show of 1878, and W. H. C. at the W. K. C. Show in 1679 under the name of Lottery—W. Chicago—Mr. James Page. Stinson claims the name Crieket for tot period of the control of the c

Gricket—Mr. James Page Stinson claims the name Cricket for x terrier dog one year old by Vandad out of Mettle—black, white

and tan.

Sir Revys-Mr. Page Stinson claims the name Sir Bevys for black and tan eetter, four months old, by Redfield's Glen, he by Aten's Glen.

Daisy-Mr. Jumes Page Stinson claims the name Daisy for liver

and white pointer bitch, two years old, by Strachan's Flash out of Bravo-Mr. James Page Stinson claims the name Bravo for liver and white pointer, three months old, by Hubbard's imp. Shot out

of Daisy. wood -Mr. Linc. F. Kellogg of Princeton, Kan., claim f Kirkwood for red Irish setter puppy by Elcho H. c

mane of surawood for red first setter puppy by Eleho II. out of Dell.

Lady Elcho—Mr. Line F. Kellogg, claims the name Lady Elcho for red Irish bitch puppy by Elcho II. out of Fannie.

Gypsey—Mr. S. G. Bering, Jr., of Winterset, Iowa, claims the name Gypsey for his bitch puppy by Heck out of Ball.

Josiel—Mr. T. D. Geoghegan, of Louisville, Ky., claims the name Josiel for an Irish setter bitch puppy, bred by Dr. &rnnelle, by his Elcho II. out of his Dell (Champion Bob—Champion Buck)

Belle—Mr. D. S. Gregory claims the name Belle for his lemon and white pointer bitch puppy formerly Leona by Sensation out of Grace.

Witten os

WHELPS.

'Slar.—Mr. Wm. B. Wells, Jr.'s (Chatham, Ont.,) setter bisch Star, whelped November 13, 1889, eleven puppies, eight dogs and three bitches, by Denid.

Doll—Mr. John Davidson's Doll, whelped October 15, four puppies, two dogs and two bitches by, Prince of Oranga. None for

pies, two dogs and two bitches by, Prince of Orange. None for sale

\*\*May—Mr. Wm. H. De Forest, Jr.'s (Sumina, N. J.), pure red setter bitch May by Lincolon and Helbyar's Dash, whelped October 10, nine puppies, seven dogs two bitches, by Mr. C. De Ronge's Montague, Salter's Dash-Lill III.

\*\*Bedbe-Mr. H. B. H. Harrison's bine Belton bitch Bell (Pride of the Bedbe-Mr.) H. B. H. Harrison's bine Belton bitch Hell (Pride of the Bedbe-Mr.) H. B. H. Harrison's bine Belton bitch Bell (Pride of the South Hell (Pride of the Bedbe-Mr.) H. B. H. Goodsell's inported setter bitch Norus (5,976 Eng. K. C. S. B.), bred by Mr. Liewellin, by Dan out of No-lie, whelped four on Nov. 8, 1880, two dogs and two bitches, by Champion Lecester. One of the bitches is dead, but the remainder of the litter is very promising The dogs are a close reproduction of Leicester in color and markings; the bitches, black, white and tan like the dam. Norma was a very celebrated field bitch in the object of the Belton South (Pride of the Belton) and tan like the dam. Norma was a very celebrated field bitch in the object of the Belton South (Pride of the Belton), but we understand that her present owner intends to put her on her merits in the ranning trials next year. At all events it is certain that she is one of the best proad bitches in America to-day, being own sister to Mr. Burges' Queen Mab, and combining to a remarkable degree some of the best qualities of her sire and dam, the renowad Dam to Mr. Burges' Queen Mab, and combining to a remarkable degreesome of the best qualities of her sire and dam, the removed Dan

and Nellie

Mighan—"Mr. Eugene Power's, Cortlandt, N Y.,
black and white cocker bitch Mignon (Daisy IL out of Findley's
Dart), whelped Nov. 25, six pupples, two dogs and four bitches,
by Hollis' Wildair. Two of the puppies have since died.

Kate II—Mr. E. A. Herzberg's Kate II. sister to Llewellin's
Champion Dash II., whelped Nov. 27, 1880, two dogs and four bitches
sired by his imported pure Laverack Aldershot.

BRED.

BRED.

Flora Montague.— Mesers, Win.B. and James L. Banks, Ji.'s., Flora (Lill II.-Fop), first prize New York, 1878, and first prize Boston, 1879, to Mr. Charles De Ronge's Montague (Dash Lill II.) first prize Philadelphia and second prize New York.

Countess-Count Noble—Mr. Isaac Yentsley, Jr.'s (Coatewille, Pa.) Countess (Ciester-Pochahontas) to Mr. D. C. Santorn's Count Noble (Count Wind'em-Nora).

Jock. Jr., Frante—The Gordon setter Litch Jennie (Copeland's Shof-Tilley's Mab), owned by John Pitzpatrick, Waterhury, Conn. was bred to G. S. Sedgewick's Jock, Jr., (First W. K. C. Show, X. Y., 1880), Nov. 17.

Information -We learn that Mr. A. Talbot, of Boston, has recently imported from England three beagles, one dog and two bitches and one pug bitch. All are very fine speciments: the beagles in the opinion of some judges being far a head of anything in Boston. If a show is held in this city next year Mr. Talbot purposes to exhibit his dogs.

poses to exhibit his dogs.

Sale—Dashing Liou.—Mr. Isaac Yearsley, Jr., has purchased from Mr. D. C. Sanborn, the white, black and tan setter dog Dashing Lion (Dash II-Leda).

Mr. Line F. Kellogg, of Princeton, Kan., has sold to Mr. Ed. Fuller, of Ottawa, Kan., a red Irish dog puppy by Elebo II. out of Fannie, to Mr. Knowles, of Sobetha, Nemaha Co. Kan., a dog pup by Elebo II. out of Fannie, and Tady Elebo To. Ottowa Kansas.

by Elemo II. Out of Famile, and rady Florio to Alt, Will. Substitles of Ottawa, Kansas.

Correction—In our issue of two weeks since, one or two type-graphical errors need correction. For Count Windom read Count Windom and for Mr. Moore, the handler of Cecile, read Mr. Morris.

## KENNEL MANAGEMENT,

- E. M. G., Lambertville, N. J. -What is the matter with my pointer puppy, fifteen months old? He has spells that 1 don't know anything about. Every six or eight days he has then. He looks gaunt and poor. He starts and mopes around the house, and slobbers at the mouth a thick slime. It is stringy, and he will ommence drawing air through his nose, as if there is something in t that he cannot get out. He scratches his ears all the line, and likes to have them rubbed. Ans. Give your dog an emetic of table salt once a day for three days -a table-poonful is enough. Then oil. Feed carefully during the time, and keep warm and comfortable, with plenty of fresh sir. The trouble with his cars you do not describe fully enough. Is there any running from them?
  so, he has probably got canker. To treat same we refer you answers in late numbers of Forest and Stream on the subject.
- A. D. E., Irvington, N. Y.-1 will endeavor to give you some 2. A. D. E. Irringion, A. I.—I will relate to Got by Society idea of the condition of my dog's eyes. I have noticed several times, particularly in the morning, that there is considerable white matter on the eyes and lids; once or twice if has partially covered. thatter of the eyes and had, the eyes are weak. This about all I can tell you. There is probably not much the matter with the dog, but I think something to strengthen his eyes would og good. Ans. Wash the eyes with tepid water twice a day, and give a purge twice a week. Do not feed too much meat. 3. C. B., Poughkeepeic, N. Y.-I had a beautiful red Irish sette
- puppy, four and a half months old. Last Thursday 1 gave him large dose of sulphur—not quite a tablespoonful—in his cracker and milk. He ste it with a relish, as it seemed. Friday he was httle off. Saturday he became a little weak in his back and be and Sanday morning he was very weak and could not stand. called in a dog fancier and judge and he gave him a teaspoonful table salt about eleven o'clock. At one o'clock he was dead. table salt about eleven o'clock. At one o'clock he was dead. Garyou toll me the cause of the dog's death? Aus. There should have been a post mortem examination which would defaitely in settled the cause of death, and speculation as to the same trougour description, not having seen the pupp, is ruther useless. Tu dose of sulphur was too large, but should not have caused death.
- 4. C. X., Millersburg, Pa.—An incision can easily be made to exlarge the sheath by any surgeon, if he thinks it necessary, and that will cure the trouble which is called phimosis.
- 5. F. S. P., Portville, N. Y.—1. My Newfoundland dog has large sore on his back, or rather rump. It is very much inflamed

He has been so about three mouths. At times he will both scratch and lap it. 2. My hound is very much swollen about the abdom which seems very hard. He runs badly at the eyes. He has been so about three weeks. Will you please subscribe for both dogs and oblige. Ans. 1. The sore is probably due to mange. Rub sulphur ointment over it each day and try to cover it so that he cannot lick it. Give him a teaspoonful of sulphur in his food each day for a week and two doses of sulphate of magnesia during the same time.

Write results. 2. Try the sulphur and magnesia with the hound, keep him quiet and feed no meat for two weeks.

- 6. J. II., Swanger, Vt.-I. My bound hurt one of his eyes by a twig about the first of this month. I wash it out in tepid water, but it looks milky and runs. What shall I do for it? I had an conlist look mirry and truns. What small 1 do for it? I had an occulist look att, and he says it will soon be all right. Ams. I. The opinion of the centlist is probably correct, and washing with tepid water will be likely to do good. 2. The gun is highly commended, and is, we believe, entirely reliable. 3. The powder does not lose
- 7. H. A. M., Hammond, N. Y.—A setter bitch has watery seres break out over her body and legs. After a time the scabs become hard and dry, and seem to amony her very much, so that she scratches them continually. The puppies are two months old now. A few days after their birth I found them sore on various parts of A few days after their birth I found atom sore on various parts of their bodies. They grow fairly, but look rough, and the scabs are making them lose their hair. They cat well, and are bright and playful. What shall I do for them? Ans. The bitch probably has eczema. See that she has a healthy, clean bed, and feed her carefully. Give her a teaspoonful of sulphur once a day for a week, and a dose of sulphate of magnesia twice during the same week, and a dose of supplies of magnesia twice during the same time. She should also be washed three times a week with good carbolic acid soap. If this does not cure her you must resort to arcenic and quinine. The puppies may be occasionally washed with the soap, but be careful to keep them warm and dry. Write result.
- 8. J. S. S., Rockford, Ill .- 1. Plain cornmeal mush, with cooked 8. J. S. S., Rockford, Jll. -1. Plan cornneal mush, with cooked meat, and occasionally vegetable matter baked in it, is good, sound food for your dogs. 2. You should consult a first-class gunsamith regarding the re-boring of your gun. 3. We consider the spring snipe an excellent bird to train dogs on, especially in the East. Chickens are first-class to work young dogs on, for the high prairie grass makes them hold their heads well up, and feel for the
- 9. R. G., Connerville, Md.—If your dog is in good health, and not overfed on meat the want of nose is a misfortune that cannot be remedied. Your dog, however, may be out of condition. We would advise you to give him a thorough trial before casting him aside, as he comes of excellent stock. We have seen dogs in apaside, as he comes of excellent stock. We have seen dogs in apparent health that we have known to have been good ones in the field sometimes show an absence of scenting power. Distemper frequently destroys power of scent, and in such cases nothing can be done to restore the lost sense.
- 10. J. J. D., Gainesville, Ala.-I want instructions how to break a setter or pointer on ducks, snipe and quail. What work should I get? Ans. For breaking either pointers or setters on snipe or rgutal see articles recently published on Dog Breaking in Forest AND STREAM, or if you wish to go more fully into the subject "Hutchinson on Dog Breaking" is the best book we know of. We cannot advise you to put to so base a use as retrieving ducks either a setter or pointer. An Irish retriever is what you want.
- 11. T. C. P., East Randolph, N. Y.—Having had a controversy as to a cross between an Irish setter and a cocker spaniel in regard to its field qualities I write to you to decide the point and thereby oblige a reader. Some claim that this cross will not stand not point, but always flush the bird and is not good for wing shooting. The offspring of a staunch Irish setter and a careful working cocker spaniel could, by patient training, be taught to point and remain steady while on point; but who would go to the trouble of training a mongrel that would be valueless, when the task was con pleted.
- pleted, 12. J. T. W., Ionia, Mich I. I have a bull terrier bitch one year old. When about six months old she had the distemper and it left her in a bad state. She looks and eats well, is playful and when in action you would not know there was anything the matter with her, but when she stands she keeps dropping on her forward with her, but when she stands she keeps dropping on her forward legs and can't stand still. She had fits for a few days, but has not had hay lately. Have given her most everything. Nux vomica seemed to do her as much good as anything, but still she don't get well and I don't know as she ever will. If you can think of anything that will do her any good please let me know. 2. Do you think it would be a good thing to let her get with pup? 3. Do you know of any one who breeds the small white bull dogs? Ans. The dog has chorea. Nux vomics one-eighth grain and quinine two grains three times a day will probably benefit her. 2. We cannot advise you to breed to your bitch. 3. Write J. P. Barnard, Jr., Beacon Kennels, Boston, Mass.

#### CURRENT DOG STORIES.

A gentleman of this city informs us that he was lumting with a friend several weeks ago nearPensaucon Creek, N. J., about four males above its mouth, when he saw a rabbit shead of him. Cautiously approaching it he discovered that it was dead. They examined it carefully and saw no evidence of nighry on the body. As they were departing from the vicinity, they found at a short distance the dead body of a horned with heat pointed that of or interest of the rabbit. As no located with the pointed that of of either, they conclude in the rabbit and the rabbit of the rabbit and the rabbit of

One morning last week a little brown and white dog, owned by our of the bosses on the Pennsylvania Railroad, was playing about the depot shortly before 9 c'clock. During his gambols he got between the tracks just as the two lightning through trains were approaching, which pass each other directly in front of the depot. The dog apparently saw his danger, for he quickly looked in either direction, and calculated that if he should attempt to cross the track on either side he would certainly be crushed to death. Now, this dog did the only thing which could have been accomplished by a human being—he stretched himself out upon all fours, placed its nose between his paws and remained in that position until the trains had passed. A number of gentlemon witnessed the actions

of this dog, one of whom gave the particulars to the reporter.

New Brunsmick (N. J.) Fredonian.

XIV.

I send you the following dog story, the truth of which is vouched for by the young lady who owned the annual: He pet dog, a black and tan terrier, was well-known to the neighbors for his intelligence. He had established a remarkable friendship for a certain kitten, although given to here attacks on all others. This kitten was infested with lieus, which, when the dog discovered, he took her by the nape of the neck, in truly parental fashion, and should her up and down in a backet of water. He would then out into the sunshino and carefully pick out the drowned fless, NATURE.

#### OLD TIME PRACTICAL JOKES.

A JOLLY crowd it was that used to sally forth from this city in pursuit of game, from 1857 to '61—a score of kindred spirits, whose like it would be hard to find in these days of game preserves and exclusiveness. The bags they frequently made would seem incredible now; so perhaps it is just as well not to tax the credulity of the present generation with a narrative of their doughty deeds with gun and dog. A few anecdotes will suffice to show that they did not depend entirely on shardler for amusement.

Just as well not to their doughty deeds with gun and dog. A few ancedores will suffice to show that they did not depend entirely on slaughter for anuscence.

Practical jokes had become so numerous, and tricks so common, that it was almost as much as a man's life was worth to be off his guard; therefore the nimrods always kept a sharp lookout and slept with one eye open; but even then they often caught each other napping. State Senator Coombs, of Alameda County, was the victim on one occasion, when a party of five were hunting and fishing in the Contra Costa Hills. Coombs was deeply interested with hook and line, while the others spun yarns. Bears were the subject under discussion. Coombs finally came to the conclusion that he wasn't afraid of bears anyhow. Conversation lagging, the others picked up their guns, and started up the hill after some birds. The hill was steep and the brush was thick; but they finally reached the top, and the first object that met their gaze was a brindlet calf. The thought crossed them all like inspiration to drive the calf through the brush on to Coombs below. The calf was surrounded and driven quickly down the hill. Coombs heard the noise, but could see nothing. The calf was on the point of breaking through the bushes into view, when Ned Gallagher shouted: "Coombs, look out for the grizzly." At the same moment the animal dashed toward Coombs, and the terrified fisherman plunged headlong into ten feet of water, and dove and kept diving until the shouts of laughter on the bank reassured him that the coast was clear. Then he came out, only to find a scared brindle calf and four men rolling on the ground.

plunged headlong into ten feet of water, and dove and kept diving until the shouts of laughter on the bank reassured him that the coast was clear. Then he came out, only to find a scared brindle calf and four men rolling on the ground. Coombs looked serious for a moment, but finally he laughed and rolled too.

Not long after this event a party of the same sportsmen, including John K. Hackett, afterward the celebrated Recorder of New York, Ned and Charlie Gallagher, Johnny Orr, George Coffee and William Koll, made in Annador Valley what they thought then, and still think, was the biggest bag of game ever made in the State in our day. Besides untold numbers of ducks, geese, qual and rabbits, Gallagher, Koll and Coffee killed sixty-one, Gallagher skyty-three and Kohl sixty. On the way back Hackett and Kohl rode in one buggy. Ned Gallagher and Coffee in another, and the two others in a third. Hackett succeeded in having all the snipe placed in his buggy, and as he and Kohl had a fast horse, they soon left the others behind; and when Gallagher and Coffee reached Hayward's Hotel, and were about to register the game (each lotel kept a register for game then) what should they see, but recently written: "Kohl, Hackett and friends, so many ducks, so many geese, and fifteen dozen and four English snipe." The same thing was done at San Leandro, and when they reached the city, to make matters worse, they found that Hackett and his friend had given every single snipe away.

But Ned Gallagher and George Coffee were not easily

that Hackett and his friend had given every single snipe away.

But Ned Gallagher and George Coffee were not casily beaten in playing pranks, so they kept quiet and bided their time. Not many days elapsed before the same gentlemen made another trip to the same place and met with their accustomed good luck. As the day drew to a close Messrs. Gallagher and Coffee came into camp, a little in advance of the rest, as per agreement, and proceeded to develop their little plot. Knowing that the greater part of the road home was along the side hill and very steep, they took the hind wheels of the two buggies and put them on the uphill side, and put the small, front wheels on the down grade side, and screwed them on tightly, took all the monkey wrenches out of the buggies, and started rapidly for Hayward's and spread the joke. Kohl, Hackett and friends were thus compelled to drive all the way in that strange rig, and on arriving at Hayward's were met by a laughing crowd of spectators, whose shouts and cheers so incensed the unlucky hunters that they threatened to clean out the place. It was some hours before good feeling was restored, when the parties not and declared threatened to clean out the place. It was some hours before good feeling was restored, when the parties met and declared a truce for the time being. These incidents are still referred to by the survivors of the haleyon days, a number of whom still reside in this city.

Ploner, in Pacific Life.

#### WHAT THEY SAY OF US.

Bethlehem, PA., Nov. 12.

T FIND the Forest and Stream up to its old standard, in some respects better. I am glad that you propose to omit cricket entirely, so as to give more room to the rod and gun, and I think this change a decided improvement. Keep right on, you are doing a good work in elevating the literature of sportsmen.

For another thing I constant.

sportsmen. For another thing I cannot thank you enough, that is your rigorous exclusion of the bottle. Don't let it creep in. It causes many an accident, and it inevitably degrades the man who uses it. From you the young men may learn that a man may have a keen enjoyment of sport, may be a good shot and an artist with the fly and yet have no use for the accursed bottle. Again I say, my sincere thanks for this. C. B.

bottle. Again I say, my sincere thanks for this. C. B.

Boston, Mass.

One morning in each week I receive my mail with greater pleasure than usual. The particular morning referred to is the day which brings me the Forest and Streem. For a time I am taken away from scenes of business strife to the happy hunting grounds of the past, and in turning the leaves of this able journal I seem to seem the breezes of forest and stream from the many districts of the country, some of which are as yet unexplored by the writer, and many from localities old and familiar to your scribe.

Trajectory.

## The Rifle.

VERMONT-Brattleboro, Nov. 18.—Thinking that perhaps it would be of interest to some of the readers of Forest and Steeam I send an account of the mid-range rule match which took place between the Rod and Gun Club, of Springfield, Mass., and the Fort Dummer Club, of this place, at the range of the latter club at Ver-non to-day. The scores of both teams at the 400 and 500-yard ranges were excellent and have never been excelled on our range. ranges were executed and nove never near occurred or our range. The highest possible of 78 was reached by members of both teams on the 400-yards range. The wind, which freshenced up some at 500 yards after dinner, developed into a perfect gale, varying from 12 to 3 o'clock, requiring the use of all the way from 1 to 10 points of windage, and the score at 600 yards suffered accordingly. Members of our club were high in praise of the gentlemanly qualities of the Rod and Gun Club, and another season will probably see the in-auguration of a series of friendly matches. The following is the score in full :

CREEDMOOR, Nov. 25.—The Thanksgiving Day match was declared a most enjoyable success by all who took part in it, as it certainly was a real novelty in the shooting line. It was, in fact, a novel mode of handicapping, so pleasantly were the poorer shots led to suppose that they were having a close call on the shekels. The was an all-day one, open to everybody, at 200 yards, using the State model rifle. Every freedom was given to contestants, and the same rifle could be used by a number of shooters if the match was not thereby delayed. The entrance fee was one dollar for first entry and fifty cents for each duplicate entry—five shots each entry. Competitors to enter as many times as they please, each entry. Competitors to enter as many times as they please, but only the aggregate of their two best scores to count. All nu-merical ties to be decided by lot. Upon payment of amount of en-trance fee, ammunition will be furnished without charge.

Pool targets were kept running ad lib., and all day long the crack of the rifle was heard. Seventy men were out with their rifles and the entries ran up to nearly 400, one gentleman, in his eagerness for a good score, entering no less than thirty-two times. Sharp at 4 o'clock the firing ceased, and then came the settlement of the orders of ties. Before 5 o'clock the fifty leading scorers were seated at dinner in the large dining-hall of Klein's Hotel, by the range and, with appetites sharpened by a day's shooting, the lucky fifty fell to with vigor. With the dessert Assistant-Secretary Weston, to whom the credit of suggesting the match should be given, appeared with a broad tray, on which were fifty charlotte russes. The shooting of the day had determined the distribution of these charlotte

1. The competitor making the highest score, as stated, to select 1. The competitor making the inguess scare, as charge, in according to the charlotte russes.

2. To select three charlotte russes.

3. So select two do.

4. To select two do.

5. To select two do.

6. 7, 8, 9, 19, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31 and 32, one charlotte russe each.

33, 34, 35, two charlotte russes, ownership to be decided by committee themselves.

petitors themselves.
36, 37, 38, two charlotte russes, ownership to be decided by com-petitors themselves.

36, 37, 38, two charlotte russes, ownership to be decided by competitors themselves.

39, 40, 41, two charlotte russes, ownership to be decided by competitors themselves.

42, 43, 44, 45, when the charlotte russes, ownership to be decided by competitors at the control of the competitors of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the charlottes were as follows, each one cantining a single com: One double-capile, \$20; four single capies, \$20; is half-capies, \$30; fourteen quarter-eagles, \$30; fourteen quarter-eagles, \$30; the control of

There was to be no "nering," and the rine of throughes, that a piece once touched should be taken, was adhered to. When all had been served, on the call from the charman, "Search and ye shall find," all spooned down into the depths of the charlottes, and from all sides came up expressions of joy or disappointment. Van Heusen's four selections netted him \$26. McInnis was the lucky man, and drew the double-eagle, with an odd dollar besides. Secretary

and drew the nonne-agic, win an out done arcsuces, sectuary Donaldson secured \$4.50 for his three pieces, and all down the ta-ble odd streaks of luck ran, and the only regret of the men was that the wretched weather of the day had kept namy shouters from attending on this wind-up day of the regular matches. The scores of the match stood : of the match stood:
1. A. B. Yan Heusen.
2 F. J. Donaldson.

GARDNER, Mass., Nov 26.—There was a good attendance at the Hackmatack Range yesterday. A series of meetings was inaugurated. There is to be a contest each week until a certain sum is realized. It is open to all. The prizes to be awarded aggregate \$50. The first prize is \$10. Distance, 200 yards, off-hand, using the inch-ring and Creedmoor target combined. The work of yesterday is told by the following score :

I. N. Dodge	97 - 186	Geo. F. Ellsworth 83	89 - 172

MAMMOTH RIFLE GALLERY-Boston. Nov. 26.—Thanksgiving week was a busy one at the Mammoth Gallery, and the contestants in the Excelsior Biffe Match were large in point of numbers; the gallery was well filled both day and evening during the week with riflemen and their friends, many members of the several rifle clubs in this vicinity being among the number.

citibs in this vicinity being among the number.

Mr. R. S. Gray, of the Massachusetts Riffe Association, still bolds the lead with 191, closely followed by Mr. N. W. Arnold, of the same Association, with 191, and Mr. U. A. Pollard with 191 ranking in the order named. The three leading contestants are so ranking in the order named. The drive resump contestants are so close that it will be hard for any one to name the winner, Mr. E. F. Nichardson follows closely with 190. Next in order is Mr. J. Merrill with 188, and sixth is Mr. S. Canterbury, with 186, outraiking Mr. H. Appleton, who also has 186.

On Dec. 1 will commence a new match, called the Any Rifle Match, with six cash prizes, as follows: First prize, \$7; second Match, with six cash prizes, as follows: First prize, \$7; second prize, \$6; third prize, \$5; fourth prize, \$4; fifth prize, \$2: sixth prize, \$1. Conditions of the match are: Any twenty-two calibre rifle three pounds pull; rounds, eight; possible 40; five scores to win, or possible 200; position, off-hand.

The management, desiring some one to make a clean score, will

offer an extra prize of \$15 to any one making a clean score eight consecutive bullseyes. This the management thinks will an incentive for the crack shots to put forth greater efforts in this direction. This new match will commence on next Wednesday. The following are the leading competitors, with their scores to date; 50 yards, rounds 8; possible 40; five scores to win, or possible 40; five scores to

BROOKLIELD, Mass., Nov. 26-Yesterday, Thanksgiving Day, several of the members of the Sportsman's Club had a practice at the range, breaking glass balls. Each had ten shots; the balls were thrown from a rotary trap, with eighteen yards rise, record was as follows: C. H. Griffin, 10; J. P. Crosby, H. P. osby, H. P. Ger ald, George Chapin and Henry Crosby, 9 each. The two last are but 13 years old.

#### HUNTING BIFLES.

NEWPORT BARRACKS, KV.

A LLOW me, as a sportsman of many years' experience, to venillate my views on what I consider good, serviceable sporting rifles—rifles which in their way and for actual work cannot be excelled; and although I admit they still may be improved upon, at all events, for the present, they stand, in my estimation, as the best in this country, regardless of cost.

I will commence with what I consider to be the best rifle for sporting in timber, for self-defence against odds, for general utility, the standard of the property of the constraints of the standard of the self-defence against odds, for general utility, the self-defence against odds, for general utility,

and, in fact, the best rifle for killing game on the run, and quick snap-shooting generally.
In 1870 I bought a cal. .44 rim-fire Winchester repeater, which

shot 28 grs. powder and 200 grs. lead. With this rifle I killed a snot 28 grs. powder and 200 grs. lead. With this rifle I killed a good many deer and some elk, and in its day it was the best American repeater made; but then it had many shortcomings, especially for killing large game—the load was entirely too small to give good results, and although a most convenient gun, yet it was not "the thing."

In 1873 I bought one of same make, but of later model, which -40 grs. powder and 200 grs. lead. was a good one, and with it I killed many deer, antelope, eik and buffalo. Still it was not a "bone crusher," and although I always used a hollow-pointed explosive bullet, in many cases I did not bag game which a heavier ball and larger load of powder would have "called in." When first I used this gun I tried factory ammunition—viz., solid bullet and ordinary rifle powder. Afterward I used Curtis & Harvey powder, and made my own hollow-pointed bolls. With these I came out very well, and consider that for light sporting rifle - one that is not intended for game any larger than deer, and exclusively for shooting in timber, where the range seldom exceeds 100 yards, and no wind to disturb the flight of the ball-this is an excellent rifle; but for prairie work the bullet is too light, especially when cast hollow-pointed; and I have been sadly disappointed when shooting at black-tail deer across rayines, at say, 250 to 300 yards, to see my bullet drift away to one side, per haps several feet, when 1 knew I held where I thought was right making due allowance for wind, depression of ground, etc.

Since then this same firm (Winchester) has turned out what consider the very best rifle in the world as an all-round gun—viz. a cal. .50 Winchester Express, burning 95 grs. powder and 300 grs lead (hollow-pointed bullet). This gun is rather heavy, to be sure but that is all that can be said against it, and it must be borne in mind that a strong shooting gun must be full weight, as a light gun would kick fearfully with 95 grs. powder, even if it doos shoot a light bullet. I don't like the long magazine, but one that carries, say, six cartridges, and that, making with one in the barrel ny as are generally required. Such a weapon in the hands of a skillful marksman is a perfect armory in itself. and will stop any animal at which it is fired, backed by an a aim and good judgment.

The penetration is not so great as that attained by rifles which shoot a more pointed and heavier bullet, but it will be found amply sufficient to bowl over a grizzly, buffalo, or any animal that is a native of this hemisphere, and that with one shot, if properly delivered. But what if the first shot doesn't? You still have six others—and there is the beauty of the repeater. Should you jump a band of deer, by keeping cool and giving the gun a show may bag three or four before they get out of range. course, depends upon the ground, etc. At all events, you can always count upon doing more mischief with seven shots at your fingers' ends than you could under the most favorable circumstances expect to with only one or two shots. Then again, when hunting in the Northwestern States in the winter, it is an inexplicable luxury to be able to do all your loading at home before yor start, as when it is ten or twelve degrees below zero I have always found it was more comfortable to keep on my gloves-or, rather mitteusand no other gun (other than a repeater) can be handled successfully with these ungainly but indispensable appendages By the way, for hunting in cold weather, a regular mitten for the left hand and with one a forefinger for the right is what is wanted. The trajectory of this cal. .50 Winchester Express is very flat, and that is one of its best points. To those wishing a somewhat lighter gun I would recommend the gun of this make which shoots 60 grs. powder and 300 grs. lead (solid ball), but for a smashing, killing bullet, give me the cal. .50. As to the gun being too complicated and liable to get out of order, that theory has been entirely forgotten out West, where they are most extensively used, and with decent care and attention they will last as long as can reasonably be expected, considering their price.

Regarding the Express system -or hollow-pointed ball and pecuar grooving—there is, I believe, no one who now doubts their superiority over a solid ball, any more than that a choke-hore shot gun will outshoot a cylinder, or but what a 10-gauge gun, if properly built, will outshoot a 12. These things happily seem at last to be settled facts, and it would be folly to argue with a man who would not accept them, as such an individual could never be onvinced. For my part I am fully convinced that a 160-grain collow-pointed bullet, driven by 40 grs. powder, will do more damage and have a more demoralizing effect than a 500-grain sharp-pointed bullet, with 100 grs. powder. This I know to be a fact on antelope and deer. For buffalo and other large animals the former is too light and has not the requisite penetration; but the 300-grain ball from the cal. .50 Express is just the thing.

I hope I have not opened a hornet's nest by advocating a certain rifle in preference to others, as I do this merely as a word of advice o beginners, and not in contradiction to ideas which may be too deeply rooted to allow of any change. TIRADOR.

Bosron, Mass.

Of late much has been written upon the subject of "Hunting Rides." and the articles have been subject to "Hunting Rides." The late Bayard Taylor used to say that he never found himself in the company of a person but what he could learn something, and so each of the new contributors I am introduced to through columns tells me some little useful point, which adds to my store of knowledge on this subject.

Rifle shooting is my madness. Hunting with a rifle I prefer all other sports, so if I may tell fellow sportsmen my opinion of hunting rifles, perhaps—even if I am thoroughly thrashed by some abler scribe-some one may find a grain of wisdom which will profit them

In hunting with a rifle we are supposed to be in pursuit of game which is too large and too shy to be bagged with the shot-gun, therefore we want a more powerful arm. The question naturally arises, "What calibre do I require and how much powder do I require to charge my rifle?" Look over the market, and you will and many excellent weapons, but a large, very large, proportion of the so-called hunting rifles in the gun-stores to-day are totally unfit to kill anything above the size of a hare. Ritle makers generally to-day seem to be manufacturing objects d'art instead of weapous of usefulness and defense.

When I go hunting I take either my shot-gun or rifle, and whe I take the latter I go to kill what I cannot kill with a shot-gun, and I therefore have a weapon with which I can kill my game from 100

to 500 yards. To do this, 60 grs. powder is theleast I should think of using, and never have shot less than 70 grs. The bullet I want to weigh at least 420 grs. The rifle to be .45 cal., and to weigh not under 9 lbs. Now, some of your readers will exclaim, "None of that for me," and will cite cases of tigers and bears being killed with .38 cal. rifles; but because such a case has been brought to to their attention, it is no reason that the weapon is suitable to hunt such animals. Dr. Coues once shot a wolf dead with No. 10 shot, but I don't believe our ornithological encyclopedia would go wolfnunting with such ammunition.

I have owned many rifles, and what I tell your readers is the result of a long experience and many tests. The finest and best hunting ride I ever owned I bought in a city gun-store—a poor, despised, second-hand, Sharps "Old Reliable Business" rifle, the old model, with an outside hammer. How insignificant it looked in the background, for in front were those objects d'art-those beautiful, high-priced, hot-house-flower rifles, with Italian stocks, natty white straps attached to the slings (how white and clean those straps were!). But my eyes were upon that plain, substantial Sharps, and as an art connoissenr would seize a Rembrandt, a Titian, or a Guido, I seized that rifle, paid for it, and bore away my prize.

Now, if I may be permitted to, transfer the reader to the plains of the Great West. Time, early in the morning; very cold, a strong wind blowing; in the distance, five antelopo; two hunters approaching them, one armed with a light rifle, shooting about 30 grs. powder, and bullet to correspond; the second, the writer, armed with the Sharps rifle above mentioned, charged with the Winchester government ammunition, 70 grs. powder and 420 grs. We manage, by being mounted, to approach within about 250 yards, when away go the antelope like the wind. They run about 50 yards, and with that habit so fatal to them, stop for an instant to indulge their curiosity. In a second two shots are fired. the lighter bullet strikes the ground about 150 yards from the shooter. The antelope run, but before they have covered fifty yards, one is down, stone dead, bored through with the 420 grains of lead. I look around, and in the distance, upon a slight eminence, stands a noble buck. In as quick time as I could "pump" a shell into a Winchester, I had slipped one into "Old Reliable." The buck was so far away that as he faced me he looked like a tiny object, but he soon presented his side, and my ritle was at my shoulder. "Don't fire," shouted my companion. Crack went my riile. "You've hit him! What a shot! He's all right!" I heard as I jumped into my saddle. What a distance, I thought, as I cantered up to my game. How pretty he looked, so slock and clean. He was shot behind the shoulder—a well-placed shot, but he was not dead, and he jumped to his feet. Another shot brought him , and I cut his throat just as the boys from camp came riding
"We thought you wild," they exclaimed, "to shoot at such a distance. What a gun to 'hold up.'" The distance was paced, and 468 paces counted.

I have detailed this account—which is a truthful one—to illustrate what I wish to say in conclusion. I have shot many deer and antelope; of the latter I have rarely killed one under 200 yards, and from that distance up to 468 paces.

I want and have a rifle-the one mentioned-that I can shoot, in cover, bears and moose ; and my bullet, with the charge of powder mentioned, will, if well placed, bring to bag the largest game. It will also shoot perfectly at long range. When antelope shooting, I sometimes use the Government shell, 85 grs powder and a 500 gr. patched ball. This is very effective in making long shots.

I do not believe in magazine rifles. I have used them, and know their merits and demerits, and cannot but believe that, sooner or later, hunters who now favor them will believe as I do.

To sum up my statements in a concluding paragraph: I do not believe any rifle is fit for actual field service but what takes powder and lead enough to make a nearly flat trajectory up to 150 yards. Have your rear elevating sight fast, and learn to shoot at different distances by drawing a fine or coarse sight. Let the front sight regulate the clevation. Get such a rifle, brother sportsmen, and you will find it a fit weapon to shoot in timber or on the open prairie. Have target sights, if you like, interchangeable with the hunting sight, and you will find you have a "thing of joy forever,

Hop Bitters have more patience than Job, curing thousands of patients daily. See Proverbs.

## Pachting and Canoeing.

RIGHT AS FAR AS HE GOES.

Editor Forest and Stream:

I HAYE observed that you think American builders give too much beam and too little depth to a yacht of given length; also, that you oppose the use of the centreboard and the use of much canvas in one sail. I linefar from your account of the race between Georgie and Annio and Ayrshire Lass that you capecially object to defects. I think your condemnation of these models and rigo lust, so far as applied to large yachts intended for rough work and much "ontside" crusins, but when applied to our smaller sailing boats, of which the eat is the chief, I consider it entirely too sweeping. The very things which seem failures when applied to sea-going yachts are, it seems to me, those which make the cat such a favorite. Her small draft and centreboard canble her to sail in very shallow water, and when in deep water to use a large keel. As we cannot despen our indets and shallow lakes, and still like large boats, we can only increase the beam to add to their size, which increase of beam sice prevents the necessity of much balast—a great cannot deepen our indets and shallow lakes, and still like large boats, we can only increase the beam to add to their size, which increase of beam sice prevents the necessity of much balast—a great cannot deepen ure indets and shallow lakes, and still like large boats, we can only increase the beam to add to their size, which increase of beam sice prevents the necessity of much balast—a great cannot deepen ure indets and shallow lakes, and still like large boats, we can not prove the convention of the said of the provents of the part follows being far superior to anything of their class described in his book. And as concerning smaller sail-boats, "On smooth water we are laing." Now, the cat is the chief of these smaller boats, and I claim that it is in her class cepecially that "we are king." Dison Kemp speaks very highly of the catboat, as represented by the Una, asying that the handiness of the boat was a marvel to thece whose simplest rig was that of a waterman

the British Isles, and consequently do not demand such extreme depth and small beam.

Boston, Nov. 20.

G. N.

We take no exception to the above letter. As long as we are content to remain in smooth water and shirk good breezes, our beamy light-drafts is all that are required. So far as small "open boats" are concerned, not even this much can be said of them, however, for the catamaran is their superior on every point. But a very large and growing fraction of the yachting community is desirous of having safe and comfortable vachts of small tonnage in which to cruise in open water and weather a gale if necessary. a class, we are becoming sea-going yachtsmen more and more every year, and eventually will graduate as such quite as thoroughly as the English already have done. For the use of that class we advocate a modification in prevailing customs, and we have never yet met any one who has tried the orthodox sloop under such conditions but what he was prepared to acknowledge the truth of our strictures concerning the unitness and danger of cruising at sea in ninety-nine out of every one hundred yachts as they are mod-eled at present. It is not necessary to go to the English extreme in depth and want of beam to secure an honest boat. Something half way between the sloop and cutter in model will secure the good qualities of each without any of their objectionable points. The very nature of yachting in America is still in a shifting condition. It is not yet half developed, and, until the sport reaches maturity, we must expect and counsel a change in model to suit the advance in the acquirement of seamanship and a love for the sea. It is an uncomplimentary slight to the stamina and courage of American yachtsmen to assume that they will forever rest content with pottering about New York Bay and the Sound, and that we will never become sea-going sailors like our brothren across the Atlantic. Any one who has observed the signs of the times, indicated by the growing popularity of handy rigs, depth, keel and craising, will conclude with us that the day is not far distant when the line will be sharply drawn between the mere yacht owner and the yacht sailor. Just at present the former carries his head as highand often a little higher—than the latter, because the length of a person's purse is still confounded with his claims as a semnan. We cannot go to sea until we have sea-going yachts, in which tonnage shall not be the criterion of rough weather qualities, but model and a fit rig and equipment. It is to encourage the highest form of yachting that we are doing what we can to have a rational modification of the smooth-water racing machine extensively introduced, and the liberal success met with already encourages us to "keep harmoring away" until even the Bourbons catch the drift of our ideas, and are taken irresistibly with the sea-going and cruising fever. During the coming winter we will have something practical to submit to the reader on this score.

#### MEASUREMENT.

MEASUREMENT.

Eitlor Forest and Strom:

MOST yachtamen are beginning to realize that if yacht racing is to to continue at its precent height a new system of measurement must be adopted, and that before long. Many men have given up racing because they cannot indulge in the sport, except in a boat that they dislike for all other purposes. Length is used as a basis for classification in most of the races for small yachts. This encourages the building of short, wide, shallow boats which are useless and dangerous in rough water, but which, owing to their enormous spread of sail, and to the prevailing hight breezes and smooth water during racing time, are enabled to walk off with the prizes. Many of these boats are used for no other purpose than racing and the yacht that is used principally for cruising does not have a fair chance when ale enters for a race with them. Now we want a classification which will enable boats of different types, and which at classification which will enable boats of different types, and which at a fine-allowance rule which favors no one type to the exclusion of all others. I think "Length plus Beam," will answer the purpose. Thooretically, length plus beam plus depth unquestionably is better, but if we adopt a rule which taxes all dimensions racing men will extrainly expend those dimensions which give speed at the expense of those which give other desirable qualities and with L. B. D. we would build long, narrow and shallow boats which would be unaafe. Now, if we leave depth out men night build extravagantly deep boats so as to curry monstrous sails. I very much doubt if this would be the case, but we can it with a have at least as afe, uneapsizable type. If we consider a centreboard sloop 38ft. Long, with 15th, bearn, with he sum of these dimensions, 26th, let grow the sum of dimensions the same, be made a "crimerie" 27 by or 22 by 8, or 29 by 7, or, if we like it, 30 by 6.

Length plus bean encourages the "medium" type—the one which moet vachtsmen nowadays agree in considering the most b

The addition of length and breadth would work too strongly in favor of width, and produce the short, stumpy model our correspondent very justly objects to. As boats are longer than they are broad, a foot more added to beam would mean a much larger boat than a foot more added to lead would mean a mort larger that the would in both cases be alike. The builder will, of course, prefer the greatest tonnage and power, and would continue in his present beamy sin. If length and beam are to form the basis of a rule, the two must be treated as factors and multiplied. This re-The two bins to errors as a ractions and multiplical. This re-proves the preponderating advantage to been offered by their summation, as a little reflection will show. Under such a rule the "back door" would lie in the direction of depth, and it remains a question whether the wily builder would not soon follow in the footsteps of the English. At all events, multiplying length and team would be a step in advance over the present clumsy method of measuring only the former. Should it be found in experience that yachts are running too strongly into the English type, a third actor could be readily introduced either in the shape of the actual depth, or, better still, of some "standard" dependent upon both the other two. Then the rule would be about as perfect in logic, and at the same time fair to all types and beneficial in its work-and at the same time fair to all types and beneficial in its work-ings, as any yet suggested. But we will welcome any change from the length rule, which is perhaps the least reasonable and the liest permicious in effect of all, American or English, a fact now choosed by all who have given the matter more than superficial

SCCCIMBED TO THE FASHION.—The "old America" will soon be no more. She is to be "simproved." Let us hope the job which is to rob the world of such a famous relie will be done by men who will understand how to assimilate the "improvements" to the rest of the structure. We could have wished to see improvements in more vital parts than mere counter and deek, but the old wood will not stand much below without complete rebuilding. Fast and weatherly as this famous craft may be—and in proper hauds and trins has is faster than any new fangled sailing methles affoat—she too has her faults, she is terrible slow in slays and lacks the round in the control of the control of the control of the control of the control of the control work. Many a time have we stood at her helm while beating up a narrow clannel and wished the heel knocked of her; it was too much of a good thing. From the Boston titobe we take the following: The America was built by George Steers in New York in the fall and winter of 1849, and was launched in the spring of 1850. In the year 1850 she was taken to Cowes, England, and sailed in the relation of the property of 1849, and was launched in the spring of 1850. In the year 1850 she was then sold to an England mobile and the school of the spring of 1850, and after a few seasons was laid up for two or three years. A builder on the Thanes next bought her in 1869, replanked her and put in new timbers. In the year 1861 a confederate agent in London, looking after fast vessels to run the blockade, purchased this yacht and she was taken to Nassau N. P. Who it was that purchased her, or who it was that owned he at this time could never be ascertained. She was thoroughly fitted out at Nassau for a blockade runner, and ran for four accessful frips to and from blockade ports. On her iffth trip she was chased by a federal gunblock up to the standard provers. On her iffth title she was chased by a federal gunblock up to the standard provers and the relation of the provers and the provers and the sparse was the standar

A Farst Gowyers.—The Herotel's horizon has cleared up. In reviewing "A Daring Voyage," published by E. P. Dutton & Co., N. X., in which the brothers Andrews detail the advantures of their ill-considered voyage across the Atlantic in a dory, the Herotel remarks: "The brothers Andrews, who made the trip, were not experienced sailors, as were most of the other men who have crossed the Atlantic in boats nowhere near as large as some of the yachts that hide from such rough water as is to be found in New York Bay or Long Island Sound; they were neares." Their log is quite suggestive in many ways to amateur cruisors who manage their own boats; it is also a warning to other venturesome spirits to confine their hardihood to shorter trips than that between America and France."

ica and France."

Pont Jefterson.—Our correspondent sends the following list of yachis wintering at Port Jefferson, L. I.: Stranger, steamer, Osgood, New York. Promise, steamer, Belden, New York. Rambler, schooner, W. H. Thomas, New York. Electwing, schooner, Osgood, New York. Sylph, schooner, Mallory, New York. Osprey, schooner, Kate Claxton or Stephenson, Alice, sloop, —Boston, Active, sloop, Win H. Horton, Boston. Vindex, sloop, Robt Centre, New York. Volante, aloop, Hitcheock, New York. Orion, sloop, — Coeper, New York. Curlew, Sloop, —New York. Siren, sloop, Thos. B. Hawkins, Yort Jefferson, and two others amnes not known. The popularity of Port Jefferson as a yachting harbor is constantly growing, especially since the conveniences at Gowanus, Brooklyn, have been destroyed by filling in.

A CHANKE WANTED—Editor Forest and Stream: The leading clubs of Boston are ripe for a change in measurement, and may be prevailed upon to adopt something like you suggest. But to make a rule good for anything it is necessary for all ports to establish it. If a yacht sails under one; measurement one day and another the next it is impossible for the designer to turn out a good boat. N.

ANOTHER CONVERT.—Still they come. The school out a food out at Kinder Another Convert the big sloop of Providence, has been handed out at Leighton's yard, Boston, and is receiving a keel in place of her bond. With the exception of small bay craft, the centre-board has about become a relie of the past in Eastern waters. We hear of many new yachts to be built in Boston, and every one of them will go into commission with a keel and outside beliate

to commission with a keel and outside ballasts.

SENEN VIEWS (howeve,—Editor Forest and Stream: All the yachting we do here in Buffalo now is to ait around the fire during these tool winter values and the fire during the continuous compares with yachts and yachting. Two, if not three, new yachts are contomplated for next spring, but I trust we will have no more shallow boats. Deep draught and sea worthineses is what we want here as elsewhere, and then we can make up our minds to enjoy curselves without being in chronic danger of being spilled out. We are anx-tously waiting for your articles on your own model. A small yacht with good stability and not expensive to build or run. That is what we want, and then look out for a "rovolution" in yacht designs.

ANTIBACITE.—From the Scientific American we take the following: "It is to be regretted that the experiments with the Anthracite were not continued long enough to practically demonstrate whether the Perkins system would or would not do all that is claimed for it." We desire to ealth the attention of our contemporary to the fact that the experiments with the Anthracite were entirely superduous. The Perkins system had already been extensively: tirle for months on board the steam yacht Wanderer and the ferry-boat Loftus Per-

kins, and in both cases had been rejected as a failure, engines and boilers of the ordinary type having been substituted. Of the Leftus Perkins it was truly said that she spent as much time in dock for repairs as she did on duty. Extended experiments with the Anthracite were therefore uncalled for, as the system had been demonstrated a failure long before her arrival. The trip asset was made with a view of entitied Anterface of Naval Engineers, showing the press generally, have eveloaded the fact that the Anthracite steamed across the Atlantic of half-speed and used cansons an unch as possible, and that her successful passage prove nothing for the durability or wear and tear of enginee or boiler. Engineers know full well that many an old rattletrap may be run for a long time at half-speed which would fly to pieces if the thrutte were opened wide even for a moment, and that is exactly the case with the Perkins machinery. As a sensation the visit of the Anthracite was worth noting as an element of a coming "revolution" in steem engineering she is a laughing stock to the profession.

sion.

GLINARE.—Mr. Samuel Holmes, No. 120 Front street, announces the sale at anction of the steamer Gulnare for December II, at 1 r. xr., foot of Erest Ninth street, where she can be seen for a week beforeland. She is 138 feet long, 23 feet beam and 11 feet 6 inches deep, composite hull, two cylinders 26x21 inches, schooner rigged, Speci 10 knots on 8 tons per day.

#### CANORING

SINGLE-HADDERS—Editor Forest and Stream: I have for along time been interested in the single-handed crusser from the descriptions of Macgregor's boat and others, and have been glad to see them advocated in your columns, as I think that, like a cance, they tend to develop yachtsmen and a knowledge of seamanship, and not mere mugchasers. I am interested in them, as I think they will extend our yachting and reclaim some blind followers of the cat-boat; besides which I think there will undoubtedly be a big demand for them.

demand for them.

Detroit Canor. Club—Edilor Forest and Stream: We are about perfecting the organization of a canoe club here, to be composed entirely of prominent business men of Detroit. I shall interest myself in posting you as to the matter. The number of letters I have received from all parts of the country leads me to suppose that the following season will see quite a favore in our canceling.

F. H. S.

Oscood Folding Boat.—These carvas boats have found much favor and are used extensively by sportsmen throughout the land. They are made in two sizes, 12 and 15 feet long. The width of the former is 33 inches, with 12 inches depth: weight, 45 lbs.; designed for two men, and will carry 600 lbs. on 4 inches draft. The width of the larger size is 36 mehes, with 13 inches depth. It weighs 70 lbs. and is designed for four persons. Carries 850 lbs. on 4 inches draft. These boats can be folded mto chests 383 lTs/18 inches and 40x20x22 inches. The canvas used is woven especially for the manufacturer, Mr. N. A. Osgood, of Battle Creek, Mich, and is readered waterpoof and pliable by a special process. From numerous testimonials we judge them to be superior to birch-barks and certainly "as much" as any one could possibly wish for the money, for the two sixes are sold at \$35 and \$43, oars and fittings, duck sack and chest all thrown in, and they are shipped C. O. D. upon prepayment of \$10, with the privilege of examining before accepting.

#### UNSINKABLE CANOES.

Editor Forest and Stram.

[HE objections of "Nessmul" to the use of oars in hunting might be overcome by using "bow-facing oars," and the objections to the causes and metallic boots, on account of their sinking when full of water, by the use of air-tight compartments, such as all prudent men now use.

Apparently "Nessmul's" experience with canvas causes has been confined to collapsable boats. A canvas canoe can be made very strong and seaworthy and light, and, if well made, will live with ease in any sea in which an 18-pound cedar ear.

With regard to the portability of collapsable boats, it depends an much upon the shape as on the weight of the boat carried. I would much rather carry a long pole of 20 lbs. than a boat of same weight. Coughtry's hunters boats when closed form a long bundle like a pole. I used one in the woods last summer and found it very convenient. I think it weight only 25 lbs. I mention here, for the benefit of sportsmen using collapsable canoes, that I saw hast sammer. They can will two air-tight large, but they supported the boat when rule of water and two much boding on. I woulder Osgood and Conghry do not if their boats with collapsable bags that can be blown up when wanted.

Canvas Back.

J. H.D. Ponglikeepsee, N. Y.—Please inform me exactly what kind of bird is meant by "coot," so often referred to by writers in Fonest AND STREAM Js it the velvet duck? Is it the clapper rail or mudhen, or what is called on the St. Lawrence, mgger duck, which latter I believe to be the velvet duck of Wilson? Ann. We are unable to give a categorial answer to your question. The name coot is used to designate a duck in some sections, and the so-called and hen in others. An ornithologist in speaking of a coot refers to Fulica americana, which bears the local names, and hen, king rail, sea crow, crow duck. But along the New England coast a cool is any one of the three species included under the genus (Edemianamely, the scoter, the velvet and the surf duck. Where this term is employed you will have to decide for yourself what is meant by it, being guided by the context. We do not know the "aigger duck" by that name.

H. P.-Much information on canvas cances scattered through

our back files. Article by Com. Chase in number for Aug. 7, 1879. B. C.—Best plan to renew your Cape Ann suit is to give one or two coats of boiled linseed oil with a little beeswax dissolved in it, if the thread of the cloth is still worth it.

S. N. J., Philadelphia.-We know of no one having such a gur for sale. You will perhaps find it by making your wants known to gundealers, or by advertising in this paper.

J. B. L., Lockhaven. - Your duck may perhaps be a wood duck but as you do not describe it we cannot tell with any degree of cor It is not, however, a goesander, that is certain. Write more full particulars.

H. A. G., Utica, N. Y .-- 1. What is the scientific name of the bluefish? 2. What is the scientific name of the fish caught along the coast with hook and line, generally called snappers and snapping mackerel and sometimes young bluetish? Aus. 1. Pomatomus saltatrix. 2. They are the young of the bluefish.

D. L. T.—All large yacht clubs publish an annual pamphlet giv ing names of members, yachts of the squadron, constitution, by-laws, etc., for private circulation among the members only. You may obtain a copy through the courtesy of the secretary possibly, by addressing him at the club rooms, Madison avenue and Twenty seventh street, New York.

J. McN.—The waterproofing process you refer to is probably the following: Dissolve parafine in naphtha or benzine and soak the garments thoroughly, letting them dry slowly. Another recipe is: Half pound sugar of lead and half pound powdered alum dissolved in bucket of rain water; pour off into another vessel and steep the garments. Hang up to dry without wringing.

SAIL BOAT.-We do not like to discourage any invention. The one you speak of will be hard to place on the market. It seems, as far as we know, more suitable to models than to large yachts. You can address the inventor through us. Only actual experience can demonstrate the extent to which it can be applied with success, and that experience we have net had.

V. A. N.-The dimensions 32x8x3 will make a good boat of the Sharpie style. A little more beam would make her safer. She will do very well for Mississippi and Florida waters. The chief danger is her great liability to capsize, and if green hands are to accompany you keep your eyes open in bad weather. A keel with iron on it would make her safe, but would not suit for exploring shallow and unknown waters. An iron centrebord would help you much. We counsel 91/4ft, boam, Mr. Clapham makes a specialty of such boats. See his card. The drawings of the Newport catboat were published before our advent and we cannot youch for them. All three plans ought to coincide.

From Twin Lakes Orange County, Nov. 17, -4 Florida, in your issue of the 11th, wants to know what are the prospects of a young man going to Florida to engage in the orange business?

Ans. It depends mostly on the man and depth of pocket. 2. What part of the State is best adapted to the business for healthfulness and profit? Ans. Elevated pineland for the first, almost anywhere south of danger of frost or freeze. For quickest profit get the richest land to be had, which is hammock, which you can't

live on healthfully the year round. Pineland is not rich but is healthful, and takes much manuring. Locate near transportation. If possible get hammock for grove, with pineland near for residence. 3. How long before one can realize, etc.? Ans. It depends on whether you plant seedlings or budded trees. 4. What amount of capital? Ans. How much do you want to plant? 5. amount of capital? Ans. How much do you want to plant? 5. What time of year best to begin? Ans. September or October. 6. Any book treating of orange culture? Ans. Send to T. W. Moore, Fruit Cove, Fla., for his "Treatise on Orange Culture." I have been on my present place five years. Have had some experience; grove (part) coming into bearing. Shall be glad to give inquiring parties information. Have done nearly all my own work and know considerable about the difficulties of orange culture. It's not a "flowery bed of case." "There is no excellence without

P. S.—One thing more, very emphatically: Let no man come to Florida expecting to support himself from his pincland place in south Florida and raise a grove at the same time. If one can combine the three desiderata (healthfulness, good garden land and suitable orange land), then he can raise vegetables for Northern markets, and so keep the pot boiling or help thereto. There is a divided opinion as to the degree of latitude north of which that orange can safely be grown.

-Any subscriber or reader of Forest and Stream in want of any kind of carpetings, oil cloths, rugs, etc., etc., can be sure of fair treatment at the hands of John H. Pray, Sons & Co., Boston, Call or correspond with them, and get their prices before buying. It will pay you to fry them .- [ Adv.

# MacIntosh Waterproof Goods.

In ordering Stock or Pants please state the Size—you can easily obtain it from your Shoemaker—of the Boot or Shoe you are accustomed to wear.

The quality of these goods is so well and widely known as to require no comment. It is not only unequaled, but also unapproached by that of any similar manufacture in the world. By a special arrangement with the Messrs. MacIntosh, we are enabled to place their goods in the hands of Sportsmen at prices which will certainly drive all inferior makes out of the market.

\*.\* The Forest And Steam goes to press Wednesdays, Correspondents are requested to mail their communications so that they may reach us before that day.

—This is an excellent time to call the attention of your friends to the merits of the Forest and Stream. We shall be happy to supply specimen copies of the paper to any addresses which may be sent as for that purpose.

THE man who thinks that he can afford to pay the jarmer's boy more for quait than the boy is puid by the baggage-masters is invited to send his address to this office.

WE must beg the indulgence of numerous contributors whose communications are deferred this week.

BACK FROM THE FISLD TRIALS.—A portion of the returning throug of sportsmen who had been interested whoesees at the Eastern Field Trials, passed through this city on Monday, and we had the pleasure of seeing many at this office during that and the following days. Among those who called were Col. James Gordon, (Pious Jeems,) Dr. Rawlings Young (Guyon), Mr. J. C. Higgius, Mr. J. O. Donner, Mr. T. Gadston, Mr. Theo. Predmere, Mr. Tallman, Mr. E. J. Martin and Mr. G. W. Bissford.

It is about this time of the year that the American bear vanueth himself in all his primitive immensity and blood-curdling ferociousness. Our country exchanges teem with hair-misting accounts of the frightful encounters and howling struggles of man and beast. There is one venerable old bear, who makes his appearance in the paper year after year, with all the regularity of the revolving planets; and along with him in this year of grace, 1880, comes the same unhappy "settler" to die again for the fortieth time his lingering death in the embrace of the monster. He is dead again; but we shall look for him, just the same, nextyear. He and the bear are as fixed in the newspaper world for all time to come as is Traus Major in the heavens.

And, by the way, what about that family out in Iowa who are eaten up every winter by the wolves? Is it not almost time to hear from them again?

#### THE DITTMARS' ABRACADABRA

THERE came into our hands some time ago a printed circular, issued by the present Dittmar Powder Manufacturing Company, setting forth as a reason for the stoppage of their "sporting powder" mill the alleged sickness of Carl Dittmar. The circular letter further alleged that the failure of the company to make any more "sporting powder" was not due to the effect of our publication of the true nature of our compound, but that, on the contrary, the publications of the Forker and Stream articles had rather helped their business. Within the past week the Dittmars have published what they state to be extracts from a seventy-five page pamphlet prepared in reply to those Forker and STREAM statements, which had helped them so substantially. The Dittmar Powder Manufacturing Company (No. 2) is not altogether consistent.

The Dittmars preface their pamphlet by assuring the public that they did not themselves write the Forest and Stream's article. The simple fact that the Forest and Stream's article that the contained the exact truth about the "Dittmar sporting powder" is sufficient proof that it was not written by the manufacturers of that explosive.

The pamphlet which the Dittmars have been two months and a helf in preparing is, as we supposed it would be, mainly an abusive attack upon the FOREST AND STREAM. Had the Dittmars been conscious that the truth was on their side they would not have tried to bury the powder beneath the gutter refuse and tunck of their ribaldry. We insist, and the public insists, that the "Dittmar sporting powder" manufacturers must not attempt thus to evade the facts adduced by the FOREST AND STREAM.

Stripped of its personality, the Dittmac's "reply" is this:

1. That the truth was published by us in consequence of the withdrawal of their advertisement. We simply ropest what we said before respecting the withdrawal of that advertisement, namely, that "after their agent had been informed that we were about to publish the results of varinterstigation, the Dittmar Powder Manufacturing Company, upon the trumped up pretext that our refusal to publish what we thought to be a libelous letter proferred by them was un fair, judiclously withdrew their advertisement." The Dittmars allege that we published the article because they withdrew the advertisement because we had told them that we were about to publish the article. This is a matter concerning which the public may draw its own conclusions. Right motive or wrong motive, the facts adduced respecting the powder remain. The Dittmars may "publicly charge" until the crack of doom; the facts are not altered thereby.

2. That the truth was published by us in the interest of other powder concerns. This is unqualifiedly false. The exposition of the powder, except such portions of it as were then credited to others, was written entirely, every paragraph, sentenceand word of ir, by the editor of this paper, and in the interest solely of the sporting public and for its protection.

The Forest and Stream insists upon the right to expose any and every fraud and swindle, which endangers the personal safety of its patrons, and to gather its information from every available source. In investigating the "Dittmar Sporting Powder" we pursued this course, and we did not stop until we had inquired if Mr. Dittmar's sworn testimony concerning his sporting powder tallied with the letters written by him to forward its sale. We consulted the records. We found that they did not so taily. We published them. Him illee lackrymee, which means, literally, "hence these tears;" freely translated it means hence Carl Dittmar's "sickness."

3. They quibble on the patent specifications we published. By referring to the notice on the backs of the "Dittmar sporting powder" cans it will be found that the patent there called for is the one published by us. The reissue of the same patent does not affect the case at all. That those, who are interested in following the present Dittmar Powder Manufacturing Company in their crayfish movements, may satisfy themselves that Mr. Dittmar's patent was correctly presented they may send to the Patent Office at Washington and procure all of his patents upon payment of a fee of twenty-five cents for each one. The numbers are 98,854, 99,069, 90,070, 145,403; reissues, 5,759 and 6,645 and No. 179,688. More-

over, if Mr. Carl Dittmar will send us a copy of a patent and accompany it with a sworn affidavit that it is the patent under which his powder is made, we will publish it, and the affidavit with it.

4. Professor Morton's report. We have not the patience to follow the writers of the pampblet through the rortuous course of self-contradiction here, wherein one sentence they deny that the Morton powder was "sporting powder," and in the next affirm it; and then go backward and forward again. For example in one sentence it is:

"The alleged Ditmar powder presented him [Prof. Morton], and which we claim to have been nothing more nor less than Dualin, a blasting powder generally called Dittmar powder."

Then:

"Suffice it to say that no nitro-sugar, etc., not even in infinitely small proportion has for many years been used in the production of Dittmar sporting powder."

And again, forgetting what they have said, further on they affirm:

"Now, as far as the nitro-sterch and nitro-sugar mentioned in that deposition are concerned, they beyond eavil, are purely detonating powders, and as such highly beneficial to a blasting compound, but, although science owes the production of such nitro bodies on a commercial and practical scale to the invention of Mr. Dittour, we have nothing to do with them here because, as Prof. Morlon states, they fi. e., nitro-sugar and nitro-starch] are present in the sporting powder in such small quantity that they do not effect the character of the material."

That is to say—and after ten weeks in which to say it—the powder referred to by Prof. Morton is in one breath "blasting powder." "No fitro-sugar, etc., used, not even in infinitely small proportions," and then "they are present." The Dittmars deny that Prof. Morton referred to sporting powder and then they acknowledge it; they deny the nitro-sugar and then admit it; in short, in one of these statements the writers of this Dittmar pampilet are guilty of falsehood.

Their pamphlet sorely needs editing. The concerted efforts of all the editors in New York could not prove the safety of the "Dittnar sporting powder," but the youngest and most inexperienced editor in the land, if he were given ten weeks in which to do it, could have doctored up this pamphlet so that its successive assertions should not have directly or by implication proved themselves false.

We advise the Dittmars to take another ten weeks and fabricate, if they can, a rejoinder, of which one-half shall not be a contradiction of the other half; a rejoinder, in short, which shall contain a decent proportion of truth.

shall contain a decent proportion of truth.

The report of Prof. Moreon referred explicitly and solely to Dittmar sporting powder, which had been received by us in person from the present Dittmar Powder Manufacturing Company, and by us delivered, scaled as received, to him.

Had the Dittuars entertained any honest doubt about this they might have written to Prof. Morton. His reply would have satisfied them.

Office of the Forest and Stream Publishing Company, j New York, Dec. 7, 1880.

PROF. HENRY MORTON:

Dear Sir—The Forest and Stream of Sept. 23, 1850, contained a report written by you on Dittmar powder. May we ask you to state explicitly whether or not that report referred only to "Dittmar sporting powder," samples of which in sealed cans were furnished to you by curselves. Truly yours,

FOREST AND STREAM PUBLISHING COMPANY,

SIEVENS INSTITUTE OF TECHNOLOGY, HOBOREN, N. J., Dec. 8, 1880,

Editor Forest and Stream:

the powder in shot-guns,

The powder examined by me and reported upon to you as Dittmar powder was contained in a sealed can labelled "Dittmar's New Sporting Powder."

The paper seal was intact and was broken by me.

My report was therefore founded upon the material sold by the Dittmar Company as sporting powder.

On the reverse side of the can were directions about the use of

Truly yours, HENRY MORTON.

If the Dittmars will furnish us a sworn affidavit that this powder, which they delivered to us in scaled cans, was blasting powder, and not sporting powder, we will with pleasure publish that affidavit also in our next issue.

As to the influence of the nitro-starch and nitro-sugar contained in the sporting powder, we advanced no opinion. We

simply stated what Carl Dittmar-under oath-said that he thought of them. And this brings us to the sworn testimony. 5. Respecting the sworn testimony of Mr. Dittmar, which we published in our issue of September 23, the Dittmar Powder Manufacturing Co. explain :

"In the first place, this deposition has no even remote application to sporting powder. It refers only to blasting powder and to the ingredients used to produce such powder.

A portion of that deposition was as follows:

UNITED STATES CIRCUIT COURT.

New York, Feb. 19th, 1880.—Before John A. Shields, United States Commissioner Southern District of New York. Deposition of Carl Dittmar, of Binghamton, N. Y., who, being first duly sworn, deposes and states

"My Gunpowder, when I first made it, had the same tendency as nitro-glycerine powder. It burst most all the guns at first, when I began to introduce it. It was just the same as if I would use nitro-glycerine powder. I have it now so that it is tamed down, and don't burst any more guns."

"My gunpowder," the Dittmar pamphleteers explain, refers only to blasting powder." "It burst most all the "refers only to blasting powder." guns" "has no even remote application to sporting powder. It refers only to blasting powder." "Don't burst any more "refers [Feb. 19, 1880] only to blasting powder." guns" This "tamed down" stuff, which "refers only to blasting powder," is, or was, for sale at No. 24 Park Place. The price per can is, or was, 65 cents and 85 cents. "All canisters are sealed, and only warranted when the scal is unbroken." The manufacturers warn the purchaser that the powder is "not guaranteed if this seal is broken." He is sensible who leaves the seal unbroken.

We may explain just here that the deposition from which we have quoted Mr. Dittmar's confession, referred principally to his blasting powder. The statements therein made by him respecting his "sporting powder" were in no wise pertinent to the case, and Mr. Dittmar might just as welland better-have omitted them. But the words, which we have quoted, he did utter under oath, little dreaming that they would ever be brought before the public in contrast with the delusive letters he had written about his "sporting pow-

The Dittmars allege that we have garbled the testimony A copy of the deposition, as written out from the stenographer's notes and printed under the supervision of Mr. Carl Dittmar's own counsel, is now at this office. It is open for inspection. Any one who has sufficient interest in the matter may satisfy himself that we have quoted Mr. Dittmar We invite the fullest reference to every letter deposition and article cited by us in this discussion.

The Dittmars lay stress upon the fact that Bogardus and Carver used "Dittmar sporting powder." Well, Bogardus was paid to use it. Whether or not be is paid now, we have no means of knowing. Moreover, we refuse to believe that Bogardus ever used it alone in a pigeon match where he was shooting for bona fide stakes. He has admitted to us, personally, that in such a match he would not use it in the second barrel. And as to Carver he, too, used the "Dittmar sporting powder" for pecuniary considerations. Moreover, we are credibly informed that Carver shattered two guns with the " Dittmar sporting powder."

The Dittmars strenuously deny that their "sporting powder" is a nitro-glycerine powder. The Forest and Stream strennously denies it, too.

The Dittmars and the FOREST AND STREAM are agreed on that. But we have said, and we reiterate, that the so-called " Dittmar sporting powder" is analogous to nitro-glycerine powder, that is to say, that under given conditions, which are absolutely beyond the control of the man who uses the powder in his gun, the "Dittmar sporting powder" will deto-

We insist that the Dittmar pamphleteers must not evade this statement of the true nature of the explosive. Mr. Dittmar, being first duly sworn, knows it to be correct. That is where Mr. Dittmar-under oath-and the Forest and STREAM agree again.

And when the Dittmar pamphleteers issue their second edition, we advise them to omit the self-contradictions and falsehoods now existing in their pamphlet, and in place thereof, to explain in their rationale of their nitro-cellulose compound that the conversion of the powder into gas may be by detonation; and for a "more extended scientific consideration" let them explain that the man who pulls the trigger of a gun loaded with their "tamed down" stuff is just as liable to blow off his own head as he is to kill the bird.

The Dittmar Powder Manufacturing Company accuse us of having been personal in our discussion of their explosive. We recognize this bid for sympathy on their part as an old dodge, but we submit that any reflections, which may have been cast upon the character of the manufacture of the "Dittmar Sporting Powder," have been only the reflections suggested by a fair presentation of his past written and sworn utterances respecting his powder. We suggest to the manufactures of the "Dittmar sporting powder," that the sportsmen of this country are not to be caught with their chaff.
A burnt child dreads the fire: the "rationale" of the process of combustion will not induce the child to put his hand into the flame a second time. The most vigorous pumping of gas will not keep a bursted balloon in the air. Scurrilous pamphlets will not float "Dittmar sporting powder."

We have repressed our indignation at the course of a man who for greed of paltry gain has placed a powder analogous to | weekly letters from Philadelphia.

nitro-glycerine in the hands of the sporting public, and then systematically and shamelessly bolstered it up by fraud and deception. We have directed our remarks so far as possible to the powder and not to the man. We have preferred, and we still prefer, to leave any reference to Mr. Dittmar's personal character out of this discussion. But if Mr. Dittmar and the present Dittmar company want a change, and would have us leave the discussion of the powder for a consideration of Mr. Dittmar's "honesty with respect to past and present life, and the purpose which guides him," let them distinctly say so.

We fail also to see what is the bearing on the case of the statement that the Forest and Stream in the past has commended the powder. Murderers go unhung and thieves associate with honest men until they are foundout. the powder looked well at first is shown by the fact that it was accepted without question and thoughtlessly commended by many until we set to work to find out what its true nature Our investigation showed that its true excellence was all seeming, and the deeper we got into it the more extraordinary it seemed that the public should so long have been imposed upon. It appeared to us, after we had discovered the nature of the explosive, a plain duty to announce it to the shooting world; and having done that, we have done all that can be expected of us.

The allegation of the Dittmar Company that their business has increased and that ours has diminished since the publication of the article is one which has nothing whatever to do with the question of the safety of the powder. It makes not a particle of difference to us whether they sell ounces or tons of their compound : that is a matter which interests, we presume, only the manufacturers and the consumers of the article, and among the latter we are not to be counted. some accounts it would be an excellent thing if their business were to prosper greatly. It would cost some lives, no doubt, but it certainly would make the gun trade very lively, and many of our advertisers would accumulate wealth at a surprising

The public do not care whether the exposure of the character of the powder has benefited or injured the Forest AND STREAM, nor did any calculation as to what would be the effect on our business enter our minds when the articles were published. We had a duty to perform; we did what we thought proper in the case.

The Dittmar Company thought that the price of their advertisement should have purchased our silence. sorreed with them

This paper is not managed to please the Dittmar Company, but the Forest and Stream Publishing Company and the subscribers to this journal. If its management suits them the Dittmar people may, we think, possess their souls in patience.

As a matter of fact, the circulation of Porest and Stream is, and has been steadily, increasing since the publication of September 23. But that is wholly beside the question.

We have purposely avoided any discussion of alleged results of tests alleged to have been made by the Dittmar manufac turers. We do not question Mr. Carl Dittmar's ability to safely perform, with given samples of his "sporting powder," any experiments he may see fit to devise. record, and he swears to it, that "it [ which does not refer only to blasting powder] burst most alithe guns at first." But Mr. Dittmar has repeatedly told us before that he never had any accident with the powder and that he never burst any of his own guns with it. Moreover, in the absence of other proof than the Dittmar powder manufacturer's unsupported assertion, we must be excused from giving credence to what they

The Dittmars again characterize our exposition of their "sporting powder" as maliciously false and slanderous. This we again deny. If they think that they can make good the charge of wrong motives and false representations, their proper course is to sue us, prove it in the courts and recover damages. They may easily satisfy themselves of our responsibility by consulting any of the mercantile agencies. if they did not recover six cents, a simple judgment in their favor would be of more decided advantage to them and their product than they can ever hope to gain by the dissemination of twenty tons of such rodomontade as this pamphlet.

The Dittmers have proved such adepts in misrepresenting their own powder that we cannot trust them to fairly reprecut the charges of the Forest and Stream against the plosive. We have therefore reprinted in convenient shape our scientific discussion of their nitro-cellulose detonating explosive, and we shall be happy to supply the articles upon application. They contain the simple and direct explanation of the difference between the "Dittmar sporting powder," a chemical combination, and common black powder, a mechanical mixture, and the different explosions of the two. The manufacturers wholly ignore this. There was nothing else for them to do.

More Carp for the East .- In drawing down the national carp ponds at Washington Prof. Baird found 1,000 young leather carp " which he did not know of. These have been ent to Mr. E. G. Blackford, Fulton Market, New York, for distribution, making the third lot. These are fine fish, from four to six inches in length.

'Hono" manages to put a deal of information into his

#### WALTON'S COMPLETE ANGLER.

WESSRS, JOHN WILEY AND SONS, 15 Astor Place LVI. New York, have supplied a want in giving the auging public a new and handsome edition of the late Dr Bethune's Walton. Of all the editions of Walton, either English or American, we have preferred Bethune's, and is popularity is attested by the fact that his editions were ex hausted before his death and have been in demand since The volume now before us is a reprint of the original, and opens with a letter from the Doctor to his friend Charle, Lanman, the graceful writer and accomplished angler, and is followed by Bethune's poem, "Saptogus," which, when re in winter, stirs the angler's blood until the lines,

O, that the willow's leaf were free. And the dogwood were in flower

rise to his brain during the cares of business, and he knows that there is a time coming when he can throw aside his cares and get beyond the screech of the locomotive. Dr. Bethum seemed to be thoroughly imbued with Walton's spirit of a admiration for nature, the feeling that is at the bottom of all true angling enjoyment, and which gives more pleasure its possessor than the mere capture of a few fish which can be bought in the market for a dollar. How many men miss this enjoyment and measure their pleasure by the number trout in their creel. They find no music in the chirr of the kingflisher, the call of the loon, nor companionship in the chattering of the squirrel, which scolds them as an intruder into his domain; but Walton felt all this and more, and if the modern reader is occasionally tempted to smile at his credulity and superstitious notions he cannot help admiring his quaint style, which is in perfect accord with his simplicity and freedom from technical love

In the bibliographical preface to the first volume Dr. Bethune gives us ninety-two pages of notices of fishing books before the time of Walton, which is followed by "The Con plete Angler," with copious foot notes, and illustrated with fine steel engravings of Walton, "The Salutation" and "Landing a Trout," as well as numerous woodcuts, all from the original.

The second part opens with "some account of the life and critings of Charles Cotton, Esq., by the American Editor, and steel portrait of Cotton. The list of birds is interspers with entire poems and precedes the second part of the "Conplete Angler," while the appendix contains songs and poems and an "Arrangement according to the method of Cuvier, the American species of fishes alluded to in the preceding pages. By James E. De Kay," which was authority thirn years ago, but is not followed now.

In the appendix is also found "Extracts from the Journal of the Lake Piseco Trout Club," and Trout Fishing on Long Island (Frank Forrester); a "list of books on fish and fish ing founded on Sir Henry Ellis' catalogue, as reprinted by Pickering, but very greatly enlarged and carefully corrected making the most complete list ever published," and "bool in the cathedral library, Salisbury, formerly belonging to Isaak Walton.

The volume is a large one, printed in large type on good paper, and will no doubt meet with a large sale. It is a large and handsome volume ; price \$8 to \$15, according to style.

#### THE EASTERN FIELD TRIALS.

IN last week's issue we gave the full account of the running of the Nursery and Puppy Stakes, with the names of the successful youngsters. The running of the All-Aged State commenced on the day of our last publication, Thurs day, and continued during Friday and Saturday, ending only as the sun went down on the last day of the week. days therefore had been devoted to the great event, and i was deemed expedient to declare the running of the Brace Stakes off and postpone the running of the Club Stakes, in definitely. A special train was engaged, and the party returned home late on Saturday night, well satisfied at havin been present at a most successful field trial meeting.

Considering the lateness of the season the Club is to be con gratulated on having secured the good services of the clerk of the weather, for only one day, Wednesday, turned out to be a bad one.

The entry of twenty-seven names in the All-Aged Stakes was a very large one, and brought together many of the fines strains of dogs in the land. The draw was remarkable, n only that the braces were to an extent evenly balanced, but it certainly was strange that the pointers should fall together as they did in the different heats.

There were plenty of birds in the openings at the start, but towards the closing hours of the trials the bevies had drawn into the dense cover and breaks, where they were hard to find, and when found in many instances impossible to move.

Taking the words in Instruction to Judges, "The dogs are to be hunted in all respects as in an ordinary day's shooting in a sportsmanlike manner," as our text, we have written our report as we saw it with our own eyes, without fear or favor. We consider that the decisions rendered by the judges were in the main correct, several of them astonishingly so, particularly in those cases where a good dog was handicapped by an inexperienced handler. But in several decisions we have begged to differ in our report, and we have tried to make it clear why we did so.

As a rule there was less "kicking" than is usually the case

at competitions of the kind, and the only regular withdrawal

was one that we were told was suggested by the President of the Club.

The dogs as a rule turned up in fine condition, but there were two of the youngsters afflicted in a manner that rule No. 6 was drawn up specially to cover. No man has a right to present any dog in a mangy condition, and it is a breach of contract with every owner present if the dog is allowed to

The largest draft from any one Kennel was that from the Moorefield, owned by Mr. W. H. Moore, of Philadelphia, in charge of Mr. Wanmaker, of Coolspring, N. C. Lass o' Gowrie, Raleigh, Luna May, Count Fred and La Guy were all on hand, who with Countess Bang, constitute the strength of the kennel this season so far as preparation for field trial events is concerned. Mr. Moore was singularly unfortunate in having but three of the lot in running order. Countess Bang a superb small pointer bitch who was entered at Vincennes, and in fine order there, came in season on her return and had to be left at home. Both Luna May and Count Fred were taken sick two days before the opening of the trials from exposure from travelling from Vincennes. The former, a fine bitch of rare excellence and perfectly trained is one of the best field dogs in Mr. Moore's kennels, and Count Fred who was winner at Patoka last year in Puppy stakes, and also second with Lincoln in braces in same trials was a stand-by whose loss was keenly felt. Raleigh, as we have noticed in our report, was just over a severe atlack of rheumatism so that out of the draft of six superior dogs only one half, and not those that were considered the best for the Robin's Island ground were left to run.

Their was a deal of luck in running off the heats, and in several instances dogs of grand ability were cut down by dogs of less merit. As shown in our report Gladstone won first; Dashing Monarch second, and the judges awarded Sensation third, and Glen came in for fourth place under the

At a meeting of the Eastern Field Trials Club held at Mc-Nish's Hotel, New Suffolk, L. I., during the trials it was determined to secure the privilege of the purchase of Robin's Island from the owners. This was done, and a three months' refusal was secured.

## The Sportsman Tourist.

NOTES ON DEER HUNTING IN CANADA.

THE American readers of Forest and Stream, as a rule, do not appear to luut much in Eastern Ontario, at any rate for its larger game, judging from the columns of the same paper, hounds are not allowed to be used or are not used to any great extent in the more settled States of the neighboring Republic for the purpose of running deer. I may be pardoned, therefore, if in the following notes, I particularize more than is probably necessary, and I may add, that although running deer with dozy shas a burdency to extern just to see

nore than is probably necessary, and I may add, that although running deer with dogs has a tendency to exterminate deer, or at least, to drive them to other resorts, yet while it lasts the fun is fast and furious. Who would enjoy fox hunting if the music of the dogs were wanting? though of course, the excitement of the ride lends often pleasure to the sport.

In Ontario deer hunting with hounds for the sportsman is the rule, for the pot-hunter the exception; although pot-hunters from your side of the line formerly brought dogs over here and carried off numbers of deer. Now that the Legislature has stepped in, the sportsman has a clear field. On my trip this year we were fortunate in having located ourselves where we were in no danger from dog poisoners, who flourish in some sections, and we were not even troubled, as some are, by the "natives," on hearing our dogs betaking themselves to the runways and killing our deer ahead of the hounds.

hounds.

My brother and myself, with a couple of men who thoroughly understood hunting, and seven dogs, put in a very good time of it for about ten days near the head waters of our Canadian Mississippi, and managed to bag fornteen head, which is considered about the average brought in by those

Canadian Mississippi, and managed to bag fourteen head, whilen is considered about the average brought in by those who were out this year.

After a two day's drive over the most infernal road that statute labor was ever performed upon we arrived at a lumber shanty, the first, by the way, that I land ever seen. So we gazed upon that shanty and poked our noses into every corner thereof, and the result is that we now know that a lumber shanty is a log building with a large hole in the roof through which the snoke of an immense fire finds its way or not, as the case may be and the wind may decide. Around the sides are the "bunks," or beds, or whatever you like to call them, and in these shanties as many as thirty men live and sleep—if they can—for I fancy they are often troubled in their dreams with things just as annoying as the point of Shakespear's "bure bodkin" would be, realizing to the full the expression "packed like herrings in a barrel" and living on pork, beans and bread (the latter baked in the ashes and very good) without butter during the whole winter. As I am partial to butter we moved on and reached our headquarters on the shore of the lake at dusk. At daybreak our plan generally was to send a man into the base with two sets of dogs in order that we might have two chases in the morning, and erally was to send a man into the bush with two sets of dogs in order that we might have two chases in the morning, and again after lunch have two more, as some of the deer were very likely to run to other lakes than the one we were watch-ing. As soon as the first pair of dogs "start" the man loosens the others and they start in their turn, provided they can find a track, and the man hurries back to the lake to help watch. As we could always depend on our dogs "water-ing" the deer somewhere, we rarely watched the runways. watch. As we come and ing" the deer somewhere, we rarely watched the runways. In the event of any of your readers not fully understanding the term "'runways," I may say that the red deer have regular "'runs" or paths by which, when they are chased by dogs, they make their way to the lakes where they have been accustomed to drink. Hunting on runways is probably better sport than hunting on the lakes, as you generally hear and see more of the hunt and frequently get more chances to aboot.

Aboot.

Last Went out for a runway luint, bringing two dogs along with me, and much to my disgust the deer took the water almost at once, although

not till he had been fired at and missed by the men with the dogs. In the afternoon of the same day we ran two more, which were both missed, much to our disgust, while I had not the luck even to see the "deers," as the hunters call them, all day. Old Charlie, my best dog, when last seen was within thirty yards of the fawn he was running, though of course he would never earth it.

To resume what I was saying about hunting on the lake. On the Monday after we arrived I had been watching for about three hours where by the well-known crash of the bushes in my rear I was put on the qui vice, and in a few seconds a nice buck jumped literally over my head into the lake. Of course fallen tree under which I hay hid me from the deer. After looking around to see if any danger threatened, he struck boldly out into the lake. Thus the fun began as my boat into which I had by this time thrown myself was tossing wildly in a heavy sea. I pumped cartridgesat the buck for some time before he got his coupt by grace. By this time the dogs had come to the shore, and were rewarded with a tast of the blood, and as one of them was a pup it did him a great deal of good. We got another deer that day, and kept on at that rate till we left. One day we put into the lake three separate "chases," but killed none of them on account of the high wind which caused them to "skulk the shore," as it is called; that is, they strike out along the shore for a couple of hundred yards and then land, and are off for good, as they are arrely shot when they try this plan of escaping.

There is no better sport than to sit on the shore of a lake

There is no better sport than to sit on the shore of a lake

for a couple of nundred yarus and then hand, and are on not good, as they are rarely shot when they try this plan of escaping.

There is no better sport than to sit on the shore of a lake listening to the baying of the hounds, every moment expecting them to "bring in" their deer, now coming straight forward you, and then off almost out of hearing. I tell you one is kept in a delightful fever of excitement; but on windy and rainy days there is the other side of the picture, as frequently out can't bear the dogs, and you may have to remain for five or six hours wet without and dry within, without a drop of "the crature" to put a little warmth into the cockles of your heart, or anywhere else about your half frozen person, and you have got to stay there till you receive a signal to go, for it is a point of honer "never to give up the ship" when watching for deer. Ye gods! I would just say that if any-one wants to hunt deer at the proper time—the first week in November—he will find sport, but will have to have the patience of Job, with a fair share of endurance and cheerfulness under discouraging circumstances; for the very time he leaves his post, may be the time the dogs will put in the deer and he had better had been the piper who played before Moses, and have been "dead and buried and embalmed before Romulus and Remus were suckled" than the man he is, for he may look out for squalls when he roturns to camp if the deer has gone in at the place descreted by him.

The two men who were with us were almost as good as Indians in the woods, and, as is no rare thing with an old deer hunter, could take a track, and by carofully noting the different sizes and the general direction the deer seemed to be taking, follow it till "started." This is useful, as very few dogs can take a track more than a day old, and some dogs are so keen of secont that they will work away at an old track for half a day, and in the oud make nothing of it, for deer travel so far when they move about that it night be a long time before the dog coul

OUR WATERFOWL.

Querquedula crecca. English Teal. In the male the head is slightly crested, and is bright chestnut, with a broad glossy green band on each side, becoming black and meeting on the nape of the neck behind; breast and under parts white, the former marked with circular black spots; upper parts and sides waved with black, and whitish; under tail coverts, black; speculum, green; the long scapular feathers are black externally, and creamy white internally; bill, black; feet brownish; weight, about ten ounces. In the female the col. oration is very plain, and the bird resembles somewhat the female pintail duck.

This is a European species accidental on the Atlantic

Querquedula carolinensis. Greenwinged Teal. Resembles the preceding species, but has a conspicuous white crescent on the side of the body, just in front of the bend of the wing; scapulars, plain. Female resembles that of Q. crecca.

The greenwing is so abundant and well known throughout the country that it seems almost superfluous to speak of it at length. Almost everywhere it is highly esteemed as a table bird, and its gentle and unsuspicious nature causes it too often to fall a prey to the wiles of the small boy as well as to those of the more mature gunner.

The greenwing is a hardy bird, and usually remains with us until the advent of really cold weather. It breeds in considerable numbers in Montana, where, during the summer of of 1875, we found along the mountain streams many females with newly-hatched young.

Querquedula discors. Bluewinged Teal. Male with head and neck dark slate color, almost black on the crown, with metallic reflections; a white crescent in front of the eye; under parts, yellowish brown, thickly spotted with black upper parts, barred with black, almost to the exclusion of the brown; scapulars, striped with tawny; wing coverts,

sky blue; speculum white, green tipped; bill, black; feet, yellowish brown. Female plainer, without head markings. but may be known from any except the female of the next species by the wing markings. Size of preceding.

The bluewinged teal appears to be confined to that portion of North America east of the Rocky Mountains, being replaced to the westward of that range by the succeeding species. Throughout the country which it inhabits, however, it is a well-known bird, and, especially early in the season, affords good shooting. It shuns cold weather, and usually disappears soon after the first frost. It is a gentle little bird, and is usually very easily approached. When flying, both this and the preceding species often crowd quite close together, and a single discharge will sometimes bring to the ground a dozen individuals out of a flock.

Querquedula cyanoptera. Cinnamon Teal. Male, with head, neck and under parts, rich purplish chestnut, becoming darker on crown; chin and under tail coverts changing to black on the belly; wings as in Q. discors. Female difficult to distinguish from the female of that species but usually darker and with some traces of chestnut. Somewhat larger than the last, and with bill a little longer.

The cinnamon teal is a South American species which has only within a few years been ascertained to occur in any numbers in the United States. It is very abundant in California, and is found from the Pacific coast east to the Rocky Mountains It also occurs occasionally and as a strangler in some of the Gulf States, having been reported from Louisiana by Pilate, and from Florida by Maynard. It breeds in cousiderable numbers in the Rocky Mountains, whence we have obtained both eggs and skins.

Spatula elypeata, Shoveller, Spoonbill. Bill greatly expanded in front, being twice as wide at tip as at base and with numerous and prominent lamine. The male has the head and neck green, the breast white, sides and belly chest-Wing coverts, blue; speculum, green; scapulars, some blue and others black; all with white stripes; bill, black; feet, red. Female colored much like the female mallard but always to be known by the bill and the blue wing markings. Bill in female and young, yellowish brown.

The shoveller is abundant almost everywhere though perhaps less so in New England than elsewhere. It is an excellent table bird and affords good shooting in many places, being, like the little teal, rather an unsuspicious bird. breeds in considerable numbers in the region west of the Missouri River, where during the migrations it is found in considerable numbers. It has also been found breeding in Alaska. We have found shovellers abundant in California and have had fine shooting at them in that State.

Aix sponsa. Wood Duck. Crested. Head with green and purple reflections, with parallel, curved, superciliary and postocular white stripes. Throat and upper fore-neck white, sending out two short stripes, one below and behind the eye, and one below the back of the head. Breast, rich, purplish chestnut; marked in front with arrow-shaped white spots. Lower parts, white; sides, gray, waved with black, and barred behind with black and white. Upper parts black, with glossy reflections. Bill, red and white; feet, brown. Female, less brightly colored, the head gray. This most beautiful of all our ducks is very generally distributed throughout North America. We have seen it in Nebraska, and it has been recorded by Dr. Hayden's expeditions from Heart River, Dakota, and other trans-Missouri localities. It is especially noteworthy, in addition to the beauty of its plumage, for its habit of nesting in hollow trees. The young either drop from the nest to the water or are carried to it by the mother in her

The woodduck does not decoy well, and is perhaps most often shot by jumping it from crecks and pond holes. In many sections they are killed by paddling up to them on the narrow, winding creeks in which they feed, and shooting them as they rise from the water.

#### SNAKES.

SCARCELY know of an animal that crawls the ea cleaves the air, or swims the searth, or cleaves the air, or swims the sear toward which I instinctively cherish a greater repugnance, and for which, at the same time, I show more consideration than the snake. Let a lot of boys encounter a snake in their rambles, and however

time, I show more consideration than the snake. Let a lot of boys encounter a snake in their rambles, and however good natured and accommodating he may show a disposition to be, by turning "tail to," he is a lucky snake if he escapes a merciless visitation of cobble stones upon his head.

The best of saints do not seem to have grace enough to permit a snake to enjoy, unmolested, the pursuit of happiness. People generally can't leave a snake alone, though to my mind it is the easiest thing in the world. If, on a bright day, a snake sees fit to crawl out of some dark cavern or nasty marsh to sun himself on the roadside, it is pronounced trespass worthy of capital punishment, and the weapon nearest to hand, be it club, fence-rail, stone, or what not, is seized for the unequal and deadly fray.

For one, I never stop to interviow a snake with stones or sticks, or to molest him in anywise. If I'm in his way I get out of it. I the's in my way I allow him to enjoy it, he, being the weaker animal of the two is emitted to the courtesy. I always accord to him the right of way, even though I have to go across lots home sometimes. If he lifts his head and hisses forth his complaint, I say, "Yes, you're right, every man's hand is against you but one, that's mine."

If the tricians, who love to indulge in figures of speech, talk about "the milk of human kindness." Why, for the snake, my cup is always brimful of this milk. He enjoys it; he likes to feed upon it just as much as your cats and dogs and pigs do. Now let me be understood, for I would not have anybody to think of me as strutting about on great, tall stilts, disdainfully looking down on the rest of mankind,

tall stilts, disdainfully looking down on the rest of mankind

with the sentiment on my tongue, "I am better than thou," for treating these hated vipers with so much grace and mercy. I put in no claim for superior virtue. The truth is, this "bands-off," this "leave them alone," the truth is, this "bands-off," this "leave them alone," the sent alone, the man alone is simply to accommodate my cowardice. As I hate snakes with a perfect lear. The very sight of one, however harmless he may be, makes my flesh creep. There is nothing in the world that I will run quicker, faster and farther from than a snake-except the snall-pox Somehaw there is something about him that imparts wonderful acceleration to my locomotion. And I think it most ardently, if I don't say it audibly, "Now, snake, you attend to your business and I'll attend to mine, and don't you dare to scare me like that again, or I'll be hanged it I don't join issue with the rest of mankind and kill you every time I meet you." But in spite of any resolution my cowardice proves more than a match for my courage and the usual tender mercy is the result. The viper proves the victor every time. I was my uncoveted tot once to have a black-snake for a bed-fellow, between my chum and myself, on the tented field. He bid himself down to sleep all coiled up in a little heap. I shall never forget it. It was the night the Army of the Potomac rested on the banks of the Pauminky. We arrived there late and so fatigued by a long march that we spread our blankest at once without the precurition of inspection by the aid of a lighted candle as was our wont. It happened to be near a diapitated old fence, half stone and half wood. At the sound of the reveille we arose, and in rolling up our bedding we uneverted an immonse black-snake all saugly coiled up in his warm neet. Many's night after this episode would I waken from the slumber so sweet to the weary soldier and

up in its warm nest. Many a ingiti after this opisione would be whether so sweet to the weary soldier and feel the subtle movements of serpents underneath me, something like vibrating bed-cords, and no sleep would come again to my eye-lids till I had been assured by actual examithing like vibrating bed-cords, and no steep would come again to my eye-lids till I had been assured by nettual examination that they existed in fancy rather than in fact. You should have seen that old fence about an hour after sunrise that morning. It was fairly animate with the life of reptiles. At a little distance it looked as if it were veneered with polished ebony. Companies of men gazed at the scene in amazement and then, as if suddenly seized by one impulse, they burled a perfect fusiliade of stones and sticks and whatever cane first to band at the vile creatures, quite demoralizing them and the fence in the bargain.

Barring my Virginia experiences I believe that I have not witnessed in all the forty years of my life as many snakes as I have seen this summer at Illinois. While the most of them are harmless many are not. Their sting is death unless the autitate be at hand. And in my judgment a snall plaid of aqua ammonia is as necessary to insure safety on the prairies as in the mountains. Indulge me now in a moment of serious discussion. I will preface it with an incident or two. There a brother a farmer, a few years my senior, living on a farm

agua anunonia is as necessary to move a moment of serious as in the mountains. Indulge the now in a moment of serious discussion. I will preface it with an incident or two. I have a brother a farmer, a few years my senior, living on a tarm four miles west of our village. Last summer while harvesting his hay he killed a snake of a brownish hue, about four feet long and of disproportionate thickness. Curiosity led him to take his knife and slit it open, whereupon sixty little snakes (he counted every one of them) issued forth, each one about a foot in length. I asked him how he accounted for it, and he said, "On the theory that snakes in time of danger swallow their young." To me it was a new idea, and I was disposed to be incredulous. A cousin from New Jersey, now an old man, who had always been a farmer, was visiting us. I asked him if he had ever seen anything corroborative of that fact, if fact it was. He said "Yes; I once saw on my farm as many as fifteen or twenty small snakes run out of the mouth of a large one." I have since argued the question a little, and I find a difference of opinion. One of our best lawyers is somewhat skeptical on the question, while, on the other hand, one of our nurchants is a firm believer. His faith is founded on ocular demonstration. He was down the river one day, when his doc encountered a snake. He attacked It, and shook out of the snake's mouth at least twenty little ones. I have consulted two encyclopedins. In one there is no reference to the subject. In Chambors' flad this paragraph: "It has been often alleged that vipers and twenty intro ones. I more consistent we analycopeans a function one there is no reference to the subject. In Chambiers' I in this paragraph: "It has been often alleged that vipers an other arcpents, when alarmed, swallow their young, an eject them again after reaching a place of safety. The still remains some doubt on this curious question, which has the property of the control of the property o still remains some dount on this curious question, which has recently been much discussed, and it is not improbable that the alleged proofs of it from living young ones issuing out of the body of the parent when crushed are to be accounted for by the covorisprons mode of generation." What is the latest on this subject? With this inquiry I subscribe myselt, Bauxia, Ill., Nov. 23. Hix.

This question was discussed at some length in early issue of Forest and Stream, and the conclusion was reached that grakes do sometimes swallow their young. We should be glad to hear any further evidence on this question that our readers can contribute. The following are some of the references to this subject: Vol. 1, p. 54; do., 86; do., 118; do, 166; do, 198; do., 214.

o, 166; do, 198; do., 214.

The Nuttall Belletin.—The October number of the Bulletia, which is the last of the fifth volume, contains, as is usual, a great amount and variety of valuable matter. The opening article, by Dr. Coues, is especially interesting, as it treats of a great quantity of manuscript letters and papers of Wilson and Audubon, the existence of which has not, up to this time, been generally known. The letters referred to will, when published, throw a flood of light on many points which have always been obscure, and will no doubt render clear the facts in the case of the ever-to-be-deplored misunderstanding which existed between these two great men. Dr. Coues, in giving us a little gossip about what he saw "Behind the Yeli," tells the story in his own inimitable style, and our readers know how interesting all his writings are. Mr. Louis A. Zerega, in his "Notes on the Northern Range of the Fish Crow (Corvus owifragus), with Some Account of its Habits," gives some important particulars in regard to this species. It is inclined to believe that "one-third of the crows that fly about the Lower Bay of New York are C. ossifragus." This will be to most readers a surprising announcement, but the writer of the paper supports it by the statement that out of twenty-six crows killed during the past year between Sandy Hook and Scalvright, N. J., eleven were fish crows. He also notes the interesting fact that crows will come to decoys.

Mr. Frank W. Langdon's description of this new species of Helmindophaga, H. carnati. Society of Natural History, where it first appeared. Part 111. of Mr. J. J. Dalgbish's "List of Occurrences of North American Birds in Europe" concludes the series, the number of species detected on the other side of the water reaching sixty-eight.

Mr. Ridgway gives an interesting description of the eggs

of the Caspian tern (Sterna cuspia) found at Calib's Island

of the Caspian term (Sterna caspia) found at Camb sistant during the past summer, and the number concludes with some "Notes on Colorado Birds," by H. D. Minot.

Recent Literature contains a number of interesting notices. Among "General Notes" Mr. Nathan Clifford Brown records the capture of Patispide aerulva in Minie and Mr. Jencks that of Thryothorus Indovicianus in Rhode Island. Mr. Ridgthat of Thryathorus Indovicionus in Rhode Island. Mr. Ridg-way suggests that Helminthophaga c neinnatiensis may be a hybrid between H. pinus and Operorus formosus. There are other notes of much interest to bird lovers.

A BLACK RABBIT-Moria, Franklin Co., N. Y., Dec. Two friends of mine, while hunting foxes last week bac A BLAOK RABBIT—Moria, Franklin Oo., N. Y., Die. 3.—
Two friends of mine, while hunting foxes last week back of
this village about three miles, came across a black rabbit.
They put their dog on his track and the dog caught and killed
it after a long chase. They gave it to me and I have skinned
it and intend to have it mounted. It is black all over, save a
small white spot on the breast about the size of a silver quarter. No one about here ever saw a black rabbit before, that
is, a wild one. I once saw a tame black English rabbit, but
this is the same species as the common wild rabbit about here
which are all white now and brown in the summer. Please
let me know in your Answers to Correspondents if such cases
are common. The two gentlemen from Bridgeport, Conn.,
that went up to Blue Mountain a week ago. Saturday came
down Tuesday with two deer. They had a very unfavorable
week while there, being very cold weather, making it bad for
still hunting. The snow is about a foot deep here on the
level, and the cold ranged from twenty down to two degrees
above zero the last week.

EXCLUSION SPANDOWS IN CANADA -Mr. H. G. Vennor, the Almanac Man, writing to the Montreal Gazette, says:

Almanac Man, writing to the Montreal Gazette, says:

"A colony of English sparrows have reached St. Jerome, Province of Quebee, and have taken up their residence around the Convent and House of Cure Labelle. In this spot they appear to take great delight, and the louder ring the church bells the louder they chatter. Up to the present date the sparrow has not made much inroad through the country north of the Ottawa Valley. They are not seen to the northward of Buckingham Village, Thurso, Lachute or St. Jerome, and it would appear as if the range of Laurentian Mountains limited or arrested their migration. I have not met with one individual of this species anywhere beyond St. Jerome, although the villages of Piedmonte, St. Sauveur, St. Adele and St. Agathe all possess as suitable places for their abode as St. Jerome. Possibly hawks and shrikes are too numerous for the sparrows' liking among the Laurentian hills, but as st. octome. Fossini mawas and suffices are too minerous for the sparrows' liking among the Laurentian bills, but however this may be, their loss is not felt, as the forests are full of our own native birds, which have not only higher musical powers, but likewise much more insectivorous tastes.

THE NATURALISTS DIRECTORY .- This manual is at great The NATURALISTS DIRECTORY.—This manual is a great convenience to all naturalists who wish to know the addresses of others who are working in the same line with themselves. The new volume for 1890 centains the names, addresses, special departments of study, etc., of the naturalists, chemists, physicists, astronomers, etc., etc., and also a list of the scientific societies, of scientific periodicals and the titles of

ists, physicists, astronomers, etc., etc., and also a list of the scientific societies, of scientific periodicals and the titles of ecientific books published in America, from July 1, 1879, to October 1, 1890.

We think this is the third year that the directory has been issued and it is enlarging its list all the time. This year it has adopted the plan of arranging the names by States by request, a plan in which it is doubtful if the advantages balance the disadvantages, and the publishers say that next year they qust, a blan in which it is doubtful if the advantages balance the disadvantages, and the publishers say that next year they will return to the old plan of an alphabetical arrangement irrespective of geographical location. The list of names occupies 18 pages averaging thirty names, or about 3.500 names, and gives a list of those who have died within the past year. It is edited and published by S. E. Casino, 299 Washington street Roston.

## Mish Culture.

#### GERMAN CARP IN TENNESSEE.

ON last Wednesday, the 24th of November, the second consignment of German carp intended for distribution in this State, arrived in charge of Mr. J. T. Ellis, an assistant of the United States Fish Commission. Col. Akers, our State Fish Commission col. Akers, our State Fish Commissioner, had been notified by telegraph and was at the depot to meet Mr. Ellis and receive the fish. The local press gave notice of their arrival, which brought to

State Fish Co-unissioner, bad been notified by telegraph and was at the depot to meet Mr. Ellis and receive the fish. The local press gave notice of their arrival, which brought together a number of gentlemen who have ponds on their farms, with numerous buckets in hand to transfer their allotted number of fish to their new homes.

As there are no protection laws for fish in the State, or appropriations made to meet the necessary expenses incurred in introducing new varieties of fish, Col. Akers determined to give this consignment only to persons whom he knew would take care of the trust and footed the bill himself. A bath tub was at once secured at George Barbour's tonsorial parlors and the fish not actually disposed of put into it; there they will be fed and watched until called for. Mr. Ellis said to me that he had never seen a finer lot of young carp than the once he brought here. He had with him 1,000 in ten cans, each containing 100 fish, to be distributed as follows: 600 for middle Tennessec and the others for the Western portion of the State. Out of this large number, though they had been on the road several days, not one died. The weather was favorable and the water was changed every five hours. Mr. E. is entitled to much credit for the waterfulness and skill displayed during the journey.

It is gratifying to notice the growing interest on the part of our farmers for fish-enture, and it is to be hoped that the protection laws, so nearly passed at the last session of our Legislature, will pass the one assembling here in January. They should make a reasonable appropriation for the stocking of our principal streams with such fish as will thrive in them. By this means in a few years we will have an abundance of this delicious and wholesome food.

The carp distributed here last year are all doing remarkably well, but those entrused to Dr. Callender, Superintendent of the basane Asylum, have made phenomenal progress. When placed in the ponds of the asylum grounds the fry did not exceed one and a half inches i

spring. Every care has been given, feeding regularly and not allowing any one to disturb them. They have become so tune as to come at call to be fed.

so tume as to come at call to be fed.

Rather an anusing scene occurred on Wednesday while the distribution was going on. An elderly colored man came up with a bucket on his arm to get some fish, being, as his whole race are, fond of them, and, being told the Government were giving them away, said to one of the assistants:

"Look a heah, I wants some of dem fishes."

"How many will you have, my good man?"

"Data's Cording to the size; 'specks two dozen is 'huff,"

"But have you a suitable pond to put them in?" inquired

Col. A.

"Ain't got no pond, but such de ole 'coman's got a pot

big 'ruff to hold what I wants."

"Old man," said the colonel, "these fish are sent here to breed from and cost about \$5 apiece, and hard to get at

breed from and cos which that."

"Usen honey, dem creeturs not 'tended for de black man, so you can keep 'em: de cats and buffalces good 'muff for dis chile, and five dollars' wuff of dem las' me all my days.'

With these few remarks he walked off, showing no great disappointment at his refusal.

Nashville. Tenn., Nov. 25.

#### FERTILE HYBRIDS.

ROCHESTEE, Dec. 8.

Editor Evrest and Stream Botton Eorest and Stream:
At the New York State Hatchery we have a pond containing sixty hybrid trout. The cross is male salmon trout with the female brook trout. They are now three years old and will average one-half pound in weight; the largest will weigh three-quarters of a pound. They resemble both parents, but three-quariers of a pound. They resemble both pare are inclined toward the salmon trout a little the most.

three-marters of a pound. They resemble both parents, but are inclined toward the salmon trout a little the most. November 1st they commenced spawning for the first time and continued until November 12th. We succeeded in obtaining 16,400 spawn. A remarkable fact concerning the spawn is that they are fully two sizes smaller than brook trout spawn. It may be necessary for me to state that salmon trout spawn are twice as large as brook trout spawn. It may be necessary for me to state that salmon trout spawn are twice as large as brook trout spawn. One would supprese that the spawn would be in size between salmon trout and brook trout, but instead they are smaller than either.

The oggs are perfect in shape and a good percentage are impregnated and doing well. The formation of the fish in the egg can be seen plainly at present. They commenced spawning just after the salmon trout in our ponds had stouped, and just, before the brook trout had fairly commenced. It is my opinion that they will make a fish well adalpted to either lakes or streams. They are well-formed and handsome fish, and the prospects are they will be a valuable addition to our better class of food fishes.

We also crossed a few hundred of the hybrid spawn with male brook trout. A good percentage are impregnated. All the fish at the hatchery are looking exceedingly well. We shall take a large supply of brook trout spawn, also Californian mountain trout spawn. The breeders of this variety are in fine condition, and we shall be able to furnish all parties in this State with a good supply of the young fry who are desirous of procuring them for the purpose of stocking public waters.

#### EGGS FOR DISTRIBUTION.

The following circular has been sent out. Those wishing eggs should apply at once.

United States Commission, Fish and Fisherhes, Washinston, D. C., Nov. 27, 1880. 

\*\*Dear Sir—The eggs of the species of Salmonide mentioned below, are now being matured by the U. S. Fish Commission, and I write to ask, what number you are desirous of receiving and I write to ask what number you are desirous of receiving in behalf of your State to be interhed out and planted in public wa'ers. They wi'l be ready for distribution during the months of January, February and March 1881.

No charge will be made for the eggs themselves, but the expense of transportation from the hatching houses must be read by the receivings.

paid by the recipients.

paid by the recipients.

Due notice will be given by telegraph or otherwise of the time of shipment of any eggs that are assigned to you.

It will of course be understood that the supply of eggs is limited, so that no larger number should be asked for than can be properly hatched out and distributed.

The eggs will be supplied to localities, the temperature and the waters of which are known to be favorable to the growth

of the fish asked for.

Should (as is probable) the aggregate of eggs be less than the number for which application is made, a pro rota reduc-

be mad ill be made. Respectfully your obedient servant. Spencer F. Baird.

Species.

Sulmo salar (Sea or Atlantic Salmon). Bucksport, Maine

oregonus albus (White-fish). Northville, Michigan.

fornia.

Gregonus albus (White-fish). Northville, Michigan.

Fish Notes from Mann.—The Belfast Journal is responsible for the following statements: The salmon-breeding works at Orland, under the supervision of Harry Buck, report good success in procuring eggs, and are making ready for hatching. Mr. Ellis Hanscom, of Machias, is making preparations for the hatching of salmon from spawn to be furnished by the State Fish Commissioners. He will have 50,000 or more spawn. The York County Game and Fish Protective Society intend to have fishways constructed on Saco River, and persevere in their efforts till the river is stocked with salmon. Gov. Davis has appointed S. Black Fish Warden at Brocksville. Smelts have been biting lively at South Waldoboro. The new batching house for fish at Kinen, Moosehend Lake, contains many thousand eggs, which will keep the lake well stocked with fish of various species. There are now thirteen sardine factories in full operation in Eastport, employing about 800 hunds. These factories are running night and day, and turn out about 5,000 cases per week. Some \$8,000 per week are paid out weekly to the hands, men, women and children. The sardines bring from \$10 to \$1

ASTOUNDING GROWTH OF CARP.—It is a fact that the carp has grown faster in America than it does in its original home

but the most wonderful story comes from Georgia. A gen-tleman in Macon sends Professor Baird the following slip from a local paper and vouches for its truth. It says: "Yesterday afternoon Mr. E. Witkowsky, who owns the tan "Yesterday afternoon Mr. E. Witkowsky, who owns the tan the dam and clean out the pond in order that he might hitroduce his new German carp. The pond contained a large number of smaller fish and among them Mr. Witkowsky hoped to find his four carp which had been put into the pond last May. He found there of the fish, but to his astonishment they were by actual measurement twenty, twenty-two and twenty-five inches in length respectively. The fourther secaped through the cut in the dam. These carp were but two or three inches long when put in the pond and their growth is remarkable. They are now in the tank in the rear of their owner's store on Cherry street, where we saw them last night and where the public are invited to see them to-day."

CANADIAN FISH CULTURE. - Notwithstanding the most in-CANADIAN FISH CULTURE.—Notwithstanding the most in-clement and boisterous sultumn for many years past the New-castle (Ontario) Hatching Commission has laid down up-ward of five million of salmon trout eggs, collected in the waters of Lakes Ontario and Huron. All of these ova were taken from fish in the act of being conveyed to the markets of the United States and Canada for consumption. The per-centage of young fish hatched from these eggs will therefore has a days gain to the acquiry, as acquist a fixed loss. be a clear gain to the country, as against a total loss.

Is speaking of the increase of whitefish (Coregonus) since artificial propagation has been carried on, the Essex Register registers the following:

At one of Mr. Chas. Gauthier's river tisheries two thousand whitefish were taken last Monday. At the same place only three thousand were taken in the whole season of 1879. They are making hauls here of from twenty-five to 150 whitefish, averaging about 1½ to 1½ pounds apiece.

## Sea and Hiver Hishing.

CONCERNING ROBBERS.

TN a recent article on the violation of the laws and the facility with which fish and game can be disposed of in the great city, we said :

the great city, we said:

The fact is that New York City needs a game Protector, and Long Island needs another—men who reside on the premises and can watch the markets. These markets, as we have before said, are the great incentive to poschers, and it the sale of their plunder is stopped they cannot follow their unlawful business. There is entirely too lax a state of public opinion in regard to the violation of the game Laws, many unlawful business. There is cultiely foo lax a state of public opinion in regard to the violation of the game laws, many people looking at it as a venial offense, but it is robbery—robbery of the worst kind.

The New York Market and Index Journal publishes our article entire, and remarks:

article entire, and remarks:

We will allow this is an umpleasant position for our fish dealers to be placed in—"robbers" and a stillless pleasant one for the markets generally—"the great incentive to poschers." The htter accusation we think entirely too sweeping, inasmuch as one would be led to believe that marketmen were hand in glove with the poachers, which we deap unhesitatingly; and yet, we shall not for one moment attempt to defend roquery or the law-breakers, and we trust that, for the good name of the markets, the marketmen shall do all in the position of a series the name and this protective associations. good name of the markets, the marketmen shall do all in their power to assist the game and fish protective associations in their endeavors to sustain the laws, and not necessitate the appointment of a "game protector to watch the markets."

We do not mean to insinuate that the great body of market men of New York are violators of the law. As a class they contain as many honest and upright citizens as any other, but it is folly to assert that they are all saints, and among them may be found a few who have no higher idea of respecfor law than-well, perhaps lawyers, doctors, editors, or other men taken in lump, and these have the same lax state of morals which we charged upon the general public, i. e., a lax idea of the morality of a violation of the game law. know that the law says that a striped bass shall not be sold if under a half a pound in weight, but their customers will buy them and they are offered them, and so the trade is opened as if it were the most legitimate thing in the world. and we contend that the mere knowledge of the presence of an officer empowered to enforce this and kindred laws would have a salutary effect upon a class of marketmen who perhaps have not the slightest idea of being "robbers.

Nevertheless, we repeat what we said before: "These laws are made, or should be made, to give every man a fair start in the race for sport, and he who starts a few days, or weeks, in advance is a robber, whom it is base flattery to call simply a violator of the law." The striped bass question is one which affects the food supply as well as angling, and, therefore, demands enforcement.

We think that the Market and Index Journal will find that the interests of the market men are on the side of the observance of all laws intended to protect fish and game, and that these laws are for the good of not only anglers and sportsmen, but for the whole neonle.

The Cattish—Cleveland, O., Dec. 3.—I am glad to know that the catish is found farther north than Lake Erie, on Lake St. Clair. The farther north you find the fish the better food it will be for the table and probably the most expert in taking the fly. Perhaps we may yet find it within the Arctic circle, in which case be will probably be half salmon and the other half cat. Let some brother angler from the Red River or Lake Winnipeg region respond.—Dr. E. STERLING.

WE would like the address of Mr. John J. Collett, one of the recently appointed game protectors of the State of New York. We have written him at Cobleskill, Schoharie Coun-try, the address given in the original list, and the postmaster at that place forwarded it to Albauy, from which place it was

#### THE ILLEGAL FISHERMEN

NOW when the law breakers have assumed an attitude of defiance to the laws and are parading the shores armed and threatening death to all officers of the law it may be of profit to read the following learned, and yet humorous opinion of Judge Riegel, and the comments of the Syracuse, N. Y., Sunday Times, which under the heading of "A Just Law Defied," says:

Defied, "says:

The moment a law is enacted, the provisions of which are for the general good of the people, and yet encroach somewhat upon the privileges of a small class, it is almost always the case that such law, however beneficial it may be, is defied by the class who lungine themselves injured by it. This has been the case, to a great degree, in this State, with reference to the just laws for the preservation of fish and game; and within the past few weeks the opposition to the oliters of the law by the piratical fishermen has arisen to attempted assassination, arming of the law-breakers and threat-ened murder to any officer who seeks to do his clear duty.

All good citizens will rejoice at every triumph of justice in this matter, and, therefore, will read with pleasure the following Opinion of Judge Riegel, given the past week in the case of William Fancher, of Baddwinsville, against Reuben Wood and George Travis, Fancher having such for the recovery of the value of a net destroyed by the game constable. Fancher had recovered judgment before James R. Shea, of Baddwinsville; but Judge Riegel, as will be seen, differs with him:

with him:

It appears by the Justice's return that the defendants took It appears by the Justice's return that the defendants took what is called a fyke net from where it had been set by the plaintiff, in the Seneca River, for the purpose of catching rish, and substantially destroyed it. That when the net was taken from the river, it had in it bullheads, pike, pickerel, sunish, perch and rock bass. The plaintiff testified that he had at that time six or seven nets in the Seneca River. He was allowed to testify, against the defendant's objection, that when he caught any ish uside from bullheads, suckers, catfish and cels, he threw them back into the river without inturing them. juring them.

On this testimony the Justice gave the plaintive a judgment for \$25.00, the varie of the net, from which this appear

is brought. By sec. 28, chap. 534, laws of 1879, it is enacted that "No person shall kill or catch, or attempt to kill or catch, any fish except minnows, bullhends, cels, suckers and catrish, in any of the fresh waters and canals of this State by any device except that of angling with a hook and line." Certain waters are specifically excepted, not material to this case. By the same section it is further enacted that "All nets, seines, weir, traps or other devices forbidden by this section are hereby declared contraband, and any person finding the same in any place where they are forbidden is hereby authorized to destroy against hun for such destruction.

It appears that the right of the defendants to take and destroy the ret in question, depends upon the question whether they found it in a piace where it was forbidden. The statute mentions no place where the devices of catching fish therein 

mentions no place where the devices of catching fish therein mentions no place where the devices of catching hist therein mentioned are forbidden except infrequently; but the plain inference is, that when one of the devices therein mentioned is tound in a place where it was manifestly set for the purpose of catching fish other than buildineals, suckers, eels and catlish, it is in a forbidden place. It is in a forbidden place for the reason that it is in a place where it will, in the ordinary course of things, do the mischief which the statute forthics.

for the reason that it is in a place where it will, in the fordinary course of things, do the mischief which the statute forbids.

The law will presume that the person setting the net or other device, intended the natural consequences of his act. The defendants could not know what disposition the plaintiff would make of the fish when eaught, nor was the statute acquired was that they should find the net under such circumstances, and so placed and set that it would necessarily and according to the ordinary course of things, do what the statute had forbidden.

It is possible that Mr. Pancher did throw those fish back into the river, which the law forbade him to catch. But this law was framed with reference to the known moral chanceristics of ordinary nortals who would not do any such thing, and whom the Legislature knew better than to trust to do any such thing. Angels' visits on this planet are too lew and lar between to influence the ordinary course of legislation.

A fisherman all alone in the darkness of the night or at the early dawn, in the act or sorting out the nice, planip pike, pickerel and bass, and throwing them back into the river, for no other purpose than to afford some enthusiastic disciple of Sir Isak Walton the rare sport of catching those same fish with hook and line, would be a spectacle worthy the admiration of gods and men; but whether any such transaction ever occurred on this subtinuary sphere, aside from the one testified to by the plaintiff, may wen't be considered a matter for grave doubt. If the Legislature had known Mr. Fancher, it is burely possible it would have trusted him to co what he swears ne did do; but such cases are too exceptional to form the basis of legislation. I never knew but one man whom I would have trusted him to co what he swears ne did do; but such cases are too exceptional to form the basis of legislation. I never knew but one man whom I would have trusted him to co what he swears ne did do; but such cases are the exceptional to form the basis of legislation. I n

bidden places the constables had the right to destroy them. As to Fancher's throwing away certain fish and keeping others, his Honor treated that part of the story exactly as it deserved. The law was not made with reference to the differences of moral character in those given to setting fykenets. A might be a moral poacher, and B an immoral poacher and the distinction would be hard to understand. It would take a very moral fyke net setter, should he be taking fish at night, to determine what were suckers or young steed or black hose. shad or black bass

#### THE BEAVERKILL CLUB FOR 1880

NEW YORK, Nov. 25. Editor Forest and Stream:

The report for the Beaverkill Club for the past season shows that the spring and surmer, indeed all the seasons, have been very dry. Whether the effect of this will be to lessen the number of trout, next year's sport alone can determine; on the whole, I do not expect to find it diminished. Our warden reported late in October that hethlinks there were out water reported her rectioner that notatings there were more fish on the spawning-beds than ever before, although this seemed hardly possible.

Six of our ten members have been up on the stream this

Ciect took 125 ibs. from the lake. All who went there had days as satisfactory. The expenses this year have been \$40 per member.

The average temperature by our warden's thermometer has been rather higher, but on the 1st of May it snowed and again on May 14 if froze ice helf an inch thick, with frost on the 4th and 18th of June. Between the 19th of June and the 17th of July there were ten thunder showers. On June 28 Bukkley has put a X against the thunder shower, and July 10 he says it was "heavy." There was frost again the 29th of July and the 6th of August, and on the 15th of August "everything was killed by the frost." I happened to be there at the time. I never realized more the injury that is often suddenly effected by natural agencies. The crops, the winter's food, the support of many families, were ruined in a night by a magic louch. The thermometer reached ninety again Sept. 16. The first snow came on the 20th of October, and by Nov. 22 the Balsam Lake was frozen "solled so it would bare up a man," the trout had all left the inlet and were oil the beds along the stream. Gro. W. Van Stelen.

#### THE DEATH-TRAP IN SHINNECOCK BAY.

POND QUOSUE, NOV. 20, 1930.

It is possible that Mr. Pancher did throw those fish back into the river, which the law forbade him to catch. But this law was framed with reference to the known moral characteristics of ordinary mortals who would not do any such thing, and whom the Legislatures knew better than to trust to do my such thing. Angels' visits on this planet are too lew and lart before the Legislatures knew better than to trust to do not have the Legislature knew better than the control of legislation. It is find that the carry dawn, in the act or sorting consistent of the carry dawn, in the act or sorting consistent than the carry fish, proceeding the carry dawn, in the act or sorting consistent than the carry fish, and the carry dawn, in the act or sorting consistent than the carry fish, and the carry dawn, in the act or sorting consistent than the carry fish, and the carry dawn, in the act or sorting consistent than the carry fish, and the carry dawn, in the act or sorting consistent than the carry fish, and the carry dawn, in the act or sorting consistent than the carry dawn, in the act or sorting consistent than the carry dawn, in the act or sorting consistent than the carry dawn. It is a subject to such dire or the carry dawn, in the carry dawn, in the act or sorting consistent than the carry dawn. It is a subject to such dire or the carry dawn and the carry dawn and the carry dawn. It is a subject to such dire peril, or the fishermen to such grievous tempation. Certain it is, that if the construction contained that the Board of Supervisors have passed an act authorizing the taking of bullheads, suckers, carrish and calcet of an Act of the Legislature. In the carry dawn and the carry dawn and the carry dawn and the carry dawn and the carry dawn and the carry dawn and the carry dawn and the carry dawn and the carry dawn and the carry dawn and the carry dawn and the carry dawn and the carry dawn and the carry dawn and the carry dawn and the carry dawn and the carry dawn and the carry dawn and the carry dawn and the carry dawn a Editor Forest and Stream :

ing sentences and well-rounded periods of some "oily-trongued" advocate, but rather let them listen to the hardy sons of toll, who may not be able to quote you Chesterfield, but who can and will tell the truth if properly approached. There is one great and crying evil connected with the inlet just closed that should be abolished by the Legislature or Commissioners, if they have the power, and that is the use of seines or "bull nets" at its mouth. I presume, although I do not know this for a fact, that the men who use these nets are "simple-hearted and free from guile," and are honestly plying their calling with the sole object in view of keeping the wolf from the door. Certain it is that they catch a fair amount of fish that, owing to the searcity, bring an exorbitant price. Now let me cell you how their proceedings strike a disinterested looker on. The fishermen tell me that while the tide is running out of the bay the fish are hovering about the mouth of the inlet and just before slack water they ascend up the slight current. Now is the golden opportunity. Our honest fishermen spread their nots at the lower end while a party at the upper end, with much pounding on their boat's end and splashing in the water, turn the frightened fish and scare a portion of them into the nets while the rest go out to sea, and as a natural consequence the fishermen of the bay secure tone, and are obliged to purchase their supply of these honest fishermen at an exorbitant price or send to Kew York for what they use.

Far be it from me to sit in judgment upon these men.

honest fishermen at an exorbitant price or send to Kew York for what they use.

Far be it from no to sit in judgment upon these men. I do not even impuren their motives. I merely state the naked facts, and but echo the wailing prayers of hungry fellow creatures when I cannestly call upon "the powers that be" to so restrict and regulate this abuse that in the dwellings around this fair bay not in vain shall be the prayer, "Give us this day our daily bread."

NEW YORK, Nov. 28

Editor Forest and Stream:
Many trips to Shinnecock Bay have interested me in that once famous shooting ground, and I beg leave to offer a word in regard to its inlet, concerning which there is some misun-

Many trips to Shimnecock Bay have interested me in that once famous shooting ground, and I beg leave to offer a word in regard to its inlet, concerning which there is some misunderstanding.

There was a State law passed about three years ago providing for the appointment of commissioners to fix the place for an inlet into that bay and making it an offense for any one to cut through the beach at any other point than the one decided on. Such a law was necessary, because it was thought that an inlet must be in the west end of the bay, in order to remain open, and because, whenever an attempt was made to cut an inlet must be in the west end of the bay, in order to remain open, and because, whenever an attempt was made to cut an inlet there, the east end people would cut through the beach in their neighborhood (which they could do in a few hours, because of its narrowness), and thus obtain the head of water in the bay without which no large inlet can be secured. It is a work of many days to cut through the high heach further west.

Since this law was passed two inlets have been made, one opposite the light-house and one further west. Neither of them kept open a year, nor do I believe that any inlet from the ocean which local enterprise on Shimnecock Bay is capable of making will keep open.

Two things are to be proposed in this connection. One is that the State perform the work on a larger seale than has yet been attempted. The State appropriates a larger sum of money, which Long Island tax-payers have to help pay every year for Hudson River improvements. Why should it not spend a little on Shinnecock Bay? Another proposition is that instead of cutting through the beach to the ocean a channel he dag across the neck of land from Shinnecock Bay from Moriches Bay. I do not believe that any ocean inlet can remain open very long, while a good channel lending to Moriches Bay. I do not believe that any ocean inlet be certainly permanent. Such a channel would not make that the state performs power annually, and a bonest bay

The great objection to the opening into South Bay is the fact that the waters would become fresh, or nearly so. The water at the eastern end of South Bay is now so fresh that the horsefoot (Limulus) cannot live in it, and it is full of small pike, a variety inhabiting brooks and ditches.

ONEIDA LAKE POACHERS.—The New York Telegram recently contained the following: "A Schwartz is needed at Oneida Lake. So hold have the illegal fishermen become that they threaten to kill the next game officer that appears. The Oswego Palladhum says: "They are lawless in their habits and it is not doubted that they will fulfil their threats. One man has thirty of these trap nets, worth \$40 apiece. If the enforcement of the law he insisted on it is believed that there will be trouble, and at the same time it looks cowardly for the Oneida County Game Association, which started the movement, to buck out." If there is such a thing possible as a thorough exposure of the illegal fishing on Oneida Lake it should be done. It is a notorious fact that is talked of among all classes in Central New York that the authorities dare not do their duty. The matter should be agitated all possible and the guilty ones, who compose the wealthier classes all round the lake, he brought to justice.

Iowa—Reokuh, Nov. 29.—We have enjoyed an immense amount of fine sport at this place this summer with the red and line, and have eaught some fine specimens of the black bass, striped bass, erroppun, etc. What we need here is a strict enforcement of the Statefish laws, and were they properly enforced we would have some of the finest fishing waters that there are in this State, or even in the West. I am in hopes to contribute something in the future in reard to the fish and fishing grounds of Southern Iowa. W. H. D.

A PLORIDA PARTY—Washingtonville, N. Y., Nov. 26.—
My wife and self are preparing for a trip to the Gulf coast of
Florida, having spent three winters there very pleasantly,
our only drawback being a want of congenial companions.
Should you know or hear of any gentleman who is fond of
shooting and fishing, and his wife, not afraid of roughing it
a little, you will please have them address Manata, P. O. Box
101, Washingtonville, Orange Co., N. Y.

MISSOURI—Sedalia, Nov. 27.—Weather fine and quail and abbit-shooting good. rabbit-shooting good.

## Game Bag and Gun.

SPORTSMEN AND LAND-OWNERS.

COMMENTS ON THE POREST AND STREAM'S PLAN.

OMMENTS ON THE POREST AND STREAM'S PLAN.

A NOTE published in your issue of the 25th inst. from East Rockaway, Queene County, L. I., and signed "J. H. Griffith," is replete with gross ignorance, spic, offensive references and unnecessary threats, and but for the prominence you give it would not be worthy of notice.

The writer's objection that the game laws involve an "encreachment upon the liberties of the people by the wealthier classes," and "if not unconstitutional ought to be," evinces a desire to excite unworthy prejudices and shows an obliquity of mental vision which would delight Dr. Hammond as a specimen from the Island.

All laws are in one sense an "encroachment upon the liberties of the people" by the dominating classes to which Mr. Griffith himself, if he owns a farm, belongs. What protects him in his property? What deteres the ubiquitous tramp from occupying and using Mr. G's house and barns, and what punishes the genius if he invade them or rob or destroy his chicken-roost or his crops? And is a tramp not one of "the people" and outside of "the wealthier classes?" But for the laws he might, if the stronger, reverse his position and convert himself into a member of the "wealthier classes" and turn Mr. Griffith out of his possessions and into one of "the people." Does not this wandering factor in society consider this law "unconstitutional or that it ought to be?" But who stand more sturdly for it and insists upon its enforcement than East Rockaway farmers? Who denounce "wee unto any man who disregards these notices" to kep off their farms?

Mr. Griffith, with felicitous inconsistency, stigmatizes one part and in the next instant calls for protection upon another

"woe unto any man who disregards these notices" to keep off their farms?

Mr. Grillith, with felicitous inconsistency, stigmatizes one part and in the next instant calls for protection upon another portion of these very game laws. He and his neighbors have put up "the required legal notice." Whence is the authority for this notice derived and what is its effect? Why form these game laws which he so glibly arraigns? But for them a shooter on his or any other farmer's lands would in ordinary cases, where no special injury was done, he liable only in nominal damages—say six cents—for the technical trespass, whilst these laws assure him of any actual damage and entitles him besides "to exemplary damages to an amount not exceeding twenty-five dollars." The gunner, heedless thereof, is assured that Mr. G. and his neighbors will exact this pound of flesh. Is not this part of the law "unconstitutional," Mr. Grillith, or "ought it not to be?" It would be difficult to compete with Mr. Grillith in his senseless appeals to the prejudices of the unthinking or ignorant. "Encroachments upon the liberty of the people"—"the wealthier class-ce"—"that unmitigated unitsance, the real sportsman"—'aristocratic trespassers" and such like phrases dance through his inflamed innegination with all the inaptness and jumble of a Rockaway-cham-produced nightmare.

The experience of every man who has come in contact with a real sportsman will rise up and testify that a kinder, more genial, liberal, considerate and unaristocratic member of the human family than he, cannot be found on or off Long Island.

He does not "throw down" farmers' fences, or intention—

hand.

He does not "throw down" farmers' fences, or intentionally "twomot their cattle," and if by accident any injury occurs from him to land, or living thing, the real sportsum is always ready and prompt to make full reparation. Nor does be plune himself upon his wealthif he possess any, or his social position if he have it, or it any way or manner obtrude, or make himself offensive. He is retiring, and consorts on equal terms with all whom he meets. He is forgiving, too, as well as consolatory; for should he meet even Mr. Griffith, he would shake his hand cordially, and assure him that he had not the slightest intention of invading his farm, and probably exclaim, "Lord: Griffith! he see must have been running pretty high on the bar the other night before you overhauled your sheet."

No farmer is, notwithstanding Mr. Griffith's assertion to

pretty high on the bar the other night before you overhauled your sheet."

No farmer is, notwithstanding Mr. Griffith's assertion to the contrary, "virtually the owner of the game" by which he is understood to mean quall and partridges. They are locally migrantey birds—particularly the former—and feeding here to-day and there to-morrow. By what right then, does any particular farmer claim to virtually own them? If he were proprietor of all the country they might be his, but from time immemorial every where these birds have been regarded as fera naturn—wild birds—with ownership in no one until captured and in hand. The sole proprietor of them in their natural freedom is the people of the State. It is to the interest and enjoyment—and some cases the health—of the public that they should not be exterminated, hence the game laws and the prohibition against certain means of capture sure to extirpate them if permitted.

There is much more on this subject, and the cognate suggestion in your issue of the 25th inst., as to the "proposition to Gentlenen Sportsmen," but there is nother space nor time to discuss them at present. If this long screed does not weary and scare you I may return to it.

Manhattan.

Weary and scare you I may return to it.

Manhattan.

Please add my name to your list of subscribers and send copies to this office weekly. I also wish to give my hearty indorsement to your scheme for the preservation of game. I will willingly pay any farmer from \$2 to \$5 per day for shooting over his land, where quali are plenty, or rather, say twenty to twenty-five cents for every quali brought to hag. There are plenty of qual on Long Island, at Moriches, Yaphank, Manor, Southampton, Good Ground, etc., etc., and if your plan were put in operation fine shooting could be had near at home.

I would also suggest that not only quail be protected, but that where there exists a town law against battery shooting, as in Moriches Bay, the law-abiding gunners should be encouraged in their efforts to prevent the lawless ones from batteries. There would be as fine shooting in this bay as anywhere, as the flats are wide and feed plenty if the law were authered to. There is one man especially who uses batteries in the spring and by "driving" the birds curtails their stay in the bay. His name can be given if necessary. Genee are subso plenty, but in regard to them a worse evil exists. The life-saving crew being near at hand, under cover of darkness fire-light them on their feeding-grounds.

This matter should be looked into by some one in authority. With all these disadvantages against good sport, I have shot from twenty-dwe to thirty ducks and thirteen geese in a day in the bay. I would willingly subscribe my pro-rata for an enforcement of the law to make the sport still better, as it does not continue good very long once fire-lighting takes

place. I have no doubt that a number of sportsmen would rather pay the full price of the game to law-breakers than have to travel miles for good shooting at heavy expense. I am one of them.

In going into the details of a scheme for preserving game,

In going into the details of a scheme for preserving game, the following ideas suggest themselves to my mind:

Given a certain locality, the farmers of the township, village or lamlet organize a club for preserving game, those not entering into the association to be debarred from the benefits of the club and to be prevented from illegally killing or snaring game of any kind by process of law. The members of the club to constitute themselves into an organized body of game-keepers, appointing certain ones among them to see that the laws are enforced. To keep posted at the railroad stations nearest their town the names of parties, members of the association, where good board can be found; they also to act as guides and keep fully of the game killed. A liberal rate to be ixed upon per bird, to be paid to the club, and the man or boy who acts as guide to be paid for his services, say \$3 to \$3 per day; a reasonable rate of board to be fixed. The funds thus carried to be divided among the members of the club. Advertisements to be inserted in good sporting papers of the localities where such clubs exist, with details as to board, rates, prospects for birds, etc., etc.

I think that these suggestions, conveyed to the farmers of Long Island in a liberal spirit by some of the game associations, would find it to their interest always to have plenty of birds, securing remuneration to themselves and sport to the gamer.

New York.

If our sportsmen would invest a few dellacs with the fearwest.

If our sportsmen would invest a few dollars with the farmer boys and set an example of liberality they would have no trouble to monopolize all the desirable preserves they wish. I bought about 1,100 acros for a stock farm near this city, and I found the farmers very prejudiced against the town gentry (as they called them) hunting on their lands, and had notices put up warning them from going on their lands to hunt. I soon got the secret. Indiscreet hunters had been there and shot stock, frightened their cattle and left down fences and open gates. I tried a carreful, generous course, by handing the boys a few dollars and avoiding all carelessness. I now have at least fifty coveys of quali and prairie chicken and rabbits in abundance on my own land, with almost unlimited privileges.

and rabbits in abundance on my own Isnd, with almost unlimited privileges.

Two years ago I had to winter the Bob Whites among my fat cattle in my brush heaps. I cut and piled brush heaps, then threw wheat straw over the brush piles, and over eighty quail wintered nicely. This winter has set in so bard I am preparing to do the same thing.

C. G.

I read with great interest the letters in the Forest and I read with great interest the letters in the Forest and Stream on the subject of protecting game. Keep it going: it will help to call the attention of true sportsmen to the dangers which threaten the extinction of game in our vicinity, and perhaps stir up the game clubs to a sense of theresponsibility resting on their shoulders. I must say that I consider Long Island one of the worst-poached places in this State, excepting, perhaps, the Adirondack region.

I have shot and fished on Long Island a great many years and I know that the evils that "A True Lover of the Sport" complains of are only too true, and if our new society is a success we shall do our share toward breaking them up, whether the farmers like it or not. But I think that the farmers will find it greatly to their advantage to stop poaching and preserve the game.

Member New Protective Society.

he gune. York, Dec. 3.

New York, Dec. 3.

As you invite comment on your plans for bringing the sportsmen and farmers more into accord, I would suggest that the sportsmen put themselves in direct communication with the farmers for the purpose of securing board, lodging and a guide and companion for their sport instead of going to a hotel, where the charges would be higher. It is generally conceded that the influx of sportsmen into any locality is the means of carrying a good deal of money into that place. This being so, why not give the farmers whose land furnishes the game the benefit of that money? It will also be the means of bringing the two into contact, and if the sportsman be a gentleman he may make a convert of the farmer, whose previous ideas of a sportsman may have been formed from the roughs or market-hunters he may formerly have thought fit to order off his place. As a farmer (and also, I hope, a sportsman) I know whereof I write.

Litelyfield, Conn.

As a sportsman and having a wish to pour oil on the troubled waters apparently existing between shooters and farmers, and also to start the ball rolling you suggest, I will guarantee to pay the boy or farmer on whose grounds I may shoot next season the rate of \$12 per 100 quail, or I will pay a reasonable price for permission to shoot and give one-half the birds killed on said grounds. Now, game preservers, come up to something that does look like action. SMOKE.

If fully indorse your plan as between farmer and sportsman in commenting on the letter of Mr. Griffith in to-day's paper. I have preached this doctrine to farmers and sportsmen wherever I have met them during my shooting for last five years and am glad you are putting it before us in tangible form.

A. S. S. Brooklyn, N. Y.

I heartily approve of your plan for the removal of the dif-ferences of opinion between "the farmer's boy" and "the city sportsmen." Wm. D. New York.

Meis York.

MINNESOTA DEER SHOOTING—Pillsbury, Minn., Nov. 30.—
The open season for deer commenced in this (Todd) county
November 1 and closes December 15. That the game has
been reasonably plenty the following list will show: The
Bain brothers (three of them) have killed 45 deer and 4 bears;
Peter Alcshire, 20 deer; Loring Bachelor, 22 deer; Marshall
Adams, 22 deer; Henry Adams, 17 deer and 2 bears; A. Pilson, 14 deer; Peter Roy, 17 deer; Meistral almost every
man in town has killed from 1 to 10. At least 4 tons of venison saddes have been brought into this village this season,
and all killed within a radius of ten miles. I am sorry to say
that but little regard is pald to the game law, and in a few
years the deer will be utterly exterminated. Pheasants, gray
and black squirrels, coons, wolves, etc., are quite plenty.

J. F. J.

#### GUNS, POWDER AND SHOT

PRACTICAL HINTS AND INSTRUCTIONS

PARKERSDURG, W. Va., Nov. 23.

THAVE read a number of rather scientific articles in your which could not full to impart much valuable information to any sportsman. It is only within the past few years that the use of the shot-gum for shooting hirds on the wing has become a science. The scientific knowledge of this manly and fascinating sport is yet confined to a very limited number of sportsmen.

fascinating sport is yet confined to a very limited number of sportsmen.

The minutiae of shot-gun practice, if closely studied, show that to become an efficient marksman it is not only necessary to be a good shot, but also to regard the peculiarities of your un, noticing closely the proper charge, the kind of annumition beet suited to it, etc. Every gun has its peculiarities, some requiring more powder and less shot, or less powder and more shot, a lighter or heaver wad, as the case may be it is often found that two guns, supposed to be exact duplicates, charged exactly alike and fired under the same circumstances, will not give the same result, and it yet remains for the wiscion of future generations to discover some system of Soring guns and loading them which shall insure absolute certainty and uniformity in every discharge. A sportsman is sometimes disappointed when he knows that his aim is correct and he generally blames his gun, when, in all prolability, the fault is owing to some defect in loading or in the quality of ammunition. Most guns shoot well when properly baded and the finest gun will only give its best result when loaded just rield. Many persons think that by using ridiculously large chargesof powder greater penetration is obtained; there is necless. By experiment only can such information be gained. My object is not to appear learned in this respect, but to offer a few suggestions which may lead to experiment and a more perfect knowledge where, in many cases, ideas have existed based only on hearsay evidence.

Among beginners, and those who have not had large experience, the idea seems to prevail that a good gun should kill at from 100 yards to as far as the object can be distinctly seen. This is all a mistake. Forty to sixty yards is as far as any gun can be considered reliable. Shots may occasionally be made at longer range, but they are more the result of element than calculation. The majority of birds killed in field-shooting are within thirty yards. In duck-shooting there have solve an a

about one-sixth more powder than muzzle-loaders require size.

In selecting a gun get it to fit you; one that comes up and balances well so it will naturally point at the object of your aim without requiring you to feel around to find the sight. When ordering state the weight, length of barrel, size of bore, length of stock from the front trigger to the middle of the but plate, the drop of stock, measuring from a straight line with the top of the barrel to the top of the barrel, rise of more same line to the top of stock, measuring from a straight line with the top of the barrel to the top of the part of the property of the proper

to the load, were so deformed and out of shape upon leaving the gun, that a very large proportion of the charge was lost; this was owing to their being crowded against each other with such tremendous force by the explosion of the powder, and by contact with the surface of the barret, that very few, if any, of the pellets retained their original shape. If any one will take the trouble to creet a soft target, eight feet square, made of plank thickly padded with cotton waste, or batting, stretching a cloth on the ground from the gun to the target, say forty yards, they will find upon firing soft shat that the pellets begin to fall at a very short distance from the muzle of the gun and will be sprinkled along on the ground in an increasing ratio up to the target, and that the shot caught in the target are nearly all badly out of shape, many of them having indentations on their several sides from compression against other pellets while passing from the barrel. Most of the pellets while have fallen short of the target will be found to be flat, three-sided and have every shape except round.

A few years ago W. W. Greene, a celebrated gunmaker of Birmingham, England, published in a circular the results of a number of trials, proving conclusively that to secure the best result, it was necessary that shot slouid possess the qualities of perfection during its flight through the air, and to do this it must be hard enough to resist the concussion incident upon the discharge. Shot of an irregular shape, or mixed size, will have a scattering and uncertain effect. The principal quality of perfection in soft shot is that each pellet in a load should be of the same weight. If some pellets are heavier they will fly faster and in their passage throw the lighter ones out of range. This of course holds good with all drop shot. "Improved Chilled" shot possesses equalities of perfection that soft shot does not, resisting concussion and retaining its spherical form, flies in a more compact and uniform mass and therefore, needing with l

Standard." The object was to induce all manufacturers to number their shot by the same scale, so that any specified number should represent the same size everywhere. Some of the shot-makers conformed to this standard, many fide not, so there is a considerable difference in the sizes of shot made by different manufacturers. In experimenting, or for accurate shooting, it is necessary to know that shot is of the right size. Among other ridiculous theories is one which prevails only among those who form hasty conclusions, without consideration or experiment, that chilled shot may injure finely finished gun barrels. In loading the shot is poured in and settles into its place entirely by clauce. It is not likely that the pellets in any two loads take exactly the same positions, therefore the points of contact of the different loads upon the surface of the barrel is never the same, so it could not cut or wear grooves as many suppose. The surface of the shot being smooth, no sharp edges or corners, it is impossible that the barrel could even be scratched. The shot in the outside layers of the load, even of the hardest metal, after being fired from a gun, will be found to have their sides flattened and ground off by friction in passing from the gun; but no pelletic can be found possessing any sharp, irregular surface that could scratch or injure the finest barrel. Soft shot wears a gun out in time and hard shot may wear out one a trifle soone, but the wear will be as smooth and uniform as by soft shot and so slow that no one will ever notice the difference.

Regarding "icading," about which there seems to be such a diversity of opinion, when a gun does become leaded it is with mstallic lead, not plumbago or black lead, which is a fine lubricator, and the best safeguard against leading. To prove this wash all the polish off the shot before using and note the result. Load several shells with black lead instead of shot and after firing several rounds, enough to dirty our gun, wipo it out clean and find any lead adhering to

sonable and judicious game protection and the advancement of field sports in a gentlemanly way, the rougher and ill-bred class of persons who cause so much annoyance, and go out merely to butcher something, anything in fact, from harmless songeters to "barnyard pheasants," will soon be compelled to behave themselves or quit. Game laws should be so made as to protect both the interest of farmers and non-resident sportsmen, and clubs should be organized with this object in view and be able to aid in enforcing the laws by making members, whether farmers or non-resident sportsmen, game constables, with power to act at any time.

BEDFORD.

constables, with power to act at any time.

One-half of the guns that are condemned by reason of their poor shooting are in no fault, the fault being in the user or the improper manner in which they are leaded. Is a gun to blame for heirg poor if it is poorly fed? Is a loose to blame for heirg poor if it is poorly fed? Is a loosenoitve to be blamed and thrown aside if it is improperly used and consequently does not perform as its manufacturer intended it to? A horse may be a young, good blooded animal, full of life and vigor, but on passing into hands that do not know how to take care of and feed it, does not do the work assigned it in a satisfactory manner.

A locomotive may not be wanting in those essentials which constitute a masterpiece in the art: its proportion and strength may be such as to render it capable of lugging thousands of tons up the steepest grade, and yet, if it has not the proper amount of steam it cannot do the labor or work which it was designed to do.

The same argument holds good with firearms as well, and since the makers of "choke-bores" intended them to shoot well they also intended them to be properly loaded in order

since the makers of "choke-bores" intended them to shoot well they also intended them to be properly loaded in order

to do so.

For instance, take a No. 12 gun and place one drain of powder in it, and put an ounce of shot on top, and on firing at a target you will see at once that something is wrong. Its killing power is "very small," but on increasing the powder to 3½ drams we find a wast difference both in range and pat-

to 3g drams we find a vast difference both in range and pattern.

The proper way to test a gun has been hinted at in these columns some time ago and was correct as far as it went, but there is such a wide difference in the boring of guns, especially the "choke-bore," that a set rule will not always win, consequently many a good, close, hard shooter is thrown aside with the fault in its owner.

J. W. Long says that choking a gun is performed by inserting a tool made for the purpose in the rear end of the harrel and working (turning around) it forward until a point not to exceed one-eighth or one-quarter of an inch from the muzzle is reached. This is repeated by placing a slip of paper between the tool "a short bar of three-eighths to one-half an inch square, steel, about six inches in length, the corners ground and sharp, and welded to a handle of one-half inch round-iron the length of the barrel. To one side of this bit a thin, flat piece of pine or other soft wood, rounded on its outer side in conformation with the bore of the gun is fitted," and the wood, until enough boring is accomplished, when the gun may be tried at a target and if "sick" properly "doctered."

This constriction at the muzzle must affect the shot in their

gun may be tried at a target and it "sick" properly "doctered."

This constriction at the muzzle must affect the shot in their exit, hence the better the shot chamber at this point the more regular and even they are thrown from the gun. Some suppose the shot, more especially the large kind, should chamber at the breech; but this is a dangerous mistake in a closely-choked gun. A very fine shooting "choke bore" improperly loaded will "disgrace its race," and when the shot are chambered at the breech a cylinder-bored gun will outshoot the choke-bore in an astonishing manner. My plan, which I have found to win, is to take a cardboard wad which will fit lightly in the muzzle and ram down about half an inch, and then try the shots and see if they will chamber, keeping the number of all the kinds you wish to use. Now load your gun with 35 drs. of coarse-grained powder and 1 oz. of the shot you have found will fit at the muzzle, when you will be surprised at the evenness of your target if your gun is properly choked.

shot you have found will fit at the muzzle, when you will be surprised at the evenness of your larget if your gun is properly choked.

Always take a "rest," so you may know whether your gun shoots over, under, or sideways. If it does not suit all you shoots over, under, or sideways. If it does not suit all you shoots over, under, or sideways. If it does not suit all you have to do is to take your gun to the right man and get it "curred" to your heart's content." Chilled shot are better than soft, for the reason that they do not flatten at the choke of the gun, consequently they make better pattern and penetration. Some time since I saw a young sportsan trying a No. 12 at a target with B B and buck. He told me he did not know what was the reason his breech-loader would shoot them no better, saying, "They just chamber in the brass shell perfectly; now, what is the rip?" I loaded some of his empty shells and tried my plan, which was nedecided success, much to his pleasure and edification.

Now, all who read this article that own poor shooting guns please test my method, and let me hear from you through the columns of FOREST AND STREAM.

I neglected to state that when buckshot were used the spaces between the shot as they are placed in the shell should be filled with bone dust.

Sauk Centre. Minn., Nov. 26.

WE want the name of every sportsma . New York City, and in other cities, who thinks that he were afford to pay the farmer's boy something for preserving the quail for him to

#### A DUCK SHOOT ON THE KANKAKEE.

A DUCK SHOOT ON THE KANKAKEE.

N November 5 our party of four unde an arrangement to go to the Kankakee and neighboring swamps duck shooting. 'At midnight, the time of taking the train, the weather was very disagreeable, raining and snowing. When we arrived at Momence, III, at 8.50 a. M., the snow was some four inches deep and still snowing. Our arder was considerably dampened and we began to get n little blue over the prospects. But having gone so far we determined to make the remainder of the trip. We left our baggage at the depot and went down for breakfast, after which we made inquiry as to the shooting. The resident sportsmen told us that the shooting had been good and was now a little '10ff,' but with the present snowstorm they thought it would be good again on the river. We hired a livery team to take us eight miles up the river to Taylor's, with the understanding that we should be taken farther if we desired. On arriving at Taylor's he informed us that he could not keep us as his spare room was already occupied. He said that the shooting was not very good at that point, that it was much better farther up the river, and advised us to go up some eight miles to Bradys, for which point we

started, and found the roads very bad, having not been lately

started, and found the roads very bad, having not been lately worked. The team could only go in a slow walk. We arrived at Brady's at one o'clock r. M. Having ridden in the Korthwest snow storm all the way out twe were much chilled. I went into the house and introduced myself. We soon had a good warm dinner and were made to rice! confortably at home, which we daily appreciated after our cold ride. We found here quite an extensive place, Messrs, Adams and Brady owning 3,300 acres of land, mostly under fence, with a nice frame dwelling and large barn, in which were eighteen head of horses for use on the ranch. The firm had 2,000 head of sheep on the ranch, and put another 1,000 head on that week. After dinner we donned our hunting clothes and rubber boots, and under the guidance of Frank Fuller, son of our host, we went to the river to try the ducks, but it was snowing so hard that the ducks were flying but very little, and only two ducks were filled that evening. We found but the river shooting would not on, and that we should have to try the swamps.

Next morning the snow storm was over, and the prospect was much better. After an early breakfast we crossed the river and made our way some three miles across the country to a bage rice swamp. Here we found very hard tramping to get into the swamp. The prairie grass and wild rice had fallen down, covered with snow, and underneath water and mud. We did not see any ducks flying, and it looked discounging. Kerdolph, Bishop and Hopkins stopped at the clag of the swamp, while Frank Fuller and myself concluded to make our way to the centre, which we did after hard work.

hard work.
Suddenly the ducks rose out of the wild rice by
the handreds. We both fired, but were too for away. I
quickly put in two more shells, and as a second flock
rose nearer and circled toward as I got one with a right and
one with a left, both flue mallards. We then waded into the one with a lett, both time mallards. We then waded into the vice and took our positions, each on a muskrat house. Soon the ducks commenced flying and we had good shooting all day as they flew over us. We lost quite a number of crippled ducks that fell out in the rice and water and would get way before the dog could get to them, it was so hard for him to get through the thickly-grown rice and the rat holes, and we would have lost many house if it had not been for my young Gordon setter Sigel. It was hard on him. The weather and water were so cold I had to keep him covered with a rubber coat after each bath. By 5 o'clock Frank and I had all the ducks we cared to carry out of the swamp. We loaded up and started for home. After tramping about one-half miles est down and poured the water out of our rubber one said runways. After going some distance further I found I was going to give out with my load, being very fired and weak, not having had anything to eat since early morning. Frank took the ducks and I the guns, and has weighted we trudged on another quarter-nike, when I told him I could mot go any further: It was then after duck. I told him town team the said there was a Swell lived about a half-nife aross the country and he would go there and get him toland in shome. He took hay flight gun and some shells in case he could not find me on his return, he could shoot and I could masser. He took may flight gun and some shells in case he could not find me on his return, he could and deep wert and get him toland in show. He tolk may flight gun and some shells in case he could not find me on his return, he could and down the half wet allowed the west house and so had a subject to walk around an deep were and get him toland in the monohight, which had a long to rest, but being wet and get him claimed the was not have the said and the subject of the walk around and deep were and get him foland himself and the subject of the said and the subject of the weak and the subject of the weak and the subject of the weak and the s

THE FOREST AND STREAM'S exposition of "Dittmar sporting powder" will be sent upon application.

#### DUCKING IN A SNOW STORM.

I HAVE been away for a few days duck shooting in the you would like to know how the shooting was. We left the sharket Street Ferry at at 6:40, November 23, bound for Tucketton; a trived at Tucketton about twelve o'clock; found our gunners, Sam Shords and son, allready with skiffs, sneak boxes and decoys. A northwest gale had been blowing hard two or three days, and had blown the water out of Tucketton Creek so that Cap. Geo. Burton, who was to take us over to Bond's, could not get his yacht afloat. After waiting some time the tide came in so that we got the yacht off and started for the beach. After acold but pleasant sail of about one hour we arrived at Bond's. The cold was increasing fast, and it looked like a freeze up. However, we made everthing ready for an early start in the morning. Next morning we were up by daylight, but found we could have no shooting. Sam reported the bay frozen out to the edge of the channel, and a very low tide, so it was no go. We spent the day watching the flight of brant, black duck and broad bills dying up and down the channel hoping for better luck next day. It was getting colder sil day, and Wednesday was no better. A few sanners broke their way through the ice with their sneak boxes and tried stooling in the ice with poor success. Two boats shot one pair of dippers, three cub heads and one brant. The next day the weather was warner with good tide, wind east and the ice moved off the flore daylight, put found day had head bills and the ice moved off the flore daylight, put found us, but they did not want to fix. About him o'clock we had a long shot at two orond bills high over head. Sam gave then his big gun and dropped then both. After waiting an hour or so we had a shot at a single brant and down the came. Nothing was done after that, until, after twelve o'clock, flock after took passed us both sides of the bunch; they did not rouse of the word. Said Sam. On splendid, "Don't shoot till Jaive the word," said Sam. On splendid, "Don't shoot till Jaive the word," said Sam. On s HAVE been away for a few days duck shooting in the neighborhood of Bond's, Long Beach, N. J. Thought you would like to know how the shooting was. We left the Market Street Ferry at 6:40, November 22, bound for Tuck-

#### OUR PHILADELPHIA LETTER,

OUR PHILADELPHIA LETTER.

An important discovery has just been made by Prof. Tousaint, of the Veterinary College of Toulouse, with the view of protecting animals from epizoolic diseases by preventive inoculation. M. Pasteur, of the Same college, had already succeeded in shielding gallimacous birds to a great extent from the zymotic disease known as chicken cholera by vaccination with attenuated virus. Recently young hunting dogs have been inoculated with vaccine virus to protect them from a disease (distemper) which decimates them when quite young, which has proven quite successful, the average number of puppies succumbing to this fatal malady in large kennels, where it frequently rages to a fearful estent, being much less, and those attacked by it have it in a much milder form than animals not inceulated. The above I have taken from the French, being from a letter dated October, 1880, written at Paris to a medical journal of this city, and will no doubt be interesting to your readers having kennels and expected litters of valuable dogs for size. Certainly the experiment can easily be tried here, and we would recommend the part of the body of the youngster most casily operated upon to be directly under the forearm where the skin is free from hair. We would use the freshest of varcine virus, which can be readily purchased at ten to fifteen cents per pint from any reliable dispensing druggist.

In the same article we read that "M. Toussaint has directed his attention to the extension of these experiments to other animals, especially to sheep, with the belief that they may be protected from the invasion of evertain forms of malignant maladies which annually carry off victims immurrable among the homed beasts in various parts of Europe."

Your correspondent will be having access to a large list of medical journals which give interesting accounts of experiments or dogs and articles of value to the kennel man will be incorporated in my weekly letter.

An important test has been made as to the virtue of Liebeg's extra

due to the deleterious influence of the potash salts of the extract; for although these are indispensible to the economy, a large dose of them is injurious in the absence of the food whose metabolism it is their office to direct." The food here referred to is the albumen and fabrine of flesh wantingful Lisbeg's extract, by his own confession; in fact, all simple extracts of beef are flavors of here only, in no sense nutritions, and are valuable as stimulants but not food, the entire nourishing properties being in the albumen and fibric or insoluble portions.

soluble portions.

Referring again before closing my letter to the vaccination of puppies as a preventive or to cause a modification of violence in the attack, I would advise, after the skin had been abruded with "he ivory point on which the virus has been

spread, and the matter had been well rubbed into the part. spread, and the matter had been well rubbed into the part, that a small piece of court plaster be placed over it as is done with the human patient. Care should be taken, however, that blood is not drawn, as there is dauger of its flow washing away the virus and not taking it into the circulation, and thus preventing 'a good take.' We should try the experiment as soon as the purply was weaned—certainly before his second teeth were visible.

second teeth were visible.

We are now having winter in carnest, with every probability of a severe and prolonged one before us, with plenty of snow. So there is more need, Mr. Editor, that you continue to agitate and call the attention of the spertsmen of the timue to agitate and call the attention of the sportsmen of the country to the necessity of perfect protection for game birds and to freely exchange their views on the subject, as is invited in the columns of your journal last week.

Illustrative of what can be done by systematic effort, note the result of the labors of the West Jersey Game Protective Association.

I have been reading with much interest the papers on nat-

Association.

I have been reading with much interest the papers on natural history in Forest and Stream. In number three, under head of "Our Water-Fowl," the writer states the snow goose (Anser hypertariae) is less abundant on the Atlantic coast than further westward. This we know to be the case, but we would like to mention as an incident in the change of nigrations of birds, that for the past three years large flocks of the fowl mentioned have made their appearance in Delaware Bay, below Bombay Hook. The first season of their arrival none of the local gumers knew what they were nor were they at all modested for two or three weeks, until two Philadelphia duckers—John McCallum and John Brown—who were down the bay, came across them. Many were shot and sent to the city to be sold for what they would bring. McCallum and Brown being unacquainted with the bird, they were offered for sale for a trilling sum and the wise ones readily and engerly purchased them, for they are of all waters fowl the most deficious. They have again appeared in Dehaware Bay, but not in such great quantities. These are the larger birds (Happe tarva), not the smaller variety (Allbaria from Valparaiso, Ind., while suipe-shooting, a gander and two geese, one of the latter, having a wonnet and free found, for rest, leading the other two with it. Hosto.

#### HOW THEY DO IT IN ARKANSAS.

BALTIMORE, Nov. 26.

THERE are doubtless many of your readers who are not acquainted with a method used in the South—and probably other portions of the States—by pot-hunters for capturing the persecuted little qualit and for the enlightenment of these I will describe the modus operand, prefacing the description with the hope that although they may hereafter be acquainted with the namuer, they will, not one of them, make use of their information. It is merely for their general knowledge, not instruction.

scription with the hope that although they may hereafter be acquainted with the manner, they will, not one of them, make use of their information. It is increby for their general knowledge, not instruction.

The 'Squire was the only one in the village who practiced netting, and was very fond of it. Often was he seen astride his gray mag, with his not slung from the horn of his saddle, bound on a pot-hunting expedition against Bob White. The 'Squire was one-legged, but rather active if he chose to be, which was rather seldom, as he was lazy: he was poor, he had a wife and five small children to feed, but for all that handly think the means were justified. I had never seen how it was done, and once accompanied him.

As quail were plentiful in that region, we had hardly proceeded above a quarter of a mile through the woods ore we thished a bery. Marking them down about a hundred yards off, under a bush, the 'Squire selected a place about thirty or forty yards distant from the birds, dismounted and set the net, which was composed of twine, the meshes being about one inch and consisted of a barrel ten feet long, the opening being fifteen inches in diameter, therpring to a point at the other end. The opening had stakes on each side, which were stuck into the ground and the barrel drawn out its full length and staked at the point, thin wooden rings preventing the net from collapsing. Whigs twelve feet in length, of the same material, about fifteen inches in these if was only in the same material, about fifteen inches in the order for some inches to to frighten the birds, but oue enough to witness everything, he made a detour, and coming toward the birds on the opposite side from tho net, so slowly as not to make them take wing, he started them from the cover where they had it. Slowly he advanced, whenever the birds appeared inclined to scatter, he stopped altogether. Now all itthe on one side to steer them, now on the other, he gradually drove them into the outspread wings well bunched. Running along, they cause to th but was unsuccessful; he wanted them for his you It was my first and last participation in this kind

'uns. It was my first and last participation in this kind of bird-killing.

There is, or was, no game law in that State—Arkansa— protecting quail During the season the 'squire probably killed more quail in this manner than I dad with shot-gan, the net frequently not leaving a single bird of the bery. Do the Long Islanders do the same?

FREDERICK.

#### DOWN IN SOUTH MISSISSIPPI

Woudville, Wilkinson, Co., Miss., Nov. 28.

I SEE in your department of Gane Esg and Gun sporting notes from all parts of the country except this. I thought perhaps your readers would like to know how things are done with gun and dog away down in South Mississippl. In the way of game we have the quait, turkey, wild fox and a few deer out here in the hills, though twenty miles from here, in the swamp lands, user are quite plentiful. The above list comprise what we consider game. Besides that wo have innunerable quantities of rubbits, squirrels, coons, etc. Quail (or, as they are more commonly oulled here, partridge) shooting is our principal sport in this immediate section, Our dogs are altogether pointers and principally native stock; though they have no long pedigree attached to their name. Yet, I fancy, for the work we have them for they would be able to hold their own with the best "blue bloods" of the North and West. Our does have one very serious objection, however: very few of them are thoroughly broken, though that is attributable, I think, to the abundance of birds and

the way we hunt them. We hunt together on horseback until the dogs find a covey. We then dismount and fire into them. We then work up the single birds as long as we can find them. After they are too badly scattered we mount our horses and hunt for another covey, and so on throughout the hunt. It is such an easy matter to find new coveys that we do not work up the scattered birds anything like as thoroughly as our Northern brethren do. Our dogs generally run in and get the dead birds as soon as the gun fires, consequently a great many birds are flushed. It is a common thing to find ten or fifteen coveys of quali in half a day's hunt. It is only within the last two or three years that Mississippi has had a game law, and considering the fact that we have never been accustomed to much restraint of that kind the game law is very well observed. The close season for quall and turkey is from April 1 to September 15, deer from May 1 to September 15. Although this is such an out-of-the-way where them.

tember 15.

Although this is such an out-of-the-way place that we can scarcely ever hope to have any of our Northern brethren partake of our hospitalities or share with us our field sports, yet I will say to them that if any should ever stray down thus far I will assure them a hearty and cordial welcome, and that they will receive all the courtesy and attention that the circumstances of our people will admit of. And I will further assure them that we are nothing like as bad down here as our stalwart Republican friends would have the country believe, and though some of us are pretty handy with the shot-gam yet we rarely ever use anything larger than with the shot-gun yet we rarely ever use anything larger than

No. 8 shot.

Well, Mr. Editor, if this should prove of any interest to
your paper, you may possibly hear from me again at some
future time.

J. A. R.

#### SQUIRREL-SHOOTING.

MIFFLINTOWN, Pa., Dec. 2.

MIFFLINTOWN, Pa., Dec. 2.

WHY is it that in your paper so little is said about squirrel-hunting? Certainly the sport is exciting and while possibly not to be ranked with grouse and quait-hunting, it nevertheless requires a good shot to bring down a squirrel when running at the top of his speed through the leafy branches of the trees, when "now you see him and now you don't "follow in such quick succession. Did you ever stand at the corner of a field and attempt to shoot a red squirrel running on a worn fence? If you have not, try it, and then say if it requires no skill to shoot squirrels. There are certainly some of your many readers that are fond of this sport and who rould occasionally say something in the Forest and known each other for three years—that is, we were acquainted at long range. I knew where he harbored and he knew I knew it, and whenever I could make it convenient I called in his absence. As he was on his way home he discovered that I "held the fort." He at once resorted to strategy. About seventy-five yards from his harbor stood a large oak; when he reached it he took up his position and I went round and round that tree—I was going to say one thousand times, but I'll come down one. I threw stones to the opposite side, flung my hat, shock bushes and did everything to frighten him, but he persisted in staying on the opposite side of the tree. He knew if he left it he would never reach home, and I knew if he left it he would never reach home, and I knew if he left it he would never reach home, and I had in my hunting-cont. To pull off my coat, hang in on a bush, place my hat on top, it the line to the bush and unreel sulficient to allow me to get to the opposite side of the tree to my limprovised houter required but a short time. Give on a bush, place my hat on top, he the line to the bush and unreel sufficient to allow me to get to the opposite side of the tree to my improvised hunter required but a short time. Giving my line a quick pull and instantly throwing my gue to my shoulder I had the satisfaction of seeing him whisk around to my side. He did not whisk back.

Sancho Panza.

#### AN AFTER ECHO.

Petrolia, Ontario.

Petrolia, Ontario.

Editor Forest and Stream:
Enclosed please find \$4, renewal of my subscription for Forest and Stream. The Forest and Stream's expose of the Dittmar powder is complete and crushing. The man who worked up the case either is, or ought to be, a lawyer, I of sould say.

I don't think that a "Dittmar Powder Co." (No. 24,286), placing a label on the bottom of each can, two on each side, a seal on each cover, and a duplex patent safety plug in the nozzle, could revive it.

If any man, after reading the able article in Forest and Stream, uses Dittmar powder le will have to thank inborn mulishness for his poor bag one day, and his burst gun (with accompaniments) the next.

Most sportsmen have experimented with Dittmar powder; many had stready given it up, or will give it up in the immediate future.

Dittmar powder is practically dead, and sportsmen who were using it, or were going to use it, are deeply indebted to the Forest AND STREAM for giving the diabolical compound its death blow.

The scientific prelude to the Dittmar article was very barnly the duplet.

1:s death blow.

The scientific prelude to the Dittmar article was very happily thought of; something of the sort was no doubt necessary for a considerable class of readers.

H. A. F.

A Thanksouth Hunt—Hatavia, Ill., Nov. 29.—Among the most vivid of my boyhood recollections are the shooting matches that used to take place in my native village in New Jersey, on Thanksgiving Day. I remember well how my boyish enthusiasm would rise to a white heat on hose occasions. I remember too how, during one of these matches at Bound Brook, on the low land stretching from the New Jersey Central R. R., to the Ravitan River, the contest was brought to a said and sudden close by the bursting of a gun which effectually severed a man's hand from his forearm. I find that shooting matches and hunting are popular pastimes for sportsmen in Illinois on Thanksgiving Day. A number of gentlemen in our village combined the two sports on hast Thursday in a rather novel manner. They came together and chose sides, tossing up I suppose for the first choice as they used to do when we were boys for an old fashioned game of base ball. They then sallled forth in every direction each to his favorite hunting grounds, with the understanding that the side that bagged the least game should pay for a good Thanksgiving supper. At night all hands returned to ....

the village with an aggregated score of eighty-six rabbits, the vinige with an aggregated score of eighty-six rations, three quails, three partridges and two ducks. True to the agreement the losing side provided a first class supper, of which all partook with a keen relish after their hard day's

tramp. Hix.

Texas—Indianolu, Not. 18.—For the past two days have had the coldest snap I have ever seen thus early for years. Large flocks of swan, geese and ducks have been passing over town. Jacksnipe very plenty in the inarshes around town. From your answers to my queries I suppose my gun must be excessively choked. The gun is a "Scott." bought by me from Messrs. Read & Son. Boston, and the patterns sent with the gun are 263 R. H. and 272 L. H. barrel, No. 8 shot, 30 in. circle, 40 yards. Have shot her at the bottom of a common scap box, 100 strides, and stuck twelve No. 6 shot in the box so they would have to be picked out with a knife, four drs. powder, 1/4 shot. No. 4 shot, same distance, struck it with five pellets, one of which went clean through. Do you think this a good record? Can I do anything to improve the gun for general shooting? There are spots inside the barrels which I cannot remove by the ordinary mode of cleaning, although I try very hard. They can't rust, as I take great pains to keep my gun very clean. Is it lead? and what would you advise to remove them? Gun is almost new, has been shot only this season. been shot only this season

The spots, if they are simply the so-called lead, can probably be removed by a wire brush with kerosene. We would not risk changing the gun.

not risk changing the gum.

Shooting from Theeks—Teal, Mo., Moc 23.—I notice in your paper various opinions in regard to ruffed grouse treeing. In several years experience hunting this bird I have found that with the right kind of a dog that fully one-half of the birds found will tree. The dog used was a Blenheim spaniel. I have shot as many as five from one tree. Canada was the shooting ground. In that part of the world we do not have quail nor pinnated grouse, and a good partridge dog is very valuable; I had one. I brought the dog to this country with me, and found the habits of the bird the same. In one instance the dog kept one in a tree while I went at least a quarter of a mile for my gum. The birds are not plenty here, but habits the same as in the North. Can it desired send you an occasional note in reference to sporting resorts in the central part of Canada, also some hints about wild rice and fishing.

G. H. We shall be much pleased to receive the notes.

We shall be much pleased to receive the notes.

We shall be much pleased to receive the notes.

California State Association.—The California State Sportsmen's Association have adopted a constitution which sets forth that the object of the association is: The preservation of game and fish; protecting the same by legal means; influencing, as far as practicable, the emacment of such additional laws and ordinances as may be found necessary to accomplish that end; to enforce those laws; to bring to and stock our State with the different varieties of fish and game birds; to encourage and advance the interest taken in field sports, and generally to attend to and guard such matters therewith connected as may be of benefit to the sportsmen of California. The Association has the following membership: Grass Valley Sportsmen's Club, Pajaro Valley Sportsmen's Club, Oakland Gun Club, San Francisco Sportsmen's Club, Stockton Gun Club, O'Neill Gun Club and the Calusa Shooting Club.

Nebraska—North Platte, Neb., Noc. 30.—Well, the boys are having lois of sport now. There have not been as many deer or elk killed for years. M. J. Colm's man killed two mountain lions between here and old Port McPherson. We had a grand Thanksgiving shoot in this city—glass balls, pigeons and turkeys. Dillon, Baker and Bradley did the best shooting at balls and pigeons, getting their balls and birds every time. David Perry, C. Grome, Bradley and Baker left all the rest on the turkeys. We have as good material here for a rifle club as there, is in this country. R. Watts and a party of friends are up on the Dismal River hunting now, having a good time. Jimmy Canon, the old Government seout, is trapping this winter.

Tennessee-Savannah, Nov. 27 .- Owing to heavy rains TENNESER—Navannah, Nov. 27.—Owing to heavy rains bird-shooting has been very poor this month. Quali are not to be found in their wonted haunts and are supposed to have taken to the woods and thickets for shelter. The late cold snap brought in the ducks and geese at an earlier date than usual and some good bags have been made. While out after quali on the afternoon of Thanksgiving Day I found a small "bunch" of mallards in the creek and got in two shots, bagging four, three of them large drakes. The change in the day of publication of your paper suits me exactly, as I now get that most interesting journal on Saturday night—a most pleasant close to a bard week's work.

Ruyped Grouse—Boston, Mass., Dec. 4.—I notice in this week's issue the weights of ruffed grouse, which I call partridge. In October, 1878, Mr. O. H. Davenport and myself were gunning in Templeton in this State. Mr. Davenport killed a partridge which weighed twenty-eight ounces, and I shot and killed an old cock which weighed thirty ounces. These were two of the heaviest birds of the kind that I have ver seen in Massachusetts.

IT IS THE CAT .- A private letter from Mr. S. V. R. Bray-IT IS THE CAT.—A private letter from Mr. S. V. K. Bray-ton, one of the newly-appointed Game Protectors of the State of New York, says that the great enemy of the ruffed grouse is the cat and that its depredations in Albany County exceed that of all the other enemies combined. As there is no bounty offered for these small tigers we hope that all good sports-men will regard it as a matter of duty to shoot every cat found in the fields or woods. By all means shoot the cat.

SEND US HIS NAME—Greenpoint, Nov. 25.—Editor Forest and Stream: I heard of a case where a man laid poison on his ground for the purpose of stopping gunners from hunting on his grounds. Two hounds were poisoned there last week and died within fifteen minutes. This happened on Great Neck, L. I. Will you please inform me if this cannot be stopped?

Rudde Island—Newport, Dec. 4.—Last week Island Chase brought into town four woodcock that he shot on our island. He says plover and woodcock shouting has been the best this season for a number of years. Grant Lafarge shot a Fforida gallina at the pond. It was in fine condition and has been wounded. The bird is seldom found so far North.

F.

Big Black Bass.—A black bass of six and a quarter pounds was taken from Oswego Lake (N. Y.) by Mr. Justus Potter, of Cooperstown, one day last month. The people who have done so much toward stocking this beautiful sheet of water until it is fairly swarming with fish are about making it warm for poachers

#### SHOOTING MATCHES.

VACHTSMEN AT THE SCORE. -Port Morris, Noc. 26. - The Knickerbocker Gun Club is composed of the members of the Knicker-bocker Yacht Club interested in shooting, and serves to keep the members of the yacht club together during the winter months. Our club house at Port Morris is open the year through, and we are pleased to welcome visitors at all times. At the meeting of the Gun Club, held Nov. 16, the following officers were elected for the ensuing year: President, Geo. R. Hobby; Secretary, Alfred Varian: Treasurer, Wm. Potter, Jr.

The glass ball match for the gun club medal was a handrap

Jacques therefore wins the medal and the first extra prize, Potter receiving second prize.

At the conclusion of the glass ball match the shooters and their friends adjourned to the club house and enjoyed a good turkey dinner. At 2 F. M. the pigeon shooters were called to their marks.

This was also a handicap match, 5 birds being shot at. Five traps. 5 yards apart, 80 yards boundary. The following is the score :

W Potter, Jr25 yards	1 1	1	1	1-5
T N Jacques30	1 1	ī	1	1 - 5

T T Nixon28	0.0	0	1	0-1
G R Hobby				

Two prizes were offered in each match in addition to the medal. No man to receive more than one extra and prize during the day. The tie between Jacques and Potter was shot off at three birds. Potter killing his three straight, Jacques two. Neither of these gentlemen were entitled to the prizes, having won first and second prizes in the glass ball match. Mr. Chedsey therefore received the first prize. Messrs. French, Scaman and Steinke then shot off the tie for the second prize. Seaman killed his three birds, winning the prize. French killed 2, Steinke 0.

Washington Gen Club.—Brooklyn, E. D., Nov. 30.—Score of the first practice shoot, under the N. Y. State rules, for two prizes the inet-practice shoot, under the N. Y. State rules, for two prizes— one silver ice pitcher, one set fine carvers. Object—To add to the sinking rund; to aid in defraying expenses for the next State fournament. The weather being stormy the attendance was very small, only thirteen members coming to the score. Mr. Metcalfe won the first prize, and Mr. B. N. Watte won the second for H.

EASTERN FIELD TRIALS.

Wednesday, December 1.

THE snow, which had commenced falling on Tuesday evening, changed into a dripping rainearly in the morning, so that when we rose betimes and looked across the bay Robin's Island was shrouded in a fog. There was a disposition on the part of some to brave the storm, but wiser counsels prevailed and the dogs were given a full feed and stoves were hugged throughout the day.

#### THURSDAY, DECEMBER 2.

THERDAY, DECEMBER 2.

The morning opened rough, with the wind blowing a gale from the northwest—anything but a day on which to test the scenting qualities of dogs. An early start was made across the bay, at 8 o'clock, and another judge, Dr. J. C. Monroe, of Brooklyn, N. Y., was added to the trio which had acted in the Nursery and Puppy Stakes, and Mr. George T. Linch, of New York City, was appointed Referee. Treasurer Hall, the official scorer, with a view to signaling the decision of the judges from time to time, had armed himself with a red and a blue flag, the waving of the former intending to derote a demorit and the waving of the latter a merit, but as no means had been provided for specifying which dog in the

I race was under discussion, the spectators, held in check seventy-five yards behind by the field stowards, were not enlightened to any remarkable extent, but viewed the performance as one hidden in deep mystery.

Arriving at the island, overcoats were stowed away in the losus mear the landing and the contestants called together and male-seal on the part of the judges by Dr. Rawlings Young, who tensely said: "Gentlemen, the judges in these trials propose to do their best in rendering their decisions, which shall be based upon the rules and upon their best judgment."

All-aged stakes open to all eetters and pointers, limited to fifty atries. First prize, \$200; second prize, \$100; third prize, \$50; north prize, \$25. Entrance fee, \$25. Forfeit, \$15. Closed with

FIRST SERIES

Halia against Grones Dale.

Atton. 1892.

First Series.

Thest Blace.—It was quarrier to nine o'clock when Dr. Atton's Large black, and and white setter dog Glen, the winner with Nedo first in the braces, same rials, last year, handled by Mr. Stahev Blydenburg, of Long Island, and Mr. Higgins black and white imported setter dog Dashing Monarch were not down for the first heat. Monarch is a very bandsome and powerful dog and was handled by Mr. E. J. Martin, of Wilmington, Delsware. In crossing the hill-side of the old stubble Monarch went lame in his near fore foot, having twisted in on the frozen ground. It appears that soon after list arrival here last January his foot was bitten through, but since then it has not troubled him. In a monate, however, Monarch was hinself again, and away he sped, showing grand style and pace, leaving his companion somewhat in the rear. On the strip of buckwheat Glen winded along the fence. Entering the briar and bayberry-brush range, Glen showed up a trile headstrong. In a briary hollow Glen pointed and Monarch, being called up, followed suit, not seeing his dark-coated competitor in the dense underturnsh. The birds were not moved, although subscipently one of the spectators stirred them up, and Glen was stiven a false point. Monarch being called off, quartered to the shore, and Glen began to potter, winding up with a fulse point, which Monarch backed in good form. Monarch of the enth-ack strip near the shore a brace of birds was moved by Monarch flushing one and stopping at sound of wing, Glen backled in Both dogs roaded on and Monarch good form down the strip of the shore a brace of bird was moved of the enth-ack strip near the shore a brace of bird was moved did not owded. Martin flushed bird and missed. Glen trended and pointed along inner edge of bush and Monarch do blandle kitch, and Martin flushed bird and missed. Glen readed and pointed along inner edge of bush and Monarch would have a strip hear the shore a brace of bird by and monarch forged alnead. Glen turned of slarp cred the other in style. Glen was sent for remaining bird, which he retrieved with assistance of handler. The heat was awarded to Dashing Monarch after the brace had been down thirty mioutes. We consider that Monarch won with ease, so he was far superior in style and nose. He handled himself throughout for the body seent and pointed with head well up.

Iron Duke against Isabella.

Second Bhace—Mr. Bassford's black and white setter dog Iron Duke, handled by owner, and black and white setter bitch Isabella by Chester, out of Fannie II. winner of first in puppy stakes at Memphis, 1876, and formerly owned by Mr. John Davidson, handled by Mr. W. Tallman, Drowsville, R. I. The brace was slipped at 9:45 A. M. on same range, and slong the northeast shore Isabella was penalized with a fulse point, and Duke for failure to back. The bank was followed around until the high ground was reached, when the brace was away to leeward of a briar hollo w where some birds were heard calling. Isabella false pointed again, and again Duke refused to back. The judges then ordered the brace up after being down a quarter of an hour with decision reserved. Ray against Spy.

Third Brace.—At ten o'clock Mr. Livingston's white (with liver cars) setter dog Ray, handled by Mr. W. W. Titus, of Centerport, L. I. (not Circleville aspreviously published), and Mr. Ripley's red Irish setter dog Spy by Duke, out of Belle, known on the bench as a winner, and handled by Mr. O. B. Edwards, of Sag Harbor, L. I., were put down. As the wind had increased in furry, a move was made for a more sheltered position at the south side of the island. On the way a bevy was flushed by spectators, Spy winding at the time. The birds topped the crest of the bill and were narked in some serub oaks. Then Spy half pointed, drew on and pointed, Ray failed to back and passed on and thushed several birds. Edwards shot and missed, and both dogs showed great unsteadiness. Spy further on winded and thushed. Dogs ordered up by judges without chance to range or retrieve after being ten minutes down, with Spy the winder.

Pourth Brace.—Mr. Godeffroy's liver and white pointer dog (roxteth, handled by Philip Thurtle, and Dr. R. Day's (Norwich, Conn.) small liver pointer Trim, handled by PM. H. Thayer, of Bristol, R. I. The brace was put down at 10:15 a. M. in a cornfield, and the rough, frozen ground was well beaten by both dogs. We had never seen Croxteth in better condition, which speaks well for Thurtle, who has had no end of trouble with him. He is a grand dog of the heavy bone sort, while Trim was of the light, wirp whild. Croxteth led off with a draw obliquely across the field and pointed a game-cock on the edge of the brash. Thin backet finely, but noved on as the judges crowded him. For this performance Croxteth was penalized with a false point and the back of Trim's was not allowed, although he deserved it. A long sweep of grassy and brushy range was drawn blank, the beat unavoidably leading down wind. Trim flushed a woodcock, but was not penalized, as it had been agreed that the trials should only be run off on quall. The heach being reached, a detour was made along the shore to the extreme end of the island. On a sheltered range of rolling ground, intersected with strips of cover and ending in several large, grassy flats, the brace was cast off again. Croxteth at once winded and, with head well up in grand style, roaded to a bevy, which flushed wild. Thurtle shot and missed and both dogs dropped to order. Croxteth, at edge of brush, pointed where a moment before we had seen a little flush wild. Trinbacked and wont the properties of the propert Croxteth against Trim. with head well up in grand style, roaded to a bery, which itsished wild. Thurtle shot and missed and both docy dropped to order. Croxteth, at edge of brush, pointed where a moment before we had seen a bird flush wild. Trin backed and the big pointer was penalized for a false point, the judges not having seen the bird. Trim pointed where bery struck, but left the seent, and Croxteth drew on forty yards on his belly and pointed like a rock, head up and stern down. Thurtle flushed and killed and Croxteth, on being ordered to retrieve, took a few steps and pointed grandly on a new bird. The judges ordered Thurtle to take his dog off the point. He was pulled off and retrieved nicely. It was a grand exhibition of careful work, done in such good style as to catch the judges' eyes, and Croxteth was proclaimed the winner after being down fifty-five minutes, out of which there were twenty-five of actual work. This by no means, however, should infer that Trim is not a good working dog.

Sensation against Lizie Lee.

Sensation against Lizzie Lee.

of actual work. This by no means, however, should infer that Trim is not a good working dog.

Sensotion against Listie Lee.

FIPTH BLACE.—In the same place on the grassy plain at 11.15 a.m., the Westminster Kennel Club made good their promise of showing that there was something more than looks in their stand-by, Sensation. The old fellow turned up drawn as fine as silk—perhaps too fine—and considering the many hands through which he had passed, Mr S. T. Hammond certainly showed him off to the best advantage. "Don," as Sensation is called in the field, was certainly in lack to be put down in the centre of a scattered and well lying bevry, and there was nuch currosity expressed by the large numbers of spectators to see how he would come out. Among the number we noticed more than one who has for years been decrying Sensation is simply because they have been inspired with that fallacious idea that because adog is a winer on the bench he is good for nothing in the field. All this shows the absurdity of expressing opinious derogatory about any dop before seeing him work. It was a lesson world something, and we trust it will be remembered. Against the old dog had been drawn a rattler in Dr. Spelr's Lizzie Lee, a remarkably handsome black and white tricked young setter bitch. She appeared with a record, having won first prize at the late Nebruska Field Trials, where she obtained a score of 98 out of 100. We had the pleasure of meeting her late owner, Mr. George Waddington, of Geneva, Iowa, at Vincennes, and he expressed his opinion that she was a dog of musually fine qualities. Lizzie Lee was handled by Mr. Jefferson Cooper, of Blauveltsville, N. Y. Sensation had not taken half a dozen steps forward before he threw his nose up and winded. Every eye was upon him, and the spectators drew up within thirty yards. The scent was so hot hat it took the legs from under the old dog, and he crawled on his helly roading where it was supposed the birds had just here where here here here in the head on his helly roading where it wa

as to what was going on, and in our heart we believe he turned it to good account, but this is the more to his credit, for it shows he is not lacking in intelligence. No comparison can be drawn between Sensation and Croxteth, because they are of an entirely different type. The latter is a grand, powerful, lusty dog, with strong action, a goer and a laster. He is under most excellent command and free from most faults that dog Ifesh is heir to. Those that were fortunate enough to see these two dogs, one following the other, will long remember the pleasing sight. We were glad on our own eccount the pointers did so well, for we predicted as long ago as last March that there was good stuff in Croxteth, when we had seen do good work at Guymard on quali; and later, from personal knowledge, we suggested that it would be well to see Sensation first before decrying him. All the harm we wish those that have spoken slightingly against the old dog is that they had been present and seen what we did.

\*\*Lass of Goorrie against Peep of Days.\*\*

Lass o' Gowrie against Peop o' Day.

wish those that have spoken slightingly against the old dog is that they had been present and seen what we did.

Loss of Gororie against Peep of Dny.

Sixth Brack.—Mr. Moore's very handsome blue setter bitch Lass of Govrie, handled by Mr. E. S. Wanmaker, of Coolsprings, N. C., and Mr. Bryson's black and white young setter bitch Peep of Dny. handled by Mr. E. S. Wanmaker, of Coolsprings, N. C., and Mr. Bryson's black and white young setter bitch Peep of Dny. handled by Mr. C. B. Whitford, St. Louis, Mo. The brace was turned down on the same range at half-past eleven a. M., and Peep of Dny at once pointed at edge of seruh bushes. As previously ordered, Sensation was called up to back, which he did magnificently, and then put on the chain. Lass then backed benutifully. Whitford killed and Peep ordered to retrieve, which she did indifferently. Turning back the brace was given an opportunity to show their going qualities. Both ranged and quartered superbly, and showed up at this period of the heat as very evenly matched. Both dogs were very fast, but Lass o' Gowrie showed the best style and form. Circling round, Lass pinned a bird grandly while going at great speed and dropped on her point. Peep backed excellently. Bird flushied; not shot at on account of spectators. The work was first-class and was duly appreciated by all present. Lass half pointed in grass and roaded into the cover, where she dropped to point. Peep came up and failed to back. Spectators flushed two birds on coming up. Evidently the scenting in this siellered position was sexcellent, but as the day advanced and became warmer and the wind was again faced the dogs fell off considerably. The brace continued to do good work and as the beat was located so that spectators could keep the dogs in sight the interest never flarged. Lass dropped to point. Peep came up and failed to back. Spectators the down again, but strange to say, maintaining the sand relative distance when either backed. The netion of the dogs spoke volumes for the handlers. On top hill P

SEVENTH BRAGE.—Mr. Wagstaff's lemon and white pointer
depends of the property of t

Dufferin then retrieved and dogs were ordered in with Fred the winner after thirty-five minutes actual work.

Eight Brace.—Mr. Moore's red Irish setter dog Raleigh, handled by E. S. Wanmaker, and Mr. Donner's pretty white and lenon sotter bitch Bessie, handled by Theo. Predmore, Porked River, N. J. Raleigh was winner of second in Allaged stakes last year in same meeting, being then owned by Dr. Wim. Jarvis, of Charemont, N. H., and handled by same trainer, and Bessie won second in puppy stakes last year in same meeting. The brace were put down in same place on the scattered hevy. Bessie is a lovely medium sized bitch, and the smartest we had yet seen, but she wants finishing touches to her education. She seemed a bit tender in her going, but it came from being over careful. Raleigh went stronger, and it was generally supposed he had an easy walkover, but he was decidedly off, having been suffering from rheumatism all autumn, and recently increased by plunging into a cold spring. In briar hollow Bessie winded; showing a delicate nose, and further on on hill sidengin drew and pointed. Predmore then managed to gether a false point, which later on was withdrawn as birds were flushed. The birds were evidently running; Raleigh continued to read; Bessie passed him and pointed, and Judges walked up the bird. Again Bessie pointed and her handler injudiciously failed to call the attention of the judges, and flushed bird. Raleigh pointed, a bird was flushed and killed, the dog dropping to shot and the bitch to wing. Raleigh retrieved care-

lessly. Both dogs warmed to their work, and Bessie showed herself to be a sharp working, busy little animal. Haleigh going down what flushed a brace. Bessie on crown of hill dropped to point, got up and roaded. Raleigh, a jedons worker crowded her and a brace of birds was flushed by handler off to one side. That Bessie might show her qualities as a retriever, a dead bird was thrown up and a gun discharged. She dropped to shot, and retrieved the bird down wind vary prettily. The heat word to Bessie at 3:35 r. M., after being down within ten minutes of the hour.

Warwick against St. Elmo.

wind vory prettity. The heat went to Bessie at 3:35 r. M. after being down within ten minutes of the hour. Warvick against St. Elmo.

Nisym Brack—Mr. Gause's lemon and white setter dog Warwick, handled by Mr. E. J. Martin, who handled Dashing Monarch, and Dr. Speir's black and white setter dog St. Elmo. handled by Mr. Lefferson Cooper, of Blawellsville, N. Y. St. Elmo, besides being a well-known beach winner, has won in the fieldat Hampton, Iowa, 1877, at Robin's Eland, third in All-aged stukes last year, and second at the Nebraska trials last autum, having at the last-named place a score of 80½ out of 100. The cast off was in the brush, and as the brace started away there was little to choose between the two, so evenly were the dogs matched. St. Elmo dropped to point in bruish heap: Warwick backed instantaneously: bird was flushed by judges on coming up. Both dogs showed grand training and that they were at home in the cover. Busity they took their turns, and Warwick nade his score good by pointing and St. Elmo backed. A single bird was moved, but not shot at. In open pasture both dogs moved and quartered intely. At dege of brush St. Elmo dropped to point; got away and roaded, Warwick backed. St. Elmo continued roading, twisting and turning flrough the brush over the dry leaves, and making but little noise. Warwick followed each turn, roading also, passing through the brush over one hundred yards, St. Elmo and randing and turning those of work for both dogs and the best roading of the trials. The beys was flushed and a bird killed, both dogs dropping to shot. St. Elmo crieved finely. The dead bird was then thrown out and gun discharged for the benefit dogs dropping to shot St. Elmo retrieved finely. The dead bird was then thrown out and gun discharged for the benefit dogs dropping to shot. St. Elmo retrieved finely and tail up a beautiful piece of work for both dogs and the best roading of the trials, and ended without one single error for cither dog. In hollow Warwick pointed in grand shape and a bird was mov

Rush against La Guy.

fattiers, and cannot be spoken of too highly for work done in this heat. The race lasted thirty-five minutes.

Texth Brack.—Hr. Orgill's lennon and white pointer dog Rush, handled by Mr. Orgill's lennon and white pointer dog Rush, handled by Mr. Orgill's new kennel nam. Charles A. Gladston, of Baltimore, Md. and Mr. Moore's liver and white pointer dog La Guy, handled by E. S. Wannaker. The dogs were much of a size and a remarkably fine-looking brace, again showing the strange good fortune of the draw. La Guy at once began to show Rush the way and Rush took two looks at a long stretch of bull briars before he followed. Rush dushed beey on opposite side of hollow and seemed altegether off. We then learned that not expecting to be run until the second day, and not being among the braces ordered over in the morning, he had been worked until noon and gives two feeds. Under these circumstances he should not have been allowed to run. Rush false pointed and Guy backed. Rush moved on and Guy came alongside and both pointed. Both dogs were so much of a size and pointed so exactly alike tlut, looking broadside at one the other dog was completely hidden, for their tails were held up the same length, thickness and curve, and it was impossible to see the one furthest off, although the dogs were several feet apart. As the north shore was reached the full force of the wind, which was blowing a zale, was felt, and Guy made an infortunate flush. Guy then false pointed and Rush backed grandly. Guy pluckily took the briars and landed an infortunate flush. Guy then false pointed and Rush backed grandly. Guy pluckily took the briars and landed himself first in the stubble field, where he flushed a bevy, the briarls lying on a hare son. The bevy scattered along the shore he some weeds and grass. Guy pointed in briars and Kush went in and blushed, thus extringuishing his chance for the day. The brace was ordered up after heing down twenty-five nimutes, with decision reserved.

As the tide was at chi the little steam yacht could not ma

#### Friday, December 3, 1880.

The day opened as badly as it could for the running of the dogs, a terrific northwest gale sweeping the island and freezing one to the marrow. The bay was crossed betimes and the field taken at quarter past nine.

Rush against La Guy.

Rush against La Guy.

Tenth Brace—Continued.—Rush and La Guy were again ordered down to finish their beat of the preceding evening. The road was taken to the south side of the island, that the dogs might be worked in a sheltered position out of the fury of the wind. On hill-side beyond the last gully leading to the east shore a beay was flushed wild by the judges. Rush showed much better going qualities than on the afternoon before and seemed awake to what was going on. Both dogs worked jealously. On bank in seruh-oaks La Guy hointed and Rush also winded at same moment and pointed and a single bird was dushed by the noise. La Guy dropped to wing. Rush, further on, Jushed a bird and the brace was ordered up at 10:65 & M., after being down fifty minutes, with La Guy the winner.

Smut against Brile.

Belle started off as wild as a hawk and showed up as a very free goer. The brace had been put down on same bevy on the dry leaves in brush along the shore. Belle flushed a bird and chased, which was not seen by the judges; alse then pointed finely in bollow and Smut refused to back; went in and look point. Townsend flushed and Belle ran in and classed. Smut, after being rolled over, dropped to order. The brace was ordered up, to be put down later, at discretion of judges. Time of heat, ten minutes.

TWELFITI BRACE.—Mr. Bryson's well-known black, white and tan setter dog Gladstone, handled by C. B. Wbitford, of St. Louis, Mo., and Mr. Bloodgood's small black and white setter dog Shadstone, handled by C. B. Wbitford, of St. Louis, Mo. and Mr. Bloodgood's small black and white setter dog Shadstone, handled by C. B. Wbitford, of St. Louis, Mo. The start of the start o

Irace between dogs not handlers.

Iron Dube against Isabella.

Second Brade—Second Opportuniy.—Mr. Bassford's Iron Duke and Isabella, handled by Mr. Tallman, were again given a chance. The brace was cast off at 11.10 a. Mr., in the scrub oaks on the same bevy. Isabella pottered and Duke half pointed, went on and flushed bird. Bassford shot and Duke failed to drop to shot. After being down quarter of an hour, Iron Duke was given the heat.

an hour, Iron Duke was given the heat.

Simut against Bells.

ELEVENTH BEAGE—Second Opportunity.—Mr. Earle's Smut and Stanley's Belle had their second try at 11:40 a. m. The brace was cast off in the corn field. A heavy was flushed wild in the scrub oaks and not followed. A long range of brush and hilly country was drawn blank, and it was not until the extreme western side of the Island was reached that a feather was moved. Smut then pointed a bevy in a briar patch near a salt marsh. Belle circling around the cover came up, failed to back, and shared point. A large bevy was flushed, and a bird shot down winged. Belle broke shot and Smut retrieved nicely and won the heat. As it was not 12:40 r.w. a move was made to the house for luncheon and a rest taken until 1:10 r.m.

Muida against Grouse Dale.

before and seemed awake to what was going on. Both dogs worked jealously. On bank in seruh-oaks La Guy pointed and Rush also winded at same moment and pointed and a single bird was dushed by the noise. La Guy dropped to wing. Rush, further on, lushed a bird and the brace was ordered up at 10:05 a. M., after being down fifty minutes, with La Guy the winner.

Smut against Helle,

Eleventh Brace.—Dr. Speir's black, white and tan setter bitch Maida, handled by E. H. Haight and Mr. Goodwin's Grouse Dale, by W. Tallman. Resuming where beey black with La Guy the winner.

Eleventh Brace.—Or. Speir's black, white and tan setter bitch Maida, handled by E. H. Haight and Mr. Goodwin's Grouse Dale for one for the short down the special pointed, and Maida backed to order. On edge of impenatrable birar thicket Maida pointed and birds run, while waiting for Grouse Dale to be brought up. Grouse Dale failed to back and roaded off to one side. The birds could not be moved. On hill-top in brush both dogs pinned a bird between them. Haight shot and Maida broke shotand chased very badly, which threw the heat to Grouse Dale after being down forty minutes.

SECOND SERIES.

SECOND SERIES.

Afton against Dashing Monarch.

FIRST Brace.—Mr. Lincolu's orange Belton setter dog Afton, who had a bye, a well-known winner on the bench, handled by Mr. Hammond, and Dashing Monarch, by Mr. Martin, were turned off at two o'clock. Monarch found bery on edge of brush above the stubble field and pointed in grand form very staunchly. Afton backed finely. Martin shot and killed. Both dogs dropped, and Monarch retrieved perfectly. The bevy split, part of the birds had drawn to for shelter. Afton on buckwheat stubble half pointed and went on. Afton quartered finely and showed up as a wide ranger. Monarch, however, took the lead and in serub-oaks along the shore pointed, and Afton backed. A brace of birds were flushed and the heat given to Monarch, after running half an hour.

Iron Duke against Spy.

Second Brace.—Iron Duke handled by owner, and Spy by O. B. Edwards, were cast off in same place at 2:30 F. M. The bevy was flushed while waiting for dogs, which seattered in the long sedge grass. Iron Duke flushed a single bird, and a second and a third. Spy flushed a bird in brush, and Iron Duke secured a point in the grass. Spy bonneed around Iron Duke failing to back, and the bird was flushed and Bassford missed. Iron Duke pointed staunchly, and Spy failed to back. This gave Iron Duke the heat, after being down fifteen minutes.

Ensatting against Createll.

failed to back. This gave Iron Duke the heat, after being down fifteen minutes.

Sensation against Crextetth.

Third Bace.—Sensation and Croxteth came together being handled by Hammond and Thurtle. There was considerable private betting on the result of this heat and great interest felt by all present. Sensation led off with a flush of a single bird, going down wind, and chased. He then turned into the brush and pointed; Croxteth came up and pointed behind, also having the scent. The bird was moved and hard hit and Sensation partly retrieved, bitting bird badly. Along the fence by the buckwheat field Sensation again showed his excellent nose by pointing in the ditch with his head level with the field beyond. Croxteth came up and backed and went on past Sensation, failing to catch the seent. Hammond killed and the bird was not recovered, although both dogs had a chance to retrieve. Sensation false pointed and Croxteth backed. Croxteth pointed and Sensation coming up behind, fifteen yards away, caught scent and pointed, not secling Croxteth. Thurtle killed and Croxteth retrieved excellently. Along the fence Sensation dropped suddenly to a capital crouching point, with his head turned downwards. He was firm as a rock. Croxteth came up, backed, pointed over him, became unsteady, went his and fushed brace, thus rulning his chance to be placed. Sensation continued to hold his point and, being ordered on, caught a winged bird he had directly under his nose. The heat was given to Sensation after lasting twenty-five minutes. It was evident that Croxteth's nose was off from the start.

Less of Goverie against Fred.

Lass o' Gowrie against Fred.

FOURTH BLACE.—Lass o' Gowrie agains: 1742.

FOURTH BLACE.—Lass o' Gowrie, handled by Wannaker, and Fred by Height. In hollow Fred made a grand point and Lass backed: single bird was moved. Lass made dropping point, and on being sent on the bird was flushed ahead of her. Fred false pointed in brush heap and Lass backed. Lass was then awarded the heat after being down half an

Bessie against St. Elm

FIFTH BRACE.—Bessie, handled by Predmore, and St. Elmo by Cooper, were ordered down in stubble field. Bessie sailed off, showing a lively pace and outspeeding her competitor. Upon reaching the far side the brace was ordered up for the day, as it was already dark, and the party was soon steaming to New Suffolk.

SATURDAY, DECEMBER 4.

The morning was one of the most perfect ever seen for the season. The wind had died out and the warm sun shone brightly, without a cloud in the sky. Later on a slight breeze from the N. W. stirred the tops of the grass and enabled the dogs to do some fine work in the exposed portion of the indeed.

Bessie against St. Elmo

island.

Bessie against St. Elmo.
FIFTH BRAGE—Continued.—Shortly after nine o'clock Bessie and St. Elmo were put down in a grassy valley at the south side of the island. Bessie struck seent and roaded down wind, worked around and flushed a good sized strong flying bery, which skirted the valley and towered over the brush on the crown of the hill. Bessie upon going down wind in cover along the shore, had several birds flush very wild by the noise in the dry leaves, St. Elmo heing away behind. Bessie pointed staunchly and several birds distanced to back. A move was made across the opening to where moved. St Elmo false pointed along bank and Bessie failed to back. A move was made across the opening to where birds had been marked. Here Bessie pinned a bird in splendid form, being very staunch. St. Elmo came up and backed for a second, crowded in on the bitch and flushed and chased badly, which ended his chances in the raree. Bessie won handsomely after running twenty minutes. No one who had seen the superb work of the dog on the first day would have imagined that it was possible for him to show such unsteadiness. Mr. Cooper was certainly greatly astonished as he had handled St. Elmo with full confidence. It shows that dogs, like white men, are at times "nighty unsartin."

La Guy against Smut.

Sixtu Bracz.—LaGuy, handled by Wammaker, and Smut Malicia have been been been to be one of allow the south east shore, bether the several bare the supers the product of the product

Sixtii Brace.—LaGuy, handled by Wanmaker, and Smithy Aldrich were cast off along the south-east shore, both dogs winded, and a single bird was moved. Further on both dogs roaded, and near South Point one of the judges flushed the bevy. In sedge grass Smith pointed and LaGuy backed, a gun was shot at each of the three birds that moved. On extreme point Laguy pointed single bird and Smith flushed. When this decision was rendered it eccurred to Aldrich to take the change out of the little bitch. LaGuy was scored a false point when he really had birds running in front of him, and Smith failed to back. She then passed two birds on the sandy beach and crawling up the bank picked up the bird LaGuy was kept at charge. The heat was given to Smith ale Guy was kept at charge. The heat was given to Smith ale Guy was kept at charge, which decision we consider a premature one, to say the least, as LaGuy had shown the best work.

\*\*Gleadstone against Grouse Dake.\*\*

Gladstone against Grouse Trate.

SEVENTH BRACE.—Gladstone, handled by Whitford, and Grouse Dale, by Tallman, were put down on same range of sand hills along west shore of island. Grouse Dale troubled the scorers with a flush along the beach. In briars in open, Grouse Dale pointed and Gladstone backed; a brace was flushed, Tallman killing. Grouse Dale broke shot badly, retrieving when ordered very cleanly. Birds were passed along

In briar hollow Gladstone half painted, Grouse the bench. In briar hollow Gladstone half painted, Grouse Dale pointed brace, and judges in going to him moved hevy to windward of where Gladstone was roading to. Gladstone Ralse pointed and Grouse Dale made a capital point, Gladstone backling grandly. Single bird moved and Grouse Dale dropped quitchly to wing. Grousedale again pointed bird in the a uniformatic grandly. Single bird packing. At short Grouse Dale again broke in. This unsteadiness on his part was what was beating him, for he was plekting up his birds in grand style. By a little pond Grouse Dale flushed a single bird. Gladstone pointed in same place and bird was killed. Gladstone sent to retrieve, located fairly and returned quickly with bird. Gladstone won the heat, after brace had been down forty minutes. the beach.

#### Turn Series

There Serges.

Dashing Monarch against Iron Duke.

First Brace.—Dashing Monarch and Iron Duke. Both dogs flushed. Monarch false pointed in dropping position and Iron Duke failed to back. On top of ridge Duke flushed and Monarch was awarded the heat, after being down forty

#### Lass o' Gowerie against Sensation.

Lass o' Goorie against Sensation.

Second Braon.—Lass o' Gowrie and Sensation put down on some range along the northeast shore. Lass got quickly away and false pointed badly. Sensation backed in form. It was evident Lass was far from being herself. A long range was drawn blank, the birds, from having been disturbed so much, hid away in the brush and dense briar thickets. Sensation pointed staunchly in hollow and a small lot of scattered birds flushed wild. In a briar patch Sensation false pointed and Lass dropped to back. Lass pointed birds in briars and Sensation backed, as the birds were not moved Lass was scored a false point. Sensation winded and bowled through the thick bull-briars and pointed. Hammond was ordered to take him off point and Sensation was given the heat. This Wammaker stated was done while Lass was pointing, and being dissatisfied with the judge's decision he left the ground. Smut against Bessie.

THIRD BRACE. - Sout and Bessie were cast off in the scrub Third Brack.—Smitt and Bessie were cast off in the scruboak bell along the beach. Bessie pointed and Smitt passed
her on point and flushed bevy. Both dogs, however, were
awarded a point. Smitt pointed and Bessie backed, but was
given a point. Along the shore Smitt pointed and Bessie
backed to order. The judges, recognizing that Bessie was
hardicapped by having an inexperienced hardler, allowed
the heat to run longer than it otherwise would have done.
Smitt won after brace had been down just half an hour. A
half hour was taken for luncheon and a very acceptable rest.

#### FOURTH SERIES.

Gladstone against Dashing Monarch.

Gludstone against Dashing Monarch.

First Brace.—Gladstone and Dashing Monarch were put down in briar range, and a bevy which was flushed by spectators made a long flight and was marked down in brushy ravine along shore. There Monarch secured a capital point on hill sale and Gladstone backed. The bird was flushed and killed by one of the judges and Monarch broke shot, but checked himself after going a few steps. He then retrieved splendidly. Behind brush, where we could not see, a bird was flushed, beth dogs behing there. Monarch was found stone had circled around him and had made the flush. Glad stone came up and backed and Martin this time shot and killed. Monarch dropped to shot, showing the necessity of the handlers doing all the shooting. Gladstone was sent to retrieve, and the bird turned out to be a winged one. He then pointed dead, and the bird fluttered up again, and he flushed a fresh bird and chased, which was excusable under the circumstances. Gladstone then plunged into the thick flushed a fresh bird and chased, which was excusable under the circumsances. Gladstone then plunged into the thick briars and retrieved the winged bird alive. It was a grand piece of work, but he should not have been subjected to an ordeal that is up to unsteady any dog. Gladstone pointed a beyy very finely, and after being down three-quarters of an hour the heat was given to him.

#### Sensation against Smut.

Seastlom against Smut.

Seesne Brace.—Sensation and Smut were started in briar lot, along the shore in serub-oak belt. Smut pointed and Sensation backed indifferently, three birds were moved, Smut turned to the left and after going six yards pointed boyy. Sensation failed to back and shared point alongside. The birds were not ordered to be retrieved. Smut again picked up a point by bush and Sensation backed here. In long grass along shore Smut roaded where birds had been and Sensation followed suit. Across the fence in the stubble edge Sensation came to an excellent point and Smut backed; a brace of birds were flushed and one killed, which Sensation retrieved indifferently, bitting the bird. The heat was awarded to Sensation after the brace had been down twenty-five minutes. This decision caused great dissatisfaction, and the owners of Smut and Nat, who were present and had seen the running, withdrew their dogs from the trials. There is but one opinion in our mind, and that is that little Smut had the best of it from the start.

#### FIFTH SERIES

Sensation and Gladstone, at 2:40 r. m., met at last for first place. Gladstone flushed a bird and Whitford rang in a shot. Sensation pointed and single bird was flushed. Gladstone flushed a single bird was flushed. Gladstone flushed a single bird was flushed. Gladstone flushed a single bird was flushed. Gladstone flushed a single bird: he then, across the fence, along shore, roaded, having the wind, and flushed deliberately. Both dogs were evidently off and Sensation was plainly showing his overwork. He was tired and used up. Gladstone again flushed a bird and it seemed that the retrieving of the winged bird in his heat with Dashing Monarch had unsteadied him. The brace was then taken beyond the house to the west, while a lot of imported birds were planted along the shore in long raws. The dogs were then swung around to the leeward, but both failed to make the birds out on being brought to the spot. Just a hight Sensation winded a bird in a weary way, a did before he could establish his point. Whitford sent Gladstone down on the beach, where he secured a magnificent point. A consultation among the judges was held and the decision came up from the beach that Gladstone had won, aiter being down fifty minutes. Reviewing the heat and number of flushes made by Gladstone, we consider that the old pointer showed the best nose and work, and should have been the winner.

#### SIXTH SERIES.

Sensation against Dashing Monarch.

In the moonlight Sensation and Dashing Monarch were run
ir second place on the same birds. Monarch pointed a sin-

gle bird and Sensation backed; at shot both dogs showed un-

gle bird and Sensation backed; at shot both dogs showed unsteadiness. Monarch pointed another single bird and Sensation again backed. Thus Mouarch landed the second prize with case and the judges awarded Sensation third place. A discussion then ensued about the interpretation of the club rules, and it was found that according to their abourd wording Glen, a dog that had not won a hear, was the fourth winner. The following is a sammary of the heats as they were run in series and the list of winners:

#### FIFTH SERILS.

Gladstone hat Sensation.
First prize, \$200, and special prize, Fox gun, to Gladstone. SIXTH SERIES.

#### Dashing Monarch beat Sensation.

Second prize, \$100, to Dashing Monarch, judges awarding third prize, \$50, to Sensation; also winner special prize, silver cup, for best pointer dog in any stakes. Fourth prize, \$25, to Glen, under the rules, being the best dog, in their opinion, beaten by second-prize winner.

A PLUGRY CHALLENGE.—Mr. Horace S. Bloodgood, of Providence, R. I., has forwarded a challenge to the owners of Gladstone and Sensation, offering to run Nat and Smut either in braces or singly on Robin's Island against those two dogs, a two days' match for \$1,000, each party to select a judge and they to select a referee.

#### THE CARE OF DOGS.

#### CHAPTER III.

THE sickening odor which greets our entrance at most of the prominent kennels is due not so much to the moreod dresser's portion as to the unsnecessful effort or total neglect to remove all traces of impurity from the floors and lower portion of walls and under benches. Dusting floors with sifted road dust to the depth of one-sixteenth of an inch and cleaning out for a fresh supply each day will keep them disinfected; but the parts most needing attention are the walls and sides of sleeping benches. After removing all bedding and dust from floor the sides should be scrubbed with a broom and rinsed by dashing clean water over them. A rigid adhering to this practice will enable the kennelman to dispense with carboic acid and other troublesome disinfectants. Carbolic acid is good in its place—especially in the hospital quarters where there are cases of a loathsome nature and where it is not convenient or advisable to freely use water upon the boards; but for general use in the kennel I cannot indorse it. That an excessive quantity exposed is injurious to the olfactory nerves (though the injury be buttemporary), few who have studied the subject will hesitate to assert. Knowing that a theory which cannot be brought down to practice remains but a theory, let us say that it does not directly affect those most sensitive nerves; let us only say that it interferes with their natural power of scenting game and let us prove it beyond a possibility of a doubt by a very simple practical test, which any person can make without going into a scientific discussion.

To prove that hair—not only the coat of the dog, buthuman hair—will absorb and retain a great amount of seent, let a person remain for half an hour in a fischen, where fish, oys-

into a scientist, which any person tan make without going into a scientist, which any person tan make without going into a scientist discussion.

To prove that hair—not only the coat of the dog, but human hair—will absorb and retain a great amount of scent, let a person remain for half an hour in a kitchen where fish, owsers or onions are frying or fragaran cubbage boiling; let them walk in the open air until the clothing is free from all taint, then apply your nostrils to the hair of their whiskers or head (if no hat was worn in kitchen) and tell them what they saw cooking. You can do it, provided your "dose aid stobbed ub" with a cold.

Now, to test the scenting power interfered with by carbolic acid, or the scent of it, upon the hair, against the same power under ordinary chremastances. Take small this or wood boxes and label them on the bottoms as they are filled with a very faintly-scented mixture of flour and one of the following aromatics for each box: Cloves, allspice, cinnamon, ginger, lemon ped, orange ped. Dilute each until the person upon whom the test is being made can only detect and distinguish the aroma by the greatest possible exercise of his olfactories, each box being held four inches from the tip of the nose. Now moisten his mustache and the hair of his head with a very weak solution of carbolic acid (or let him sleep during the night if a room corresponding with the kennel disinfected by carbolic acid), let him walk around the room in which the test is made twice before placing the boxes successively at the aforesaid distance from tip of nose, and ask him to distinguish lemon from orange, ginger from cinnamon, or cloves from allspice, and note the difference in the time required to so distinguish, if he succeeds at all.

In applying this experiment to the dog we find no difficulty-His coat is all hair, it absorbs and retains an immense amount of

scent when kept over night in a closed kennel impregnated with a powerful odor. This scent is retained for a considerable length of time, even in open air. His power of scent is keen and delicate to a degree not exceeded, we believe, by any other animal. The scent of the bird is sometimes strong, often faint, and it must be detected at a considerable distance to be of use to the dog and master. Now is it not reasonable to suppose that this powerful scent carried in and thrown from the coat of the dog will interfere materially with his detecting and locating the scent of the bird?

Beside all this, I have frequently seen dogs made deathly sick by the odor of this most excellent disinfectant. So much for carboile acid.

There are times, such as rainy, days, and frequire conse

secting and locating the scent of the bird?

Beside all this, I have frequently seen dogs made deathly sick by the odor of this most excellent disinfectant. So much for carboile acid.

There are times, such as rainy days and freezing ones, when scrubbing and wet boards are out of the question; for a wet kennel on a rainy day when the dogs are or should be in-doors, is quite a serious manner, breeding colds, rhunatism, and often distemper. When scrubbing must be dispensed with, careshould be taken to take upal droppings, and on the first bright, warm day give the neglected places a tontomorning, so as to allow it to dry perfectly before night. The beds should be clared of all droppings, vomit or litter, and the straw turned over to air, if not renewed. Don't sweep the pile just outside the door and leave it; but remove it to the manure pile, and keep your yards clean.

To clean kennels and yards I owe my success as a kennelman. No case of mange or discupper has ever originated at our kennels, nor (as I remarked before) have we lost a single case frem any disease this year. I boldly assert, without feer of contradiction, that one half of all diseases to which canine flesh is subjected are the result of fifthy kennels, improper food and mismanagement.

It would make your heart sad to visit some of the noted kennels of the East and the West and look upon the dogs crowded together in a filthy den, the stench of which is almost unbearable, and chained with a four feet chain to a diminutive square beach, upon which they may manage to cut, but cannot stretch out their cramped and weary limbs. Their cager, pleading eyes beg carnestly for air and freedom. Or look at the scene of high strung ambitious champions of the bench and field confined in the narrow, cramped, high-fenced close pens, more fit for slanghter-house bullock pens than for the permanent quarters of sporting dogs.

Why do sportsmen and breeders persist in ignoring the fact that the respective natures and provinces of the dog and hog are totally different a

Deer Hounds and Their Training.—In regard to the training of deerhounds, I have often inclined to the belief, that like poets, they are born, not made, for I have seen hounds which had been trained all their lives to run foxes, in the Middle States, never baving seen nor smelled a deer track; when put on the latter trake with alacrity and delight to the nobler game, and ever after pass a fox track with silent contempt, and a good judge can usually select those which are likely to do this thing. It is necessary that a first-rate deerhound should possess in a high degree courage, endurance, speed and intelligence; their heads should be wide in proportion to their length, ears well rounded and not over-long, muzzle broad, and lips not too pendulous; chest deep and broad, and forelegs well set apart. They should never be put on the track before they are one year old as their strength is, before that time, not always equal to the task of holding out till the game is brought to bag, and this sometimes affects their endurance afterward, but not necessarily. Young dogs should, if possible, always be put on at first uncompany with old and well-tried hounds; if this cannot be done, then the trail should be followed, and the dog encouraged to take the track again, in case helewese it; and this should be repeated till the deer is caught, if possible. There is a vast difference in the manner in which deer loads run their game. Some which will never leave the track, while or dry ground, will return the instant the deer takes water, even if the stream is less than a foot in depth, but decline to swim, and will be at fault if the game courses up or down the stant for them to swim and will be at fault if the game courses up or down the stant for mise, then recross and do the same on the other bank, and develop more than buman saggedity in searching out the trail. These are the deer hounds pair civellence, and readily command from seventy-five to one hundred and fifty dollars. When a hound leaves a track, for any reason except i

WESTMINSTER KENNEL CLUE'S OFFICERS VOR 1880.—The following is the list of officers to W. K. C. for 1880: Genl. A. S. Webb, President; C. DuBois Wagstaff, Vice-President; Robert C. Cornell, Secretary; Edmund C. Stanton, Treasurer. Board of Governors—Alex. S. Webb, Wm. F. Morgan, Robert C. Cornell, C. Du Bois Wagstaff, Elliot Smito, George De F. Grant, Walter S. Webb, Lewis B. Wright, Wm. A. Haines, E. C. Stanton, Lewis K. Wilmerding, H. C. Mortimer, F. O. De Luze, R. Ray Hamilton, William S. Webb, The club is in a most flourishing condition. A number of important improvements have been made on club grounds at Babylon. As the club has no vacancies, it is proposed to increase the members to 100.

"REX"—Ashfield, Mass., Nev. 26.—Noticing Mr. Lathrop's communication. I would merely suggest that this is a very large world, and that there are several dogs in it, and that it is barely possible for even a "dog man" to occasionally get pedigree or blood a little mixed, and yet not be generally

considered as particularly ignorant or perverted in conse-

PENNSYLVANIA BENCH Show.—Mr. Chas. Lincoln will reach Pittsburg, Pn., this week and enter into his duties as Superintenden on the 10th inst. Major J. M. Taylor, of Lexington, Ky., has been selected as one of the judges.

—Mr. J. J. Snellenburg's address is at New Brighton, Pa., not New Castle, as published in account of Vincennes trials.

#### KENNEL NOTES.

Harold—Mr. Geo. Schofield, of Toronto, Canada, claims the name Hurold fer his liver and white cocker dog puppy by Flusher ont of Fanny, purchased from M. P. McKon.

Hable—Mr. Geo. Schofield, of Toronto, Canada, claims the name Haidee for his liver and white cocker bitch puppy by Ned II.

17, 1880, ont of his Fly by Music.

Boston, Dec. 8, 1880.

In your issue of 2d inst., Mr. Line F. Kellogg, of Princetor Kan., claims the name Lady Elebo, for a bitch mentioned in the same issue as sold to Mr. Smethers, of Ottawa, Kan. I ask that the animal may be given another name, as I claimed the nam Lady Elebo for my Rose-Elebo bitch, April 8, 1880.

C. E. Wing, M. D.

Whe

Dayton—Dr. J. J. Jennello's red Irish setter bitch Dayton (Bob-Duck) died Thanksgiving night from distemper. She was in whelt to Elcho II.

#### PHERMASES.

Setters—Mr. E. F. Mercilliott has purchased from Mr. William Hall, of Now York City, a broon of pure black English setter dogs of excellent train and carrell breeding.

Garleo—Mr. J. Olis Follows, of Rornellaville, N. Y., has purchased of A. A. Sewoll the liver and white cycker birth Chrisw Garls—English Setter of Sailor Boy (first at Rochester) and of

chased of A. A. Schriften, and of Clark-Faunce little sister of Sailor Boy (first at Rochoster) and of Little Duttercub.

Revuluarly—Mr J. Otis Fellows, of Hornellsville, N. Y., has purchased of Joseph Dolbarrie the liver colored bitch Bernhardt and stypups by Wildair.

Princess—Mr. J Otis Fellows, of Hernellsville, N. Y., has purchased of Frank Ammon the black and white tiched bitch Princess (Wildair-Dolly).

Symmo—Mr. J. Otis Fellows has purchased of John Prunell the black cocker bitch Squaw (Wildair-Josie).

BEED.

Mack cocker bitch Squaw (Wildair-Josic).

Burn.

Unser Fritz-Waltlins—Mr. Wm. Loeffer's dachsund bitch Waldme, first prize St. Louis, 1859, was bred November 21 to Dr. L.

Twaddell's Inser Fettz, winner of Coutonnial metal and special prize, Philadelphia, 1876; first and special prize, Baltimore, 1877; first and special prize, Baltimore, 1877; first and special prize, Baltimore, 1877; Ocion-Countess Lusca—Dr. C. E. Wing has a fine healthy littler of seven puppies, five dogs and two bitches, out of Countess Lusca (Drake-Countess Vesta) by Mr. Fay's Coin. They were whelped Ostobre 20.

October 20.

\*\*Black Ress-Dash.\*\*—The black and tan setter Black Boss, (1,086 N. A. K. C., Stud Book, Vol. 1.) owned by Mr. James T. Walker, Trey, N. Y., was bred to same owners. Dash (956 N. A. K. C., Stud Book), Dec. 4, 1880.

\*\*Bookly Dec. 4, 1880, for Sunner's Lelaps.\*\*

\*\*Roslindale-Lelaps.\*\*—Dr. C. E. Wing's Roslindale by Dash III. was bred Dec. 3, 1880, fo Sunner's Lelaps.\*\*

was bred Dec. 8, 1880, to Summer's Lelaps.

Sally.

Lady Therefeira—Dr. J. J. Jennelie, of Du Quoin, Illinois, has selected the lateral setter butch in whelp to Elebe II. to Mr. R. G. Sylvester, Carbondal B. M. McKoon, of Franklin, N. V., has sold to Mr. Geo. Schofield, of Loronto, Canada, a liver and white cocker dog Plun out of Faunt by Finsker.

Haikes—Mr. M. P. McKoon, of Franklin, N. Y., has sold to Mr. Geo. Schofield, of Toronto, Canada, a liver and white cocker bitch puppy out of Daisy by Ned II.

Sulph—Mr. E. F. Mercillott has sold his beautiful orange and white fox terrier bitch Sylph to Mr. John Mackey, of New York City.

white fox terrier bitch Sylph to Mr. John Mackey, or New York City.

Jet—Mr. E. Mercilliott has sold his Newfoundland deg Jet to Eugene Hale, of New York City.

Rauth-Netl, Whelps—Mr. S. W. Truslow, of New York, has sold a brace of pointer pups out of his imported Nell by Mr. Orgill's Champion Rash to T. Broach, of Morristown, N. J.

Fly,-Music Whelps—Dr. B. Wegant has disposed of his "Fly and Music" litter as follows: A dog to Mr. Roblettson, of Peekskill; two dogs to Dr. A. McCollum, N. Y., one of which died; one died of membranous croup. One dog he keeps, not for sale.

#### CURRENT DOG STORIES.

XV.

One of our citizens had a hound which was great on a fox trail, and wanted to be in the business most of the time. One morning last spring his master started to come up town, and the dog wanted to accompany hum, but was not allowed to do so. If was a sore disappointment to the dog, and he made great complaint. He stood en his hind legs, with his fore paws on the window, and watched his master out of sight. After a while he was let out, and

trotted about the yard for a short time, and then started off, and that was the last seen of him. It was learned that he went off on a miff, and did not stop until he got to a neighbor's some miles away, where he has since remained.—Ashtabuta, O., Sentinel.

that was the last seen of him. It was learned that he went off on a miff, and did not stop until he got to a neighbor's some miles away, where he has since remained.—Ashlabula, O., Sentinet.

XVI

One of the two most prominent dogs of our day—Prince Bismark's Tras and Viscount Hugo's Senta—the latter has just joined the canine majority, full of years and honors. The "Realm Dogs," who schieved historical immorality two years ago by collaring the venerable Gorischakon' when the celebrated diplomatist was paying an official visit to the Gorman chancellor, still lives to dismiss troublesome deputations and terrorize importune petitioners. But Sent, the great French poet's faithful friend and constant companion during many years of exite, has succumbed to old age at Hantwelle House, and received interment in the grounds of that romantic retreat. With him was buried the silver collar presented to him somewhal they wered royalty exhibited by the first french legislative chember in yee-Kapoleonic days probably suggested to him as auturisbly appropriate to "the most objected to him as auturisbly appropriate to "the most objected to him as auturisbly appropriate to "the most objected to him as auturisbly appropriate to "the most objected to him as auturisbly appropriate to "the most objected to him as auturisbly appropriate to "the word to got a ready of the name he bestowed upon his favorite. Upon this collar was engraved the following distinct expressly composed for Senat by the author of "Un trame." "Jo vondrais qu'au logis quelqu'un me ranenat. Mon clat? Chien. Men matire? Hugo. Mon nom? Senat." For the lenefit of our readers, we translate: "I wish some one would take me home. My profession? Dog. My master? Hugo. My name? Senat."—London Telegraph.

The femily of James Herrington, of Stapleton, S. I., while seated at the supper table on Thoselay evening, had their attention attracted by a squealing noise in the kitchen closet. On making an investigation, Mr. Herrington discovered a rat with one of its legy into the da

#### THE CHASE: ITS HISTORY AND LAWS.

THE CHASE: ITS HISTORY AND LAWS.

[Continued from page 310.]

[In the paintines on the Egyptian tombs and the bass-reliefs of Nineveh and Babylon, which, after the lowe lapse of ages, have in recent times been brought to light, and the dewish bistory, which, though we may not be certain as to the precise date at which it was composed, still undoubtedly carrier us back into a remote surtiquity, have afforded us some insight into the labits of these nations as regards the sports of the field. It is only at a much later period that we become acquainted with the sporting habits of other nations of the ancient world. Our first knowledge of the Persians and Medes, as hunters, is derived from the Greeks, who in Asia Minor became the subjects of the Persian Denry, or, as regards Greece itself, were brought into contact with the Persian court or rulers after the Persian wars. But a long interval sepandes the Egyptian or Assyrian monuments from the writings of Herodotus or Xenophon, and we are therefore unable to say at how early a period the passionate love of the chase, which in the days of these writers bad acquired such large dimensions, and had become a national characteristic of the Persian, had its first commencement. In its existence, as a national institution materially influencing the national character, auclent writers, but Greek and Roman, are agreed.

The hunting parks, of the Persians and Medes were, if we may trust the Greek writers, but Greek and Roman, are agreed than those of the Assyrians. Curtius, the historian of Alexander's campaigns, who of course could personally have known nothing of the matter, but is said to have drawn his materials from early and reliable writers, speaking of these inclosed parks, tells us that the conqueror having entered with his army into one of these parks, in which the game had not been disturbed for a long time, a shangher of four thousand head cursuet, after which the king feusted the whole way and reliable writers, speaking of these inclosers, when he cells us that the

were acknowledged to be the finest then known, from which we may infer that the chase had been energetically cultivated in that country. It may be assumed that the other nations of the East had not been behind their Assyrian, Egyptian, or Persian brethren in following what seems to be the common, and as it were instinctive, propensity of man, more especially as in these countries wild antinals were abundant, and the facilities for hunting great.

The mention of Greek historians brings us to the Greeks themselves. But here the beginning of history is lost in the obscurity and mist of fable. Even Xenophon, in his treatise on hunting, has nothing better to tell us of its origin than the legendary story that hunting and the training of hounds were the invention of Apollo and Artenis, who inparted the discovery to Chiron, who in his turn instructed the long list of heroes whom the writer enumerates. But, as has already been observed, the existence of the legend itself shows how deep was the sense of the benefit resulting to mankind from the services of the hunter in the destruction of wild beasts. It shows, too, that the Greeks were from the curliest times a nation of hunters. Nor could it well be otherwise. A country intersected in all directions by mountain ranges, covered with forests, would be prolific of wild animals, of which an active and energetic population would not fail to take advantage. When we come to the historical times, we are told an idle story, for which there seems to be no sufficient authority, and bounds were maintained at the public expense. Hounds of the Spartau breed were much esteemed, as were also those of Crete, which probably differed but fittle, if at all, from those of Sparta. We have to thank the recorded excellence of the Spartau breed were much esteemed, as were also those of Crete, which probably differed but fittle, if at all, from those of Sparta. We have to thank the recorded excellence of the Spartau breed were much esteemed, as were also those of Crete, which probably differed

I was with Hercules and Cadmus once, When in a wood of Crete they bayed the bear With hounds of Sparta: never did I hear Such gallant chiding; for besides the groves, The skies, the fountains, every region near Seemed all one mutual cry: I never heard so musical a discord, such sweet thunder.

So musical a discord, such sweet thunder.

To which Theseus answers:

My hounds are bred out of the Spartan kind;
So flewed, so sanded; and their heads are hung
With ears that sweep away the morning dew;
Crook-kneed and dew-lapped like Thesealian bulls;
Slow in pursuit, but matched in mouth like bells,
Each under each. A cry more tuneable
Was never bolls' dt o, nor cheered with horn,
In Crete, in Sparia, nor in Thesealy.

Slow in pursuit, out matened in mouth like bells,
Each under each. A cry more threable
Was never holf d to, nor cheered with horn,
Total, in Sparta, nor in Thosely.

Whether hounds were used by the early Greeks, for the
purpose of running down the gane, or only for that of finding and bringing the flereer animals, such as lions and boars,
to bay, for the purpose of their being speared by the hunter,
and of driving the smaller sort, such as hares and deer, into
the net, and so capturing them, appears to be doubtful.
From several passages in the \*Iloda\*, especially the spirited description of the \*Caledonian boar-nunt\*, as also from that description of the \*Caledonian boar-nunt\*, as also from that description of the \*Caledonian boar-nunt\*, as also from that description of the \*Caledonian boar-nunt\*, as also from that description of the \*Caledonian boar-nunt\*, as also from that description of the \*Caledonian boar-nunt\*, as also from that description of the \*Caledonian boar-nunt\*, as also from that dethe scription of the \*Caledonian boar-nunt\*, as also from that the
first of the purposes above mentioned. But in these instances
no mention is made of their emplayment for the sole purpose
of catching the hunted animal. On the old hound Argos,
it would seem that hounds were sometimes used for the purpose of pursuit. For Eumans says of \*Cryos that no animal,
if he once caught agit, of it, could escape from him, while at
the same time his power of seent was perfect.

Bet this as it may, as regards the Homeric age, the use of
the hound for this purpose solely was unknown in later times,
as may be inferred from what Xenophon says on the subject.

It is to this accomplished Athenian, the general, the philosonlyner, the friend of Sorrates and Plato, and an the same time
arident sportsman, that we are indebted for the earliest treatiso
on hunting—a treatise equally interesting to the sportsman
and the scholar. Banished from Athens, Xenophon settled
himself at Scillon, in the neighborholod of Olympis, whe

Poor is the frimaph o'ee the finid hare.

The work in question gives the fullest account of this form of hunting: but the sport is certainly not such as, according to our ideas, would be deemed sportsmanlike. It consists not in the fuirly running down the hare by the hounds existed by the skill of the huntsman—a result which, according to Xenophon, seldom occurs, and which he seems to think it to much to expect—but in driving the hare, by means of the hounds, into nets placed to receive her, where, when entangled in the net, she is to be knocked on the head by an attendant stationed there for the purpose.

(To be continued.)

Weakness and sickness changed to health and strength with Hop Bitters, always,

#### RANGE AND GALLERY.

PORTLAND, Mc., Nov. 25 .- There was a general day's shooting at FORTLAND, MC. AOC. 20.—There was a general day 8 grounding at the Fort Preble butts to-day, though the weather was not all that could have been desired, and the wind blew in such a way as to greatly bother the contestants, but nevertheless the shoot letween and warlike pursuits of their fathers.

Of the other Eastern nations of the period we are treating of we know little or nothing, through at a later period we read of some of them—for instance, the Parthians—as being passionately devoted to hunting. All we are acquainted with privates laker and Dow led off, the former opening with a 'misa' as regards India in this respect is that the Indian hounds | and Private Dow with an "outer," closing with 60 points. Cap-

tain Davis and Sergeant Knight, for the Blues, both opened with a and closed with the same, making 72 points. The following is the score made by the teams

toston. -The scribblers on the newspapers here are smitten with the desire to shoot, and have grown up to a second annual exhibi-tion of their skill. A little over a year ago several gentlemen con nected with the Boston press conceived the idea of having a rifle competition between teams representing the daily newspapers of The project found favor, and a short-range match was arranged, to take place at Walnut Hill, over the range of the Masarranged, to take place at man arm, or the range of the research settle Rifie Association. The contest was open to teams from all Boston dailies, but only three newspapers—the Globe, Post and Herald—were represented Nov. 21, 1879. An exceedingly strong Heraid—were represented NOV. 21, 1879. An exceedingly strong and treacherous wind blowing all day long across the line of fire, and the cold being of an intensely penetrating quality, the scores were not gratifying. The Heraid team won the match, the Post and Globe teams getting second and third places respectively. Going with the match was a series of five gold medals, one for each man on the winning team.

A month or two back, the first anniversary of the "press rifle match" having drawn near, it was proposed by certain of those who had participated in that competition that a second contest of a who had participated in that competition that a second context of a similar kind take place at an early date. Out of this proposition grew the match of yesterday. The various newspaper offices were communicated with in regard to the matter, and favorable responses were received to the subsequent invitations which were sent out to participate in the affair. The Globe, Post, Traveler and Bernel signified their willingness to enter teams, and success and threas signification withingness to either teams, and success was thus assured. The Massachusetts Rifle Association kindly proferred the use of its range, and, all the necessary preliminaries having been arranged, a party of about twenty-five newspaper men took a train this forenoon for Walnut Hill. Besides the men took a train this foreign for manner this. Besides the competitors in the event of the day there were included in the company several "non combatants"—friends of "the boys" and attaches of the different newspapers, who had come out to see attaches of the chiefent howspapers, who had come out to see "the office" carry away the prizes. Arrived at Walnut Hill station, a large sleigh was found in waiting, and the contestants tion, a large sleigh was round in waiting, and the contestants were taken to the range. Here every arrangement had been made for the comfort of the rithemen, the "winter shed." having been well warmed and a substantial "lunch" provided. At I o'clock sharp the match was called. The competition was open to teams of five men from each daily newspaper office of Boston; distance, 200 yards; rounds, 10; any rille; off-hand shooting; the rules of 200 yards; rounds, 10; any rifle; off-hand shooting; the rules of the M. R. A. to govern in all things else. The prizes for the match were, for the winning team, five medals of gold and silver. When the marksmen faced the butts the wind was blowing fresh from the northwest, ranging from that point to west throughout the shooting. The sun was out bright, and the range was covered with snow. But there was very little trouble, the weather condi-tions on the whole not being unfavorable to the making of good scores. The following are the scores:

Pistol Practice, -This favorite range has also been very lively during the month, and the crack of this little arm and the rungin of the little electric bell has been almost incessant. Mr. J. J. Dunno and Mr. S. Odiorne have carried off the honors during the month, although Mr. J. Miller, of New York City, has shown himself at home with this weapon. Mr. Dunne made two thirty-nines Mr. Odiorne one thirty-nine, and Mr. Miller's two thirty-sevens was fine shooting and showed capital holding. On Dec. 1 was commenced a pistol match with three cash prizes as follows : \$5, \$3, \$2. Also an extra prize of \$5 for a clean score of eight consecutive bullseyes. Conditions of the match are: Holding the weapon at arm's length, rounds 8, possible 40, three scores to win or possible 120; distance, 50 feet. The following are some of the best scores made during the month of November; 50 feet, rounds

BRIDGEFORT, Conn., Nov. 27 .- The Bridgeport Rifle Club had : shoot at Seaside Range on Thanksgiving Day, but on account of the storm in the morning the attendance was small. Fifteen turkeys were shot off on a ring target, Mr. White and Mr. D. E. Marsh making the best scores of 55 each in the subscription match—200 yards, 5 shots, off-hand:

A, C. Whita 5 5 5 5 5 5 25 Philo M. Beers 4 5 4 4 5 22 D. E. Marsh 4 4 5 5 6 5 23 Isaac McCourt 5 4 4 4 5 22 Fred Barber 5 5 5 4 4 23

This will, I think, finish our shooting for this winter. R. S. B.

THE ALFORD MATCH .- Creedmoor .- The twenty contests. for the twenty Remington rifles offered by Mr. A. Alford, closed on the

twenty Romington riifes offered by Mr. A. Alford, closed on the 17th ult. The matches were at 200 yards, 10 shots, with any nillitary rifte, and the winners were as follows:
July 2, 1879, Capt, J. L. Price, 7th N. Y., Sharps, 41; July 36, Sergt, T. J. Dolan, 12th N. Y., Remington, 44; Aug. 13, Lieut. B. Griffin, U. S. Eng., Springield, 45; Aug. 23, W. J. Underwood, 7th N. Y., Remington, 44; April 14, 1889, W. M. Farrow, Peabody, 45; April 28, J. L. Paulding, 12th N. Y., Hotchkitss, 42; May 15, Fred. Alder, 7th N. Y., Sharps, 43; May 29, J. R. Grohman, Battery K. N. Y., Sharps, 42; Juue 9, Prank H. Holton, 23d N. Y., Sharps, 47; June 16, A. H. Cobb, Sharps, 43; July 31, Liout. G. N. Whister, 5th U. S. Artillery, Starps, 46; and 47; Sergt. A. B. Van Hensen, 12th N. Y., Remington, 45; Aug. 25, Liout. T. J. Cley, 10th

U. S. Infantry, Springfield, 43; Sept. 4, Geo. Joiner, Sharps. 44; Sept. 25, S. S. Bumstoad, Springfield, 43; Oct. 9, Capt. A. M. Miller, U. S. Eng., Springfield, 44; Oct. 30, J. W. Todd, Sharps. 41; Nov. 6, H. Z. Lockwood, 7th N. Y., Bennington, 41; Nov. 17. Sept. so. S. Enc., Springfield, 44; Oct. 30, 4, w. Anna, vov. 14; Nov. 6, H. Z. Lockwood, 7th N. Y., Remington, 44; Nov. 17, A. Belmanes, Sharps, 45.

Paulding took part in fifteen of the contests, and was the lead.

The contests of the c

ing scorer in five of them on a score of 631 in a possible 750. He becomes the winner of the Creedmoor ritle offered

N. Y. RIFLE CLUB.-The officers for the coming year are: President, L. V. Sone; Vice-President, C. H. Cheever; Captain, F. J. Donaldson; Adjutant, A. J. Howlett; Treasurer, J. H. Mecker; Corresponding Secretary, J. L. Martin; Financial Secretary, W. H.

SEDALIA, Mo., Nov. 27. - The Queen City Guard displayed their inefliciency before the butts yesterday at Sicher's Park. At the grounds a two-and-a-half-foot target had been creeted. To the south of it a pit was dug to accommodate those who kept watch of the shots on the target. The conditions of the match were:
Distance, one hundred vards at a two-foot-and-a-half target, five shots for each man, each perfect shot to count five; weapon, regusatos for each man, etca perces and to count No; weapon, regulation masket; the prize, a handsome gold medid worth \$20. It was as cold as Greenland at the grounds, but the boys stood the piercing wind and low temperature very well—after they got a good fire built. The ancient detry, who has, the credult of bringing fire from heaven, was blessed over and over, and a few sacrilegious fellows even went so far as to pay some left-handed compliments to the devil, who has the reputation of keeping the boss fire.

At 2:30 the shooting began and continued until it was almost too dark to see well. Major Current finally came out winner. The Major is an old veteran, and has shot at men often enough to enable him to hold his gun pretty steady in front of a board. following is the score of shots out of 41 contestants:

Rippey	Thatener 2 0 0 4 3 - 9
Ramsey, R	Ramsey, D 4 0 3 2 0- 0
Brandon2 3 0 5 0- 8	Simmons 3 2 3 0 3-11
Heller 2 2 2 0 3- 9	Landes 3 0 4 2 2-11
Hammond	Garey 3 3 0 0 4-10
	Lieut. Current 2 4 2 3 4-15
Henry4 4 0 5 4-15	Capt. Fredericks4 4 0 0 0 8
Hancock 1 2 0 2 2-10	Wright2 3 3 2 2-12

DENVER AMATEUR MILITARY RIFLE TEAM.—By courtesy of the secretary, Mr. Jno. P. Lower, we have received a photograph of the members of this club, grouped about the firing point of their range, where Mr. Lower tells us: "We shot Oct. 24, making 612 the members of tria cute, grouped about the fring point of their range, where Mr. Lower tells us: "We shot Oct. 24, making 612 in 15 shots; each 200 yards, off-hand, with Sharps' 1878 military rifle. Each ride could be hung on its trigger after cocking and re-lieving the trigger lock, say 9 pounds and over pull.

Casson Crry, Nev., Nov. 21.—The Carson Guard had its annual shooting match to-day. The liberal prizes donated to the rifu-men had the effect of bringing out the full strength of the com-pany, and lifty-nine men took part in the match. The day was bright and clear, although a triffe cold. The score has nover been exceeded in the State by the same number of men from any one company. The score of 1,488 by 40 is an average of 37½, a score never before made by 40 mon in the United States. There were 50 prizes, Little getting the ≥50 rifle as first prize. The distribution of the prizes was connected with an exhibition drill. The following is the score of each member:

#### SCHUETZUN NOTES.

The grand prize and poultry shooting festival, which was given by the Jersey Schnetzen Corps, Capt. A. B. Hardekopf, at the Schnetzen Park, Union Hill, on Thanksgiving Day, would have been a grand success for the treasury of the corps had not the been a grand success for the breastly of the corps and not the weather clerc played one of his tricks. We noticed, in spite all the snowing that day, a great many of the Schuetzen were present. The shooting was greatly injured by the snow and cloudy day, otherwise the scores would have shown different figures. At the

prize target, 200 yards distance, out of a possible 75, the following was the result :

M. W. Farrow.
G. H. Brown.
M. Dorler.
H. Oehl
G. Joiner.

The first bullseye in the morning was shot by A. Appel, and he last at the closing by J. Schnoider. The most bullseyes during the day was shot by H. Ochl, the second most by M. Dorler, the third by M. W. Farrow. At the poultry target the following received a prize : cs Annel

T. Fitz	Delfake
N. Judson	Mohn52
H. Ochl	Raschen
D. Miller	Hansen
Joiner64	J. H. Horsman
Overbough63	F. Horsman
Brown62	Aery1
Fenning	Dr. Helfer
M. Dorler	Gartegast,
Ph. Klein	Kaeglso
Kundahl 59	Brehm36
C. G. Zettler59	Mrs. Farrow 36
B. Zettler58	Hardekopfsv
Schnelder	Duhrkopf, 29
Ermisch57	Wolfstirn
W. Klein	W. Schumann, Jr 29
Dlumanhare 53	

At the distribution of the prizes a great deal of fun grose by

picking the prizes, and especially by the first prize, which was a nicely dressed-up pig of about 105 pounds, for which Mr. Farrow, Fitz and Mr. Judson had to draw for, as the list shows all three were equal. Mr. Fitz drawed No. 1 and run off with his baby pig.
The poultry was also nicely dressed with flowers and red, white and blue ribbon. The affair closed with great satisfaction to

Honouxx, Dec. 3. - The father of the Schuetzen, Capt. H. D. Busch, of Hoboken, returned last Thursday from his two months' pleasure trip in California and was received by the New York Schuclean Copp and many friends at the Pommsylvania depot in Jersey City and escorted him to his home. A band of music at the head of the company played "Home Sweet Home" on their way. At the hotel in Hoboken some of the Capt's friends, who had not the the note in monoser some of the Capte friends, who had not the time to go to the depot had a hearty handshaking upon his arrival. The hotel was splendidly decorated from top to bottom. The Capt, looks well and says he has had a splendid time, especially m San Francisco with the California Ride Club, of which the majority are old acquaintances. This club gave a grand banquet in honor of Capt. Busch before he left and presented him with a gold locket as a token of their estern and friendship in the shape of a horseshoe to be worn on the watch chain and contains specimens of the vari-ons kinds of quartz found in California. Capt. Busch is in hopes that he will be able to return the compliments to the California Rifle Clab at the next Bundes Festival of the Sharpshooter's Union of North America.

SCHUETZEN CORPS BALL.-The ball which the New York Schuetzeu Corps, Capt. Geo. Aery, held Dec. 1, in fleethoven Hall, was a grand success of which the captain and the corps can be prond. The hall was decorated in splendid style and visitors could be counted by the hundreds and showed the great friendship which the New York Corps holds with the different companies. At half past ten of clock Major Kari Klein's separate troop appeared in full force and parado uniform under his command. Also a strong delegation from the Jersey Schuetzen Corps, Capt. A. Hardekopf, a strong delegation of the Helvetia Rifle Club, with Pres. Mattmann, and a delegation from the Greenville Schuetzen Club, with Capt. A. Zenguer. All the different committees proved themselves in their respective duty faithful and deserve great credit. The amusement was kept up until a late hour and everybody seemed to

OSHROSH YACHT CLUB — Editor Forest and Stream: The annual ball and reception of the Oshrosh Yacht Club at Turner Hell, Thenkegiving evening, was the most brilliant and encessful after ever given by this club. The hall being chloratisty decorated with appropriate yachting designes, and trimined with the many forested extension of the state of the propriate was the state of the sta

There for the control of the control

to-night at Lexington Avenue Opera House, Fritz-eigith street, a pleasant remnion being promised to the club and its many friends, SEAWANKAR, YACHT CLUB.—At the last monthly toccting held at Delmonico's the following gentlemen were admitted to membership: G. A. Beeh, Ogden Goelet—new schooner new building—C. R. Fint, sloop Gracie; J. F. D. Lanier, J. Stephen Penbody sloop Coming; J. H. Purdy, N. Y. Roosevelt, deamer Loter; V. E. D. Stokes, Jac. Winslow and J. M. Woodbury. The sailing regulations were amended as follows: "Each yacht shall carry during regulate two serviceable life-buyors, or life processors, which dash be kept within reach of the behasinan and is order for mimediate use." This is a very sorbide rule, and all clubs should adopt something to the state offect. The necessity, therefore, has been insisted upon in these columns, and last year the East-tra Yacht Club found the rule of immediate service in the successful received a man who had been knocked overboard during the laid sloop, match when bad worther was encountered. The by-laws were also amonded through, or before surface and strength and we have a laborated when bad worther was encountered. The by-laws were also amonded through, or before surface and strengths and welcome the like to see the whole child's play of firing pop-guas relegated 1: the street unchins for their Fourth of July fun, and welcome the limitations placed upon the missance by the new law. The distinguishing night signal of the club is a Coston light, tod succerded by blue.

Our fluggery Pory — A foreign corresponded with the treet.

OUR OBJECTIVE POINT.—A foreign correspondent writes that he admires the untiring efforts and incisive manner in which we seed to elevate the standard of our yachts and yachtsmen, and thinks we are accomplishing good work.

#### DETROIT CANOE CLUB.

DETROIT CANOE CLUB.

Bellior Forest and Stream:
The movement to organize a Canoe club in Detroit has had a lively boom, and such an organization is to all intents and purposed an assured fact. The moving spitt in it is Mr. Fried. H. Seyment, of whose recent adventures your readers already know. The interest which Bookers and Strikens ensured to have taken in it to project is appreciated by its friends and readers in Michigan, that its enterprise in laying hefore them a thoughtful and knally deterial on the subject will not be forgotten. It is regarded as a stroke of journalistic forosight quite characteristic of 2 paper which permits nothing of moment within its domain to except administration of the property of the permits and losses in the subject which permits nothing of moment within its domain to except administration for the government of the club has been adopted, and interest in the summy ready an invitation has been received to participate in the among regards of the American Canoe Association at Lake George in August next. A letter has alsolybeen received from the Cheveland canoe chil, saying that that organization would coast down Lal or Eric and Ontario, the St. Lawrence River and up the Buves-Bichelieu to Lake Champlain and Lake George, and expressing the hope that the Detroit club would join them for the vivage. Committees have been appointed on boat house, ensign and Jamis, and permanent organization. Executive officers will be decided to the contraction of the contraction of the contraction.

### FOREST AND STREAM.

NEW YORK, THURSDAY, DECEMBER 16, 1880.

\*\* The Forest and Stream goes to press Wednesdays. Correspondents are requested to mail their . mirnications se that they may reach us before that day.

—This is an excellent time to call the attention of your friends to the merits of the Forest and Stream. We shall be happy to supply specimen copies of the paper to any addresses which may be sent us for that purpose.

THE CENTRAL FISH CULTURAL SOCIETY .- Mr. Fred Mather, of the Forest and Stream, is now in Chicago, at the second annual meeting of the Central Fish Cultural Association, a report of which will be given in our next issue.

WE have on hand another batch of letters respecting the relations between farmers and sportsmen; and we regret that these are crowded out of our present number. They will be published next week.

THE following articles have been reprinted together in pamphlet form from our issues of September 23, September 30, October 7, and December 9, and will be furnished to the readers of this journal upon application:

- "The Dittmar Sporting Powder."
- "Evading Detonation."
  "The Detonation of 'Dittmar Sporting Powder.'"
- "The Dittmars' Abracadabra."

THERE have been numerous reports of hunting accidents this fall. The New York Sun, with its usual diligence, has collected and published at frequent intervals the accounts of dire calamities in the field. Of the men killed by shot-gun accidents the majority belong to that class who will persist in drawing their loaded guns muzzle-foremost after them through fences, into wagons and out of boats. It is extremely seldom, indeed, that an accident is reported to have occurred from any other cause than recklessness and carelessness. Common sense would seem to suggest that a loaded gun should not be pointed at the handler himself nor at his companions; but simple as it is, and easy of observance, it is a rule which is constantly forgotten, and the neglect of which is repeatedly fainl.

#### THE ENGLISH CHALLENGE

THE note from the chairman of the Council of the Nation al Rifle Association of Great Britain, which we publish in another column, gives to our American managers a chance which they should not neglect. Here is an apportunity to start afresh, free from the many entangling alliances and confusions which surround our ill-starred Palma, and to wine out that wretched Hyde affair of last summer. If properly conducted, this proposed contest could mark the beginning of a new lease of life for our moribund American Association and give American riflemen a chance to draw together and score another signal victory. We need some common object in view to invite the somewhat scattered energies of our marksmen. There is too much tendency on the part of Walnut Hill to pull away from Creedmoor, of Brinton and Stockton to 'go it alone,' and so ou of all the ranges the country over. This challenge, couched in the form of an invitation, means that the British rifle-makers at last consider themselves provided with arms fit to cope with those of American manufacture, and the manufacturers of this side the ocean should he ready to show at once that the supremacy of our small arm output can vet be maintained. This challenge is the first direct communication between the older N. R. A. and its younger rival. There have been explanations, corrections, etc., before with a long string of misunderstandings which it would be tedious now Putting all this by-gone matter aside and to go into. guarding specially against any cropping up at the present time of these old time wrangles, a discreet management on both sides may now lead to a match which shall be truly representative in character. Ample time intervenes between now and the date fixed for the match for the completion of all details. We have had an experience in the past to teach us what to avoid in a dozen particulars. The manner of team selection and composition, the vexing question of the cantaincy, the ways and means and the proper status of the match may all be fixed long enough in advance to make the actual work on the range and at the match very simple. We might be captious and insist that as an American team had won the Palma, and that made its conditions as an international championship emblem the British team are bound to make the match on this side the water. We say all this might be insisted upon, to the fomenting of a very pretty battle on paper and the setting back of rifle shooting in this country to a serious extent. Let the Palma remain under its present condition, but let this note from Earl Stanhope inaugurate a new match to be fought at convenient intervals between the nicked teams of the two National Rifle Associations.

Antelope Husting .- The letter which we print this week from the pen of "Tirador," is by all odds the very best contribution to the literature of this branch of hunting that we While we do not cutirely agree with the writer on all the points he gives, we still feel that his article furnishes a great amount of most useful and practical information. In a few words he gives one of the most important directions for success in hunting the antelope. " Don't be in a hurry," he says, and the man who bears this in mind will get many more shots, and much better ones, than he who is eager to shoot at his game the moment he sees it.

In the early days of our antelope hunting we have too often crawled up to the top of a hill, fired at the first antelope that appeared in sight, and then seen the rest of the band jumpup almost at our feet and gallop away over the hills followed by a few wild and ineffectual shots. Take time. therefore, and locate your game well before you shoot at it. We have always used and prefer a double-barrelled field glass about the size of an opera glass rather than an extensi-ble spy-glass, such as is recommended by "Tirador;" but this, after all, is much a matter of habit. A man uses best what he is most accustomed to

OLIVER FISHER WINCHESTER, the founder and President of the Winchester Repeating Arms Company, died at the ripe age of seventy years at his residence at New Haven, Conn., last Friday, December 10. His career was one of small be ginnings and proud achievements; his life-work well rounded and complete. An extended sketch of Mr. Winchester's life will appear in our next issue.

#### THE POOR CHILDREN'S CHRISTMAS.

THERE is no charity which appeals more strongly to the heart of the average man than one which helps the little ones, and no charity does better work than the one whose appeal we publish below. So much good can be done by what will appear to many of our readers a very little money that we feel sure that the Children's Aid Society's request for help will not pass altogether unheeded.

Sportsmen are proverbially kind of heart and free of hand, and we believe that at this season, when the nature of every man is a little softened and when kindly thoughts are felt and good wishes exchanged by the fraternity throughout the land, there will not be lacking men who will gladly respond to such a solicitation as the following

CHRISTMAS APPEAL FOR POOR CHILDREN:

CHRISTMAS APPEAL FOR POOR CHILDREN:

The bitter cold and snow-storms of winter coming on so early will remind the kind-hearted of the thousands of little children in New York who are homeless and friendless, without sletter from the biting storm and frost, half-chal and barefooted, and sleeping often in boxes, cellars or attics, growing up thus for misery and crime. They reach out hands of silent appeal to the many in this country whom Providence has blessed, and ask for aid and sympathy.

Who will help the Children's Aid Society to nake Christmas happier to these unfortunate little ones? The best Christmas gift is a home.

Fifty dollars will send three homeless children to homes in the country. One hundred dollars will put shees on seventy-five barefooted little boys or girls. One hundred dollars will give 120 hungry children a hot meal for a month.

Surely those who have homes and friends and every comfort will enjoy Christmas better for feeling that they have made it happier to the homeless and friendless orphan.

C. L. Brace.

Secretary Children's Aid Society, 19 East 4th st. N. Y. Gifts of clothing and provisions may be sent to the Central Office, 19 East Fourth Street, New York, or will be called for, if the address be forwarded.

Donations of money may be inclosed to either of the undersigned. If they are in checks or post-office orders they can be made payable to the order of George S. Coe, Treasurer. Wm. A. Booth, President, Third National Bank, 20 Nassau street; George S. Coc, Treasurer, American Exchange National Bank, 128 Broadway; C. L. Brace, Secretary, 19 East Fourth street, New York,

Errata.—In our last issue, eighth line of article "The Dittmars' Abracadabra," for "our compound" read "their compound" In second column, last line but one of quotation from Dittmars, for "effect" read "affect." Page 364, first column, thirteenth line from bottom, for "manufacture" read "manufacturer"; three lines below, for "manufactures" read "manufacturers."

These were manifest typographical blunders, comparatively trivial and unimportant beside the gross perversions of truth, of which, as we showed last week, the Dittmar Powder Manufacturing Company, No. 2, have been guilty.

A HANDLER'S PROTEST.—The communication published in another column from the handler of Nat and Smut at the recent field trials meeting speaks for itself. We have no desire or intention to go into the merits of the case, nor to comment on the results of the trials further than we have already done in the very full report published in our issue of last week.

That report was written without fear or favor and events were recorded as we saw them. From that report our readers draw their own conclusions.

We have more than once in these columns expressed our appreciation of the difficulty of a judge's position at all dog shows, whether on the bench or in the field, and we desire now to record our thorough belief in each and every one of the gentlemen who occupied this position at Robin's Island.

There is not, nor can there be, the slightest possible doubt that each one of the judges desired most ardently to see the best dog win, and whether or not these gentlemen saw things differently from the handlers, reporters or spectators, there is no doubt that they gave the decisions which seemed to them proper. Every one who entered a dog knew, before the running, who the judges were and every one knew further that their decisions would be final, and while there can be no harm, now that it is all over, in discussing the results of the meeting, this should be done in a temperate way and with due respect for the honest convictions of others.

The absurd rules by which the meeting was governed may be credited with no small part of the dissatisfaction which has resulted, and we commend the recent letters of our correspondent "Couples" to all who are interested in field trials

AT a regular monthly meeting of the New York Association for the Protection of Fish and Game, Monday evening, Dec. 6, Mr. Whitehead offered the following

Whereas, by chapter 591 of the laws of 1880 the Governor was authorized to appoint game constables and has failed to appoint any fer the city of New York,

Resolved. That this association regrets the failure of the Governor to take such action. Resolved,

Several members spoke on this question and the resolutions were adopted. Our readers will remember that from the first we have insisted that New York city and Long Island should each have one. Mr. Holberton said that it was of more importance to watch the markets than the places where came is slaughtered, for the markets are the inducement to kill unlawfully, and Mr. Luddington thought it was not only of more importance, but also more practicable, as the markets were a small territory to watch in comparison with the whole State. A resolution was adopted recommending the extension of the scason for the sale of venison to Feb. 1, instead of January as the law now reads.

READERS of the FOREST AND STREAM, who wish to question its correspondents upon points in their communications, are requested to do so, when practicable, so that the replies may be given through the paper.

#### HOW THE PRESS REGARDS IT.

[From an editorial in the Richmond Whig, Dec. 6, 1880.] "FOREST AND STREAM."

We cannot too warmly and earnestly commond this paper to the sportsmen of Virginia. It is a great paper—brave and high in every sense of the word. It has recently given striking proof of its mailiness and moral courage and disinterestedness in exposing a dangerous humbug, the Dittmar powder. That fraud was a large and profitable advertiser in its columns, and by silence the paper might have continued to reap this profit, and no one could com-plain. But, satisfied it was a dangerous explosive, threatening life ar limb of all who used it, it did not hesitate a moment to declare the truth and denounce the imposition. The paper is not only bravely and honestly conducted, but is edited with great ability. Its specialties are indispensable to the intelligent sportsman, while its miscallaneous columns supply a rich variety to the general reader. We dare say no one can peruse it a twelve-month without being duly impressed with the great importance of fish and game propagation to the people of this country. By a law simply pro-tecting game and fish, during the breeding seasons, the whole population of the land could obtain fully half its meat-supply with little labor or cost.

There ought to be at least a thousand subscribers to Forest and STREAM in Virginia. Two or three thousand would be all the better for all parties. The paper is worthy of the philanthropic cause Let the Game clubs all over the State direct their it supports. es to the increased circulation of this paper. They could not adopt a more effective means of promoting the objects all desire—streams filled with fish, and field and forest with game.

## The Sportsman Tourist.

HINTS'ON ANTELOPE SHOOTING.

THE antelope, to a beginner, is, with the exception of the mountain sheep, the most difficult animal of approach on this confinent. When first I hunted antelope on the Upper Yellowstone I came to the conclusion that there was not much fun in it, as it seemed to be more a matter of luck than skill if I got within 600 yards of one, and although I am considered a pretty good shot. I must confess that half that distance is my limit for anything like a sure thing, and even then I don't want too much wind, nor do I want to be out of wind from having run up and down a few ravines to get a shot

wind from having run up and down a few ravines to get a shot.

The fact is there is no animal possessed of keener sight than an antelope, unless it be a giraffe. In localities where they have never been shot at much they are comparatively tame, and may appear supid; but just try them where Indians are in the habit of hunting and then the tune changes, especially as an Indian always hunts on horseback, and when he rounds one the next thing he does is to run him down, if he can, and that scares all the others that are in sight away.

"During the summers and falls of 1878 and 1879 I did nothing but hunt, and antelope received the greater part of my attention, and having killed over 240 by actual count of think that at any rate I gained some valuable experience, some of which I will try to impart. The principal thing is to keep out of sight. Don't delude yourself because a band is a couple of miles away, apparently feeding, and all with their heads down, that none are on the look out, and that you may ride up a little closer and then keep out of sight. That won't do; I know it to my sorrow. The chances are ten to one that they will see you long before you see them, and although they may not move at first, still they are on the quistire, and if you get a close shot after having shown yourself, why, just score it down as luck.

My advice is to always hunt over broken ground and undulating prairie, for although you don't see as many antelope there are done and the parties, and well still your planes are twenty to one there are a long and a littly company and all though any planes are twenty to one there are only a long leader to a long a long and the planes are twenty to one there are only any long and a

My advice is to always him: over broken ground and undulating prairie, for although you don't see as many antelope there as on level ground, still your chances are twenty to one in your favor, as against the level when you do come across a band. Again, remember that when you reach the summit of a hill your horse's head is in plain sight before you can look in the hollow beyond, so if you are too lazy to dismount always skirt along the ridge for a few yards, stand well up in your stirrups and take a good look. But this is the lazy mud unprofitable style, and generally before you can check your horse the antelope have seen you, and that settles it. So the best way is to dismount, lead your horse with a good long lariat, so he will be some yards behind you; take off your hat (which, by the way, is also visible before you can see—your eyes being lower than the crown) and go slowly up until you can just see well into the ravines and on the

is ill sides beyond. Don't be in a hurry. Take a custious survey, as during the day it often lappeus that an old buck is brigg down suming himself on some gentle alone, when he may easily be mistaken for a stone, or perhaps a whole band in the princip of the pr

with buck horn grip. No other kind of knife will stand chopping with, and that is sometimes unavoidable. A small light steel is all that is required.

I prefer the California saddle to any other, but a good McClellan is perhaps the best for both man and borse. Always carry saddle bags, they are convenient for your lunch, some extra anmunition, matches, and a flask of cold tea, which is the best and most refreshing drink I know of. It is as well to carry in them an oily rag, and if it comes on to rain just ruby your gun with it, and when you get to campy you will see how easily it is cleaned.
